THE affair of the Korean refugee, KIM, has attracted some attention outside Japan. Most remarkable and most inexplicable is the verdict pronounced by the *North-China Daily News*. "After what has been revealed by KIM," writes that journal, "as to the share which Japan took in the occurrences of 1884, it will be impossible for the Government of the MIKADO to enforce their order of expulsion on him; they must give him a refuge and full protection for the sake of their own honour." In the face of this tolerably sweeping declaration, it is worth while to consider what KIM's so-called "revelations" really amount to. He had published two documents at the time when our Shanghai contemporary wrote—a memorial to the KING of Korea and a letter to Li Chung-tang. We have examined them again carefully to see whether they contain anything that justifies the assertion of the *North-China Daily News*. The result of our examination is this. In the two documents KIM makes three, and only three, allusions to the share taken by Japan in the *émeute* of 1884. In one place he says:—"I and my fellow-workers are blamed for relying upon a foreign Power, but in doing so we only acted, as Your MAJESTY is very well aware, as was required by the urgent necessity of the times." In another place he says:—"The Japanese Government may now be regretting their former interference in Korean affairs and may find it convenient to extinguish all source of information by taking my life." And in a third place, addressing Li Chung-tang, he says:—"The cause of your Excellency's resentment against me, I can rightly guess. It is my calling in the aid of Japanese troops, a step which was necessitated by the inevitable turn of events." Did these three assertions stand alone, no person of common intelligence could regard them as "revelations" which impose upon the Japanese Government the duty of giving refuge and protection to KIM. But they do not stand alone. They are supplemented by explicit definitions of the character and purpose of the *émeute*. It is the KING of Korea's "ruthless servants who are really to blame," we are told. The *coup d'état* was directed against the BIN family, who were "remarkable for their treasons, disloyalty and shameless reliance on China." The KING himself is said to be "well aware of the fact," and to have "instructed KIM to devise some means of neutralizing the unscrupulous audacity" of the BIN. "I then thought," continues KIM, "that unless some decisive steps were taken to remove the political power out of such dangerous hands, Your MAJESTY might, in some future time, be reckoned among the forgotten rulers of an obliterated country. And for this purpose I sacrificed myself." These protests are addressed to the KING. To

Li Chung-tang he writes even more unequivocally:—"The late disturbance was caused by the secret intrigues of EN SEI-GAI and others, who thoughtlessly fired on the Royal Palace. Anxious to cover up their own mistakes at the crisis, they imposed upon their royal master and shamelessly flung all the blame on me. \* \* \* Since the disturbance of 1882, all profligate and intriguing people had attached themselves to EN SEI-GAI, and formed a political faction. Possessed of great influence, they had turned it to nefarious uses; they had darkened the sight of their KING; resorted to oppression; prevented the carrying out of laws; and as a consequence the country was being daily hurried to the brink of ruin. At that time I was thinking of calling on your Excellency in person, in order to discuss the situation to my heart's content; but I was prevented from attaining my object by the intrigues of the gang. But the national affairs being in an extremely critical state, I could not look on with indifference, and I decided to adopt a radical remedy." It appears, then, that the *coup d'état* of 1884 was undertaken by KIM at the desire of his sovereign; that its purpose was to remove the political power out of traitorous hands; that the disturbances attending it were caused by the intrigues of the Chinese commander and others, who fired on the Palace; and that the part taken by the Japanese troops was contrived by KIM himself. Where are the "revelations" which place Japan in such an equivocal position? KIM does not even hint that Japanese interests were involved in the affair. What he says is that he adopted a "radical remedy" in view of a national crisis due to the intrigues of the Chinese and the BIN family, and that he procured the coöperation of the Japanese troops. That is his own account. It is not clear whether he desires to claim the credit of having forged his sovereign's autographic appeal to the Japanese Minister for the protection of the Japanese guards. But whether or no he desires to appropriate that honour, there is no manner of question with regard to his avowals that the *coup d'état* was planned by himself at the KING's desire; was dictated solely by Korea's interest, and obtained the support of the Japanese Legation guards through KIM's agency. It is a novel doctrine that a man who attempts something in his own or his country's interest, and by false or fair means procures the partial coöperation of a stranger, is entitled thenceforth to claim the perpetual protection and support of that stranger. We invite the *North China Daily News* to set forth the grounds of its assertion; to recapitulate the "revelations" which impose such obligations upon Japan. The attempt will demonstrate, better than any words of ours can demonstrate, how singularly extravagant are our contemporary's misapprehensions.

We have devoted to this matter of Mr. KIM-YO-KUN more time and space than it seems, perhaps, to deserve. We should have been pleased to see him take a course dignified, prudent, and indicative of all the patriotism for which we were originally disposed to give him credit. But the question whether he has established or forfeited his claim to public sympathy is altogether of trifling importance compared with the influence which his conduct may exercise upon the relations between China, Japan, and Korea. In the disorderly affairs of the peninsular kingdom, and in its uncertain national status no one can fail to discern elements of grave danger to the peace of the East. The plain duty of all those who have access to the public ear is to endeavour to avert this danger; to dissipate clouds which as yet have nothing tangible about them, but which, if encouraged to gather, may end in a storm. The *North China Daily News* does not seem to realize either the situation or its own responsibility. Its comments upon KIM's memorial and letter are almost as mischievous as they are misleading.

**THE CONSULAR TRADE REPORT  
FOR NAGASAKI.**

THE Consular Trade Report for Nagasaki, for 1885, contains nothing particularly interesting. Mr. ENSLIE was evidently much perplexed about rates in converting dollars into sterling, and he has succeeded in perplexing his readers. In dealing with imports for 1884, he takes the dollar at 4s. and in dealing with those for 1885, he takes it at 4s. 1d. (approximately). Both rates are purely fictitious, but the latter (4.88) has this to recommend it—that it has been employed for many years by the Customs. With regard to the former, it is not easy to see why dollars which were obtained from sterling by converting it at 4.88, should be reconverted into sterling at 5.00. Both Mr. ROBERTSON and Mr. TROUP, in their Reports for Kanagawa and Hyôgo respectively, adopted the 4.88 rate in treating imports. We presume that Mr. ENSLIE has some reason for his different procedure, but unfortunately he has not thought it worth while to explain himself. It appears to us that by taking the four-shilling value of the dollar in 1884, his sterling total is nearly 2½ per cent. less than it should be. His final result is that the total trade of Nagasaki diminished by £1,743 in 1885 as compared with 1884; but if the Customs rate be used in converting the imports of both years alike, it will be found that the decrease was £5,951. In dealing with exports, he takes rates of 3s. 7d. for 1884 and 3s. 6d. for 1885. There are thus four different rates employed in compiling the same Report.

The trade of Nagasaki is not only insignificant in dimensions—less than one

million sterling annually—but it virtually depends upon one or two staples the transactions in which do not furnish any trustworthy test of general commercial conditions. Of these coal is incomparably the most important. It represents more than one-third of the aggregate trade. Indeed, anyone visiting Nagasaki cannot fail to be impressed with the magnitude of this industry. The harbour, as picturesque as it is excellent, is the chief coal-ing station in the Far East. Vessels of all nationalities come there to fill their bunkers—an operation which is performed by swarms of women and children who, from a lighter's hold to the lower deck of the steamer, form a living chain along which the little baskets of coal fly with wonderful celerity. Marvellous records are preserved as to the rapidity with which steamers have been supplied by this device. Then there is the export of the mineral. This part of the business is of much the same importance as the sales on the spot; for we find that while 142,900 tons were shipped to various ports in China and Japan during 1885, the quantity sold in Nagasaki was 127,428 tons. In connection with the export of coal Mr. ENSLIE gives intelligence not at all welcome to English ears. He says that the maritime carrying trade has fallen almost entirely into the hands of Germans. With all that keenness to detect and utilize opportunities which is materially helping to develop their trade, everywhere, the Germans have sent out steamers specially suited—both in point of carrying capacity and economy of working—for the function of colliers. The consequence is that these vessels have driven their rivals out of the field, so that, while the returns of British shipping at Nagasaki show a marked decrease, those of German shipping, on the contrary, show an increase of 72 per cent. in number and 50 per cent. in tonnage during the year under review. This is another incident of the story which English enquirers are beginning to decipher everywhere. One of the Blue-books recently issued by the Royal Commission on the Depression of Trade and Industry ascribes Germany's decreasing purchases of English goods to the fact that "English producers are imperfectly acquainted with the requirements of the German market, and unwilling to alter the standard of supply to meet them." The truth is that English merchants and manufacturers have grown lazy in the enjoyment of a virtual monopoly, and that, until they are thoroughly roused, their more wakeful competitors will forge steadily ahead.

Mr. IWASAKI YANOSUKE is the proprietor of the Takashima coal-mines referred to in this Report. The output appears to be steadily increasing, although the cholera epidemic of last year—which made its way to the mines and was supposed to have infected

the coal—must have seriously checked both the work and the sales. The same gentleman is also largely interested in the dock and ship-building yards at Nagasaki. The Dock is the deepest and largest east of the Cape of Good Hope and will admit big iron-clads; and at the building yards no less than 87 coasters and colliers were turned out during the year. The conversion of Japanese junks into vessels of foreign rig seems also to be going on briskly.

A largely fluctuating item of the Nagasaki trade is rice. Higo and Hizen are among the chief districts where this staple is produced, and thus it happens that the export and import at the neighbouring port of Nagasaki offer immediate evidence of the condition of the crop throughout Kiushu. Last year, owing to anticipations of a short yield, rice was imported to the value of £13,527. On the other hand, the prices ruling in London and Japan alike were not favourable to export, so that business in this line showed a diminution of £119,259. Thus, under the one item of rice, a difference of £132,786 appears in the trade of the port. If rice be omitted from the returns, it will be found that exports increased by £55,196, and imports by £48,793; the total increase of the trade, with this modification, amounting to £103,989.

Mr. HALL, in one of his Consular Reports for Nagasaki, explained the reason why English textile fabrics were falling into disfavour, and predicted a steady growth of the Japanese cotton-spinning industry. He was evidently right in his forecast. In 1880, the import of cotton and woollen manufactured goods at Nagasaki amounted to £21,092; in 1885 it had fallen to £6,143. Per contra, the import of raw cotton in the former year was only £5,189, whereas in the latter it was £41,279.

It is evident that the future of Nagasaki depends chiefly upon the development of coal mining and the ceramic industry. The whole of Kiushu is said to be one huge coal-bed, and we look forward to the day when from this source the wants of the entire Orient will be supplied. As for the manufacture of porcelain, there can be no doubt that Japan's capacities in this direction are capable of enormous development. The small increase which the export trade of Nagasaki shows in this staple since 1880—from £7,123 in 1880 to £11,007 in 1885—indicates that no radical effort has yet been made to improve the methods of manufacture. So far as we know, there is no country in the world where such a splendid supply of porcelain clay exists, and certainly there is no country where expert labour is so cheap. Unless we are much mistaken, this is one of the industries which will assume very different dimensions after the country has been thrown open. Nagasaki and Nagoya will then receive a sensible accession of prosperity.

## THE MANAGEMENT OF A CHOLERA EPIDEMIC IN JAPAN.

THERE are, perhaps, no people in the world more remarkable for cheerful resignation in the presence of disaster than the Japanese. They will sit with equanimity among the ashes of their houses and live imperturbably in the presence of a cholera epidemic. The two things are not, indeed, equal tests of self-command. Familiarity has inspired a certain contempt for conflagrations. They come so often that not to be disturbed by their arrival is a necessary qualification for residence in Tōkyō. Cholera, on the contrary, is a comparatively novel affliction. It is one of the few ills—perhaps the only grave ill—that has followed in the wake of Western civilization. True, there are some who deny that the plague is imported, maintaining that it existed in Japan long before the conclusion of Admiral STIRLING'S convention. We should be glad did history furnish warrant for this belief. But it does not. Neither the disease nor its name was known in Japan twenty-five years ago. We Westerns brought it with us, and, what is worse, brought it to a country where it apparently finds conditions specially suited to its sojourn. No one can yet venture to say with absolute certainty how cholera is propagated. Expert opinion is overwhelmingly in favour of the theory that the Comma Bacillus finds its way into our systems in the water we drink, and in obedience to this verdict the Japanese are bestirring themselves to build aqueducts. Yokohama will be excellently provided before the midsummer of next year; Tōkyō, Nagasaki and Osaka are busily calculating the cost; Kyōtō alone is rejoicing in the comparative immunity which its famous rivulets have hitherto conferred on it. But when these great centres and other less important places are in possession of a pure water-supply, may we hope that cholera will cease its visitations? Who can say? Since 1877 there has been no year absolutely free from cholera. It seems as though Japanese methods of agriculture had planted the germs firmly in the soil. A pure supply of drinking water will unquestionably do much to counteract the taint, but will scarcely suffice to remove it. The Japanese have to learn that washing rice, vegetables which are eaten raw, table-utensils, and so forth with contaminated water may be just as dangerous as drinking it. Perhaps if the people were more liable to panic, less disposed to take the ills of life lightly, they would evince greater earnestness in adopting precautions.

The experience of Yokohama this season has been exceptionally startling. Since last autumn the advent of the epidemic might have been expected at any time. Breaking out with rapidity and virulence in Nagasaki, it spread along the coast of

Kiushu, and thence leaped to Kobe and Osaka. Places farther north had no reason to anticipate immunity. Between them and the plague-stricken districts there was only one barrier—a quarantine station at Nagaura. There measures of disinfection were carried out with unremitting care. Every ship coming from a place where cholera had shown itself, and every one on board, was subjected to processes of fumigation and purification. But it was impossible to attribute any great efficacy to these precautions. A man does not imbibe cholera germs from his garments or from the surface of his own body. To bake the former and bathe the latter cannot kill bacteria which have already found their way into his intestines. If cholera were to come by sea to Yokohama, people's stomachs rather than their coats and hats would be its vehicle of transport. It did not come in this fashion, however. Once only before it had established itself firmly at Yokohama was any ship from the south so unfortunate as to carry infected persons, and they were detained at Nagaura. The disinfecting station probably served only two purposes. Its establishment and the energy of its officials exercised a reassuring influence upon the public mind, and the delay to which it subjected a ship gave a longer time for the development and detection of any poison which her crew or passengers might have imbibed. How then did the epidemic make its way northward? If this question could be confidently answered, we should probably find ourselves far on the route towards prevention. Unfortunately, it has not been answered, and, so far as we can see, cannot be answered. Until the end of June, cholera scarcely showed itself at all in Yokohama, though for a month people had been dying at the rate of 70 or 80 a day in Osaka, a place only 30 hours' journey distant. But if cholera in a malignant and acknowledged type did not actually visit Yokohama in those days, the public was not entirely without a warning of its intended advent. And, strange to say, this warning came through the foreign residents. In the present, as in all previous epidemics of cholera, they have enjoyed virtual immunity. From some unexplained cause the plague passes by their doors without entering. Yet we believe that it was they who felt and showed the first indications of its approach this season. Throughout June, the foreign community suffered from an epidemic of diarrhoea, in many cases violent and even dangerous. Expert examination detected the presence of the *Comma Bacillus* in this disease. Is it not possible that the foreign residents suffered then from a mild type of the malady which was soon to develop such deadly proportions among the Japanese?

It was on the last day of June that the plague announced its presence unequivocally in Yokohama. Twenty-seven days previously a sporadic case had been re-

ported. It was followed by four others in nearly as many weeks. But on the 30th, a sudden and violent outbreak occurred. Twelve persons were seized and four of them speedily succumbed. They were all dwellers in the same street, and seven of them had used the same well. There was, therefore, a hope that the disease might be localized. The most radical measures were adopted. Every inhabitant of the street was removed to an isolation station and there placed under observation. Their houses, wells, and the whole street to which they belonged were thoroughly disinfected. For a short period it seemed as though these steps might succeed. The daily number of new cases did not exceed eleven or twelve until a week had passed. Then it rose to 19; a week later it stood at 35, and in another week it had risen to 120. A heavy strain was thus put upon the resources of the local authorities. They speedily found themselves obliged to provide hospital accommodation for from three to four hundred patients, and to organize a large force of officials who should be on duty night and day to enforce the contagious diseases regulations issued by the Central Sanitary Board. The ravages of the disease were confined to the lowest classes. Beyond the canal forming the Western boundary of Yokohama proper lies an extensive area which, eighteen years ago, was converted from an uninhabitable swamp into a mud-plain by means of material dug from a large canal. This unwholesome flat has always been a favourite haunt of cholera and fever. It is covered tolerably thickly with wooden shanties, having their floors in almost direct contact with the ground. It is scarcely capable of drainage. It has no supply of even moderately pure water. Among its clusters of comfortless huts the cholera lingers persistently. The inhabitants are wholly unprovided with the means of combating such a visitation. Miserably poor, they are packed so closely that if one member of a household is attacked, there is no possibility of isolation without removal. Thus in the vast majority of cases it is necessary to carry the patient to hospital. There are, of course, exceptions. People whose houses satisfy the requirements of the sanitary regulations in regard to space and facilities for treatment are allowed to remain at home. But these instances are so rare that the general public have come to regard the hospital as the inevitable destination of a cholera patient. And beyond the hospital they see only death; for the percentage of recoveries is too small to inspire any tangible hope. Yet in the hospital, of which we shall presently speak at length, they are far better cared for than they could be in their own narrow, comfortless dwellings. The element of compulsion is their only real cause of complaint. They are too ignorant to appreciate that

at a crisis, such as a cholera epidemic, the safety of the community takes precedence of the fancies of the individual. But they are at the same time too law-abiding to offer any resistance. They go to hospital quietly, and, once there, have no reason to regret their admission. The organization connected with this part of the work is very excellent. The police, an extra force of whom is on duty throughout the night and the day, watch closely, and immediately give notice of sickness. Private medical practitioners are also under orders to report at once every case showing choleraic symptoms. On receipt of such intelligence a medical expert, of whom a number are in constant attendance at a station in the vicinity of the infected district, proceeds without delay to diagnose the disease. Should he pronounce it cholera, and should the sick man be unable or unwilling to satisfy the prescribed conditions for treatment in his own house, he is removed to hospital. Sometimes his own physician denies that the sickness is cholera. The decision then rests with one of the foreign practitioners attached to the Sanitary Bureau. Until he has given a verdict the removal of the patient is deferred. The litter used is a frame suspended from a bamboo carrying pole, and shut in by bamboo blinds. Lying at full length in this, and carried by two trained Japanese whose skill in this fashion of portage is proverbial, the patient makes his way to hospital with scarcely perceptible motion. Should any of his family or friends desire to accompany him in the capacity of nurses, they are permitted to do so. Simultaneously with his removal all the inmates of the house where he lived are taken to a large isolated building, or cluster of buildings, where they are placed under observation for four days, their former dwelling, its furniture, drains, wells, &c., being thoroughly disinfected in the interim. Pure water is one of the chief wants in this unwholesome district. To meet a need so urgent at such a time, the authorities have organized a system by which large quantities of good water are carried from a considerable distance and supplied to the people gratis. But, as we have already said, it is more than doubtful whether the necessity of using this water, not alone for drinking purposes, but also for washing rice, vegetables and table utensils, is generally recognised and acted upon. The people do not understand how microscopic is the organism that works such terrible ravages upon the human frame. With fuller knowledge their coöperation would be more efficient, but the advisability of trying to educate them in this special direction has not apparently occurred to the authorities yet.

## II.

The Cholera Hospital stands on the bank of a canal at the Southern extremity of the reclaimed mud-flat described in our

preceding article. There is but one hospital. It would be better, of course, that there should be two or more, in order to shorten the journey for patients living at a distance. But fortunately the inconvenience which might have been caused by this want has not been felt in Yokohama: the cholera obligingly restricts its ravages to districts in the immediate vicinity of the hospital. Hearing of a hospital, the reader must not picture to himself an imposing edifice of many storeys, with ordered approaches and trim surroundings. He must rather imagine a series of low wooden edifices, standing, for the most part, parallel to each other. They are constructed of rough timbers; roofed with shingles; open on two sides, throughout their length, to all the breezes of heaven, and raised so far above the ground that the air flows freely beneath them. Along their front runs the canal—easy method of transport for patients coming from ships in the harbour—and at their rear wave green reeds that cover the uninhabited portion of the mud-flat. They are surrounded by a high paling, and at one end workmen are busily engaged running up an addition, for unfortunately the accommodation which the place affords has not been found equal to the demands of the epidemic. The neighbourhood is not deserted as one might expect to find it. People come and go with indifference, and you may even see loiterers peeping curiously through the palings within a few feet of the wards.

Let us enter as though in company with a patient who seeks admission. Passing through a short corridor, we find ourselves in a small square space, impregnated with the odour of prophylactics, its stained boards and dark corners offering a gloomy contrast to the general airiness of its surroundings. This is the court where final judgment is pronounced on the sick man. Here he learns—or rather his friends learn, for he is probably apathetic himself—whether the disease that has overtaken him is really the dread epidemic. Of course his chance of being turned back is almost infinitesimal. The symptoms of cholera are not easy to mistake. It is said that they may be detected by common intelligence, after a short experience, even without medical training. The physicians employed by the Sanitary Bureau to perform the original prognosis have both training and experience. There is small likelihood that their opinion will be contradicted by the examination subsequently conducted in the vestibule of the hospital. Such a thing has, however, occurred, and who can tell how painfully hearts have throbbed in that little chamber where the litter of the sufferer rests a moment on its journey? And then, even though he be not actually turned back, there is still one hope. He may be placed in the doubtful ward. For at the most westerly end of the hospital

there is a suite of rooms, separated from the cholera-wards proper by the place of convalescents. Here cases of dubious character are detained and tended, generally to be transferred at last to the body of the hospital, but sometimes, though rarely, to be dismissed without admission to the band of plague-stricken sufferers.

Three steps beyond the little office of examination you enter the first ward. It consists of a row of dormitories opening, at one side, on a roomy corridor, at the other looking out through spacious apertures on green reeds and the blue sky. The dominant purpose in the construction of the hospital has been airiness. It is a mere skeleton of timbers, within which the atmosphere moves with perpetual briskness. In regard of excellent ventilation, an entire absence of hangings or other paraphernalia capable of retaining infection, and cheap destructibility after it has served its purpose, the hospital is ideally perfect. But it is essentially a summer contrivance. In cold weather it would be useless, and even in hot weather its flimsy roof constitutes a mediocre sunshade. Yet it is precisely in such buildings, or under canvas, that the best medical records have been obtained in times of epidemic.

In each dormitory there are three beds with straw-stuffed mattresses and pillows. Not more than two of these beds are intended to be occupied at the same time, but in several cases the severity of the present epidemic has rendered adherence to this rule impossible. Invariably after the removal of a patient his mattress and pillow are burned—an excessive precaution, according to some, but the excess is surely in the right direction. Do not expect that the conceptions suggested by a disease which kills with the speed of a virulent poison will be realized in a Japanese cholera hospital. You will not often see people twisted by agony or convulsed by retching. Such cases there are indeed, harrowing to witness but exceedingly rare. For the most part few evidences of suffering force themselves upon your attention. The place is quiet, almost solemnly quiet. Turn your head away and nothing tells you that you are among the victims of a deadly plague except, perhaps, the monotonous moaning of some dying man as the mechanism of his life labours slowly towards its end. Here on the first bed lies a strongly built lad. His limbs are well rounded; his cheeks are full, and but for the sickly pallor of his face you would suppose him to be hale and hearty. Touch his hand, however; you find it cold and clammy. Feel his pulse; its beats are absolutely imperceptible. He is in a state of collapse. Yet he moves his arms and turns his head as though still in full possession of his muscular energy. Hanging beside his bed is a carefully kept record of his case. It tells you that he has been but a few hours in

hospital. Will he rally? "Impossible to predict," replies the doctor. "We have had a case where the collapse lasted for nearly three days, and long after hope had begun to appear extravagant, reaction set in. Look at this patient in the next ward, for example. Two hours ago he was in a condition similar to that of the lad you have just examined. Yet you observe that his pulse is just commencing to be perceptible and the caloric is returning." "Is he then out of danger?" The physician smiles and points silently to another bed on which an old man lies, hollow-checked, glassy-eyed, catching painfully for breath. He has been five days in hospital; has rallied from his first collapse and is now sinking in his second. He will be dead in a few minutes. Then there is the fever which succeeds the cholera—typhoid fever nearly as fatal as the plague that precedes it. At least in every second ward you see people lapsing into this fever or wasting away under its fire. Here is a beautiful little girl of seven or eight, with dimpled limbs and softly rounded face. She rolls her tiny head from side to side with mechanical regularity, and if you bend down you will see that her eyes are set and staring. The fever is upon her, and the doctor turns sadly away, hiding his face from a woman who stands beside the bed, her look of fierce anxiety almost the saddest sight you have witnessed. Yet she asks no questions, too fearful perhaps of the reply she might elicit. "I never saw a prettier child than that little one," says the doctor, "when it came to hospital a few days ago. It seemed to be all sunshine. Only when we wanted to change its red dress for the white garment of the hospital, it pleaded with tearful eyes for the gayer colour." Poor child! That was a prophetic instinct. White is the colour of mourning in Japan. In the next ward is another mite, thinner and more worn, but fairly on the way to convalescence. As the foreign doctor approaches its bedside, it stretches out its wasted hands and asks plaintively for an egg! Up to this you have seen little if anything of the shocking appearances which are popularly supposed to accompany cholera. The patients in general have shown few outward signs of serious sickness. Here, however, is another type—a type better known in India than in Japan. The sufferer is a middle-aged man, strongly built and bronzed. Across his forehead, from the roots of his hair to his eyebrows, stretches a close series of deep wrinkles, and the hand that lies on his breast looks as if it had been boiled, so puckered and colourless is the skin. These marks are the consequence of severe vomiting and purging. The blood, deprived of serum, has ceased to circulate freely. A woman lying in the next bed—for the rapid strides of the epidemic have rendered it impossible to provide separate wards for the male and

female patients in every case—shows these symptoms even more markedly. In addition to the wrinkling and puckering, her cheeks seem to meet, so far have they fallen in, and her eyes are sunk in deep caverns. But these are the exceptions. Generally the plague does its deadly work without much external show. The one symptom which appears to accompany it invariably is apathy. The patient seems benumbed and wholly indifferent to the things about him. Doubtless in many cases narcotism has been produced by strong doses of opium. But, apart from this, cholera appears to paralyze all the vital functions; to separate its victim at once from the world. Whenever this is not so; whenever strength or hope has begun to return, you find the natural politeness of the Japanese asserting itself. Faint voices thank the doctor for his daily visits, and feeble figures struggle into sitting postures to have their pulses felt. Nowhere does a complaint make itself heard or a symptom of impatience become perceptible.

The effects of the disease are complicated; the treatment is comparatively simple—opiates at first, stimulants afterwards. Medical science is still groping after a cure. Will it ever discover one as speedy and as powerful as the poison of the plague? It is a difficult field for experiment. The onlooker who has not been hardened by experience, finds no room for any sentiment but horror and compassion. How can any single antidote relieve suffering that presents so many aspects? This old man who rests upon his knees and face, doubled up with cramp; this girl with burning skin and suffused eyes who tosses her limbs about in fever; this child, pulseless and cold; this stalwart coolie who jerks himself hither and thither as the thickened blood flows sluggishly and painfully through his arteries—how are they all to be relieved? The hopelessness of the question is not the least painful part of the calamity. You feel that science is practically helpless. Careful tending seems to be well nigh all that is possible, and that, at any rate, is provided. With rare exceptions a nurse stands within arm's length of every bed. The majority of these belong to the staff of the hospital; some are friends or relatives who have accompanied the sick. Doctors, too, are constantly going round, so that each case is almost unceasingly under medical inspection. Ice is used in large quantities. In the fever stage its value is easily understood, but one can hardly conceive that the cold semi-inanimate condition of the cholera-stricken body should be accompanied by a fire within. Such, however, is often the case. Throughout the progress of the disease, and not least in the early period of convalescence, there is a constant longing for something to cool the mouth and stomach. Deaths take place chiefly after sunset.

They appear to be quiet and almost painless. An old woman expires as we stand beside her. Her sunken features are not crossed by any tremor or convulsion, and the coverlet is drawn over a face that might be sleeping.

Passing from the sick to the convalescent wards you seem suddenly to emerge into sunshine. Men, women and children are there glorying in the gift of recovered life. Brighter faces or more grateful greetings it would be difficult to conceive. If the physician has to confront death and pain, he has also his reward. But in the case of cholera it is a scant reward. One soon comes to the end of this happy scene. For nearly two hours you have been passing from ward to ward filled with hopeless sufferers. In a very few minutes you see the last of the little group of convalescents. How, indeed, can it be otherwise, when for every patient saved, four or five are carried to the dead-house? The convalescent wards may well encroach but little upon the space reserved for the stricken and the dying. Is it, then, that the Japanese show lack of stamina; a want of vital force to struggle against the attacks of the disease? "On the whole, yes," replies the doctor. "Not that the death-rate here differs much from the death-rate in Europe, but the type of the disease is less violent. The constitution of the Japanese resembles that of a child. He runs down quickly and picks up again, when he does pick up, with equal rapidity. Happily we seem to have passed the worst stage in Yokohama. Our death-rate is diminishing, and so is the number of our fresh cases. Strange to say, in these latter days the plague has developed a new character. It is not a better character, but it is the character with which we are more familiar in other countries. We find oftener the wrinkled skins and sunken features which are elsewhere considered typical of the malady. Do we perform post-mortems? No; there is apparently little more to be learned in that line of research, and in truth our hands are too full already."

Arrived now at the outskirts of the hospital, you find yourself beside an open shed. In it stands a row of carefully covered tubs which coolies are preparing to remove. They contain excreta, already disinfected and about to be carried away for calcination. Formerly the thinner portions of these excreta used to be dumped in the sea but the practice has been abandoned, and the whole is now subjected to the action of fire.

Beyond the shed for the excreta stands the dead-house. Like the surrounding buildings, it is roughly constructed but well adapted to its purpose. After the bodies are deposited here, an interval of about twelve hours elapses before their removal to the cremation ground. During that time their friends are notified; all necessary records are prepared, and symptoms of decomposition satisfy the ignorant

that no indecent haste has been employed. Vulgar prejudices have to be combated. The authorities spare no pains to dispel every doubt which might deter the people's cooperation.

All this costs money. The large corps of nurses and physicians—Japanese physicians constantly on duty and a daily visit from a foreign expert—the medicines; the generous diet; the numerous sanitary officials; the litter-carriers; the cremation; the lavish use of disinfectants; the destruction of clothes and bedding; the supply of pure water; the staff of clerks and recorders—these items represent a heavy total at the end of each month. Of course the Local Government take the first responsibility. But it is largely lightened by the liberality of private citizens. Thousands of dollars have already been subscribed by these, and their purses are still open. One fund there is to which all, whether native or foreign, might be glad to contribute. It is the fund for children left parentless and penniless by the plague. Recently a whole family of six entered the hospital. There remains of them now only a baby in arms. Charity had never a wider or a more worthy field to exercise its ministrations.

### III.

To complete what we have already written upon this subject, it is necessary to add a few facts and figures.

It has already been explained that each ward in the Cholera Hospital contains three beds, but that, except in rare cases, not more than two are occupied at the same time. In order to secure ample attention for the patients, two nurses are attached to each ward. In serious cases, however, the allowance is one nurse to each bed. In the wards for mild cases—which, we should have stated, are kept apart from their dangerously attacked fellow-sufferers—one nurse to each ward is considered sufficient. Further, every separate building is superintended by two overseers. It results from this distribution that the total number of nurses on duty at the hospital is 202, of whom three are head-nurses, and that the total number of overseers is 22.

With regard to medical attendance, twenty physicians are borne on the staff of the Hospital. Of these, seventeen live at the Hospital, and are either constantly on duty in the wards or ready to go on duty. Three, namely, the Principal Medical Officer and two foreign physicians, visit the wards daily, and examine every patient newly admitted as well as every patient already undergoing treatment. The Principal Medical Officer and the Vice-Principal, Drs. MIYAJIMA and YOSHIMASU, serve without remuneration. They are not alone in this philanthropy. At four convenient places throughout the town, dispensaries are specially organized to furnish medicine and assistance in cases

of cholera. To these dispensaries forty-nine physicians are attached, all of whom give their services gratis. The cost of the drugs and the current expenses of these dispensaries are paid out of a fund raised by private subscription among the Japanese merchants of Yokohama, seventeen of whom contributed over five thousand *yen* at the first call. Anyone attacked by the epidemic is thus certain of receiving medicine and expert aid within a few minutes of his seizure.

We may mention here that the total number of patients treated at the Cholera Hospital this year from the beginning of the epidemic up to August 14th, was 2,023. Of this number 386 had recovered and 1,325 had died on the latter date. Three hundred and twelve were still under treatment, of whom 80 were expected to survive. The death-rate thus appears to be seventy per cent. approximately. The number of patients treated at their own houses since the beginning of the epidemic is 46. We mention this specially, because a belief obtains pretty generally that every victim of the epidemic is carried to hospital by the police, whether he will or not. The fact is, as has been already explained, that if a patient desires to remain at his own house, and if his circumstances are such as to admit of certain accurately prescribed arrangements with regard to isolation and disinfection, no opposition whatsoever is offered to his treatment at home. Hitherto, however, the epidemic has confined its ravages almost exclusively to the lowest classes, and this, not any arbitrary action on the part of the authorities, is responsible for the very small number of patients who have been in a position to remain at their own houses.

The total numbers of sanitary officers and of constables specially engaged in dealing with cholera patients in Yokohama District alone, are 54 and 175, respectively. In the former number are included 14 physicians. Besides these there are 79 constables and temporary *employés* whose duty is to visit every part of the town daily to see that cleanliness and the prescribed preventive measures are duly observed.

The expenses in connection with general sanitation and disinfection are defrayed out of funds raised by local taxation, while those incurred in the treatment of patients, the removal and destruction of infected clothing, excreta, &c., are nominally borne by the sick man or his relatives. But when, as is almost invariably the case, the patient is too poor to meet such a call, the expenses become a charge upon the funds above alluded to. The cost of treatment in the Hospital is not large. It is covered by 80 *sen* daily, per head, and this includes every outlay required by the case. We

may add that the public expenditure on account of the epidemic this year—excluding the cost of medical inspection of vessels and disinfection of passengers at Nagaura, and excluding also the special outlay made by towns and villages—is estimated at 188,000 *yen* for the whole Prefecture of Kanagawa. Of this total, the sum absorbed by the Yokohama Hospital alone, up to August 14th, was 19,400 *yen*; being an average of 431 *yen* daily. An important item is the supply of pure water. There are many streets in Yokohama where either the wells have been condemned as unfit for drinking purposes, or the people are too poor to pay the price demanded by water-carriers in consequence of the long continued drought. These streets are visited at frequent intervals daily by water-carts, bearing a notice "Pure water supplied gratis," and each house is furnished with as much water as it requires. An immense boon to the lower classes at such a time as the present, this arrangement necessarily entails no inconsiderable outlay. When we remember, also, that in cases where, among the inmates of closely packed lodging-houses, or the crowded work-people in tea-firing godowns, &c., a number of cholera-seizures have been reported, it has been deemed necessary to isolate as many as 540 persons at one time, some idea may be formed of the strain upon the resources of the Prefecture.

One other subject, briefly alluded to in a preceding article, requires a few more words. We have said that in the case of children left destitute by the death of their parents their maintenance is provided for at the public expense. It must not be understood, however, that a particular fund is set apart to meet such emergencies. In Japan, rules for the treatment of castaways or paupers have long existed and are carefully enforced. Children deserted or left destitute by their parents, and having no relatives to care for them, are taken by the Headman (*Kocho*) and supported at the cost of the district or village. An annual grant of seven *to* (about 3½ bushels) of rice, or the equivalent in money, is made by the Central Government on account of each such child, and this is supplemented by whatever amount may be necessary from the local taxes. The child is supported thus until it is 13 years of age, or until it is adopted into a family capable of maintaining it. Of this provision it is possible, of course, to take immediate advantage in the case of a children whose parents are attacked by cholera. But it often happens that a mother does not like to be separated from her child, and begs that it may be carried to Hospital with her. In that event the little one is placed in the convalescent ward, under the care of a

healthy nurse provided by the authorities, so long as its mother is under treatment.

It will, we think, be readily admitted that in all the arrangements here described the Japanese Authorities have shown most praiseworthy zeal and prudence. We do not venture to say whether or no their system is the best possible. Indeed, it seems to us that considerable improvements might be effected by adopting Dr. VAN DER HEYDEN'S suggestions. But the case as it stands does them very great credit, and we are disposed to think that few countries, whatever be their pretensions, can show a better record.

#### THE SILVER QUESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Let me through the medium of your columns call the attention of Englishmen and Germans to the condition of affairs resulting from the methods applied to effect the depreciation of silver bullion, and to the injury suffered by the material interests of those engaged in the prosecution and development of trade and commerce in the Far East, as well as in all countries using a silver currency. The efforts of these financiers have brought down the price of silver to that extent that the bullion value of the Mexican dollar, and the silver *yen* of Japan is only about 73 cents in gold. The rupee of India has been correspondingly reduced in value. The result is that a barrier, equal to a tariff of 27 per cent., has been erected against commercial interests of all descriptions that are in any degree involved with the commerce of silver using countries. It is a question to-day that vastly overshadows Home Rule so far as the prosperity of the English Empire is involved, and has interest for Germany far above any other matter that now occupies the attention of the well wishers of Fatherland. There is an apparent strife between England and Germany at this time for the control of the trade of China and Japan, and they, with the other Treaty Powers, are now determining the measure of liberty that shall be enjoyed by Japan in the regulation of her affairs financial so far as her tariff is in question. For years the governments having treaties with Japan have been deliberating, disputing, and doubting whether a 5 per cent. or a 10 per cent. average duty should be allowed to be collected. But while the negotiations have been dragging their slow length along the financial kings have handicapped the interests of the merchant princes to the extent of 27 per cent., and the merchant princes have blindly aided them to attain this result. In the crusade against silver the manufacturing and commercial classes have marched abreast of the manipulators of exchange in the interests of holders of securities fetching fixed incomes, never apparently giving a thought to the inevitable result that would follow the cheapening of silver bullion—through the shrinkage of the value of the coined dollars of Mexico, the *yen* of Japan, the rupee of India, and the units of value in all silver using communities. The shrinkage of 27 per cent. in the value of such monies is now demonstrating to the interested world of commerce, and the manufacturers as well as the merchant princes of the world, that all enterprises based upon the commerce of the nations are being destroyed in the interests of the money manipulators pure and simple. The welfare of the millions is sacrificed to the opulence of the gold

aristocracy. The action of the United States Congress, during its present session, gives evidence that the supine indifference of the people to this question of silver depreciation is a thing of the past. The condition of the working masses in Europe is fast assuming a phase so aggravated that amelioration must be speedily found or the foundations of society will be loosened, and wealth, both gold and silver, will be insufficient to sustain the assaults of frenzied discontent. The cheapening of silver has cheapened the bread the poor eat, but at the same time it has destroyed in a large measure the means through which the poor earned wherewith to buy bread at any price—cheap bread and no work for the bread winner is a mockery of a diabolical type. The efforts of Bismarck to further the interests of German trade in the east are more than nullified by the course of the financial methods developed at home—as seen in trade here. The merchant in Japan contracts to deliver merchandise at a price based on the rate of exchange at the time of making the bargain. He is a German competing against an English firm, or *vice versa*. Competition is keen, narrow margins of profits are figured on to secure the business. When delivering time arrives he receives the number of dollars named in the bond, but finds that in pounds sterling or rix marks he is away behind on the transaction, because of the fall in exchange resultant from the continuous depreciation of the silver money in which he is paid. So long as the present conditions envelop trade, only disaster can ensue. No set of merchants can make even balances in the face of the serious losses entailed because of the fluctuations in silver value. The interests of British trade could be more speedily conserved if the English Government would act in behalf of its manufacturers, merchants, and incidentally, its labouring communities, by giving stability to the value of silver, than by all the efforts of the corps of officials who have received imitations that they should use their endeavours in fostering trade for British merchants. The United States Congress may yet be the deliberative body which, obeying the voice of the people, will ordain that silver shall again take the place from which English and German financiers have removed it. It was by a slender majority only that the free coinage of silver was defeated in the present Congress, and the indications of the times plainly foreshadow that the next Congress will legislate in favour of free coinage of silver as well as of gold. It has been hinted that the low price of silver was reached through the exertions of the exchange manipulators, with the hope that the suggestion might have influence on some of the weaker-kneed members of the Congress of the United States, and induce some action as against the continued coinage of the two millions monthly now ordained by the statute. But the project failed. The amount of injury which the commerce centering in the Far East has suffered because of the war on silver is beyond calculation. The immediate effects have been bad; the ultimate results, flowing from present losses, no human being can tell. The gold standard advocates are the devastators of all interests outside of those inhering to fixed incomes that are payable in gold. All the world besides suffers that they who are now arrayed in purple and fine linen may be yet farther removed from the source from which flows all their wealth and opulence.

It may be that neither in England nor in Germany the people make themselves felt through Parliamentary action to such an extent that the governments will listen to their demands, but in the United States, the masses have through their representatives decided that so far as that country is concerned they will have silver on the old ratio with gold. Free coinage for silver will be one of the issues on which the elections will hinge in the United States when the members of the next Congress are elected. Free coinage in the United States means the resumption of the old relations

between gold and silver, the world over. The fact that the U.S. House of Representatives has passed a bill ordering the Secretary of the Treasury to pay out a surplus of 70,000,000 in redemption of bonds outstanding, tells surely that silver will be made to hold its place with Americans. It would appear to be eminently proper for the English and German merchants doing business in Japan and China to combine in making such representations regarding the situation as will demand the attention of those in authority and who wield the necessary powers. A statement of cogent reasons for the adoption of some measures of relief, looking to some action that will give to silver a trustworthy value, if submitted to the boards of trade in the commercial centres of both England and Germany, could not fail to have a good effect; materially hastening the time when silver shall be again recognized as a fitting adjunct of gold in the marts of trade the world over. "The gods help those who help themselves." It behoves the merchants of the Far East to give what aid they may in furtherance of what they most earnestly desire. Drowning men catch at straws. While there is even a remote chance that concentrated efforts on the part of those interested in the welfare of the commercial affairs of Japan and China may bring the desired relief, the attempt should be made. So it seems to

Yours truly,

Yokohama, August 16th.

[We entirely agree with our correspondent as to the advisability of such a step on the part of foreign merchants in Japan. Indeed the same recommendation has been made more than once in these columns.—Ed. J.M.]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I quite agree with your correspondent "X." that something should be done (if possible) to set commerce on its legs again, and promote enterprise and expansion; but I cannot help thinking that X. is somewhat mixed in his ideas upon the "silver question."

He speaks of the "crusade against silver," and attributes the depreciation of that metal to "financial kings," and "the manipulators of exchange."

I should like a little explanation from him upon this point, as I have been and am still under the impression that the fall in silver, as well as in other commodities, has been brought about by the abundance of the former in comparison with the scarcity of gold.

He says again, "The cheapening of silver has cheapened the bread the poor eat." How? The cheapening of silver in silver using countries would increase the price of bread; and in gold standard countries it would not affect it at all, any more than the cheapening of sugar or iron. The fact is, that, silver and bread, and most other articles have got cheap together, and maintain their relative values pretty accurately, the difference being rather in favour of silver, which has not cheapened so much as most other things.

I fancy that the people of England "make themselves felt through Parliamentary action" quite as much, and a good deal more promptly than the people of the United States; and in coupling England and Germany together in this connection, X. betrays much ignorance of the constitutions of those countries. The people of the United States even are tied to a government for four years, while the people of England turn theirs out whenever it ceases to carry out their ideas.

I am quite sure it would be a splendid thing for the United States to have bi-metallism established throughout the world, but I am not so sure that it would be so good for England, who occupies an unique position as compared with the rest of the world.

Lastly, gold and silver are now quoted at their actual market values. If you establish a fictitious value for the latter, how will you be able to maintain it? Will not the production of silver, like the

production of every other article, affect its value, and cause a difference between bar silver in the market, and silver which has been stamped at the Mint, as now actually prevails in the United States?

The United States Government is not able to buy silver and pay for it with 1,000 silver dollars, then stamp it at the Mint and turn out about \$1,150.

Why does not England generously come forward and help the United States to work of their old stock at some such figure?

I am, Sir, yours respectfully,

CENT PER CENT.

Yokohama, August 18th, 1886.

[To answer the questions and points raised in this letter would oblige us to re-write much that has already been written more than once in these columns.—Ed. J.M.]

TO THE EDITOR OF THE "JAPAN MAIL."

At the hazard of intruding upon your space, I cannot allow it to appear that "Cent per Cent," knows all about silver, although the business of cent per cent operators should bring some financial knowledge to one of average smartness in the fraternity. It is necessary to put matters very plainly to get at the capacity of the confirmed advocates of the gold standard. I thought I had done that in the article criticised by "Cent by Cent," but I find I failed, so you will excuse my using exact terms that no one or more persons should be incapable of understanding. I mean by the crusade against silver, by way of explanation, the action of the German Government, in 1873, in demonetising silver, and the course of Holland and Sweden and Denmark in the same direction immediately after, and the action of the United States in 1876, when Mr. Bontwell, then Secretary of the Treasury, smuggled through Congress an Act making silver a legal tender for five dollars only, and stopping the coinage of silver dollars. England, upon her resumption of specie payments, subsequent to the strain upon her monetary resources incidental to the Napoleonic wars, ordained that the Bank of England notes should be redeemed with gold. England was the pioneer in the war on silver. The Latin Union, France, Italy, Belgium, and Switzerland, mutually agreed to coin a limited amount of silver, that should be current in the countries composing the Union. Free coinage of silver was prohibited in the countries that had enjoyed the blessings of a double standard of gold and silver. All the silver coins of the countries named above held their value within the confines of the country minting them, and have the same value abroad, barring ordinary exchange discounts. That is to say, the silver coins of gold standard countries have a home value: the dollar of the United States is as good as a gold dollar in all transactions in the United States. The silver coins of England pass current with English gold at home. The francs and livres of France, Switzerland, Belgium, and Italy are interchangeable with gold within the Latin Union confines. So it happens that if any volume of any of these coins find its way to any other land, they have a value equal to the relative values of the gold coins of the various countries minting them, and do command their value in gold, minus the cost of transportation, insurance, and a margin of profit agreeable to the purchaser. But the dollar of Mexico, the yen of Japan, the paper of India, and the units of value of the exclusively silver using countries, are worth only their bullion value outside the limits of the countries minting them, because they are not interchangeable with gold where they are minted. Surely "Cent Per Cent," can understand the proposition that the stoppage of the free coinage of silver in gold standard countries has been a war on silver? It has been a game of help yourself and cripple your neighbour; proving in the sequel a Boomerang diversion. The bread question is answered by "Cent per Cent" himself. The fact is that silver and bread, and most other articles, have got cheap together and maintain their relative value pretty

accurately, the difference being rather in favour of silver, which has not cheapened so much as most other things. The bakers in England cannot be considered to include the "people," as in comparison with the United States, where the suffrage not being limited by freehold and income restrictions, is the prerogative of the citizen as his birth-right, so I will not acknowledge to ignorance so deep as is charged. "Cent per Cent" tells you that he is "quite sure it would be a splendid thing for the United States to have bi-metallism established throughout the world," but he is "not so sure, that it would be so good for England, who occupies an unique position as compared with the rest of the world." I hold that what would be good for the United States would be also beneficial for all the nations, England probably reaping larger advantage than any other gold-standard country. The silver using nations, of course, would be the immediate gainers if their coins were again given the values they possessed at the era of the free coinage of silver the world over, on the old established ratio between gold and silver. "Cent per Cent," says, lastly, "gold and silver are now quoted at their actual market values. If you establish a fictitious value for the latter, how will you be able to maintain it? Will not the production of silver, like the production of any other article, affect its value, and cause a difference between bar silver in the market, and silver which has been stamped at the mint, as now actually prevails in the United States?" Ye gods! how easy it is to ask questions where one thinks the question a hard nut to crack. I will graciously insinuate that the silver turned out by the English mint, the German mint, and the mints of the gold-standard countries everywhere, holds the same relative value to gold that it does in the United States, the impress of the government upon gold and silver makes it fiat money, and the faith in the government gives such money its currency value all the world over. The United States does not invite England or any other nation to "generously come forward and help her to work off her old stock of silver at any figures," but the United States Government, being a government of the people for the people, and by the people, being based upon the intelligence of the people, a people as proud and independent as any that to-day is fashioning the affairs of the present and moulding the future, does ask the nations that have put the seal of their condemnation on silver as money, that they desist from their methods in the interest of the greatest good to the greatest number. The United States is the refuge of the oppressed of all lands, and she honours herself superbly by adhering to the coinage of silver, that it may not be utterly degraded on the face of the earth. "Cent per Cent" probably holds as some other men do in Yokohama, who think they are wise on the silver problem, that the dollar of the United States is of the same value as the Mexican dollar and the silver yen of this country, and not better. Now let me say that life is by far too short to attempt to educate one who seems to be entrenched so completely within the gold standard advocates' reasons on this silver question. The world of trade and commerce shows indubitable evidence that there is some cause that is bringing disaster to the enterprises of the nations. England feels it as sharply as any and will no doubt heed the piteous cry that is raised by a discontented populace for relief from the situation. X.

August 19th, 1886.

### BRITISH CONSULAR TRADE REPORT FOR NAGASAKI FOR 1885.

H. M. CONSULATE, NAGASAKI,  
JUNE 10TH, 1886.

SIR,—I have the honour to forward to you my report on the Trade and Shipping of this Port for the year 1885, based on the following Returns, which have been, as is customary, compiled from the statistical tables published by the Bureau of Japanese Customs:—

- 1.—Import Trade.
- 2.—Export Trade.
- 3.—Table showing trade to foreign countries.
- 4.—General Shipping.
- 5.—Treasure Imported and Exported.
- 6.—Return of Duties, &c.
- 7.—British and Foreign Residents and Firms.

The Trade of the past year as compared with that of 1884 was:—

	1885.	1884.
Imports .....	£233,468	£171,148
Exports .....	£611,845	£675,908
	£845,313	£847,056
Decrease in Exports .....		£ 64,003
Increase in Imports .....		£ 62,320

Actual decrease of Trade .....

The general depression, which has been so marked a feature of the trade of this Port for many years past, continues, and there is little prospect of any early improvement, though the export of coal will no doubt always be good, and may increase.

The trifling increase in Imports is accounted for by greater activity in Kerosene, Flour, Drugs, Chemicals, Hides, Sugar, Raw Cotton, Machinery, and Rice.

The decrease in Exports is attributable to an absence of demand for Rice, Earshells, and Tea; there was, however, an increase in the Export of coal and tobacco.

Re-exports, principally to Korea, were large, and amounted to £88,887 as against £50,100 in 1884.

#### IMPORTS.

The demand for cotton, woollen, and other textile fabrics is, as has been mentioned on former occasions, steadily decreasing; the direct imports are exceedingly small, there being a better choice of such articles in Kobe.

The business in metals and their manufactures has been slightly brisker, owing probably to a larger demand by the Japanese Iron Works established at this Port.

Rice was at one time rather heavily imported in consequence of an expected short crop, the amount for last year was 1,915 tons, as against 90 tons in 1884.

This article shows a large increase, but is entirely in the hands of Chinese; the Imports represent a value of £41,270 as against £28,542 in 1884, prices having varied between \$15 and \$18 per picul of 133 lbs. avoirdupois.

KEROSENE OIL.—Fair sales were effected in January, but as holders advanced their prices deliveries fell off in February and March, the quotations then being:—"Atlantic" \$1.87, "Devon" \$1.70, and "Stella" \$1.63. A new brand "Chester" was well received in April at \$1.70. Shortly after this holders showed themselves anxious to reduce stocks, and a larger business was consequently done till July. Replying to the American market, prices advanced with small business in September, Japanese only buying to meet present requirements. This continued with slight fluctuations till December, when fresh arrivals caused prices to fall, and a brisker trade was done, "Gaslight," however, being unsaleable at \$1.68. Throughout the year a larger quantity, by some 94,860 gallons, changed hands than in 1884; upwards of 300,000 gallons were however re-exported.

SUGAR.—A portion of the importations of this article consists of refined kinds prepared in Hongkong. The exact proportion cannot be ascertained, as the Customs returns make no distinction between the various grades of white

sugar, but it is estimated that during the year under review some 30,000 piculs of refined sugar have been brought here. The consumption is dependent to a great extent on the price increasing when sugars generally are low, and decreasing in favour of cheaper kinds when the contrary is the case. The Chinese were by far the largest sellers.

#### EXPORTS.

TEA.—Business in this article is still on the decrease, and shipments were rather less in 1885, than in the preceding year, though higher prices were paid owing to better quality and greater demand. With the exception of inferior leaf suitable only for North China, the market was closed in January, nominal prices for medium to fine being \$7 to \$9, and for fine to finest \$10 to \$14 per picul.

In May a few samples of new leaf showing more care in manipulation than had been taken for years past were brought in, but the new season did not fairly open until June, when some 720 bales changed hands at prices ranging between \$9 to \$15 per picul. Early in July floods prevailing throughout this part of the country interfered very much with the arrival of supplies, and all kinds advanced from \$1.50 to \$2.

Stocks came forward more freely in August, but buyers held off and sellers remained firm; prices were for common to good \$2.50 to \$5, and for finest up to \$15. Business was small and dull during the next two months, but in November a fall in freights induced purchasers to come forward and prices were slightly firmer. In December supplies were nearly exhausted, and owing to a well maintained demand there was a substantial advance in prices.

TOBACCO.—The operations during the past year show an increase over 1884 of upwards of 900,000 lbs., valued at about 8,400 pounds sterling. This was due to a heavy crop, which, however, proved very inferior and disappointing, it was utterly unsuited for the European markets and purchasers were therefore almost entirely confined to Chinese.

CAMPHOR.—There has been an increase in this export during the past year of about 326,000 pounds representing a value of rather more than 10,000 pounds sterling. During the first four months of the year under review there was strong inquiry for this article, and much competition by the Chinese, combined with comparatively scarce supplies, caused prices to rise, quotations in April reaching up to \$13.50 per picul. In May there was less activity with lower prices, but the market became excited in July, a considerable quantity changing hands at \$14.60. After a slight fall prices went up to \$16 and \$16.25 in August, and continued firm till October, when a strong advance took place and sales were effected at \$17.20. Early in November there was a strong demand from Hongkong and prices went up rapidly to \$22, but requirements being satisfied, there was a fall to \$19, after which there was a further drop to \$17. Throughout the year shipments were made to England and America, and to Hongkong for India.

RICE.—Owing to low prices at home and high ones here little was done in this article, only 5,300 tons being exported as against 29,000 tons in 1884. Rates were slightly higher in January than at the close of 1884, "Higo" not being obtainable under \$2.37 and "Hizen" at \$2.30 per picul. In February prices rose, but declined in March to \$2.50 and \$2.42 for "Higo" and "Hizen" respectively. Political affairs between Japan and China looking more settled, an easier feeling was produced, and prices receded in April, "Higo" being quoted at \$2.40 and "Hizen" at \$2.32. From that time till September prices again rose, principally owing to the reported failure of the potato crop, and "Higo" finally reached \$2.70, "Hizen" being \$2.60.

Prices became easier when the amount and quality of the new crop was thoroughly ascertained, but though speculative contracts for December delivery were reported at \$1.80, "Higo" was obtainable in September at \$2.55 and "Hizen" at \$2.45. In October there was a marked decline, "Higo" being quoted at

\$2.15 and "Hizen" at \$2.05, after which prices hardened in December to \$2.40 and \$2.30, stocks being: "Higo" 8,000 and "Hizen" 10,000 bales.

**VEGETABLE WAX.**—This article, principally exported to Hongkong for transshipment, opened at \$16.75 per picul on purchases by Chinese, but afterwards fell to \$12.10 and \$12.40. In April there was a strong demand and prices recovered to \$16, the rise, did not, however, last long, as in May prices fell to \$14.25. After this they ranged between \$14 and \$15.75, with a fair demand, the year closing at \$16 firm.

**WHEAT.**—There was a good demand for this article in January at \$1.70 per picul for "Higo," but more business was done when prices fell five cents in February. After this there was a rise to \$1.77 and \$1.80, but in May prices were down again to \$1.73, and shortly after fell to \$1.40. The news that the season's crops would be short produced a rise, and in August sales on Chinese account took place at \$1.95 and \$2. stocks, amounting to 10,000 bales, being held firmly at those rates. Later on prices dropped to \$1.70 and \$1.75, closing at \$1.75 and \$1.90 at which 5,597 bales were sold in December.

**HIDES.**—A considerable trade has been done in this article at fairly remunerative prices. These cow and buffalo hides come principally from Korea, and as a Customs system of drawbacks does not exist here, it is not improbable that this branch of business will find its way to the more favoured China ports.

**TAKASHIMA COAL.**—At first the demand was in excess of the supply, large coal not being procurable; towards March the output increased somewhat, after which ample supplies came forward.

Stock on 1st January, 1885 ..... Tons 5,405  
Takashima net output in 1885 ..... Tons 276,928  
Nakanoshima ditto ..... Tons 9,437

SHIPMENTS.		291,770
To Hongkong .....	Tons	59,288
To Shanghai .....	Tons	42,900
To Foochow .....	Tons	2,331
To Chefoo .....	Tons	1,093
To Tientsin .....	Tons	492
To Yokohama .....	Tons	33,921
To Kobe .....	Tons	900
To Osaka .....	Tons	230
To Hakodate .....	Tons	1,745
To Nagasaki .....	Tons	127,428

Tons 270,328  
Stock on January 1st, 1886, Tons 21,442.  
Net proceeds of the above sales and shipments £218,256. Prices have fluctuated between \$4.75 and \$5.50 per ton for large, and \$3.25 and \$3.40 for small.

Owing to unavoidable difficulties in obtaining returns from the coal mines at Karatsu and Miike I am unable to include them in this report.

The other articles of export do not call for any special notice, as they are not only unimportant but almost entirely in the hands of Chinese traders.

#### SHIPPING AND NAVIGATION.

The returns show a decrease of 10 ships entered of 10,612 tons as compared with 1884, and this is entirely attributable to a serious cholera epidemic which virtually closed this port to business during more than two months, in consequence of rigorous quarantine commencing on August 29th and which was not raised until November 11th.

In British shipping the decrease is very marked, there having been 55 vessels of 35,234 tons less in 1885 than in the previous year; it was nevertheless 39 per cent. in vessels and 45 per cent. of the tonnage of all the ships which entered here, and 53 per cent. in vessels and 61 per cent. in tons of the purely foreign shipping. Out of the 236 vessels entered only one, of 1,588 tons, cleared in ballast. The 236 ships entered during the past year carried 11,173 officers and men, the 271 of 1884 carried 12,074.

In Japanese shipping there was a decrease of 19 vessels and 22,876 tons.

There has been a notable increase in German shipping of 64 vessels and 31,244 tons or 72 per cent. in number and 50 per cent. in tonnage as compared with 1884; this is entirely due to charters made with the Mitsui Bishi Colliery Company to carry coal to China. The steamers engaged had considerable carrying capacity when compared with their size, and varied between 1,197 and 387 tons register per ship, the running expenses being most economical and comparing favourably in this respect with merchant steamers of other foreign nations. One vessel, the "Ingo," made 47 trips between this and Shanghai during the past year. Russian shipping shows a decrease of 14 ships of 10,045 tons and the American shipping of one vessel and 2185 tons.

**EXCHANGE.**—As mentioned in my report for 1884, Banking business is unimportant here and governed by rates ruling at Yokohama and Kobe, with such alterations as may be necessitated by the local demand and supply of coin. Sight exchange on London (Bank drafts) varied between 38/64d and 38/4d, the latter rate ruling in December last.

On Yokohama, Bank drafts were  $\frac{1}{2}$  per cent. premium till November, when they were at par, falling in December to  $\frac{1}{4}$  per cent. discount. On Hongkong they fluctuated between  $\frac{1}{2}$  per cent. premium and par.

The year opened with Japanese paper currency at a discount of 25 per cent. against dollars, and the rate fluctuated between that and 15 per cent. until early in April, when consequent on a peaceful settlement of the controversy between Japan and China in regard to Korean affairs, the value steadily improved to par by the end of May, at which it has since remained, occasionally commanding even a trifling premium by reason of its more portable form than silver.

This appreciation of native currency has not had any noticeable effect in lowering the cost of Japanese wages or articles in common use among foreigners, and the expenses of residents are therefore proportionately heavier.

The following foreign banks are represented by agents:—The Hongkong and Shanghai Banking Corporation, The Chartered Mercantile Bank, the Chartered Bank of India, Australia and China, and the New Oriental Bank.

**FREIGHTS.**—By vessels other than mail steamers freights have been:—To Hongkong \$1.30 to \$1.75; to Shanghai \$1.10 to \$1.80; and to Yokohama \$1.10 to \$1.20 per ton.

The number of foreign residents in Nagasaki during 1885 was 671, of which 73 were British subjects and 628 Chinese.

The Nagasaki ken has 710,566 inhabitants, occupying 146,784 houses, and the town of Nagasaki, exclusive of suburbs, has 33,518 inhabitants and 6,975 houses.

	1885.		
	1885.	1884.	1885.
Japanese Messages .....	142,250		
Foreign Messages (outward) .....	15,134		
Foreign Messages (inward) .....	15,874		

The figures marked (1) and (2) appearing in the second return added to those marked (3) in the first table represent the entire International traffic of Japan for 1885.

**PUBLIC WORKS.**—Considerable progress is being made with the dredging of this harbour, and extensive sanitary improvements are about

to be commenced in and about the town of Nagasaki.

**GENERAL REMARKS.**—The communication by water between this Port and many places in Kiushiu and in the Inland Sea up to Kobe is kept up with considerable regularity by 9 small trading steamers, running at frequent intervals; the number of passengers, and the amount of native produce carried by them is large.

The two Japanese ship-building yards at this port have been fully occupied during the year under review and turned out 87 small coasters and colliers, of which two were steamers. In 1884 business was dull, and the late briskness was largely attributable to the conversion of numerous Japanese junks into vessels of a more or less foreign construction.

The Nagasaki Dockyard and Engine Works continue to be under the same management, which is now prepared to undertake the building of vessels of large tonnage; these works contain all the latest improvements in the way of machinery, &c., and can turn out castings of up to 30 tons in weight.

29 vessels of 60,524 tons were docked, and 9 vessels of 5,585 tons were put on the patent slip during the past year; out of the former 9 were men of war of 20,802 tons, of which 3 were British of 8,661 tons.

The stone dock is still the only one east of the Cape of Good Hope which can take in large ironclads.

The interests of Insurance Companies are largely represented here, there being 16 British, 4 German, and 1 Chinese agency.

Of steamship Companies there are 5 agencies: 3 British, one Japanese, and one French.

There are 8 British and one German general agencies.

I have the honour to be,

Sir,

Your most obedient, humble Servant,

J. J. ENSLIE.

The Honourable

Sir FRANCIS PLUNKETT, K.C.M.G.,

H.M.'s Envoy Extraordinary and Minister

Plenipotentiary,

&c., &c., &c.,

Tokyo.

P.S.—Appendix A is a return of shipping for Kuchinotsu, the port of shipment for Miike coal.

## THE EXPORT OF RICE.

(Translated from the *Fiji Shimpo*.)

The prospect of a plentiful harvest this year has had an effect upon the price of rice, which is gradually depreciating. Paradoxical though it may seem, a good harvest brings suffering and hardship to farmers in this country, for if the actual quantity of rice produced be great, its price falls still more markedly; and as the money, with which they pay taxes and purchase necessities, is obtained only by disposing of their rice, it makes no difference to them whether they have two *koku* of grain worth 6 *yen* per *koku*, or a *koku* and a half valued at 9 *yen*. This is an economical anomaly peculiar to Japan in its present condition.

The suffering of farmers consequent upon the depreciation of the price of rice produces a benumbing effect upon the commercial and manufacturing classes, and any inactivity among the latter classes in turn seriously affects the farmers. That the economical condition of the farming class bears directly upon the trade of the nation, will be easily comprehended when it is remembered that the farmers make up the greater proportion of the population, and also that a change in their income produces a more important result on the resources of the poor than on those of the rich.

The average expenditure of the latter is really fixed, while that of the former is necessarily fluctuating, because, as they are obliged to deny themselves many daily necessities when their earnings are small, they will spend all the surplus, whenever such a surplus can be obtained, in restocking themselves with such necessities. The total quantity of rice produced is about 30 million *koku*, which, at a rate of *yen* 5 per *koku*, is worth *yen* 1,500,000,000. Now, suppose that the price of rice has appreciated by 20 per cent.; there will be forthwith added *yen* 30,000,000 to the aggregate income of the farmers, which addition will be expended in the purchase of various articles; while, if there be a decrease by that amount, exactly so much purchasing power will be taken away from them. It is thus plainly evident that the state of the farmers' purse has a vital influence on the activity of trade. Not simply for the sake of the rural population, therefore, but also and principally for the sake of the nation at large, it is of pressing necessity to find out some mode of averting the depreciation of rice. As repeatedly pointed out in these columns, the best and only safe course for our farmers to adopt is to substitute sericulture for the cultivation of rice. But we cannot expect this course to be practically adopted in a short period of time, and it is therefore necessary to resort to a more easy and expeditious measure. And the measure we have in our mind is the exportation of a certain quantity of rice yearly to foreign markets, so as to keep the price of that cereal practically at a stationary point. It may be supposed that 30 million *koku* of rice—the total yearly produce—is not enough even to feed the population of this country, but in point of fact there is a considerable excess of rice over the native consumption, for the bulk of the lower classes do not eat rice, their food being composed mostly of barley, potatoes, or wheat. There is, or rather was, also a circumstance which operated powerfully towards the over production of rice, and that circumstance was that, under the feudal system, each clan chief took care to hoard a vast amount of grain to meet any sudden requirements of warfare. Besides this, the limited means of transportation in former times engendered in farmers a tendency to retain any excess of their annual produce in their own granaries. These conditions have now been removed, however; and, moreover, the paying of taxes in money and not in grain as formerly, necessitates the sale of rice as soon as it is harvested. Unusual quantities of rice are therefore yearly thrown upon the market, and this circumstance has led to a ruinous fall in the price of that grain. It is thus of paramount importance to relieve the native market from the excess of the rice crop. But it may be urged by way of objection, that the exportation of Japanese rice will more or less bring down the price of rice in foreign markets, while the price in the home market will simultaneously increase, a condition which must cause great confusion. From a general point of view, however, we regard such contingencies as of little importance. Suppose that, by exporting our rice, we can raise its price at home by 20 per cent.; our farmers will be benefited to the extent of as much as 30 million *yen*, according to the calculation we have above made. Granting that the operation will be a loss, and supposing that the loss amounts to a few million *yen*, let the Government undertake the business, and the loss of a few millions will be more than set off by the increased income of the farmers and the revived activity of trade. The season of harvest being near at hand, we have thought it right to offer this advice to the authorities. Sincerely as we feel the desirability of this measure, we are far from regarding it as a permanent one, and if we urge its adoption now, it is only as an expedient to meet a pressing necessity of the moment. In the prosecution of this plan, the otherwise regrettable circumstance that our trade is as yet in its infancy will be a great help to the Government. Let it be but known that they have shipped certain quantities of rice to foreign markets, and immediately the price of rice will go up, for our merchants are incapable of preventing any such appreciation. It is of course undesirable that the Government should engage in trade, but in the face of the present financial derangement, it may be pardonable to resort to unusual expedients, if it be clear that a great benefit will be gained by such a step.

(We must confess that this is a pretty scheme. Out of the taxes which the people pay, a portion is to be spent on the export of rice, at a loss, in order that the same people may sell the remaining rice at higher prices to one another.—*Ed. J.M.*)

ARRIVED.

Per British steamer *Belgie*, from San Francisco:—Mr. Oliver Ames, Mr. Francis L. Peabody, Miss Gazelle L. Rulofson, Mr. R. C. Shannon, Baron A. de Chambrier, Mr. W. S. Smith, U.S.N., Mr. Robert Stewart, Jun., U.S.N., Mr. F. Yano, Mr. S. Satō, Mrs. S. Fujii, Miss M. J. Holbrook, Miss A. M. Kaulbach, Mr. S. E. Rochussen, Dr. P. B. C. Ayres, and Mr. Octav Norodorf in cabin. For Hongkong: Mr. and Mrs. J. Ruff, and Mr. Whelan in cabin.

Per American steamer *City of Rio de Janeiro*, from Hongkong:—Lieut. and Mrs. J. G. Mayne, Professor J. Milne, Messrs. J. J. Howard, Wm. Aitchison and servant, and Robert Jaffray and servant in cabin. For San Francisco: Hon. R. E. Withers, Mrs. Rowe and two children, Captain C. E. Hawkshaw, and Mr. F. E. Wells in cabin; and 5 passengers and 384 Chinese in steerage.

Per Japanese steamer *Tokio Maru*, from Shanghai and ports:—General Viscount and Viscountess Miyoshi and child, Messrs. Milburn, Isue, Kato, Okumura, Mrs. Royall and three children, and Captain T. Kasuya in cabin; and 3 Chinese and 3 Japanese in second class. For San Francisco: Captain A. H. Morse, Miss F. D. Game-well, and Miss F. Wheeler in cabin.

Per Japanese steamer *Niigata Maru*, from Hakodate:—Mr. and Mrs. Swartz M. D., Mr. and Mrs. J. O. Spencer and two children, Miss F. N. Hamisfar, M. D., Rev. C. W. Green, Miss Hampton, Messrs. Hargrave, Budd, Sell, M. D., and Isobe in cabin; and 25 Japanese in steerage.

Per German steamer *Stettin*, from Hongkong:—Miss Herschel, Mrs. Smith and family, Captain and Mrs. Ellis, and Mr. R. Schönbberger.

## DEPARTED.

Per Japanese steamer *Yokohama Maru*, for Shanghai and ports:—Mrs. Nagaura and two daughters, Miss Wynn, Miss Paton and child, Dr. H. Mayr, Messrs. Otani, Atsumi, Matsui, Fukugawa, Hatoyama, Hirokashi, R. Gaytan de Avala, S. Samuchi, Nio Kuroiwa, Kawaya, Takata, Watanabe, and Takatsu in cabin; and Messrs. Okunomiya, O. Yamada, Kameyama, Nakamura, Takata, Sento, Wada, Fujita, Kanda, Fujioka, Ah Swin Po, Ohira, Katani, Toyota, Fukuoka, and Watanabe in second class; and 2 Chinese and 82 Japanese in steerage.

Per Japanese steamer *Omi Maru*, for Kobe:—Mr. Yo-Sei-Shoku in cabin; Messrs. K. Hashimoto, S. Sotomura, and K. Matsumoto in second class; and 55 Japanese in steerage.

Per Japanese steamer *Satsuma Maru*, for Hakodate:—Mrs. Y. Kumagai, and Mrs. T. Tsunada in cabin; Mr. and Mrs. K. Goto and three children, Messrs. K. Ake, T. Nishida, T. Yokoi, and K. Kondo in second class.

## CARGOES.

Per Japanese steamer *Tokio Maru*, from Shanghai and ports:—Treasure, \$61,224.

Per Japanese steamer *Yokohama Maru*, for Shanghai and ports:—Treasure, \$10,000.00.

Per American steamer *City of Rio de Janeiro*, for San Francisco:—

## REPORTS.

The British steamer *Belgic*, Captain W. H. Walker, from San Francisco, reports light variable winds and smooth sea throughout the passage. Experienced heavy southerly swell off the Japan Coast. Time, 17 days 4 hours and 7 minutes. On August 14th, at 3 p.m., 35.32 N., long. 163.0 E. passed a junk bottom up.

The American steamer *City of Rio de Janeiro*, Captain Wm. B. Cobb, reports:—Left Hongkong the 10th August, at 3.48 p.m. Weather fine, moderate breezes from S.E., then light N.E. At 6.50 a.m., the 12th, passed Turnabout Island 15 miles off, at 8 p.m. heavy swell setting in from eastward, and barometer dropped from 29.79 to 29.40, sea, wind, and swell making fast. Wind from North to N.N.W., indications of a typhoon. At noon, the 13th, barometer 29.00 squalls very heavy. At 8 p.m. barometer 28.70 fearfully heavy squalls with much rain, and confused swells and sea. At midnight wind hauled more westerly with terrific force, barometer 28.65. At 3 a.m. the 14th wind changed to S.W., put the ship's head to the southward; sea and swell heavy, and much confused. At 9 a.m. moderating and barometer going up to 28.75-28.80, put the ship on her course. Wind hauling to S.E. with much rain. Sunday, the 15th, fresh breeze S.E., raining; 16th pleasant, wind E.S.E. to N.E.; passed through Van Diemens Straits; thence to port strong winds from N.E., pleasant with heavy easterly swell. Arrived at Yokohama, the 18th August, at 4.30 p.m. Passage, 7 days and 23 hours.

## LATEST COMMERCIAL.

## IMPORTS.

The Market has now lapsed into a very dull state, and no sales worthy of record have been made during the past week in either Cotton Piece Goods or Woollens, whilst the smaller sales of Yarn and poor clearances are indicative of the effects of the late "Bon" or of recent overtrading.

YARN.—Sales of English spinnings amount to about 600 bales for the week, and about 250 bales Bombay. The Market closes very quiet, and quotations are barely maintained, especially for Bombays.

COTTON PIECE GOODS.—Some sales of Prints have been reported, but otherwise there has been almost nothing doing.

WOOLLENS.—About 500 pieces Cloth were not reported amongst sales of last week and 1,000 pieces Mousseline de Laine have been sold since, but otherwise only small business is going on in contracts, of which the particulars are kept quiet. Most goods are held for higher rates than dealers are disposed to pay at present, in consequence of the advance in Wool on the home side.

White, No. 4	4.90 to 5.00
White, No. 5	4.10 to 4.15
Brown Formosa	4.50 to 4.60

## EXPORTS.

## RAW SILK.

Our last report was dated the 13th instant. Since then we have had an excited Market with some considerable transactions, resulting in the Settlement of 485 piculs divided thus:—Hanks 90 piculs, Filatures and Re-reels 355 piculs, Kakeda 40 piculs. In addition to these figures the *Doshinsha* has taken about 15 piculs for Europe, making the business for Export 500 piculs for a week.

Holders are very strong, and the up-country people excited with the prices obtained; at the same time buying is but partial and confined to few operators, many regular shippers considering that present prices are unduly inflated. The Markets abroad follow ours very slowly and at a great distance; for while last month's shipments now show a profit at home yet values in foreign marts are to-day about ten per cent. below those current here, so great has been the flurry on this side.

Arrivals come to hand daily and the Stock increases. Rumours of short crop are now put about to assist in pushing prices up still further, but we cannot find that there is any real cause for apprehension on this point; in fact the available supplies to date are about 1,000 piculs more than at the same date last year. The home trade is good; but from the most reliable data we imagine that there will be no lack of Silk for all comers, especially if the present basis of value be maintained.

At the close, buyers are holding off; and holders, while putting on a bold front, are a little uneasy, knowing well that with the present outlook in foreign countries there is room here for a decided fall.

There has been again only one shipping opportunity during the interval, but the *City of Rio* leaving to-morrow has a fair amount engaged for New York. The P. and O. steamship *Teheran* (14th inst.) carried 15 bales for London and 113 for France; of the latter quantity 18 bales were "Direct" shipments. Total Export from 1st July to date is now 1,359 piculs against 1,613 last year and 2,644 at same date in 1884.

Hanks.—Principal business in Good Medium Shinshu for Europe at \$625, with some fair Hachoji for same destination at \$560. Stock in this class is pretty large in spite of strong demand for the home trade; but holders are quite indifferent as to selling at present.

Filatures.—Large purchases at large prices by

two or three buyers during two or three days. Just now they seem inclined to pause and get breath, either for new flights, or, possibly, to retreat from some of their bargains. Among the business noted we observe the following chops:—*Rokkasha* \$800, *Tanyosha* \$780, *Hakusuru*, *Tenrusia*, and *Yamanashi-ken* \$770, *Tocisha* \$750, *Namsinsha* \$745.

*Re-reels*.—A fair amount of business in this class, both in *Bushu* sorts costing \$660 to \$680, and in medium *Josha* at \$700 to \$710. The crack chops have not been dealt in; for *Tortoise* \$725 might be listened to although \$715 is reported to have been refused for a parcel of *Five Girl*. Some *Koriyama* entered at \$710, while a few nondescript *Maibash* have been done at \$670 to \$690.

*Kakada*.—Sales are about 40 piculs on the basis of quotations given below. *Flag* chop, extra, has been booked at \$780, with *Black Horse-head* at \$720.

Export from 1st July	2,700	1,650	3,500
Stock, 20th August	4,900	4,400	2,650
Available supplies to date	7,000	6,050	6,150

## WASTE SILK.

In this department the pace has slackened a little. Settlements for the week being put at 400 piculs, divided thus:—*Pierced Cocoons* 100 piculs, *Noshi* and *Tama* 200 piculs, *Kibiso* and *Neri* 100 piculs. Native operators have also been in the field, but whether for Export, home trade, or speculation is not apparent.

Holders have practically had everything their own way and quotations are as per our usual list below. At closing there is less rigidity and a careful buyer might in some instances operate at a very slight reduction on the prices nominally current. At the same time any attempt to buy large quantities would soon result in holders asking more money again. Present prices attract supplies as the Stock list plainly shows.

The *Teheran* (14th instant) had on board 56 bales *Pierced Cocoons*, 54 bales *Noshi*, and 7 bales *Doppioni*, all destined for continental ports. Present Export is 919 piculs against 630 piculs last year and 743 piculs in 1884.

*Pierced Cocoons*.—Another parcel gone into godown on former terms. Business is not general as yet, and prices only approximate.

*Noshi* and *Doppioni*.—About 200 piculs have found buyers at pretty tall figures. Ordinary *Josha Noshi* has brought \$115, with good *Filature* at \$185. The Stock of *Doppioni* is now small, both home trade and Export drawing on it freely.

What remains is held for long figures and dealers talk of \$290 for good *Oshu*; buyers hitherto have not paid more than \$275.

*Kibiso*.—Some little doing in *Filature* at \$155, with ordinary *Bushu* at \$45 and *Neri* at \$22 uncleaned.

## QUOTATIONS.—(NEW WASTE.)

Pierced Cocoons—Good to Best	\$130 to 150

* * * Raw Stock—1,100 piculs Old, 3,800 piculs New.				
Waste Stock—600 piculs Old, 4,800 piculs New.				

## TEA.

Since last report transactions in Tea have been effected to the extent of 4,605 piculs of all descriptions, against 3,755 piculs in 1885. Sellers have succeeded in advancing their prices, and the past week's business has been fully one dollar over last quotations, the market closing firm. About 3,000 piculs of the Tea in stock is held by the native banks, so that there is only about 5,000 piculs on the market for sale. Fine grades and upwards have been nearly all taken up, and what remains is much deteriorated in cup and very dear. The only shipping opportunity during the interval has been the steamship *Devonshire*, which sailed on the 12th instant, with 26,695 lbs. for New York, and 191,050 lbs. for Canada, making a total of 217,745 lbs.

## NOW READY,

In 3 Parts, Demy 16mo, limp.

A ROMANIZED JAPANESE READER; consisting of JAPANESE ANECDOTES, MAXIMS, &c., in easy Written Style, with an ENGLISH TRANSLATION and NOTES. By BASIL HALL CHAMBERLAIN, Professor of Japanese and Philology in the Imperial University of Tokyo; author of "A Simplified Grammar of the Japanese Language," &c., &c.

PART I.—JAPANESE TEXT.

PART II.—ENGLISH TRANSLATION.

PART III.—NOTES.

PRICE, \$2.50.

The *Higo News* thus refers to the work:—

We have to acknowledge the receipt of "A Romanized Japanese Reader," consisting of Japanese anecdotes, maxims, conversations, &c., by Mr. B. H. Chamberlain, the author of the Grammar of the Japanese Language which was published a few months ago. The Reader is in three parts of convenient size, well bound, and the typography reflects much credit upon the *Japan Mail* office, where the work was printed. Part I. contains the Japanese text of the anecdotes, &c., Part II. an English translation, and Part III. is devoted to copious notes intended to give information concerning the persons and places mentioned in the Reader, to explain allusions, and in certain cases to bring out the literal meaning in a clearer manner than was possible in the translation. Mr. Chamberlain is such an acknowledged authority upon everything connected with the Japanese language, and has always been so thoroughly painstaking and conscientious in the preparation of his various publications, that students may well accept with confidence his latest work. In conjunction with the "Simplified Grammar" the "Reader" ought to prove of great benefit to all persons engaged in studying the language of Japan, and indeed to any foreign resident who wishes to speak correctly when venturing upon the vernacular.

London: TRÜBNER & Co. YOKOHAMA: KELLY & WALSH, Limited.

Yokohama, June 4th, 1886.

## NOW READY,

Demy 16 mo., limp,

"SOME JAPANESE VERBS," being a short but valuable Treatise on the use of JAPANESE VERBS of SAYING, SPEAKING, TELLING, &c., with their related Nouns.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUGUST 28TH, 1886.

### MARRIAGE.

On the 25th August, 1886, at Christ Church, Yokohama, by the Rev. E. Champneys Irvine, M.A., GEORGE JOSEPH EDWARDS, Esq., of Birmingham, to ANNIE DAISY, second daughter of William Bourne, of Yokohama. No Cards.

### SUMMARY OF NEWS.

MARQUIS HACHISUKA, Minister to Paris, is now on his way home to Japan.

MR. AOYAMA, Governor of Akita Prefecture, left Tōkyō the 22nd instant for his post.

THE Agricultural Association of Japan will hold a meeting the 11th of next month.

ON the 23rd instant the electric light was used for the first time in the Cabinet Office.

A HEAVY storm of rain and thunder visited Tōkyō and Yokohama, Friday morning.

THE Naval Department has instituted enquiries preparatory to establishing an arsenal in Hiroshima Prefecture.

A TELEGRAM from Shanghai intimates the departure for Japan of Mr. Hanabusa, Japanese Minister to Russia.

THE Korean Government is said to be satisfied with the steps taken by the Japanese Government as to Kim-yo-Kun.

A TELEGRAM received in the capital states that fire broke out in the Takashima Colliery the night of the 21st instant.

THE vacation at the Imperial Mint at Osaka will commence the 15th proximo, and the term this year will be forty-five days.

A TELEGRAM from Osaka, dated the afternoon of

the 24th instant, states that an explosion has taken place at the powder factory at Osaka Castle. Two workmen were injured.

A SURVEY for the construction of the new railway which it is intended to lay in the Sanyōdo will be begun in November.

A TELEGRAM from Fukui, dated the 22nd instant, announces that great damage to crops has been caused in that district by gales.

MR. HASEGAWA, assistant chief secretary of the Mint, who has been ordered to Europe, will leave Japan about the 1st proximo.

THE standing army of Japan numbers 34,000 rank and file, and the medical staff consists of one surgeon to every hundred men.

MR. KATSUMATA, Governor of Nagoya Prefecture, is about to visit Tōkyō on business connected with the subject of railway extension.

THE amount of camphor exported from Kobe during the first half of the current year was 20,800 piculs piculs, valued at yen 332,800.

ERUPTIVE typhus, which had lately been prevalent in Kyōto, has now greatly diminished and only eighteen patients remain in the hospital.

H.E. PRINCE SANJO, Lord Keeper of the Privy Seal, who had been staying at Nikko for some time, returned to the capital the 22nd instant.

MR. YOSHII TOMOJIRO, a Japanese resident in Germany, has applied to the Government for permission to marry a German lady at Hamburg.

H.I.H. PRINCE FUSHIMI arrived at New York the 26th July, and will visit Washington, leaving the United States about 11th August for Japan.

SEVERAL amendments to the present Shooting Regulations are under consideration, and a notification will be issued on the subject in October.

THEIR Imperial Highnesses Prince and Princess Kitashirakawa and Prince Nashimoto, who have been staying at Hakone, returned to the capital, the 21st ultimo.

THE Kanda Matsuri, which was to have begun the 14th of next month, has been postponed, in consequence of the prevalence of cholera, to the 15th of October.

THE Finance Department has ordered from Germany a set of engraving machinery to be used in the Printing Bureau. The cost is set down at yen 24,000.

A COPPER torii, 50 feet in height, which has been constructed in the Osaka arsenal for the Yasukuni Shrine at Kudan, Tōkyō, will be brought to the capital shortly.

A MEETING of ladies interested in the Charity Bazaar, which it is intended to open in November next, will be held at the residence of Countess Inouye the 16th of next month.

A COMPETITIVE exhibition of products of Hokkaido will be held at Hakodate in October.

Special reductions in freight and fares will be made by the Nippon Yusen Kaisha on the occasion.

MR. FUJIKURA, Chief Commissioner of the Lighthouse Bureau of the Communications Department, will start on a tour of lighthouse inspection about the 1st proximo.

CHOLERA in Tōkyō continues severe. The scene of its worst ravages is now the Kanda district. Two foreign residents of the capital have been attacked.

NEGOTIATIONS with regard to the recent fracas at Nagasaki are proceeding satisfactorily, a more reasonable spirit having replaced the original disposition of the Chinese.

It is stated that the Government have intimated to the Foreign Representatives that the Conference for Treaty Revision will be resumed at the Foreign Office on the 5th of October.

MR. JAMES TROUP, British Consul at Hyōgo, is about to return home on leave of absence to recruit his health. Mr. W. A. Wooley will take charge of the Consulate during his absence.

THE manufacture of handkerchiefs of hemp grown in Goshu, on an experimental scale only, has turned out to be such a great success that the business will now be engaged in extensively.

A RECENT ascent of Fujiyama has disclosed the fact that fiery vapours are now being emitted from fissures in the summit of the mountain in much greater volume than was the case formerly.

THE traffic receipts for the Ueno-Mayebashi and Shinagawa-Akabane Railways during the last month were yen 51,220, of which yen 34,052 were for passengers, and yen 17,167 for parcels.

INSTRUCTIONS have been issued to all garrisons by the Head-quarters Office enjoining the strictest care in guarding against any undue excitement among the soldiery consequent on the Nagasaki affair.

PRINCE NAPOLEON, who arrived at Osaka on the 19th inst., visited the Castle, Arsenal, and Mint, afterwards proceeding to Nara. He will remain about a week at Kyōto, and then return to Tōkyō overland.

THE new Russian Minister to Japan has intimated to the Russian Legation, Tōkyō, that he left Marseilles the 1st instant. According to other information he will arrive in Japan about the 15th of September.

THE railway line between Utsunomiya and Yaida (18 miles) will be opened for public traffic about the end of this month. The section from Yaida to Mishima Station (18 miles) will be opened about November next.

IN accordance with custom, all the military officials in the capital called on the 3rd instant on Viscount Miyoshi, newly appointed commander of the Tōkyō Garrison. Messrs. Ozaki, President of the *Taishin-in*; Takasaki, Go-

vornor of Tôkyô; Nishi, President of the Tôkyô Court of Appeal; and Takagi, President of the Court of First Instance, also visited the Viscount.

SEVERAL hundred fire-brigade coolies of Osaka have been utilised for the gratuitous distribution of pure drinking water to the inhabitants, who are regularly supplied at the rate of three pints per head per diem.

NEWS of a disquieting nature have been received from Korea. The King and the Bin Family appear to have been again coquetting with Russia, and the Chinese Government are said to be indignant.

ARRIVALS of tea from the producing districts both here and at Kobe have considerably fallen off, but stocks remain about the same, as foreign buyers have shown a corresponding disinclination to purchase.

THE grape crop in Yamanashi Prefecture has been a very large one this season, and prices are expected to be at least 10 per cent. above those of last year. The first of the crop will reach Tôkyô about the end of this month.

THE new palace at Hakone, which has occupied two years in erection, is built partly in Japanese and partly in foreign style. The timber used was brought from Fukagawa, Tôkyô, and the total cost of the buildings is *yen* 140,000.

THREE young ladies of Kyôto have been convicted of sporting male attire for the purpose of picking pockets. The fair and frail ones in their contrition confessed to having operated successfully at no less than seventy different places.

A SUM of *yen* 100,000 in gold, which was on board the Nippon Yusen Kaisha steamer *Shingen Maru* when that vessel was wrecked off Kii in November last, has been recovered, and the Government are taking steps to secure the money.

Kyôto is reported to have been much cooler this summer than Osaka or Kobe, and as the cholera commenced to diminish earlier at the ancient capital than at the ports, the former has received quite an influx of visitors from the latter places.

THE officials in the Sanitary Bureau in the Home Department are at present engaged in the compilation of draft regulations as to the treatment of all epidemics. The regulations will be issued shortly, to be enforced in the various open ports.

IN consequence of the approach of the date fixed for the resumption of negotiations with reference to Treaty Revision, in October, the Minister of State for Foreign Affairs and the foreign representatives will all return to the capital before the end of September next.

It was rumoured at first that Kim-yo-kun would be under police surveillance during his stay on the Bonin Islands, but the fact is that the police who escorted him to the island will return with the *Hidesato Maru*, and Kim-yo-kun will be as free as the other inhabitants of the island.

MR. ISEKI MORIYOSHI, the projector of the tramway between Tôkyô and Hachioji, is at present inspecting the plant of the Tôkyô Tramway Company to form an estimate of the working expenses of the new company. Official permission will be asked for shortly to establish the undertaking. The Kanda Carriage Com-

pany, the interests of which are threatened, is said to have protested against the new enterprise.

A REPORT from Kobe says:—"Judging from the steadily decreasing numbers of cholera cases in this part of the country—a decrease which has been maintained for some time—there is reasonable ground for believing that in a short time the malady will have ceased to occasion alarm."

REPORTS from various parts of the country describe the crops as magnificent in abundance and quality. In many places long spells of dry and hot weather have been experienced, but rain fell, generally, before any damage worth note had been done. Heavy dews at night have also assisted greatly in moistening the earth.

THE loan raised by the Naval Bonds will be expended in the establishment of admiralty offices, the construction of torpedo boats, and the equipping of men-of-war; and will also be devoted to the purchase of as much material as may be required from abroad. The amount to be spent for these purposes is set down at *yen* seven millions.

SEVERAL Japanese gentlemen, who consider that insanitation frequently arises from ignorance, have formed an association for the purpose of delivering lectures in the streets of cities and villages. Mr. Nishimoto, of Kyôto, who immediately received the permission and assistance of the Osaka authorities, commenced the movement in that city.

TRADE in Osaka shows continuous signs of revival, and the excellent prospects of farmers are expected to induce a further improvement in business. Traders are laying in stock to meet the anticipated demand, and cotton and linen goods have already appreciated from 25 to 30 per cent., silks 20 per cent., and manure, fish oil, and similar commodities 15 per cent.

AN officer belonging to Hiroshima garrison died recently of cholera, and in accordance with his oft-expressed wish the body was dissected. Examination of the bowels showed that they were swarming with microbes. An experiment was then made to ascertain what effect carbolic acid had upon microbes. One part acid in thirty parts of water produced no result, and when the strength was increased to one in twenty the mixture proved equally ineffective. Then one of the doctors present suggested trying vinegar made from plums, and this killed the microbes at once. Since then plum vinegar is said to have been extensively employed in cholera cases at Hiroshima, and with the most beneficial results.

IMPORTS show no sign of revival, country markets making no movement, and dealers consequently decline to increase their liabilities by further bargains, having quite enough to do at present in clearing contracts as they fall due. Yarns have been neglected, and Cotton Piece-goods have only been in small request, but several descriptions of Woollens have been sold in fair quantities at full prices. The Iron trade has not much improved, though the better feeling in the market reported last week continues. Good assortments of Wire Nails are of somewhat greater value, and the run on Tin Plates has reduced the stock to small dimensions. There is no change in the Kero-

sene market, buyers still holding off. There are large quantities of oil close at hand. Of four ships reported as passing New Anjer for this port last month one has arrived here this morning, and the others may all be in next week. The Silk trade is in anything but a satisfactory condition, and only a small business has been done. Prices, however, have gone no higher, and dealers are inclined to do business on the basis of offers made last week, but then refused. A good amount of business has been done in Waste Silk, though the buying has been far from general, on account of the high prices demanded. There is nothing to report in Sugar. The Tea trade continues large, and prices are up a dollar round, the market closing very firm. Heavy shipments have been made. Foreign Exchange has taken a decided turn upward, and closes strong.

#### NOTES.

THE *Nichi Nichi Shimbun* writes in the following strain with reference to the visit of the Chinese Squadron to Nagasaki:—"It is well known that the Chinese squadron now in the harbour of Nagasaki is on its way home from Vladivostock. From recent Korean correspondence it appears that Admiral Ting started on his voyage northwards with a fleet consisting of six men of war, and, touching at the port of Gensan, July 23rd, proceeded thence the following day in the direction of Vladivostock. The Chinese Government seems to have taken this step on account of the reported movements of Russia in the Korean peninsula in connection with her attempt to secure a port for naval purposes. It thus appears that China intended the cruise as an armed demonstration towards Russia. From the Russian point of view, it is of vital importance to possess a port open during the whole year, and there is no doubt as to the earnestness of the desire to obtain it. The occupation of Port Hamilton by England has undoubtedly afforded fresh incentive to Russia, and, although we are not sure that she will occupy Pok-chon by force in case peaceful negotiations result unsuccessfully, still it is beyond doubt that she is intent upon the accomplishment of her object sooner or later, in a peaceful manner or otherwise. Moreover, her territorial proximity to China makes it impossible to hope that the two countries will remain always on friendly terms; while the relations between England and Russia, though they have been peaceful since the conclusion of the Afghan frontier disputes, are such as give little hope of permanent stability. Should the dreaded encounter take place, it is certain that it will be in this part of the world. Between China and England these seems to be a friendly understanding, as may be seen from the complacent attitude of the former in the Burmah question. The presence of the naval squadrons of Russia, England, and China in the seas washing the Korean littoral, reminds us that things are not in a peaceful state under the eastern skies. The relations of China with Korea are so close and important in the eyes of the Chinese Government, that, in whatever light the actions of England and France in Burmah and Annam may be regarded, sovereignty over the little peninsula will be most jealously maintained by the Middle Kingdom. It seems reasonable, therefore, to regard the cruise of the Chinese squadron as an act of warning towards

Russia. But to interpret its entry into the port of Nagasaki as a menace to Japan, is quite another thing, and is in our opinion entirely groundless. For there is no circumstance in the relations between this country and China which calls for intimidation; neither is the display of four vessels of war enough to constitute a menace to Japan.

The *Yiji Shimpō* says:—The Chinese sailors' outrage of the 15th instant was no ordinary freak of drunkenness, and as the mob included some officers, the blame of either open or tacit permission of the undertaking attached to the Chinese commanders. We therefore demanded that a strong and firm policy be adopted to obtain a satisfactory indemnity. On calmer reflection, however, we find that there are circumstances which seem to require more lenient consideration of the case. Everything in China is still pervaded with the spirit of olden times, and the innovations which she has been forced to introduce are extremely imperfect, and in nothing so much so as in the case of her newly created navy. Warships have been constructed on the Western model, but she is compelled to entrust their management to foreigners, and the officers and crew are in an exceedingly bad state of discipline. Under these circumstances it is possible to conceive that the commanding officers were really unable to prevent their men from engaging in the tragical undertaking of the 15th, and we can forgive them so far as their motives are concerned. However, the violence committed remains just the same and must be atoned for in a satisfactory manner. For the future, a distinct and satisfactory assurance must be obtained from China that her war vessels will never again commit such a barbarous act on our soil. Should the assurance obtained be incomplete, we hope it will be demanded that no Chinese war vessel will visit our coasts until the discipline of her crew is improved to a satisfactory point. This demand may sound a little out of harmony with ordinary requirements, but, short of such a step, how can we feel certain that ports other than Nagasaki will not be disgraced by similar acts of barbarity by the Chinese sailors? If China is obstinate enough to reject our reasonable and peaceful demands, we shall have to resort to force in order to remind her of her own duties.

Telegraphic intelligence from Shanghai, received in Tōkyō, the evening of the 20th instant, stated that four Chinese men-of-war were on the point of leaving that port, their supposed destination being Nagasaki. The news caused some uneasiness, as such a step on China's part would not only indicate an unfriendly spirit, but could not fail also to complicate the negotiations. It has since transpired, we are happy to say, either that these ships have been diverted from their purposed course, or that their original destination was not as reported. At all events, they are not to visit Nagasaki. Meanwhile, of the four Chinese men-of-war lying in Nagasaki harbour at the time of the disturbance, two were ordered to put to sea, and though their compliance with this order was unavoidably deferred by boisterous weather, they probably left yesterday. There thus remain at Nagasaki only the Admiral's ship and another vessel now lying in dock.

The following telegrams are published by the *Nichi Nichi Shimbun*:—

Nagasaki, August 19th, 8 a.m.  
It is rumoured here that three Chinese and two Japanese men-of-war will enter the harbour.

Nagasaki, August 19th, 2.30 p.m.  
The Conference with reference to the collision between the police and the Chinese sailors will be opened to-day at the offices of the Prefecture, at 4 p.m. The Chinese will be represented by Captain Lang, Commander of the Admiral's ship, and the Chinese Consul.

Chinese residents are not doing any business, nor do they leave their houses.

Subsequent examination shows that, on the occasion of the disturbance, the Chinese sailors used bayonets, swords, and other weapons.

Nagasaki, August 19th, 6.20 p.m.  
Negotiations were commenced to-day at the Prefectural office. The Chinese were represented by the Admiral and Consul.

Nagasaki, August 20th, 8.20 p.m.  
Mr. Hayashi, the Chief Public Prosecutor of the Court of Appeal, has received telegraphic instructions to collect evidence relating to the recent disturbance with the greatest care, and to submit it to the Chinese Consulate.

It will be observed that there is a discrepancy in the above telegrams. One names Captain Lang and the Chinese Consul as the Chinese representatives at the Conference. Another says that the Admiral and the Consul had charge of the Chinese case. The latter appears to be the true version. It is confirmed by telegrams in the *Yiji Shimpō* and the *Hōchi Shimbun*.

The *Nichi Nichi Shimbun* takes the trouble—scarcely necessary as it seems to us—to expose the falseness of a grotesque account of the Nagasaki fracas published in a local English journal, the 19th instant. Not only did that statement refute itself by the extravagant and inconsequential nature of the incidents it set forth, but the language in which it was couched unmistakably betrayed the hand either of a foreigner imperfectly acquainted with English, or of a remarkably illiterate Englishman. Observing a curious coincidence between the circumstances detailed and the leading points of a telegram previously published by the Chinese Legation, the *Nichi Nichi* concludes that the statement came from a Chinese source. This seems not improbable. One item only appears to us worthy of comment. The compiler of the statement asserts that the accounts published by the *Nichi Nichi Shimbun* and the *Japan Mail* were furnished officially to those journals. That is absolutely false, so far as the *Japan Mail* is concerned. We have not had so much as one word of information in reference to this affair from a Japanese official source. But we are not surprised that a writer who could invent such a tissue of absurdities as that criticised by our Tōkyō contemporary, should throw in a few extra falsehoods about the journals he seeks to discredit. The *Hōchi Shimbun*, we may observe *en passant*, also alludes to this extravagant story, but dismisses it briefly as too absurd to be treated seriously.

As might have been anticipated, the Nagasaki affair has led to a trifling passage at arms between the *Nichi Nichi Shimbun* and the *Hōchi Shimbun*. When the news first reached Tokyo, there was a disposition in some quarters to regard the disturbance as instigated and directed by the Chinese Admiral and the officers of the squadron. The *Nichi Nichi Shimbun* deprecated such a notion, maintaining that, in the absence of the most positive evidence, there could be no warrant for attributing to the Chinese officers conduct in itself so extremely improbable. The position taken by the *Nichi*

*Nichi* was that the affair fell within the scope of ordinary judicial processes, and that no resort to diplomatic action ought to be necessary. These views did not suit the *Hōchi Shimbun* at all. It seemed to that journal that the telegrams pointed unmistakably to collusion on the part of the Chinese Admiral, and that the line followed by the *Nichi Nichi* was not only philo-Chinese but unpatriotic. "Our contemporary's hasty and unwarranted conclusion," writes the *Hōchi*, "cannot fail to hamper the negotiations." To commonplace intelligence this contention of the *Hōchi Shimbun* is extremely perplexing. Does that journal consider it a "patriotic" proceeding to endeavour to create serious complications between the Governments of Japan and China? To assume from the outset that Admiral Tei and his officers were privy to the disgraceful acts of violence perpetrated by their men at Nagasaki, would be to lay at China's door a charge which she could scarcely answer except by fighting. Perhaps that is the *Hōchi Shimbun's* idea of facilitating negotiations, and perhaps that is also its idea of "patriotism." If so, we must be permitted to say that every-day reason cannot exist in the *Hōchi's* moral atmosphere.

There is a curious suspicion in the air, with regard to the Nagasaki fracas. It is that China has devised this method of re-opening the Riu-Kiu question. The idea involves a hypothesis very unfavourable both to China's common sense and to her good faith. To her common sense, because she would be deliberately placing herself in the wrong in order to recover what she believes to be her right; and to her good faith, because to commit a murderous outrage on the subjects and officials of a friendly Power in times of peace, in order to renew a discussion interrupted by herself six years ago, would be simply an act of savage treachery. There is nothing at all in the history of China's foreign dealings to warrant such a suspicion. Her annals are at least as free as those of any other country from the taint of aggressive violence. It would be well for Great Britain, at all events, if she could show as clean a record. China's persistently Fabian policy renders it exceedingly difficult to involve her in any engagement, but whenever she has given a pledge, her faith in observing it is wholly inconsistent with the fraud of which we are now asked to suspect her. Perhaps we attach undue importance to this suspicion. Yet the *Hōchi Shimbun*, though characterizing it as grotesque, says that it has found some favour with the public. Strange fancies are engendered and entertained in times of popular excitement, but we feel very sure that no thinking Japanese harbours a notion so extravagant. The Chinese Government know quite well that if there be a question which they desire to discuss with Japan, whether in regard of Riu-kiu or anything else, they will find the Cabinet in Tōkyō ready to meet them half-way. Is it likely that they would invite an exercise of this good-will by an act which would alike estrange it and disgrace themselves?

According to telegraphic information received at the Chinese Legation and published by the *Nichi Nichi Shimbun*, Vice-Admiral Lang, Consul Tsai, and Liu Sou-chan, on the Chinese side, and Prefect Kusaka and Public Prosecutor Hayashi, on the Japanese side, held a conference, the 19th instant, at the offices of the Prefecture. The Chinese representatives handed

Original from

in lists of the killed and wounded sailors, together with documents relating to the examination of their wounds, and the Japanese produced weapons which had been used by the Chinese sailors and civilians, and documents with reference to the casualties on the Japanese side.

From the same source we learn that, in answer to a suggestion made by the Chinese Legation in respect of the advisability of sending the Chinese frigate *Ting-Yuen* to visit Tôkyô and Yokohama, it is explained that the suggestion cannot be complied with, inasmuch as Vice-Admiral Lang has been appointed to conduct the negotiations at Nagasaki, and, further, it would not be convenient for the ship to go to sea with a number of wounded men on board.

The *Nichi Nichi Shimbun* publishes the following telegrams:—

Nagasaki, August 20th, 8 p.m.  
Yesterday the Governor of Nagasaki and the Chinese Consul issued notifications enjoining their nationals to be quiet and orderly.

The second sitting of the Enquiry will be held for the purpose of taking evidence to-morrow.

Admiral Ting did not attend the first sitting, and it is not known whether he will be present at the second or not.

Nagasaki, August 20th (Afternoon).  
The Chinese say that the presence of Chinese residents in the disturbance was because of their having been requested by the sailors to render assistance. As it was, very few were present.

About ten surgeons are on board the Chinese squadron and the Chinese boasted considerably of this large staff. As the surgeons contented themselves, however, with placing plaister on the wounds of those who were brought to them, their method of treatment leaves much to be desired.

From telegraphic intelligence received on Monday in Tôkyô, it appears that two of the four Chinese men-of-war recently lying in Nagasaki harbour put to sea on the morning of the 22nd, and that the remaining two will leave the port on Thursday. Further meetings of the Conference have been discontinued until full information shall have been collected by the Chinese and Japanese Consuls. It is stated that Vice-Admiral Lang's action has greatly helped to smoothe away difficulties and facilitate the course of the negotiations.

The *Fiji Shimpô*, in an article published Tuesday, strongly advocates principles similar to those previously advanced by the *Hochi Shimbun*. After discussing in general terms the immense power wielded by the Press in civilized communities, the *Fiji* turns to Japanese journalism, and, without directly naming the *Nichi Nichi Shimbun*, delivers itself of strictures which are evidently intended to apply to that paper. It censures the attempts made to impart an air of undue insignificance to the Nagasaki affair, to minimize the incidents connected with it, and to condone the offence of the Chinese. Such an attitude, the *Fiji* declares, on the part of a leading Japanese newspaper, will encourage the Chinese to exculpate themselves, and will thus throw obstacles in the path of a peaceful settlement.

The *Hochi Shimbun* continues, meanwhile, to blow an angry trumpet. Nothing, it declares, is dearer to it than truth. For truth's sake it will not hide Japan's faults, whenever she commits any. Much less will it attempt to explain away China's wrong-doing. To betray any symptoms of polite forbearance to arrogant people like the Chinese is merely to encourage them to greater insolence in the future. Let Japan

be never so long-suffering, she will find it impossible to forgive the repeated acts of violence to which China will be urged if this Nagasaki outrage is treated with unbecoming indulgence. Much wiser and more conducive to the permanent peace of the two Empires will it be, according to the *Hochi*, to convey to China a timely warning by taking a firm and energetic stand on this occasion. Otherwise Japan will be compelled hereafter to deal with acts of augmented insolence and audacity.

The *Nichi Nichi Shimbun*, on its side, discusses the state of discipline in the Chinese Navy. It comments on the fact that Admiral Ting did not attend the first conference, and that he seems resolved to avoid, as much as possible, taking any direct share in the negotiations. Still the *Nichi Nichi* does not doubt that the ends of justice will be fully satisfied, since the case stands in a clear and unmistakable light. While, on the one hand, declining to agree with those who accuse the Chinese Admiral and his officers of conniving at the outrage perpetrated by their sailors—an outrage without precedent in the history of the open ports—the *Nichi Nichi* finds it difficult, on the other, to acquit them wholly of incompetence and neglect of duty. It cannot be denied that after the affair of the 13th, that of the 15th ought to have been impossible had the Chinese officers paid attention to the just request of the Japanese authorities that the landing of the sailors should be temporarily prohibited. After every allowance is made, there is no getting over the fact that the Chinese officers betrayed incompetence and negligence. The *Nichi Nichi* avows a sentiment of very deep regret in preferring such a charge. Every one who understands the best interests of the two Empire, must recognise the necessity of cementing tightly the bonds of friendship between them. Nothing, therefore, is more to be lamented than the fact that in Formosa, Riukiu, and Korea occasions have arisen to engender doubt and suspicion in the minds of the Chinese and to encourage them to assume an attitude calculated to give umbrage to the Japanese. The warm and cordial welcome which the citizens of Tôkyô would have given to the Chinese squadron had it come northward has been chilled by the fatal error at Nagasaki. Most deplorable is this event which puts a barrier in the way of securing the tranquillity of the Orient by the firm friendship of China and Japan. Surely it is a disgrace to the Chinese Navy that its sailors have behaved so indiscreetly. The *Nichi Nichi* hopes that when next they visit Japanese ports they may redeem the character for discipline which they have now forfeited.

The *Nichi Nichi Shimbun* has the following telegrams:—

Nagasaki, August 23rd, 8.30 p.m.  
It is rumoured that when the news of the disturbance first reached Li Hung-chang he expressed great indignation that Japanese police should so unlawfully attack the Chinese; but when he learned the true facts of the case from the Japanese Government, he gave orders that the Chinese officials should act amicably and peaceably.

It is stated that the conference to be held by the Governor of Nagasaki, Vice-Admiral Lang, and the Chinese Consul will not take place before the arrival of certain Chinese officials from the capital.

The fact that Vice-Admiral Lang takes a part in the negotiations tends powerfully towards an amicable settlement, as that officer takes an intelligent view of the situation and desires to act with justice.

Nagasaki, August 22nd, 3 p.m.

Admiral Ting states that he had no intention originally of demonstrating the power of China to Japan, but had gone to Korea simply to ascertain the state of matters in connection with the rumoured arrival of Russian ships. He only came to Nagasaki to get fuel and provisions. He now regrets very much that he came to Nagasaki and that it should be thought he instigated the disturbance.

Nagasaki, August 20th, 6 p.m.

All the communications that have passed between the Governor and the Chinese Consul were transmitted to Count Ito yesterday.

Nagasaki, August 21st (Afternoon).

Admiral Ting has not yet landed, but officers from the *Ting-yuen* have frequently visited the Prefectural offices.

Vice-Admiral Lang has not returned to his ship, and stays at the Chinese Consulate.

The second sitting of the enquiry held to-day at the Prefectural offices opened at 10.30 a.m. and with an hour's interval closed at 3 p.m. The exact mode of procedure has not yet been settled.

Nagasaki, August 20th (Forenoon).

Eight injured sailors were sent on board their ships from hospital to-day, but those severely injured still remain under treatment on shore.

The Nagasaki correspondent of the *Hochi Shimbun* says that the remote cause of the recent riot was the arrogant behaviour of the Chinese men-of-war's men from the time of their arrival in Nagasaki. He states that they frequently insulted respectable Japanese women in the streets by indecent gestures. He also asserts that he himself saw Chinese officers directing the movements of the sailors during the disturbance by sounding flutes and waving swords. The *Fiji Shimpô's* correspondent corroborates the gist of this account, and adds that the Chinese men-of-war neglected to salute when they entered Nagasaki harbour.

On the 16th instant the Kencho and all the police and law courts at Nagasaki were open throughout the night, and the officials were at their posts. The Chinese Legation was guarded by more than a hundred Chinese sailors, and at the entrance to the Oura district of the settlement a number of Japanese police were stationed, with orders to prohibit the ingress of any of their countrymen. In expectation of a renewed attack from the Chinese, the inhabitants assembled at the scene of the previous night's disturbance, armed with various weapons, and numbers of them offered their aid at the Police Offices in case of trouble.

The *Nichi Nichi Shimbun* has the following telegrams:—

Nagasaki, August 23rd, 9.30 p.m.

Messrs. Kawazu, Hatoyama, and others arrived to-day by the *Yokohama Maru*.

A special office has been established in the Prefectural Government in reference to conferences between the Governor of the Prefecture, the President of the Court of Appeal, the Chief Public Prosecutor, and the officials sent from the capital.

The *I-yuen* and *Sai-yuen* left the anchorage at daylight to-day.

The foreign Consuls seem to have despatched telegrams frequently to the Legations at Tôkyô to report the progress of matters since the night of the disturbance.

[OFFICIAL.]

Nagasaki, August 23rd, 11.05 a.m.

The *Sai-yuen*, and *I-yuen* sailed at 6 a.m. to-day.

Shanghai, August 23rd, 12.56 p.m.

The Chinese Government propose to send English legal advisers to Nagasaki in connection with the negotiations.

Messrs. Kawadzu and Hatoyama arrived at Nagasaki the 23rd instant at 12.30 p.m.

A telegram published by the *Nichi Nichi Shimbun*, under date August 25th, 9.40 p.m., and corroborated by the *Fiji Shimpô*, says that, in the indictment prepared by the Chief Public Prosecutor, Mr. Hayashi, and submitted to the

Chinese Consul, the 24th instant, the Chinese sailors are charged with having conspired to avenge the affair of the 13th instant, and a demand is preferred that the culprits whose identity has not yet been established, should be vigorously searched for and duly punished. The same journal states that the negotiations have hitherto been confined to investigating the circumstances of the fracas, and that the question of culpability will be discussed at the third conference.

It is telegraphically reported, under date August 24th, from Nagasaki, that the crew of a Chinese man-of-war have mutinied, off Vladivostock, and that two vessels, the *Wei-yuen* and *Tsi-yuen*, which had just left Nagasaki, were bound for the scene of the mutiny.

The *Mainichi Shimbun* says that on the arrival of telegraphic instructions from Li Chung-tang, ordering Admiral Ting to leave Nagasaki the 26th instant, Prefect Kusaka requested the Chinese Minister in Tôkyô to get the order rescinded, so that the Admiral might remain until the conclusion of the negotiations. A telegram from Nagasaki, published by the *Fiji Shimpô*, under date the 25th instant, ascribes this request to Admiral Ting, and says that it was favourably entertained. A telegram to the *Nichi Nichi Shimbun*, dated the 26th instant seems to contradict the latter assertion, since it gives a rumour that the Viceroy Li has instructed Admiral Ting to hold the third session of the conference at Nagasaki. Meanwhile, the date of this third session is likely, according to the same authority, to be postponed until several preliminaries have been arranged.

Officers and men of the *Ting-yuen*, to the number of about 10, landed at Nagasaki the morning of the 24th inst., and through the assistance of their Consul, procured a supply of provisions and other necessities. They returned to the ship immediately on the conclusion of their business. The Chinese residents at the port have now resumed trade, and go about the streets with confidence.

The Nagasaki correspondent of the *Fiji Shimpô* writes to corroborate the account of the fracas given by the *Chinzei Nippo* and epitomized in these columns. He asserts that the great majority of the casualties on the Chinese side were caused by Japanese private citizens who were rendered furious by the behaviour of the sailors. He adds that two Chinese men-of-war came to the entrance of Nagasaki harbour, the 20th instant on their return voyage from Vladivostock, but that they went away without entering the port.

The same writer makes a most inexplicable assertion with regard to the British Consul at Nagasaki. He reports Mr. Ensle as expressing sarcastic surprise at the bravery said to have been shown by the Japanese inhabitants—bravery which he, Mr. Ensle, considers very unexpected—and as insinuating that they must have been strongly instigated to behave in such a manner. The correspondent goes on to ascribe pro-Chinese tendencies to Mr. Ensle. We have no hesitation in saying that this is a most misleading description of Mr. Ensle's attitude. We happen to know that within the bounds of justice, that gentleman has rendered every possible

assistance to the Japanese cause. As for the surprise he is said to have exhibited about the courage of the Japanese, the thing is too silly to be worth contradicting.

The announcement that Mr. W. H. Talbot has ceased to have any interest in the *Japan Gazette* must, we presume, be interpreted to signify that gentleman's practical abandonment of editorial duties. It had been apparent, indeed, for many months that Mr. Talbot's connection with the *Gazette* was of a very casual character, and that his onerous functions as Secretary to the Japan Mail S.S. Company did not permit him to retain any editorial responsibility. None the less we are persuaded that the public has received this latest announcement with much regret. Mr. Talbot may look back upon his journalistic career with genuine satisfaction. In his hands the *Japan Gazette* became a newspaper creditable to this settlement. His style was clear and concise; his industry remarkable, and his shrewdly garnered commercial experience lent exceptional value to his articles. With his political creed in the early days we were greatly at variance, and in that field we broke with him many a lance. But even when he seemed to us least tolerant or just, it was impossible to doubt his honesty of purpose. That he should ultimately adopt more liberal views was, therefore, a matter of certainty, and during the last two years of his connection with the *Gazette*, he ably and fairly represented the moderate section of the foreign community—now, happily, no longer a section, but an overwhelming majority. His loss to the cause of journalism in Japan is the more apparent in that no one even approximately competent to take his place has succeeded him. We trust, however, that after the head office of the Japan Mail steamship Company is moved to Yokohama, Mr. Talbot may occasionally find leisure to revert to an occupation in which he has won distinction for himself and laid this community under a lasting obligation.

It certainly seems as though Russia had been guilty of a deliberate act of bad faith in regard to Batoum. Batoum is a port on the east coast of the Black Sea. By the Treaty of San Stefano it was ceded to Russia. England, however, interfered, and after much discussion Russia agreed, at the Berlin Conference, to make Batoum a free port. The 50th clause of the Berlin Treaty recorded this agreement in the following terms:—"His Majesty the Emperor of Russia declares that it is his intention to constitute Batoum a free port, essentially commercial." Scarcely was the ink of the Treaty dry when Russia set about fortifying Batoum. By the end of last year it had become a strong fortress. Meanwhile, a railway was in course of construction from Poti to Baku via Tiflis. Poti is on the Black Sea, a little north of Batoum. The opening of this railway necessarily deprived Batoum of much of its importance as an emporium for goods in transport. Still the public agreement remained that it was to be a free port, for purely commercial purposes, not a fortress to assist in dominating the Black Sea. Russia has now calmly announced, it is said, that she does not find it convenient to observe this item of the Treaty any longer. Batoum ceases to be a free port. This is a distinctly anti-English coup. Great Britain alone is interested in the question. Apparently Russia chose her opportunity carefully. She watched for the moment when a weak

Liberal Cabinet was threatened with dissolution in England. But there is some reason to hope that she reckoned without her host. The telegraph says that on August 8th Lord Rosebery issued a note announcing that England had refused to recognise Russia's action with regard to Batoum. Lords Salisbury and Iddesleigh are not likely to be less emphatic.

Is there anything that we cannot persuade ourselves to believe if only we wish to have faith? Here is what a leading American journal says of Lord Hartington:—

It is rather refreshing to find that somewhere down in the deepest depths of his mental frame, Lord Hartington has a political conscience. He had not been generally credited with the possession of such an article. His behaviour in this country during the war did not win for him any measure of American respect; and his bolt in the late campaign had led many observers to think meanly of his principles. A champion Whig-Liberal who helped to elect Tory members of Parliament strikes us as akin to the Democrat who scratches his ticket to secure the election of a Republican candidate. Hence, when the story spread that Hartington was to take office under Salisbury and to bring his 90 votes to the support of the Administration, it was quite commonly believed.

And here is what the same journal says, in the same column, of Sir Charles Dilke after the verdict of July 23rd:—

He is a power in politics; a trusted leader of the Radicals. He has some essential qualities of leadership. He is brave, cool, well informed, well connected, rich, and resolute. People who talk of such a man being permanently kept down because he has fallen a victim to a weakness which he shares with every hero in history, are indeed ignorant of human nature.

Sir Charles Dilke studied politics in America. He made his debut in 1871 as a Democrat, and the creed he preached was called a collection of American doctrines. So his little affair with Mrs. Crawford shows him to be merely a "hero of history."

"Look on this picture and then on that," says the *St. James's Budget*, presenting the following to its readers:—

MR. PARNELL AT WENDELL,  
October 2, 1885.  
You have had an opportunity recently—many of you, no doubt—of studying the utterances of a very great man, a very great orator, the person who recently desired to impress the world with a great opinion of his philanthropy and hatred of oppression, but who stands to-day the greatest monument, the greatest and most unrivalled slanderer of the Irish nation that ever undertook the task. I refer to William Ewart Gladstone.

MR. PARNELL AT PLYMOUTH,  
June 26, 1886.  
I believe that the great heart of the English people has been touched by this question in a way I have never been touched before, and that the genius of the illustrious Englishman who towers head and shoulders above all other living men—for whose equal as a statesman and a philanthropist we have to search the pages of history in vain—has shed a new light upon the blood-stained pages of Irish history.

Says the *Hiogo News*:—An unfortunate affair happened the other day which should serve to make the large section of the community who indulge in sea bathing more careful than has hitherto been the case. We are informed that one of the men employed at the wreck of the *Clarissa B. Carter* went under water to perform some slight service connected with removing the vessel's gear, and not the slightest trace of him was seen again. As sharks have been pretty numerous out at the wreck, strict orders were issued that none of the men employed should attempt to go under water without first putting on a proper diving dress, but the missing man neglected to adopt that precaution, and it is surmised he was torn to pieces by sharks. For some time past these ferocious brutes have been increasing in number in the vicinity of the wreck, and have now become so bold that on one occasion lately much difficulty was experienced in driving a couple of them from alongside a boat."

We reproduce the following references from the leading Tōkyō journals as to the case of Kim-jo-Kun. The two-first are from the *Nichi Nichi Shimbun*.—Mr. Kim-jo-Kun, who as we have repeatedly mentioned of late was confined in a house belonging of Mr. Mitsui at Iseyama, was put on board the *Hidesato Maru*, which left Yokohama at 5 p.m. the 7th instant, and after a short stay at Shinagawa, started the following morning at 6.30 for Ogasawara. The 6th instant, the Chief Police Inspector of Kanagawa Prefecture informed Mr. Kim that, his further stay in Japan being out of the question, he should be conveyed to Ogasawara by the sailing vessel *Hidesato Maru*. Mr. Kim objected to this order on the ground that, as the primary object of the order of the Minister of State for Home Affairs, issued some time ago, was to send him out of the territory of this country, it would be contrary to the spirit of that order to convey him to a remote island within the dominion of the empire instead of sending him out of it. He further requested the withdrawal of the order to convey him to Ogasawara, alleging that he was making arrangements, with the aid of one of his friends, to proceed to the United States of America. The Kanagawa Prefectural Government replied that the step now decided on was in no respect contrary to the spirit of the order of the Minister for the Interior the intention being simply to transfer him from Noge-yama to that island, and that, although Mr. Kim was still free to go to America, he must be sent to Ogasawara, unless definite evidence were afforded that he had obtained money for the passage. Mr. Asabuki Eiji immediately presented himself at the Kencho and submitted a petition on Mr. Kim's behalf, which was granted on condition that some positive assurance be produced with regard to money matters before the next day, 7th instant. This condition not being complied with, it was decided to convey Mr. Kim to Ogasawara. According to the *Fiji Shimpō*, Mr. Asabuki consented to help Mr. Kim up to the amount of a thousand yen for the purpose of paying the Grand Hotel and the expenses of his passage; but the Kencho authorities insisted that unless Mr. Asabuki would give a guarantee for the payment of all the debts of Mr. Kim, the petition could not be granted. Mr. Asabuki declared himself unable to consent to such a limitless responsibility, and thus the matter dropped. It having been decided to transfer Mr. Kim to the *Hidesato Maru*, two clerks of the Tōkyō City Government and a police Inspector and a constable of the Metropolitan Police were sent to Yokohama, the 7th instant, to receive the Korean refugee. A police inspector, Mr. Kawamura, of the Yokohama Settlement Police Office went, with ten policemen, to the residence of Mr. Mitsui. The four students of Mr. Kim attempted to resist, but the police officials informed them that there would be ample means to carry out the order of the Japanese Government, if they should offer resistance. After this intimidation the students submitted to their fate and took leave of their master, whom they accompanied to the *hakoba*. As already stated the vessel sailed to Shinagawa, and started for its destination, the morning of the 8th. The departure of the vessel was at one time put off to the 10th, and it was surmised that this step was taken to give more time to Mr. Kim. But we are informed that this was done with a

view to convenience of loading the vessel, and the loading having been finished promptly, the vessel started the 8th as originally arranged. We are also informed that, of the four students, one named Li Ka-in accompanied Mr. Kim to his new residence.

Mr. Kim objected to his transfer to the Ogasawara-jima as contrary to the spirit of the first order issued by the Minister of State for Home Affairs. But the Government had ordered him either to leave the country, or, failing to do so, to submit to confinement. Having shown that he was unable to go to another country, he was detained by the Government, the object of his confinement being to prevent him from becoming the cause of public disturbance, and to protect him against any murderous attempts on his person. The Government reluctantly recognised that they could not but take steps to deprive him of his personal liberty. But it seemed unnecessary cruelty to put him under such restraint in a place like Tōkyō or Yokohama, and it was accordingly decided to send him to Ogasawara-jima, where he might be allowed more freedom of movement without any fear either of the national peace being endangered or his personal safety threatened. At any rate, Iseyama and Ogasawara-jima are alike within the dominion of this country, and it was therefore entirely a question of convenience whether the prisoner should be detained at one place or the other. Moreover, even after his transfer to Ogasawara, the Government were willing to allow him to start for another country, in case he should obtain the necessary funds. So far as we have been informed, the matter stands as we have described it. But certain writers have been led by excessive sympathy with the Korean refugee to complain that it will be greatly more hazardous for Mr. Kim, a native of a cold country, to be sent in this weather to such a hot locality as Ogasawara, than to be threatened with the dagger of Chi Un-ei, the inference being that the Japanese Government have resolved to kill him by means of a change of climate. The condition of the island, however, is not so bad, nor is the intention of the Government so wicked, as may be plainly seen from the facts already stated. It is also said that Ogasawara is very thinly inhabited and is occupied only by a few police officials, so that it would not be difficult for the Korean Conservatives to send assassins there; and further that other countries will regard the affair as an act of exile, unworthy of the high reputation of the Japanese Government. It is to be remembered that ships ply between that island and the main land only at long intervals, and it is consequently no easy matter either to send over an assassin or to carry out any project of assassination. As to the danger of misinterpretation of the measures taken by our Government, there may be some truth, but it is not wise to waver from a necessary step of action merely on account of foreign misinterpretation.

The *Hochi Shimbun* says:—We regarded the flight of Mr. Kim to this country as a matter of small consequence; for, in the first place, we thought it one of the ordinary usages of international law to afford asylum to a political refugee; and, in the second place, we believed it would be an easy affair to prevent him from causing any fresh troubles. But the Minister of State for Home Affairs took a different view of the matter, and eventually ordered Mr. Kim to leave

the country. We then first awoke to the extent of his influence, and we believe that no inconsiderable portion of the public did the same. From the time that it was declared that his presence was prejudicial to the internal peace and the foreign tranquillity of the country, we thought it still more dangerous to let him go to another country; for, while our countrymen and our police authorities would not allow him to carry out any attempt—supposing that he has such a design—upon his native country, there would not be wanting in certain quarters abroad motives to make use of the Korean refugee. It was therefore with mixed feelings of sympathy with Mr. Kim's misfortune and of satisfaction for the sake of this country and its neighbours, that we received the news of his confinement at Iseyama. It is now with similar feelings that we regard his transfer to Ogasawara. Is there any precedent in international law for such action? Is such a step in conformity with the law of the land? Will not European and American nations regard the measure as too severe? These are debatable points. The maintenance of the peace of the country being a matter of paramount importance, we shall not trouble ourselves with discussing minor points. Suppose for a moment that Mr. Kim had gone to Russia, would not that country have made use of him? We hope that Mr. Kim will be kindly treated in this country, so that he may not think of quitting it. Should Ogasawara be found inadequate to secure this object, it may be well to transfer him to this city; and in case his confinement in the metropolis is found equally insufficient to attach him to this country, it may even be advisable to set him free altogether.

The *Fiji Shimpō* of the 10th inst. says:—We gave yesterday the account of Mr. Kim's transfer from his place of confinement at Iseyama to the sailing vessel *Hidesato Maru*, the 7th instant. On the same night the ship returned to Shinagawa, and although it was originally arranged to start on the following day, its departure was postponed to the 9th at 6 a.m. After arriving at the island, Mr. Kim will be detained in one of the buildings of the branch office of the Tōkyō City Government. Mr. Kim's friends provided him with articles necessary during his stay in the island. While the ship lay at Shinagawa, officials of the Tōkyō City Government visited it, and took care to make every necessary provision. Mr. Kim is reported to be but little annoyed by the new step taken by the Government. Up to the very moment of his transfer to the *Hidesato Maru*, he was engaged in writing autographs at the request of his friends. Three of his students, Shin Ōki, Ryu Kakuro, and Tei Rankyo, who have been left behind, are unable to maintain themselves, and Messrs. Inukai, Isaka, Okamoto, and Asabuki and others are exerting their influence to find out means of livelihood for them.

REFERRING recently to the Chinese contingent of the Hongkong Police Force, in connection with the discovery that some of the *lukongs* were members of secret societies, we said that the force would be much benefited by the disestablishment of the Chinese element and the substitution of Sikhs. To say nothing of the *lukong's* notion of duty, which as a rule is of a perfunctory description, he is known to

belong to secret societies which on occasion give so much trouble to the authorities, and he has for years been suspected of being in the pay of keepers of gambling dens. This suspicion has amounted to a certainty amongst the European members of the force, who have frequently been thwarted in endeavouring to make captures of gamblers by secret warnings which have no doubt in many cases come from Chinese constables in the pay of the gambling interest. A revelation, however, has now been made which will probably determine the authorities in sending to the right-about these useless and corrupted members of the Hongkong Force. On the 10th instant, by the order of Major Dempster, who in the absence of Mr. Deane, on leave, is Acting Superintendent, no less than 53 lukongs were suspended from duty, with a charge hanging over their heads of taking pay from gambling masters. It appears that the Chinese constables referred to, in levying black mail on the gambling houses, have lately been putting on the screw to the extent that the gambling masters gave information to head-quarters, and an inspector, sent at an appointed time, witnessed from a cockpit in Tai-ping-shan the lukongs receive their strings of cash, noting down the names of the culprits as they filed past the pay table. It is only reasonable to suppose that, if 53 men were clean bowled on one occasion—more than a fourth of the entire Chinese force—many others are on an equally familiar footing with the gamblers, and it is scarcely likely after this exposure that so rotten a branch of the service will be much longer retained.

As accident which might have been attended by very serious consequences occurred last evening on the Creek. A large lighter belonging to Mr. Kildoye had started from the *Kinshu Maru* carrying about forty workmen, who, in the absence of the steam launch, laboriously sculled the clumsy craft as far as the Creek. There they were overtaken by the launch, which, however, steamed past at full speed. A rope was thrown, and secured, and as it tightened with a jerk the whole bow of the lighter was pulled out, the wreck itself being propelled by the impetus against and crushing an adjoining bumboat. Much excitement prevailed among the workmen on board, but fortunately no one was hurt.

REUTER'S telegrams are correct enough probably when dispatched from London, but the way in which they sometimes get hashed up in being converted from "code" is simply astounding. Here is a case in point. The following message appears in the Hongkong papers which arrived here on Monday:—

London, August 12th.

In the course of a speech at the Mansion House, replying to the toast of Her Majesty's Ministers, Lord Salisbury stated that it was the duty of the Government to free loyal Irishmen from the terrorism existing and to exercise constraint when social order was disturbed. This telegram, when received by us, read:—"duty of government—free—auxiliary force." Now, there is not a word about "force," "auxiliary" or otherwise, in the Hongkong rendering, and the message as sent to us was pure nonsense.

THE progress of the cholera epidemic in Tôkyô has naturally attracted less attention here in Yokohama than the annals of the plague at our own doors. For this reason, and perhaps, also, because the disease has made no very startling strides in the capital, we hear comparatively little about it. Turning to the

official records, we find that the first case occurred June 8th, and that it resulted in death three days later. Thenceforth, the number of persons attacked averaged about one daily, the total up to July 8th being 34. The following day, July 9th—that is to say, ten days after the rapid upward leap taken by the epidemic in Yokohama—eight new cases were reported, and this number held, pretty regularly, up to the 15th of the same month, the total from the 9th to the 15th inclusive being 61. From July 18th there was a sudden increase, but the number of new cases daily did not reach 100 until August the 31st. The following table shows how the disease advanced:—

DATE.	CASES.	DEATHS.
July 16th	19	—
July 17th	53	—
July 18th	45	—
July 19th	42	—
July 20th	48	9
July 21st	44	7
July 22nd	53	5
July 23rd	74	9
July 24th	100	9
July 25th	61	11
July 26th	62	4

		new cases, old cases.
July 27th	69	27
July 28th	81	27
July 29th	29	86
July 30th	28	30
July 31st	81	27
August 1st	86	48
August 2nd	90	43
August 3rd	111	44
August 4th	141	65
August 5th	136	62
August 6th	132	60
August 7th	67	13

August 13th	171	59
August 14th	175	44
August 15th	108	42
August 16th	104	36
August 17th	175	64
August 18th	200	79
August 19th	102	74
August 20th	226	89
August 21st	108	59
August 22nd	230	118
August 23rd	232	84

The returns are from noon to noon, so that when we speak of the cases and deaths occurring the 13th of August, for example, the interval from noon of the 13th to noon of the 14th is to be understood. It will be seen that the 19th, 21st and 22nd of this month have the worst records hitherto—above all the 21st, when there were 230 new cases and 245 deaths. Towards the close of this month we may expect a radical change of weather, which can scarcely fail to produce some effect on the epidemic.

A POLICE BOAT was upset in the harbour on Monday, and all the occupants but one picked up and brought on shore. The police authorities, in order to recover the body of the missing man, had the neighbourhood of the accident diligently dragged, but without effect, for the reason that, having swam ashore unobserved when the boat upset, the man quietly went home and went to bed.

ACCORDING to the *Official Gazette*, the traffic returns for the Kobe-Otsu railway for July show that the total receipts were yen 41,785, of which yen 27,134 were from passengers and yen 14,650 from goods. During the same month the receipts on the Tsuruga-Ogaki line were yen 7,356 of which yen 3,785 were from passengers and yen 3,571 from goods.

A CORRESPONDENT of the *Japan Gazette*, replying to a correspondent of the *Japan Mail*, offers the following explanation of the fact that he does not address himself to the latter journal:—"I know I ought in courtesy to write to

that paper, but as I am not good terms with the *Manager* he would probably not publish anything I sent him, therefore I hope you will be so good as to insert this in your next issue." This explanation is scarcely ingenuous, since its writer must be well aware that the acceptance or rejection of communications to the *Japan Mail* does not fall within the *Manager's* province.

THE cholera returns for Yokohama on Saturday were:—New cases, 15; deaths, 12. Sunday, new cases, 16; deaths, 16. Monday, new cases, 15; deaths, 3. Tuesday, new cases, 16; deaths, 17. Wednesday, new cases, 12; deaths, 7. Thursday, new cases, 3; deaths, 7. Friday, new cases, 4; deaths, 3. Total cases, 81; deaths, 65; against total cases last week, 205; total deaths, 144.

THE Russian Minister of Marine, now on a visit to Japan has been decorated with the First class of the Rising Sun, and of the officers who accompany him one has received the Third class of the same Order; four have the Fourth class, and one, the Fifth class.

THE *Mainichi Shimbun* states that a telegram was received in Tôkyô, dated the 21st instant, 7 a.m. to the effect that the Nagasaki rioters consisted of 80 men from the *Sai-yuen*; 50 from the *Chi-yuen*; and the remainder from the *I-yuen*, making a total of 160. Men from the *Ting-yuen* were not present.

THE following subscription to the fund for relieving the families of sanitary officials, received at the Kanagawa Kencho, is acknowledged with many thanks:—

THE Chinese Minister has instructed the Chinese Consul at Nagasaki to acquaint him beforehand by telegraph with the nature of every question he may ask and every answer he may give during the progress of the present conference.—*Mainichi Shimbun*.

THE P. & O. steamship *Thibet*, which arrived here from Kobe on Monday, reports that the weather encountered on the voyage up was so bad that the vessel was anchored and lay at Ura-no-uchi for thirty hours.

THE Russian Naval Minister, accompanied by several officers, visited the Imperial Palace the 21st at ten in the morning, and was received in audience by the Emperor.—*Official Gazette*.

THE *Yiji Shimpô* publishes telegraphic intelligence that a typhoon visited Okayama, the 20th and 21st instant; Fukui, the 21st and 22nd, and Matsuyama, the 22nd.

THE excitement among the Japanese soldiers at Nagasaki is said to be so great—writes the *Nichi Nichi Shimbun*—that it has been deemed advisable to confine them to barracks.

THE British barque *Cyprus*, noted in a former issue as having been berthed in Shanghai for Port Moody, B. C., via Kobe and this port, has been withdrawn.

MR. W. V. DRUMMOND has been summoned from Shanghai to act as legal adviser to the Chinese in the investigations with reference to the fracas at Nagasaki.

CONSULAR TRADE REPORT FOR  
HAKODATE, 1885.

THE trade of Hakodate for 1885 shows a better record than that of any other open port in Japan. On the import side, the totals are insignificant, and will probably remain so for several years; but the export during the year under review aggregated £119,447, being an increase of over 80 per cent. as compared with the figure for 1884. Marine produce is the staple export. Sulphur, indeed, represents some £14,000 of the total, and coal is put down at £1,380. But for the rest, awabi, cuttle-fish, bêche-de-mer, and sea-weed complete the list. Up to the present, Yezo has succeeded in establishing only one title to public consideration—its fisheries. In these there is undoubtedly a great field for money-making. If the improvement in the returns last year may be connected with the change from a prefectural system of government to the control of a special bureau, it is perhaps reasonable to predict that the marine industries of Hokkaido have begun to exhibit the development of which they are supposed to be largely capable. But, for our own part, we have little faith in the official ægis. The results achieved under its shadow in Yezo are not encouraging. The story of the model farm is familiar. It finds a worthy sequel in that of the Mombetsu beet-sugar factory, which earned £6,615 in 1885 and spent £13,108. Perhaps it is not quite fair to pass judgment on this factory yet. Expenditure on account of machinery and new buildings still represents a large portion of the outgoings. Look, however, at the Poronai coal mine. The best coal in Japan is obtained there in almost limitless quantities within easy reach of the coast. Yet, somehow or other, this coal cannot be sold for less than 15s. 9d. per ton at a place distant by rail fifty-six miles from the mouth of the pit. Mr. QUIN might have enlightened us with reference to this charge. The average price of the Poronai coal, according to the figures in his Report, is 17s. a ton, yet he says that the free-on-board quotation at Otaru is only 15s. 9d. Whichever figure we take, however, the thing seems a monstrous example of official incompetence to conduct any industrial enterprise profitably. It is so all the world over, but especially so in Japan. Not that we give credence to the sweeping accusations of corruption which Westerners are so fond of preferring against the Japanese. In that line there is nothing here capable of sustaining a comparison with the records of Europe and America. But the Japanese labour under one particular disadvantage—they have not yet shaken off the *dolce far niente* mood of feudal times. Not so many years ago, employment by a nobleman or an official signified a sinecure. The dignity of his patron forbade any indecorous exhibition of effort on the work-

man's part. There must be no appearance of toil or vulgar distress, but rather a becoming display of confidence in the resources of one's employer. The creed survives, not in profession, perhaps, but certainly in practice. As a rule, a Japanese of the lower orders who receives pay from Government, thinks that he has a right to take life easy, and that he is little, if at all, concerned in the success of the work upon which he is engaged. Hokkaido will continue, we believe, to absorb public funds without any adequate return until the opportunities it offers can be taken advantage of under wholly different conditions.

Mr. QUIN'S Report illustrates most forcibly the failure which we have already suggested with regard to documents of this nature generally. Hakodate is situated in a district about which there might be written volumes of valuable information. Yezo is precisely one of the places towards which attention will be directed in the day, now happily not far distant, when Japan is thrown completely open to foreign trade and residence. English capitalists and merchants will then be anxious to know something about the resources of the place and the story of the efforts hitherto made to develop them. But the source from which they might fairly look to derive authentic information will be found barren. It is not our intention to imply any lack of industry or zeal on Mr. QUIN'S part. The instructions that hamper him and his fellow-Consuls are alone to blame. The Foreign Office has thought it advisable to issue a Circular requiring Consuls to limit their Reports to matters connected with their places of residence or their Consular districts. What is a "Consular district" in Japan? In Europe or America the term is accurately defined in every case; as for example, when it is provided that the British Consul-General at Antwerp is Consul-General for the whole of Belgium, and that the Consul at Hamburg is also Consul for Mecklenburg, Hanover, Brunswick, etc. But in Japan the boundaries of the various Consular districts have never been fixed. Nobody can say whether they are supposed to be co-extensive with the Prefectures in which the open ports are situated, or whether they are confined within treaty limits. On either hypothesis the field of a Consular Report, and consequently its practical value and utility are most unwisely narrowed. It is easy to see what an immense mass of commercial and industrial facts is thus removed from the scope of the Reports. New filatures may be started in Jōshū; cotton mills may be erected in Awa; sugar plantations may be formed in Riukiu. One or all of these enterprises may have a most important influence on the British import trade, yet no Consul can venture to refer to them in detail without violating his instructions and incurring the risk of a reprimand. If the Summary prepared at the Legation

embraced such matters, there would be some equivalent for the enforced silence of the Consuls. But it does not. The Summary does not travel beyond the four Consular Reports. One result of all this is that the capital of the Empire is absolutely ignored in the Report for 1885. The Yokohama trade is largely woven up with that of Tōkyō. Statistics recently published by the Tōkyō Chamber of Commerce, show that, in the years 1882, '83 and '84, out of 72 million *yen* worth of goods exported from Yokohama, no less than 68 per cent. passed through Tōkyō, and of imports to the value of 53½ million *yen* in those three years, 30 per cent. were distributed through the capital. Yet no trade report for Tōkyō has been published for fifteen years, though that great city, with its numerous industries and commercial undertakings of all kinds, presents a most interesting and instructive field which might be explored either by the Tōkyō Vice-Consul or by the Consul in Yokohama. It seems to us that the whole system of the Consular Reports is faulty. Instead of being restricted, Consuls should be encouraged to write on everything of interest within a fair geographical range of their posts. Indeed, we should go a step farther and leave the Consuls to choose their own sphere. Even if they did range over the whole country and at times cross each other's tracks, the contrast or coincidence of their views would be in itself valuable. In these times when the source of the success achieved by our competitors the Germans is fully recognised to be careful investigation of the circumstances of the markets in which they deal, it is inconceivable that HER MAJESTY'S Government should seek to check such investigation on the part of competent British officials with exceptional opportunities.

THE LAST ACCOUNTS OF THE  
NAGASAKI AFFAIR.

WE are now in possession of as much information with regard to the Nagasaki fracas as is likely to reach us for some days. Our own correspondent sends an account dated the 18th instant, and the *Chinzei Nippo*—of Nagasaki—publishes another account dated the 17th. Both these accounts not only agree with one another in their main features, but also tally with the intelligence previously received. The facts which it is possible to consider established are that, in attempting to arrest a truculent Chinese sailor on the night of the 13th, a policeman was severely wounded; that some difficulty was experienced in effecting the arrest; that a strong force of Chinese landed, two days later, and with a vague idea of either rescuing their comrade or avenging his arrest, engaged the police in a quarrel which subsequently assumed serious dimensions

and involved a number of the Chinese and Japanese residents of the town. Even this bald statement plainly places the Chinese in the wrong; and indeed we imagine that with regard to the question of culpability there can no longer be much room for doubt.

Turning now to the details, as described in the *Chinzei Nippo* and in a Japanese official report just published, the story assumes the following shape:—At about 6 p.m., on the 13th, a party of live Chinese sailors entered a brothel called Yurakutei, in Yoriaimachi. After spending a short time there, they went away, engaging the owner to await their return at 8 o'clock. By and by a different party of Chinese sailors repaired to the same house, but were refused accommodation on account of the prior engagement. While the brothel-keeper was endeavouring to explain the difficulty to the new-comers, the original party appeared upon the scene and took possession of all the available rooms. The second group of sailors, imagining that some discrimination had been made to their disadvantage, behaved with great violence, destroying the screens and other furniture with swords which they had apparently purchased from curio-dealers. The brothel-keeper now tried to get down stairs with the intention of carrying a report to the police-station, but being besieged by the Chinese, he was finally obliged to effect his exit through a window. He told his story to a constable called KUROKAWA, who was an duty in the neighbourhood. KUROKAWA hastened to the scene of the disturbance and tried to restore order, but was unable to communicate intelligibly with the Chinese. During the altercation, all the sailors except two, the most conspicuously violent, slipped away. These two KUROKAWA endeavoured to detain until assistance reached him, but ultimately they also made good their escape. The constable now repaired to the station. Just as he reached it, a group of some fifteen sailors made their appearance. Recognising among them one of the leading rioters, KUROKAWA promptly seized him, but the man broke away, and when overtaken after a time by the constable, drew a Japanese sword. KUROKAWA grasped the sword with his left hand, but the Chinaman, snatching it away violently, cut the officer's fingers severely, and then gave him a heavy blow on the head. KUROKAWA was staggered for a moment, but, quickly recovering, renewed the pursuit and was found shortly afterwards, by two of his comrades, struggling with the sailor on the ground. The Chinaman was arrested, carried to the station, and subsequently handed over to his own Consul. He had received two slight wounds. During this affair several Chinese assembled and tried to assist the sailor. One of these would-be rescuers, apparently a ring-leader, was arrested and taken to the station, but he was released

shortly afterwards. KUROKAWA's wounds were found to be serious, but he is expected to recover. The news of his death, sent by our correspondent, would therefore appear to be erroneous.

Nothing more occurred until the 15th, when a very large number of Chinese landed and promenaded the streets. About 8 o'clock in the evening a group collected at a restaurant in Hirobaba, and two of them insulted a policeman on beat there, by asking unintelligible questions and poking his face and body. The policeman, seeing that they sought to provoke a disturbance, despatched a report to the station, whence a small force of constables was despatched to the spot. On their appearance the Chinese raised a loud shout and fell upon the policemen from all directions, using Japanese swords and bludgeons. After this exploit the sailors pushed on to the Umegasaki station, but were there repulsed. They then turned towards Hirobaba, and were making their way towards Funadaiku-machi when they encountered, in Motokago-machi, a body of constables who had been despatched from the Central Station. A fight now took place. The police constructed a breastwork with *jinrikisha*, but the Chinese assembling from all quarters to the number of about 300, forced the constables back by sheer weight of numbers. The police next made a stand at Shian-bashi. They had already warned the inhabitants to close their doors, but these, seeing that the Chinese were overwhelmingly strong, armed themselves with clubs and swords and joined in the fray. The Chinese, it is said, now fought fiercely, but the Japanese residents, dashing into their midst, inflicted such injuries that they were at last put to flight. It was at this point that the casualties chiefly occurred. Retiring by the way they had come, the sailors, in groups of fifty or a hundred, obstinately maintained the contest, but being much harassed by the inhabitants, who threw down stones and tiles from the roofs, they finally dispersed, flying, some by Hirobaba, some through the grounds of the temple Taitoku, and some along Funadaiku-machi. By eleven o'clock the streets were cleared. Meanwhile the harbour police had laid an embargo upon the passenger boats. The Chinese sailors were thus unable to return to their ships and had to take refuge with their countrymen in the Settlement. About 30, who had fled to the temple of Taitoku, were found in the military cemetery at Sako, and handed over to the Chinese Consulate. The casualties, as ascertained on the night of the 16th, were—on the Chinese side, one officer and three sailors killed and more than 50 wounded; on the Japanese side, one constable killed, 3 sergeants, 16 constables, and over 10 citizens wounded. The weapons used by the Chinese were Japanese swords, spears, and clubs. They had procured Japanese

swords some days previous to the disturbance, and during the afternoon of the 15th, a short time before the fracas, some of them were observed searching the shops for these weapons.

Such is the story as we now have it. Making every allowance for the bias of the source, it is impossible, as we think, to set up any valid defence on the Chinese side. It is just conceivable that unnecessary violence may have been resorted to by the Japanese civilians, and even by the police after their opponents had assumed the defensive. But there we are on purely conjectural ground. Assuredly there was nothing in the affair of the 13th to palliate concerted action such as that taken by the Chinese on the 15th. We are strongly disposed to agree with our Nagasaki correspondent, that the second fracas was not actually premeditated. Probably the Chinese came ashore prepared for emergencies, and in the heat of the moment were betrayed, as much by their own strength as by anything else, into conduct which they had never seriously contemplated.

#### PROFESSOR TOYAMA ON FEMALE EDUCATION IN JAPAN.

THE *Tōyō Gakuei Zasshi* is the leading magazine of Japan. Among its contributors are many of the most eminent scholars in the capital. Its last two numbers contain a remarkable essay by Professor TOYAMA, of the Imperial University, who recently filled the post of acting president in that institution. Professor TOYAMA has always been noted for the breadth and courage of his views. His name, associated with numerous progressive movements, is perhaps best known to foreigners in connection with the Romajikai, of which he is a prominent promotor. The subject of his last essay is female education, and methods of spreading Christianity. He sets out with a general proposition, unfortunately too little recognised in Japan, that the civilization of a country may be judged by the condition of its women. No problem, he declares, demands more earnest attention in this empire than the education of women. Numerous institutions, both public and private, have been established for educational purposes since the Restoration, but, with exceptions so few as only to point the rule, they are designed for the benefit of the male sex only. It is not to be denied, indeed, that the status of women and their educational opportunities have greatly improved of recent years. But the balance of advantage has been largely on the men's side. Underlying all the provision made for female instruction there is the greatly mistaken notion that education begins and ends in the school-room. Lessons in reading, writing, elementary sciences, and polite accomplishments constitute but a fraction of what is required. You may put a veneer of these things on a Red Indian

girl, but you will find that the savage instincts bequeathed to her by her ancestors continue to crop out perpetually. To become imbrued with the habits and sentiments of civilized people it is necessary to be brought into contact with civilization from the days of one's earliest childhood. Thus in Japan it is observed that the most civilized persons are those who have lived longest in Europe or America. Whatever value may attach to scientific proficiency, neither the number of scientists nor the standard they have attained is a true gauge of national civilization. If the civilization of Japan is to progress on a sound and lasting basis, it is essential to promote the growth of a class who shall feel and think as Westerns feel and think. How is this to be accomplished? The advance hitherto made is attributed by Professor TOYAMA to the influence of persons who visited the West in a public or private capacity. Among them, principally if not wholly, are to be found guiding impulses which almost amount to instincts in favour of European ethics. But this method of educating the desired disposition has hitherto been confined, and must necessarily continue to be confined, chiefly to men. Yet the case of the women is of at least equal importance. Japan must consent to be called semi-civilized until her women emerge from the depths of mental and moral degradation in which they are now sunk; shake off the bonds of slavish submission that tie them to their husbands' feet, and, replacing their present inane frivolity by proper self-respect, learn to take a becoming position in society. Already among the men of Japan there are many who desire to adopt Western modes of life. But the ignorance of their wives is a fatal obstacle, for these know nothing of household management, and the family would have to depend for everything on hired aid. What is wanted is that female education in Japan should be undertaken by European and American ladies. Nothing short of such contact and association can accomplish a radical reform in the character of Japanese women. But it is evident that Japan cannot afford either to send her girls abroad to be educated or to employ a sufficient number of foreign ladies in her schools. Her best hope, Professor TOYAMA thinks, lies in Christian missionaries. If missionaries of different sects would work in harmony, there should be no difficulty in establishing five or six large female seminaries in Tōkyō. It would be sufficient if the teaching staff in each school included four or five missionaries with their wives, and two or three Japanese. The course of instruction, according to Professor TOYAMA, should include reading, writing, conversation, music, needle-work, and housekeeping. If

special scientific teaching were desired, scientists could easily be found to give their aid gratis. Above all, care should be taken to educate the girls in the principles of civilized morality and sociology. It may indeed be urged by some missionaries that they come to Japan for purposes of propagandism, not education. Professor TOYAMA answers that among all methods of propagating Christianity in Japan, the most effective would be for the missionaries to take into their own hands the education of girls of the better classes. In every country conversion to a new faith, as history shows, begins with women. Let but the women believe, and the faith of the children is assured. As for the apprehension that people of the higher classes, being averse to Christianity, will hesitate to send their daughters to missionary schools, Professor TOYAMA says that the sentiment of his countrymen is not one of hostility to this or that religion in particular, but of contempt for all religions. Let them be once persuaded that material benefits accrue from connection with a certain creed, and they will show no antipathy to it. Already, both in official and private circles, there are visible signs of a disposition to favour the introduction of Christianity for the sake of its civilizing influences. An exceptional opportunity thus offers to the propagandists of that creed. Professor TOYAMA predicts that, if they adopt the plan suggested by him, the attainment of their object is only a question of time. He does not ignore the fact that several missionary schools for girls already exist; but they are not of a sufficiently high type, nor is their position sufficiently central. Moreover, they ought to include classes for women as well as for girls, in order that the former may become acquainted with Western modes of life and social intercourse. Missionaries now devote a great deal of time and labour to going about the country preaching in broken Japanese. Professor TOYAMA thinks that they might as well be sprinkling a few drops of water on parched ground; the moisture is evaporated as fast as it falls. The education of girls and women, on the contrary, would be an unfailing source from which the waters of the Western creed might percolate steadily and surely through the empire.

There is little to be added to this essay. Coming from such a quarter, it ought to set the missionaries thinking.

#### CONSERVATISM IN JAPANESE ART.

WE mentioned, some time ago, that an Association of Japanese Architects had been formed in Tōkyō, and we publish, to-day, the first essay read before the new Society by Mr. J. CONDER, Government Architect. Mr. CONDER chooses a subject of great importance to this country—the question of foreign *versus* Japanese styles of building. That there should be differences of opinion with regard to such a matter is conceivable. A Japanese building of the better class offers so many attractive features and harmonizes, in many respects, so perfectly with the brightest aspects of the national life, that strangers may well be charmed into approval. But the prime purpose of a house is to provide comfortable and healthy shelter for its inmates, and it is impossible to maintain that a Japanese house fulfils that purpose. We make no allusion now to architectural beauties. There the excellence of Japanese taste is scarcely to be gainsaid. In the architecture and especially in the architectural decoration of old Japan, there are points which deserve to be ranked among classical models. So much may be readily granted. But when we examine the Japanese house as an abode, considerations far more important than the question of æsthetic beauty force themselves upon our attention. We have often discussed them in these columns, and may sum them up now by saying that the Japanese house offers no adequate protection against either heat or cold. It is strange that there should be any difference of opinion upon this point; strange that people should be found who, even after tolerably lengthy experience, persuade themselves to imagine that wood, and thin wood at that, can ever resist the sun and the frost as effectively as stone or brick. As a rule only the half of this proposition is asserted. The miseries of a Japanese house in winter are freely admitted. But they are compensated, one hears it said, by its charms in summer. Its lightness and airiness are so enchanting; the breezes blow into every nook and cranny and there is fresh air everywhere. If these principles alone are to be given prominence, better stand in the open under an umbrella. Then at least you will not be deceiving yourself with the fancy that the nature of the envelope which protects you is of no consequence. But why dwell upon what is so obvious? We have now the unqualified testimony of an expert to resolve our doubts—if honest doubts really exist. Our own belief has long been firmly fixed that whatever might be the æsthetic quality of Japanese buildings, they must soon become utterly incongruous with the impulse which the nation's civilization has newly received. Preserve the purely Japanese æstheticism if you will. Mr. CONDER himself has indicated how this is possible in the beautiful interior decorations of the palaces of

Princes ARISUGAWA and KITA-SHIRAKAWA. But do not preserve it at the heavy sacrifice of comfort and common sense. The Japanese people have to get upon a higher domestic plane. They must cease to sit upon the floor, to lie upon the floor, and to eat upon the floor. If the reform involves giving up rustic alcoves and paper doors, let them be given up forthwith.

Mr. CONDER touches—more than touches—upon another and somewhat delicate subject. Roughly speaking the foreign mind assumes one of two attitudes towards Japan. Discrimination is troublesome and demands knowledge. Therefore popular opinion generally passes to extremes. You have the ordinary European or American who is altogether too far forward in the “files of time” to recognise excellence anywhere outside his own types. His narrow intolerance warns him that to admire, or to admit the possible beauty of, things which do not bear the cachet of his own civilization, would be to demean himself in some sort. Such brainless bigotry may be briefly dismissed. Its victim can only hurt himself. His antipode is the not uncommon enthusiast: the man who substitutes sentiment for judgment, romance for reason: who sees farther than his fellows into the mysteries of what he worships, but sees there, at the same time, much that is merely the reflection of his own heated imagination. To such an one it would be a shock to discover, a sacrilege to confess, any blemish in the object of his love. If it fails, in some important respect, to satisfy European canons, he tells himself that the failure is more than compensated by an excellence peculiar to the artist, imperceptible, perhaps, to any but the true believer. We are not painting an exaggerated picture. The men we describe exist; are to be constantly met. Their one lament is that Japan should make any excursions into the domain of Western art. “Let her draw perpetually,” they say, “from the unadulterated springs of her own inspiration. The source is at once amply sufficient and too distinctive to mingle with other waters.” They are dangerous, these fanatics. They speak with the strength of conviction, and the flattery conveyed, wittingly or unwittingly, in their doctrine wins disciples whom their earnestness alone could not attract. It is hard to be patient with such sentimental intoxication; hard to speak calmly of men who would build about Japanese art a parapet of demoralizing self-gratulation; condemn it to the paralysis which must surely result from perpetual contemplation of its own excellencies. Mr. CONDER well describes the creed of these enthusiasts. “According to them,” he says, “you are not by any means to study the arts of the best artists the world has produced; you are for ever to be shut out from the enjoyment of those inspring

works of the ancient and modern schools in other countries, the very contemplation of which elevates man's soul to a higher nature. You are not to study the principles of composition, the grand harmonies in colour and form, the sublime conceptions of such art, for fear that you should lose your originality as a nation. In no other branch of culture could any one dream of telling you that originality and fertility of invention were to be attained by abstaining from the observation of what other peoples have done in the same branch of study,—by a system of rigid seclusion and exclusion; and yet this is the attitude sometimes recommended to you with regard to the Fine Arts.” Of course it would be an exaggeration to directly ascribe to this creed the abolition of the School of Foreign Art in the former Bureau of Public Works. There were other and perhaps sufficient reasons for that step. But certainly the fate of the School has been misconstrued. It has been regarded as a practical demonstration that some complete incongruity exists between Japanese and foreign art; that whatever profit the former derives from the latter must be accompanied by a fatal sacrifice of originality. Absurd fallacy. A RUSKIN was not needed to discover that all art sits at the feet of one mistress—Nature. Within her own field Japan has been a more faithful disciple of this principle than Europe, and since the charming products of her fidelity happened to become known to the world at the very moment when Western art was beginning to turn into purer channels, she received a measure of applause which could never have been earned under less opportune circumstances. But there is no radical difference between her art and the art of Europe. Each may borrow of the other without offending the canons of either. Europe has not hesitated to borrow from Japan, and those that urge Japan to wrap herself in her own garments and exclude every air of foreign inspiration, are advocating a course which would effectually condemn her art to decrepitude and decay.

#### CLOTHES AND THEIR COST.

IN the second of the Blue-books which the Royal Commission on the Depression of Trade and Industry are engaged in publishing, there is a bit of evidence which we desire to lay before the Japanese. It is this:—M. WORTH says that three weeks' Court mourning in England inflicts upon Paris a dead loss of £600,000. A little arithmetic will show that, unless M. WORTH be greatly mistaken, English ladies pay upwards of ten millions sterling—or seventy millions of dollars—annually to Parisian milliners. Now, England is tolerably self-supplying in the matter of female costume. The silly and extravagant fancy that to be abreast of the fashion one must equip oneself in Paris, does not

practically affect the bulk of the nation. Only the so-called “cream of society” indulge in this foible. Few there are, indeed, who would not dearly love to obey their barbaric yearning for fashionable finery; to trick out their persons in gewgaws of foreign manufacture. But happily the enormous expense of this insanity constitutes a species of strait-waiscoat. Ladies whose husbands have no fortunes to be squandered must perforce refrain from squandering. Those, however, who can afford to be demented, glory all the more in parading their moral disorder. Seventy millions of dollars annually! Just think of the figure. It is more than the national income of Japan. How many modern British CLEOPATRAS must be engaged in swallowing pearls in order to dissipate such a colossal total. Yet, as we have said, England can make, and has for centuries been making, excellent clothes for her own daughters. It is a mere foible that sends her to Paris for such things. But how will matters stand with Japan when the movement now developing with so much force becomes national? Among the manifold innovations which this country has accepted, open-armed, within the past twenty years, there was none that promised to take society more completely by storm than does the adoption of European costume by ladies. We should except the change, on the men's side, from the tonsure to the Western crop, were any comparison possible between such a triviality as the dressing of a man's hair and such a solemnity as the robing of a lady's person. The one change had everything to recommend it, *inter alia*, and it was accomplished, so to speak, between a night and a morning. The other has few recommendations—economy least of all—yet it threatens to be rushed through with almost equal rapidity. No thinking man in Japan appears disposed to check the current, and as for the women, the unceasing burden of their song now-a-days is: *Dōzo yōfuku wo kite mitai mon' des* (I do so wish to wear foreign costume). The female mind does not easily appreciate economical arguments, but surely the moral of M. WORTH's story is plain enough to be read running. Many a year must pass before Japan can be self-supplying in the matter of female apparel in European style. Her ability in this direction will lag far behind the growth of the new fashion. Where will she satisfy her wants in the interim? Necessarily in America and Europe. Let us suppose that three years hence twenty thousand Japanese ladies wear foreign costume, and that each of them has spent the very moderate sum of 250 yen upon her outfit. Four and-a-half million yen will then have gone out of the country to inaugurate this fashion. If the Japanese are prepared for that sort of thing, well and good. Nothing more need be said on the question of economy, for we presume that

the large difference of expense between Japanese and foreign dress is understood from the outset. But how, we would ask, will it fare under such circumstances with some of Japan's important industries? Are the beautiful and unique fabrics of Kyôto and elsewhere—the *chirimen*, the *chijimi*, the *tsumugi*, the *yusen*, the *ro*, the *hakata* and so forth—are all these to be relegated to the region of obsolete oddities? Their extensive use in foreign costume is out of the question. Are they, the outcome of centuries of refined taste and delicate workmanship, to be ousted by the calicoes, the chintzes, the muslins, and the silks of the West? Alas for the inheritance of exquisite taste which the Japanese lady is about to barter for flounces and furbelows. In the whole world there used to be but one country absolutely without shoddy, and that country was Japan. The meanest utensil used by the Japanese of other days had something to recommend it to the eye of art or of intelligence; the humblest abigail dressed herself with the instinctive taste of an educated aesthete. Out of this region where she earned and enjoyed the admiration of the civilized West, Japan is about to transport herself into the domain of tinsel and taudriness, of frump and frippery. By what canons will she be guided in her new departure? Experience shows that her instinct fails so soon as she emerges from the atmosphere of her own fashions. A parody of a house, a caricature of a costume, appears to offend her in no wise provided it be nominally European. Her natural and otherwise unerring force of discrimination weakens utterly when the old beacons pass out of sight. Soon we shall see tea-house girls slipshod, dirtysocked, trapesing about in slatternly skirts with rainbow garniture, and old ladies flashing gaudy ribbons or smirking under juvenile hats behind lace veils. Well, we rail in vain. This scum of our civilization must be taken with the sound liquor. It floats on the surface; a superficial element which superficiality assimilates. The Japanese lady has stepped down from her graceful pedestal to join in the ungainly, degraded romp of the western round-dance. It is only a step farther to the disfiguring anomaly of Western costume. She will take the step. Nothing can arrest her. She will take it, not because the new fashion attracts her eye or appeals to her taste, but because she deems it an inseparable part of the great movement to which her country has committed itself. We respect the motive, but sincerely regret the result.

# BRITISH CONSULAR TRADE REPORT FOR HAKODATE FOR 1885.

BRITISH CONSULATE, HAKODATE,  
19th May, 1886.

SIR,—I have the honour to forward you my Report on the Trade and Shipping of the Port of Hakodate for the year ended 31st December, 1885, comprising the following tables:—

I.—Return of Principal articles of Import to Hakodate during the year 1885.

II.—Return of principal articles of Export from Hakodate during the year 1885.

III.—Table showing the total value of all articles exported from Hakodate and imported to Hakodate from and to Foreign countries during the years 1884 and 1885.

IV.—Return of all shipping at the Port of Hakodate in the year 1885.

The Import trade of Hakodate for 1885 shows a slight increase of £361 3s. 2d. over that of 1884, but being of a trifling and miscellaneous nature calls for no special remarks.

The value of Exports during the past year shows a large increase over that of 1884, the Exports for that year being £66,310 3s. 6d. against £119,447 6s. 6d. in 1885, being £53,137 3s. 6d. more than the value of the Export for 1884. The following goods account principally for the marked improvement; Cuttle fish, Bêche-de-mer, Long Seaweed, Sulphur, and Coals.

COALS, which figure to the extent of 1,619 tons, valued at £1,380 4s. 6d., were from the coal mine, at Poronai, and were partly exported direct from Otarunai, the shipping port for the mine, and distant by rail fifty-six and a half miles, and partly supplied to foreign men-of-war and steamers in Hakodate. The "free on board" quotation at Otarunai is 15s. 9d. per ton, a price that prohibits it from competing successfully with other qualities at large consuming coal Ports in China or Japan.

AWABI.—The production this year is estimated at about 470 tons, almost all of which went forward to Yokohama for shipment to Hongkong. Prices ranged from £6 9s. 6d. to £6 14s. 6d. per picul, equal to 133½ lbs. avoirdupois, for best cargo. Importers to and Exporters from Yokohama lost heavily on shipments; but, as in former years, all foreign purchases are now shipped under Japanese names; they therefore do not appear in the Foreign Returns.

The same remarks apply to dried and salt cod-fish, which is sent forward from here to Yokohama for Hongkong. Shipments lost heavily.

CUTTLE FISH shows an increase of £3,680 1s. 6d. over the season of 1884. The take was very large, and is roughly estimated at 588 tons valued at, say £17,500 0s. 0d., of which about one-half was purchased by Japanese merchants for shipment to Yokohama, the balance being bought for direct shipment to Shanghai, of which, as per Returns, only 197 tons were sent forward, leaving a stock in buyers' hands here of close on 120 tons. Prices opened at £35 6s. 6d. per ton and receded to £26 6s. 6d., in sympathy with the Shanghai and Hongkong markets. Heavy shipments, combined with the poverty of the consumers round Canton, which is one of the large consuming districts, caused by heavy floods and excessive war taxes, made a dragging market, and prices gradually drooped. Only a few of the first shipments showed a profit; all the others resulted in a heavy loss.

IRIKO, or Bêche-de-mer, shows a large increase, being in 1884 £6,729 19s. 6d. and in 1885 £12,403 13s. 0d. an increase of £5,673 13s. 6d. Prices ranged from £97 0s. 5d. per ton, to £132 6s. 0d. Shipments generally showed a fair out-turn.

LONG SEAWEED also shows a heavy increase, the figures being in 1884 £46,165 14s. 0d. against £79,640 11s. 6d. in 1885, an increase of £33,474 17s. 6d.

When the new crop arrived in August and September, all old stock had been sold; there was consequently a fair demand, and the market was opened at 9s. 1d., subsequently declining to 7s. 8½d. per picul of 133½ lbs. avoirdupois, equal to £7 12s. 7d. and £6 9s. 5d. per ton. In October, owing to a fair demand in Shanghai,

and consequent advance in rates, the prices rose here to 9s. 6d. per picul or £7 19s. 7d. per ton, when heavy shipments were made, which forced the market down, and prices again receded to 7s. 8½d. per picul or £6 9s. 5d. per ton, which was the quotation at the close of the year with a weak market. The quantity exported in 1884 was about 8,283 tons, against 11,701 tons in 1885, being an increase for the year under review of 3,418 tons.

Shipments as a rule, up to September, showed a fair profit, after that date losses were incurred.

CUT SEAWEED shows a decrease of £848 1s. 0d., as during last year large shipments of inferior cargo were made from Yokohama which checked the demand for the produce from this quarter.

Quotations varied from 10s. 1d. to 14s. per picul, equal to £8 9s. 4d. and £11 15s. 2d. per ton according to quality.

Sulphur has increased from £4,402 9s. 6d. in 1884 to £14,529 7s. 6d. in 1885, being £10,126 18s. 0d. in favour of this year's trade. Out of the 6,266 tons given as exported, 1,180 tons "Seconds" were shipped to Melbourne, 810 tons "Thirds" to New York, and the balance, consisting of "Seconds" and "Thirds" to San Francisco. Quotations are given for "Seconds" as £2 11s. 7d. to £2 13s. 5d. per ton, a decline of 4s. 4d. to 6s. 2d. per ton on last year's prices.

The general export trade to China during the early part of the year appears to have yielded moderate profits; later on, losses on all cargo appear to have been the rule.

FOREIGN SHIPPING.—The shipping under Foreign flags during 1885 amounted to twenty-five vessels with a total tonnage of 12,768 tons, against fifteen vessels and 6,654 tons in 1884, being an increase of 6,714 Tons in favour of 1885; this increase, however, was in foreign vessels other than British. One small German schooner was sold during the year.

JAPANESE SHIPPING.—The Japanese shipping shows a large increase during 1885, owing to the competition between the rival companies, the Mitsu Bishi Steam Ship Company and the Union Steam Ship Company. Both Companies ran large steamers regularly twice a week from Yokohama, besides numerous other steamers to and from the West Coast, calling at Hakodate, but since the amalgamation of the two Companies in October only the usual eight trips per month have been made between this port and Yokohama; and the local coasting steamer trade and that to the West Coast have also greatly diminished.

FOREIGN FREIGHTS have ruled as follows:—To New York £1 5s. 0d., to San Francisco £0 12s. 6d., to Melbourne £1 12s. 6d., and to Shanghai from £0 13s. 2d. to £0 17s. 10d. per ton.

Freights on cargo hence to Yokohama, until October, when the rival companies above mentioned amalgamated, fluctuated considerably owing to the severe competition, and though arrangements were made in March as to current rates of freights, neither company adhered to them, but a system of rebates was commenced, at first ranging from 15 per cent. to 20 per cent. latterly increasing to as much as 50 per cent. with a further allowance granted on the weight of from 8 per cent. to 13 per cent.

JAPANESE IMPORT TRADE.—The native trade in Imports for the Hakodate district has decreased considerably in 1885 being only £610,174, against £1,072,421 in 1884, a decrease of £462,247.

JAPANESE EXPORT TRADE.—The Exports have also slightly decreased, the figures being for 1885 £573,506 and those for 1884 £591,542, a decrease of £18,036. The Imports are of the usual miscellaneous character, and the Exports as in former years consist principally of fish, dried and salted, fish manure, and edible seaweeds.

PUBLIC WORKS.—New Barracks for the accommodation of a regiment belonging to the Sendai command were completed during 1885, about two miles outside the town of Hakodate, and a convict establishment was also erected close to them. The convict prison which was

formerly in the town of Hakodate has been abandoned, and the ground will be let for building purposes as required.

Large and commodious Cholera Hospitals and Quarantine establishments were commenced during 1885 and very nearly completed. They are built on the western end of the Hakodate hill, and are each surrounded with stout palisades. There is ample accommodation for a large number of first and third class patients, with separate bath houses, disinfecting quarters, and residences for doctors, officials, &c., a special landing place with a stone pier, and a road leading direct from the shore to the Hospital has been constructed. The buildings are of wood, and the entire cost when finished, including roads, fencing, and laying out of the grounds, will amount to about £4,550.

**BET SUGAR FACTORY.**—The manufacture of sugar from Beet-root, at Mombetsu, in the Sapporo Prefecture, mentioned in my report last year, has been carried on with vigour, and nearly one thousand acres are under cultivation with beet-root; 6,271 tons of beet-root were harvested, of which up to the end of the year 5,815 tons were pulped, producing about 295 tons of sugar, against 252 tons the previous year.

The wholesale price of the sugar averaged £19 15s. 8d. per ton. The total earnings from the Factory from all sources amounted to £6,615, and the expenditure amounted to £13,108, which was divided as follows: Price of beet-root bought from the farmers £2,835; salaries and wages, £2,922; new buildings and repairs, £2,911; and new machinery £4,440.

The Foreign community of Hakodate numbered 38, besides 43 Chinese. There are also three Americans living at Sapporo, and three Germans at the Mombetsu Sugar Factory.

The census of the Japanese population of the town of Hakodate for 1885 shows a total of 41,231 inhabitants.

In stating the quantities and values of the Imports and Exports in the accompanying Tables, in British weights and measures, and sterling the rate of conversion has been as follows:—

**WEIGHTS.**—One ton equal to piculs 16  $\frac{1}{10}$ , one picul being equal to lbs. 133  $\frac{1}{3}$  avoirdupois.

**EXCHANGE.**—In Imports, four dollars and eighty-eight cents (\$4.88) equal one pound sterling, that being the rate adopted by the Japanese Customs authorities. In Exports, the rate of three shillings and six-pence (3s. 6d.) to the dollar has been adopted.

I have the honour to be,

Sir,

Your most obedient, humble Servant,

JOHN J. QUIN.

The Hon. Sir FRANCIS PLUNKETT, K.C.M.G.,  
&c., &c., &c.,

H.B.M.'s Envoy Extraordinary and Minister  
Plenipotentiary, Tôkyô.

#### ASSOCIATION OF JAPANESE ARCHITECTS.

Address delivered before the Association on July 14th, 1886, by Josiah Conder, F.R.I.B.A. Honorary President of the Association; upon "The Practice of Architecture in Japan":—

**GENTLEMAN.**—The subject which I have the honour of bringing forward this evening is one which I think specially suited to the consideration of this Association, formed, as the Society is for the purpose of uniting the members of our profession into a body, and of furthering the proper practice of Architecture in Japan. By Architecture, I mean of course such building as is suited to the present and future wants of this country, and such as is consistent with the progress that is being made in other arts and sciences. But first allow me to make one or two remarks about the style of building formerly adopted in Japan, and still employed by the more conservative of the people. To this style of structure, certain specialists abroad have refused the title of Architecture upon the plea that this term is applicable only to monumental erections built in solid and permanent materials; but such a distinction I venture to consider hardly justified. Within the limits of the material employed, the ancient builders of this country have produced works of considerable solidity and of great artistic excellence.

Japanese architects of the modern school, both for patriotic and artistic reasons, will no doubt continue to take an interest in archaeological research and cannot fail to admire those works of antiquity which remain in testimony of the skill of their ancestors. It is to be hoped that this Association will always be ready to raise its voice against any ruthless neglect or destruction of historical and artistic monuments of the past. Unfortunately, the perishable and inflammable nature of the ancient buildings in this country renders it impossible that, even with the greatest care, we should preserve them long, and unlikely that the architect-archaeologist should have much scope for exercising his skill in restoration. There is one object, however, which the Association of Architects might keep in view and seek every opportunity of putting into a practical form: I refer to the preparation of systematic and reliable records of the best of those architectural constructions which remain. Carefully measured and coloured drawings of the principal

temples, castles, and other interesting buildings still in existence should be made, and thus a work of great historical and artistic value might be produced. Of course such an undertaking requires funds both for the expenses of artists and measurers as well as for the cost of reproducing coloured drawings in the form of a book; but I do not think it would be difficult to obtain the necessary assistance for the preparation of what would be really a great national work. For the execution of proper drawings in a style suited to chromolithographical reproduction, men acquainted with perspective and with modern methods of draughtsmanship are necessary, and this Association is the place where such men are to be found. I venture to suggest that this matter should be kept in mind as one aim of the Association. We are modern architects, and may find that we cannot consistently reproduce obsolete and retrogressive methods, but we owe at least this reverent duty to the past. As men, though we need chiefly in our active relations with the world, the companionship of our equals and juniors, we do not forget our reverence for the old people, we sustain their reclining years, gather perhaps some counsel from their lips, and preserve sacred the memory of their lives.

We can show this reverence for the old style of Architecture and preserve these records of its excellences in the manner which I have pointed out; and we may even find amidst its old-fashioned theories some lessons applicable to our present wants. It is nevertheless necessary that we should rid our minds of any æsthetic or scientific fallacies with which romance and prejudice have surrounded these old methods of design and arrangement. We are obliged to set our faces against attempts to reproduce in new buildings forms and arrangements inconsistent with modern progress; and we discard, as much as possible, materials destructive to the security and subversive of the prosperity of the people.

I have referred to æsthetic and scientific fallacies in connection with the ancient style of Architecture, and first let me explain what I mean by æsthetic fallacies. I assume that Architecture in Japan, as throughout the world, has been the cradle of all the Fine Arts, the higher, and in early times the only, aim of Painting and Sculpture being to contribute to the adornment of buildings. Now, in reference to your Fine Arts you are often told, that, as a nation, you will lose your great decorative skill and your originality of design by studying the Arts of other countries. One recent writer upon Japan has gone so far as to sneer at what he calls the absurdity of your having had in former years a school of sculpture and painting on Italian models. Now, several circumstances may have contributed to the breaking up of that school of art, but the chief one was the doom of extinction which for economical and political reasons had been passed upon the Kobusho, with which it was connected, and the withdrawal of funds throughout the whole of that department. But even so brief an existence has left its mark, and has shown that the Japanese are as capable of winning artistic distinction in the completer and more realistic forms of art, as were their ancestors within their own confined limits. The phoenix born from the ashes of the Public Works Art Academy,—namely, the Bureau for the Preservation and Cultivation of Ancient Arts, with its crowd of official tyros and so-called connoisseurs, has nowhere met with greater condemnation than from the lips and pens of those who exulted over the death of the European Art School. According to such writers as I have referred to, you are not by any means to study the arts of the best artists the world has produced; you are for ever to be shut out from the enjoyment of those inspiring works of the ancient and modern schools in other countries, the very contemplation of which elevates man's soul to a higher nature. You are not to study the principles of composition, the grand harmonies in colour and form, and the sublime conceptions of such art, for fear that you should lose your originality as a nation. In no other branch of culture could any one dream of telling you that

originality and fertility of invention were to be attained by abstaining from the observation of what other peoples have done in the same branch of study,—by a system of rigid seclusion and exclusion; and yet this is the attitude sometimes recommended to you with regard to the Fine Arts. How did Charlemagne instigate the development of the crude arts of Gaul until they finally resulted in the magnificent arts of mediæval France? How did the Italian republics develop theirs? How did the artists of the Renaissance produce their world renowned works? And how did modern France obtain her present rank of artistic excellence? In each case through contact with and study of the art productions in other parts of the world. In no case has such contact been detrimental to national individuality and originality.

It appears to me that the necessity for some complete and non-exclusive method of art education in Japan is very patent, and that such a system should be very quickly inaugurated. Whilst you are studying the literature, philosophy, and sciences as developed in other parts of the world, you must also study the arts of other countries, and it is only by such means that you can develop and improve the art of Japan. I dislike, as much as any one, what is mixed and incongruous in art; at the same time all history shows us that a transitional period must be passed through in the arts as well as in every other culture of a people who are on the path of progress and development. Each period of artistic excellence throughout the world has been separated from a former period of excellence by an interim of debasement and transition. In Japan the debasement has come and the transition must follow.

"Old decays but foster new creations"  
"Bones and ashes feed the golden corn!"

The new ideas, new methods of treatment and of construction, require time to assimilate themselves to the national needs and tastes; and it is only after such novelties have engrafted themselves into the people's life that the results begin to partake of the national character.

I see very little fear of Japan losing national type and character in the art which she will eventually develop, provided that the natural artistic instincts of the people are kept alive. But if, out of terror of the bugbear called "hybridity," those responsible for the national education hesitate to establish proper instruction in the arts—if they favour only a narrow and exclusive curriculum of art education, it is to be feared that the country may eventually lose her æsthetic capabilities.

It is impossible to establish an artificial demand for works belonging to an old and passing type of civilization. Most of the natural incentives to such an art are fast disappearing, and could only be restored by a relapse which is impossible. The patronage extended in the old days towards the encouragement of artists has greatly diminished and patrons have turned their wealth and their tastes towards more utilitarian matters. Such demand as remains is almost entirely of an antiquarian character. Buildings adapted to the old style of decoration are now but rarely erected by the wealthy, in spite even of one very important example now in process of construction,—a fact which means a great deal. I do not include religious buildings, which, so long as Buddhism remains the popular religion of Japan, will probably continue to be erected in the old style. Year by year the demand for the old style of art becomes less and less, and as a consequence, worthy artists in some branches are hardly to be found. Before, then, the fast vanishing causes which have in the past kept aroused the artistic faculties of your country, before they are quite obliterated, it is necessary to "act in the living present"—to establish some stimulus to art culture fitted to go hand-in-hand with other branches of modern training and applicable in its results to modern and progressive requirements. If I be not mistaken in my observation, some of your art critics, most loyal in their admiration for Japanese art, and most erudite in matters connected with the history and principles of this one branch of universal æsthetics, are ready

also to admit that there is room for development and improvement in your arts. So afraid are they, however, of what they consider a servilely imitative tendency on the part of the Japanese, that, even in administering lessons derived from European art principles and practices, they most studiously avoid referring to European precepts and prefer to ransack the faded productions of early masters in Japan for examples of a nearer approach to these universal principles. The Japanese painter may be told for example, that he will improve his monochrome pictures by more powerful contrasts of black and white, and by the clever distribution of varying tints in synthetic and antithetic combinations; but he is by no means to be told that one of the first principles of European composition in black and white is this same balance and contrast. The logical and academical explanations, such as the facts that in nature the intensest shadows are near the brightest lights, that the paler shades are near the half tints, that a deep shade will have a softened border of reflected light—these and other axioms of modern schools, are among the esoteric mysteries which are forever to be hidden from the Japanese painter!

I think I have sufficiently explained my reason for considering that there is a great deal to be lost and very little to be gained by an exclusive attitude in regard to the Fine Arts, and that this fear of imitation and loss of originality is an exaggerated one. It is one which fails to do justice to the precedents afforded by the universal history of art. Moreover, it fails to do justice to the only precedent which Japan has had the opportunity of showing, namely, in the naturalization of the foreign art of China, which in this country has become in many ways distinctly and purely national.

In the next place, it is necessary to rid ourselves and the public of any lingering scientific fallacies connected with the old style of building. Architecture must above all things be adapted to the habits, climate, and physical conditions of the country in which it is carried out; and for the proper appreciation of these conditions in Japan a considerable acquaintance with your country may be necessary. I think you will all admit that I can speak as one having long acquaintance with Japan. Yet architects may be thought to have unreasonable prejudices difficult to eradicate, and it is well therefore to notice the observations and opinions of others who have no special interest in the art of building. Now I have invariably found that, as far as intelligent foreign opinion goes, those residents of longest acquaintance with and strongest attachment to Japan are those most ardently in favour of buildings constructed upon modern principles, whereas those who incline more to the ancient modes are people who have but a brief and limited knowledge of the country and climate and who, far from regarding Japan as their home, look upon it as a place for a short Bohemian residence with few social restraints.

The habits of the Japanese are so rapidly assimilating with those of Europe and America, that I need not dwell upon distinctions in that respect. With regard to climate, we may no doubt gather some interesting lessons from the old style of building adopted. But if I am not mistaken, many of the supposed advantages of these ancient methods are only advantages as regards the limited capabilities of such structures. Even the most conservative are ready to admit the insufficiency of comfort afforded by a Japanese dwelling during the colder months of the year, but, according to their opinion, such a structure is far cooler in the summer than its modern rival, which is considered to be dark gloomy and deficient in air. Now, even with such a matter as heat, fancy has a great deal to do. You all remember the story of Ashikaga Yoshimitsu who ordered the neighbouring hills and trees to be covered with white cotton in the heat of summer that he might experience the prospect and sensation of winter. This was carrying fancy to an extreme, and yet, to a limited extent, the popular idea that coolness is only to be obtained by exposure to the outside air is

perhaps equally fanciful. A purely Japanese dwelling having walls which are great conductors of heat, it has become a national fancy that coolness can only be obtained by an excessive amount of openings. May it not be that the reason why such a house is cooler when thrown completely open, and with little but its slender posts remaining, is that the heat absorbing and radiating wooden walls are thereby decreased? With thick walls of non conducting substances the case is different. The idea of an interior being kept cooler than the outside air is one hardly possible to the mind of an ordinary Japanese. In tropical, and semitropical countries thick walls are always resorted to, and I venture to think that the early cave-dwellers in Japan had far cooler residences in the summer than the more modern conservative hut-builders.

There is one practical test which will prove the correctness or otherwise of the heat theory in connection with houses, and that is the test of the thermometer. If any one will compare the readings of a thermometer upon a hot summer's day in a solidly constructed house, having its windows open towards the breeze and vented closed towards the sun, with simultaneous readings in a Japanese house thrown completely open as is the custom, I think he will find the readings several degrees in favour of the solid structure.

Now, in respect, to other physical conditions peculiar to Japan there is the very important matter of earthquakes. I do not think that there is one modern architect in Japan who would venture to despise the consideration of earthquakes. I know of none who has not kept the contingency of destructive earthquakes continually in his mind in designing and carrying out buildings upon this soil. We have been accustomed to sacrifice some of the most effective features of our buildings to show our respect for these phenomena. We have avoided projecting cornices and ornamental parapets which so grace the classic styles; we have shunned those corbelled turrets, projections and pinnacles so helpful to our compositions; we have sacrificed height, so necessary for grandeur in all Architecture, and in addition to this we have rounded our arches, used iron ties, and other methods of construction which have since been recommended to us by various writers.

There are some sacrifices which we are not prepared to make, partly because we doubt their efficiency, and partly because they entail danger and loss equally great and far more certain than the contingency of a severe earthquake. We cannot make great sacrifices of comfort, security, and other conveniences, as well as great expenditure of other people's money in experiments founded upon theories admirable in their originality but as yet only partially matured. For maintaining this attitude, architects are apt to be rated with callousness and indifference to scientific research in general and to the lives and safety of the public in particular, and even arguments in favour of the old style of building in Japan have been levelled at us.

Now, although it is very easy to find numerous other reasons for the long continued erection in Japan of wooden buildings, I am quite ready to admit that the dread of earthquake may have had a great deal to do with it. The fear of such recurring phenomena no doubt made the old builders afraid to attempt the use of a heavy non-elastic material like stone. But the statements that, besides the general precaution of building in wood, there were, in connection with the modes of construction, inventions and arrangements specially fitted to cope with seismic disturbances, I regard as groundless fallacies. Now in matters with the details of which the ordinary public are neither acquainted nor interested more than in a superficial degree, it is sometimes sufficient to make a novel and imaginative assertion for such an explanation to be readily accepted as the popular one and to become widely disseminated. The real truth has afterwards a little chance of being heard as a voice crying in the wilderness. You all of you know the famous leaning tower of Pisa, and how this tower, before it was completed, began to sink over upon one side owing to the unequal nature

of the subsoil, until at length the limit of compression on the softer side of the foundations was reached. The inclination thus given to the tower before completion has been corrected somewhat in the uppermost story afterwards constructed, but even thus finished the whole has a very threatening and unstable appearance.

But the popular story in connection with this leaning tower is that it was purposely so constructed as a bold and curious experiment, and this story you will hear repeated all over the world even by intelligent people. The specialist's explanation, founded upon scientific knowledge as well as authentic historical record regarding the construction and its failure, and even the fact that towers in other parts of Italy have sunk over in a similar manner, none of these refutations have yet been able to dispel the popular fancy in attributing to the architect so grand and hazardous a piece of originality. The theory of earthquake pendula in Japanese pagodas will no doubt continue in like manner to captivate the public mind. We are only surprised to hear this and similar theories with regard to ancient Japanese structures repeated by men engaged in scientific research, who ought on this account to be particularly careful and patient with regard to their facts and arguments. It is only lately that at the Institute of Civil Engineers in London during the discussion on earthquake countries originated by a valuable paper from Professor Milne, and in reference to the seismic or ball joint, that the ancient architects of Japan are stated to have erected their buildings upon rounded stones with a similar seismic object in view. Now the fact is that the so-called rounded stones used under the sole plates of these structures are not rounded stones at all in the sense it is intended to imply. They are not spherical, nor are they rounded upon their upper or lower surfaces, so that in their action and effect they have no resemblance whatever to cannon balls or shot. This method of building upon isolated hewn stones or flat boulders was, as you all know, adopted in order to keep the timber sole plates from contact with the damp of the soil, and in this respect was found to be an immense aid to durability and an improvement upon the more ancient custom of planting the posts in the ground. I have failed to find any methods of construction in old Japanese buildings which recommend themselves as having seismic advantages, even accepting the seismologists' definition of what are seismic advantages. The heavy roofs, enormous projections towards the top, and light supports with weak joints and without strutting or bracing below, are all in exact antagonism to the principles pointed out by seismologists themselves. The flexibility of the material is the one and only advantage, and this applies to all wooden structures whatever.

It appears to me then, that the few arguments in favour of continuing to employ the old style of dwelling in Japan are founded upon romantic and fallacious prejudices. Such prejudices we can respect in those whose age and habits connect them more closely with passing than with coming times; we can even sympathise with such people in a romantic attachment to many of the refined features of the old civilization; but we cannot regard such prejudices as consistent with an enlightened and progressive spirit, and we are obliged to confess that they sound like a mockery when coming from the lips of those who at the same time advocate advance in other kindred sciences. I have dwelt somewhat at length upon these introductory remarks, and I do not intend to go very fully into the main subject of tonight's discussion, because there are gentlemen here better able than myself to consider it from a Japanese point of view. In a few remarks I wish to call your attention to the subject of the practice of our profession in Japan.

The education required by an architect, both general, scientific and artistic, as well as the responsible position which he holds, has, from ancient to modern times, rendered our profession a very high and honorable one. Of course all professions number in their ranks a certain proportion of uneducated and unprincipled pretenders. We have in Europe the pettifog-

ing lawyer and the quack doctor as well as the auctioneer-architect. The position which Architecture holds as a profession in most European countries is due to a great extent to the integrity as well as the skill of a great proportion of its practitioners, and the standard which they have set before themselves in their Associations. You must remember that the position which modern architects will hold in Japan depends also to a considerable extent upon the standard of practice countenanced by this Architectural Association.

The Japanese public are not yet capable of appreciating the different status of a profession and a trade. I think I am right in saying that the profession of medicine is the only one which in former times obtained any position of rank or any respect from the upper classes; and, if I mistake not, even the doctor was a tradesman in medicine as well as a medical adviser. Even the barristers, who in Europe claim so high a standing for their profession, and who indeed supply the bench with its judges, are only now agitating here for a position of dignity in the courts, and have been, until quite recent times, hardly regarded as respectable persons or treated as ordinary gentlemen. These points I mention merely in order to show that popular opinion in Japan requires educating in order to appreciate the status of different occupations. You are not, therefore, called upon to accept the public idea of the position of an architect or of the practice of architecture.

There may be other considerations, however, which might lead you to adopt a different and somewhat less elevated standard of professional practice than that holding in the more advanced European countries. Such considerations might be, for example, the limited demand for work of a highly artistic or scientific order, and the want of proper surveyors and contractors to undertake the auxiliary and more degrading duties of the work of building. The main concern of architects is of course to see carried out in the best and most satisfactory manner such building work as there is a demand for in the country which they are working in. The demand in Japan is not at present, and is not likely for a long time to be, for Architecture of a very high order, and architects desiring to confine themselves to the designing of buildings the purely architectural work for which required their complete attention, might cover a great deal of paper, but would, I fear, cover very little ground. But even, supposing that modern architects in Japan adhered strictly to the English definition of their professional duties, and refused to contaminate their fingers with contractor's details, the question then arises, upon whom is to devolve the proper and satisfactory discharge of these more degrading but not less necessary duties? Are there in Japan men combining business qualifications with advanced technical knowledge who are capable of properly undertaking the general-contractor's branch of building?

It will be interesting to take a glance at the different methods of practice followed in other countries.

In England we have as builders large general contractors who possess capital and considerable business facilities, and who are ready to undertake contracts for the whole of a large building. Such contractors possess large stocks of material, plant, and machinery, are able readily to command labour of all kinds, and as a consequence can compete cheaply for large works. But they of course make a profit from each sub-contractor or tradesman. It is not uncommon in England for a contractor to employ an assistant who has had something of an architectural training, to make designs and drawings: but the opposite custom of an architect himself undertaking contracts is absolutely unknown.

In France, on the other hand, there are no general contractors able to undertake the contract for the whole of a building. The architect, in carrying out work calls around him the different tradesmen, each trade in a building being let to a different man who works quite independently of the other tradesmen. All

labour prices are fixed for the principal towns by the municipal authorities, and these prices form a maximum, the competing tradesmen tendering for work at certain rates below the municipal prices. One acknowledged drawback to this system is the fact of there being on one building so many tradesmen having no mutual organization and answerable only to the architect from whom each requires perhaps separate sets of drawings and specifications, and separate agreements and instructions. The different bills are prepared by surveyors employed by the several tradesmen, and these the architect has to verify and check, for which purpose he employs a "verificateur." The responsibility of such verification rests, however, with the architect. In Austria the French system is followed; in Denmark both the French and English systems are employed. In Germany, also, both the above methods are occasionally used, but very often there exists in this country the practice of an architect himself undertaking the contract for a building. He contracts for the whole, agreeing to do all professional work as well as to perform all business transactions connected with the building for a lump sum.

With regard to the preparation of quantities for building work, the following custom generally prevails in England. The main idea is that an architect occupies the position of a professional agent of the client and to some extent that of an arbitrator between the client and contractor, but he is responsible only to the client and he must not in any way put himself under the power of the contractor. If he takes out the measurements of his own work and imposes them upon the contractor, he becomes responsible to the contractor for their accuracy, and in case of disputes is in a very anomalous position. This anomaly of being responsible to two individuals having conflicting interests ceases to exist in the case of an architect acting as a quantity surveyor for buildings of which he is not the superintending architect; and such work is therefore often undertaken. The usual method, however, is to employ a special quantity surveyor approved by architect and contractor alike, and who is paid by the contractor. In the case of several contractors competing for a job, one quantity surveyor does the work for all, and is paid out of the contract price of the successful competitor. The bill of quantities thus prepared is filled in with prices by the different tenderers, and in case of extras and omissions occurring during the progress of the works, such variations are estimated at the rate of the prices filled in.

In parts of Scotland a somewhat different system prevails, by which all work is remeasured from the building after execution as a check against the list of quantities previously prepared from the drawings. The advocates of this system urge that it prevents disputes, but it must be borne in mind that besides entailing double labour and double expense, it takes considerable time, greatly delays the final settlement of accounts, and occasions no little injustice to the contractors.

According to the French system, the exact sum of money which a building is to cost is seldom known beforehand. The architect prepares in the first place a rough estimate (*devis estimatif*) from his design, and then the work is let out to the different tradesmen at certain prices agreed to by them upon the basis of the municipal rates. As far as exact amount of labour and of material is concerned, little is previously known, and it is only when the final bills are presented scrutinized, and checked by the architect's "verificateur," that the exact expenditure can be ascertained. A modification of this method is sometimes employed, which is called the *maximum* system, by which the different contracting parties not only agree to the rates but insert a guarantee that the total cost shall not exceed a certain amount.

In Germany, when contractors are employed, the architect takes out his own quantities and is responsible for their accuracy, but as a precaution he generally submits them to the contractor to be checked, thus shifting some of the responsibility on to his shoulders.

Now, it will, I think, naturally strike most of you, that as there exist in Japan no large general contractors, or at any rate none of sufficient experience, capital, or facilities to make their employment very advantageous at present, the English system as described is out of the question for this country. The choice seems rather to lie between the German method of architects themselves acting as contractors, and the French system of directing and verifying a number of small contractors in different trades. In considering the first of these two methods, it must be remembered that all contract work to be successful requires capital and needs special business arrangements and transactions sufficient to occupy the full attention of an ordinary individual and unfit him for the exercise of other professional duties. There is also the element of risk, for even with the most careful calculations a contractor may lose as much as he hoped to gain, owing to unforeseen fluctuation of prices and unexpected accidents and delays. I do not of course consider the possibility of a man undertaking a contract which he sub-lets to another contractor for a lower price, thus pocketing a profit for which he does no work at all. I have very strong doubt about the honesty of such a proceeding, especially if carried out by those styling themselves professional men and accepting an honorarium in addition, which, it is understood, is given for professional supervision in the interests of the client.

The French system perhaps adapts itself better than any other to the present conditions of Japan, where we have always to deal in a single building with a number of small contractors in the different trades. There are no doubt in this country men and companies who aspire to be considered as general contractors, and I regret if I offend their susceptibilities in any way. Let me, however, ask the following questions. Where is their capital? How much interest upon this capital are they ready to be content with for the prosecution of their business? What experience have they or their employés in modern business ways, modern methods of measurement, and modern book-keeping? What plant and machinery do they possess to make it an advantage to us to call in their aid to simplify labour? What stock of selected and well seasoned materials do they possess, and what accommodation for the storage of plant, machinery, and materials? We know contractors who have built themselves fine houses, but we observe that they occupy the public streets or the fronts of their parlour windows with their small stock-in-trade.

As I have already mentioned, one drawback to the French system is the uncertainty of cost; and it would no doubt be necessary in Japan if such a method were adopted to introduce also the "maximum" qualification into all tenders, prepared on this system. I believe that labour prices for the various trades are already fixed by the municipality of Tokio, but it is also necessary that proper constants of Japanese labour should be ascertained. It seems to me that the preparation of a reliable table of constants is no very difficult matter. If trouble were taken to watch and time native workmen of average skill in the execution of different kinds of labour, such as stone dressing, sawing, jointing, planing, and hoisting of timber, *et cetera*, reliable constants of labour could very easily be made and would serve as a guide to architects in verifying the estimates of different tradesmen. Such constants would be of equal benefit to contractors, who would have to give up their present method of guessing, which may result in their loss as often as in their gain. They would no longer be able to countenance the irregularity of their workmen, who would understand that a certain standard of labour was required of them, and who might even be thus induced to quit their homes on a cloudy morning. Putting aside really stormy days, when it would be indeed hard to carry out difficult works in the open air, I wonder how many days in the year a Tokyo workman remains away from his work on suspicion of wet, or because it has rained a few drops in the morning! Now, if we only consider that he

wastes in this way a month of his yearly labour, we arrive at an excess of about five sen a day paid for his daily support. But in addition to this, his hours of idleness and amusement necessarily lead to extravagant habits and needless expenditure. I am not of course in favour of being too hard upon the Japanese workman, who compared with his European brother is both poor and frugal; but what is detrimental to building enterprise is the irregularity and uncertainty of work and the loss of time occasioned by his habits. Time is money, both with capitalists who start works and with architects who carry them out.

There are some points connected with the subject of our professional practice which it is somewhat difficult to discuss without treading on delicate ground. We have sometimes been surprised to find contractors employed upon important works in spite of ignorance and dishonesty when there were no lack of other contractors capable of doing the same work at a reasonable price and in a much better and less scamping manner. It is not fair that employment should depend upon anything but comparative ability, cheapness, and honesty.

Of course in all competitions due regard must be given to the reliability of the different competitors, and it is left to the discretion of architects and others to select such men as can be relied upon.

It is only ignorance of the details of building matters on the part of those connected with their management that renders possible the combinations among contractors which are often complained of.

The selection of estimates, must be known to be decided by principles of fairness, and must be as open as possible with due regard to the competence of those invited to tender. If, without open competition, a contractor be employed who is known to have no special skill and no special facilities, or less of both than others who might be found, there is sure to be a bad construction put upon his employment, be it justifiable or not.

Now, Gentlemen, I leave the further discussion of the subject in your hands, and trust that some small advantage may be gained from its consideration.

### CORRESPONDENCE.

### THE SILVER QUESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I am much obliged to "X." for his long letter in answer to mine of 18th instant, which, however, is no answer at all; and as "X." can evidently see only from one point of view, it would be quite useless to attempt to argue the point with him.

I may however remark that "X." seems to quite ignore the fact that the silver coinage in the countries of Europe to which he refers, is only coined to the extent necessary for "change" in small business transactions, and it has not a home value equal to gold beyond a certain limited sum; in Great Britain £2 is the limit. "The silver coins of England do not pass current with English gold at home;" and the rest of his remarks upon this point are equally misleading and erroneous.

In contradistinction to this limited use of silver, "X." proposes to let loose upon Europe the millions of dollars lying idle in the U.S. Treasury vaults, which are to be treated as being as good as gold, while silver in the market would be 80 per cent. or 85 per cent. cheaper.

Yours respectfully, CENT PER CENT.

Yokohama, August 20th, 1886.

[By what process are American silver dollars to be "let loose" upon Europe? As well talk of letting English shillings loose upon Japan.—Ed. J.M.]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is with much pleasure I see from correspondence published in your last three issues that the Silver Question is again being revived in Japan. It is surprising to me that a question

of such vital importance to the commercial community of the East should have received so little public expression from the business men of this city, because the opinions of such men in these distant sea ports would have far more weight with the governments of the world than all arguments of financiers and silver-mongers wherever they may be. It is the opinions of outsiders that have the greatest weight on governments and the public generally; therefore I am thankful to your correspondents for having revived this great question by making their opinions public, and it is in order that the subject should be thoroughly ventilated that I again impose on the space of the press. If I disagree with either of your correspondents, it is not because I believe my opinions are any better than theirs; on the contrary, my object in writing is to gain further information which may give myself and the public some foundation on which to take definite action for remedying the evil with which an ever varying exchange is constantly burdening commerce.

Your correspondent X. has, in my opinion, regarded silver from one point of view only, viz: the Importer's view of it. But may I ask X. as an importer whether he would like the silver kings to become possessed of all the wealth in the world simply that silver may again have a fixed value. For my own part, I do not see why the silver men should receive such support from the governments of the world while every other industry is suffering from such fearful depression. I would respectfully beg to point out that silver exists almost everywhere; it is a metal which becomes commoner as research advances, and unless its value depreciated as its quantity increases we should have silver mines opened everywhere, and this heavy, cumbersome metal forced into the treasuries of the world in such quantities that gold would pass from them into the hands of a few individuals and would soon become a curiosity only obtainable at an enormous premium. The great difficulty which the commercial community has to contend with is that silver is used for payment in some countries and gold in others, and consequently the fluctuations in the values of these two metals causes them serious embarrassment in all their transactions. If this difficulty could be solved, then international commerce would have a new life, for there is little doubt that much of the present uncertainty is due to the continual fluctuation in the values of these metals. But this difficulty can only be solved by an unanimous expression of opinion of those who are interested in the question and that opinion must be arrived at by a practical study. Your correspondent X. urges that the governments of gold using countries should bolster up silver and give it a fixed value in ratio with gold. Well, if all the governments of the world could be brought to agree on this point I do not think it would be possible for that agreement to last long because the age is becoming too refined ever to hope that silver will last as a standard coin for international purposes. The old money bag has given way to the small and convenient *porta moneta*, and the silver dollar is rejected for the paper note. People now-a-days do not care to be hauling about heavy lumps of silver, so that the once precious and adored metal is now looked upon as common and cumbersome. This is what has caused the depreciation in the value of silver. There is no use for silver now-a-days; people won't have it unless it is forced upon them, and the paper substitute which has replaced it is like the ivy round the oak, sucking its very life out of it while all the time it pretends to embellish and strengthen it. If it is really desirous to give silver a standard value the best way to do so is to bring silver into practical use. If you will reject all paper dollars and paper money and demand in their place a genuine coin, then you will create a demand for the large quantities of silver now unused and in so doing you will give that silver an increased value. At the same time even this will not give to silver unchangeable value, and fluctuations will still exist, for silver exists in any quantity and its supply will increase as its production becomes more remunerative. Would it not, therefore, be better instead of bolstering up silver in this unhealthy manner to get the silver using countries to adopt a gold standard for international purposes? Your correspondent X. wonders why the American silver dollar is worth so much more than the Mexican. The reason of this is that the American dollar can be changed for gold whereas the Mexican can only be changed for silver. It is just as easy for America to keep its silver dollar at a gold value as it is for it to keep the paper dollar at a gold value. A government can make its coinage as it likes for internal affairs, but when these coins are used for international purposes they become subject to international value, viz., the value of the metal from which they are made, unless those who make them are willing

to take them back in exchange for a more valuable metal. Your correspondent X. points out something which he does not define as being the cause of serious injury to trade; may I suggest that that cause may be the existence of exchange between the money of one country and another, and that the best way to lessen the injury is to assimilate international coinage as much as possible so that a large class of men may not be able to seize all the profit of commercial transactions by merely undertaking the collecting of the payment for them. We wonder how it is that exchange varies so, but if we only knew the real manipulating of that exchange we should find out, probably, one of the most serious hindrances to commercial prosperity.

I remain, Sir, yours faithfully,

NEGOZIO.

Yokohama, 20th August, 1886.

"Negozio" is a whole argument amounts to this—that silver is produced in too great quantities to possess a fixed value, and that it is too cumbersome to serve for purposes of currency. In regard to the first point, has it ever occurred to "Negozio" to compute the effect produced upon the gold value of silver by its demonetization with the effect which can reasonably be attributed to any increase in its production? If he will examine figures bearing upon this point, he will probably change his opinion. For the rest, during the long centuries when the world was bimetallic, why was not "Negozio's" apprehension realized? Why did not the "silver-swamping" take place in those days, or at any rate, show some symptoms of taking place? As to the idea that the white metal is too cumbersome, "Negozio" need only look at India and at Japan. Is the use of silver in these countries attended by the inconvenience he contemplates? Our correspondent will pardon us if we say that these arguments of his have been discussed and, as we think, exploded time after time.—*Ed. J.W.M.*

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In a foot note to my letter of 20th instant you ask, how can the silver dollars of America be let loose upon Europe? This is how.

I take it that the object which bimetallics have in view is, to obtain an agreement by all countries that the value of silver shall be fixed at a certain rate in proportion to gold; and this attained, silver would be interchangeable in the same way as gold is at present; and we should see shipments of silver as we now see shipments of gold. If this is not the object in view, what is? The circulation of silver in the country of its coinage at gold value is (according to X.) already an accomplished fact, and the only thing remaining to desire, is a regular exchange between all countries on the fixed value basis. Therefore, whenever a shipment of bullion had to be made to Europe, you may be quite sure that the article of which there is such a plethora in the United States would always be shipped in preference to gold. Now this exchange of silver bullion could only be made by sending coined silver, because silver in the market would be quoted at a price below the fictitious value placed by agreement upon the minted coins. You and other bimetallics are perhaps under the impression that the establishment of the fixed ratio would cause such an increased use of silver as to raise the price of uncoined to a level with coined silver; and if there was a prospect of such increased use being sufficient to absorb the whole production of the world, you would have some grounds for your opinion; but such a theory is a pure hypothesis, and one from which I most emphatically dissent.

By the process which I have described you would soon see a readjustment of the balance of silver to the disadvantage of non-silver producing countries; and when it suited the United States to repudiate the arrangement they would perhaps do so as readily as the state of Virginia lately repudiated its bonds. This is one of the "high-minded" and "independent" methods alluded to by "X."

Yours respectfully, CENT PER CENT.

Yokohama, August 21st, 1886.

"Cent per Cent" is somewhat loose in his terms. He speaks of a shipment of silver "bullion" from America, meaning that the coins thus shipped are to be used in Europe as specie. Nothing of the kind would occur. Unless the dollars of the United States were legal tender, as dollars, in the country to which they were sent, they would immediately go to the melting pot, or be shipped home again. Therefore, to speak of bimetallics "letting loose" U.S. dollars on Europe, is much as though one were to speak of overrunning English pasture land by imports of Australian tinneled meats. Was the English market encumbered with Spanish pistoles, French francs, or Mexican dollars in the days when the world was bimetallic? "Cent per Cent" further says:—"You and other bimetallics are perhaps under the impression that the establishment of the fixed ratio would cause such an increased use of silver as to raise the price of uncoined to a level with coined silver." This theory, he calls "pure hypothesis." Passing by the fact that his statement of our opinion is elliptic and misleading, we would suggest to "Cent per Cent" that he should import a few ounces of uncoined silver into Japan, and see whether it would not be worth precisely its weight in yen, minus the seignorage.—*Ed. J.W.M.*

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you yield me the courtesy of your columns to ask your correspondent, "X." what precedent he finds in financial and commercial history or experience to warrant his belief that it is possible to fix by law a ratio between gold and silver independent of the market price of either. That these metals are commodities is a trite dictum.

The merchant is said to sell his tea, but this act of selling is equally a purchase. He buys with it gold or silver, and the coins he receives therefore have a market value just as his tea has, and their only worth is their power of being exchanged for a service.

The ratio of silver to gold has been fixed many times by statute and edict, and it has held as long as the demand equalled the supply and no longer. During the last decade, there has certainly been an appreciation of gold, but that would not begin to account for the great depreciation of silver.

Public attention was first called to the fall of this metal about 1875, and in 1876 it fell from 58½d. to 48½d. in London, and has made no strong rally since. From the beginning of the 18th century to 1875, the world's production of silver was \$512,000,000 in U.S. Gold. From 1876 to 1884 inclusive this sum was exceeded by \$214,000,000. This alone would seem to be sufficient to account for the fall in silver, especially as the annual output of gold has been falling off. But Germany threw on the market in 1875 \$30,000,000 in silver, and had \$100,000,000 or more to dispose of. The action of other European countries, as is well known, in demonetizing silver and limiting its coinage, contributed to still further depress the metal. But to make matters worse, the demand for silver in India, as shown by the inquiry of the House of Commons in 1876 or thereabouts, had fallen off to the amount of £10,000,000 annually (see Price: "Practical Political Economy," p. 397).

I have not mentioned the United States in this connection because it has contributed in no way to the fall of silver. Congress did pass an Act in 1873 (not 1876, as "X." has it, Mr. Boutwell was Secretary of the Treasury from March 11th, 1869, to March 16th, 1873) discontinuing the coinage of the standard dollars, but as there had only been \$8,045,838 of these coined from 1792 to the date of the passage of this Act, she could scarcely be counted as an active silver buyer that would be missed from the market, and any real or imaginary damage then done to the cause of silver has been far more than compensated since. And more than that, the very law stopping the issue of the standard dollar authorized the coinage of the trade dollar. Of the gold standard countries, the United States is the one most interested in establishing by international concert (supposing that something is to be gained thereby to appreciate silver) the ratio of silver to gold as 15½ to 1. She has some \$270,000,000 in standard dollars worth 36 per cent. less than their nominal value, and is producing silver bullion at the rate of fifty millions a year. Of course the lower silver goes, the nearer draws the time when she will be unable to bear the burden the silver fanatics are heaping on her shoulders. That these dollars are accepted the world over at par, as "X." states, is only a half truth. They are, because they do not circulate abroad in any volume. When in 1873 it was proposed to pay United States Bonds in silver dollars, worth at the time 80 cents in gold, there was a panic in American Securities in London, and United States Bonds fell considerably, and it was stated at the time that over \$50,000,000 of these Bonds (I quote from memory) were sold by English holders and returned to the United States. So much for the foreign faith in silver dollars, backed by the faith of the United States Government.

The purchasing power of money is regulated by the intrinsic value of the metal it contains. The impress of the government stamp on a coin is nothing more than an assay mark—a guarantee of its genuineness. A government may give a certain value to a coin by receiving it at its nominal value for taxes, which is one reason (and the best) why the standard dollars are not already depreciated in the United States, as the law permitting them to be paid for customs duties, etc., provides a handy and easy exit for them from circulation. But if the financial history of nations shows any one thing clearly, it is that all the laws that human ingenuity, brutality, or tyranny can devise, have never been strong enough to compel men to exchange gold for any form of fiat money—(by the way "X." had better look that word up)—and one third of the standard silver dollars of the United States is the worst form of fiat money. There is not even a promise to pay. The United States cannot make 73 cents a dollar, and it will be able to sustain the present nominal value just as long as "the silver is dug out of the ground in Colorado and buried again in Washington," but if it attempts to force it into circulation in quantities beyond the requirements of trade, depreciation will follow as certainly as night follows day, merchants will refuse to accept the coin except at its real value, and if the silver stream continues to flow into the already overstocked channels of business, the invariable law, that the cheaper money drives out the dearer, will show its truth; gold will be expelled from cir-

ulation; the United States will be forced, whether it will or no, to a silver standard and be subject to all the evils "X." so graphically describes.

Yours respectfully, "A YANKEE."  
Yokohama, August 23rd, 1886.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to your comments upon my letter of 21st instant. If the bimetallics succeeded in putting their theory into practice, and it were a workable theory (which it is not), then silver dollars having a fixed value in proportion to gold, the same in all countries, should be equally suitable and acceptable for shipment as gold, excepting their greater bulk; but only minted coins could be shipped, for the reason I have already stated. If this international exchange of silver upon a fixed basis is not what bimetallics want, I should like to know what could be the use of a common international agreement as to the value of silver. What would come of it? Spanish pistoles and Mexican dollars were always taken as they are now, at so much per ounce at the market price of silver. French silver francs never were taken in England, any more than English shillings in France.

If I import a few ounces of silver into Japan I shall doubtless get its weight in silver yen, because the silver yen is the standard coin of this country, but I cannot afterwards go and obtain an equal number of gold yen for them; and if gold yen are to be had at all they are at a premium, as gold dollars are in the United States.

Your illustration is unfortunate as it upsets your own argument.

The bimetallics' theory is not worth argument, and will not hold water for two minutes; the mere fact of its being founded upon a proposed agreement or conspiracy to confer a fixed value upon an article of produce, which that article does not really possess, is fatal to it, and would prove utterly impracticable.

I have said all I intend to say on this occasion upon the silver question, and thanking you for your courtesy in giving space to my letters, will say *au revoir*.

Yours respectfully,

CENT PER CENT.

Yokohama, August 24th, 1886.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Gracious, it is hot—yet I feel that it is but due from me that I pay my respects to "Negozio" and "Cent per Cent," although you in your foot notes have comprehensively disposed of the propositions and reasons they have advanced to refute the statements I made regarding silver. You have very thoroughly dealt with "Cent per Cent," and have given him food for reflection that will probably busy his comprehension for some time,—though he might, at a rapid review of what you have told him, hoist in enough of sound thought to make him reason better in the future. His emphatically dissenting from any proposition that you and other bimetallics may advance puts it quite outside of possibility that you or they may be correct. "Negozio" asks me if I, as an importer, would like to see the silver kings become possessed of all the wealth in the world simply that silver may again have a fixed value. To that I must reply that, while I would not see all the wealth in the world concentrated in the hands of any one set or class of men, I cannot really see where the difference comes in, whether the gold holders shall impoverish the holders of silver, or a change of base be accomplished and the silver men hold the vantage ground. No, "Negozio." I only wish to see the holder of silver placed again in possession of what was his before the holders of gold so manipulated matters that he was left at their mercy and subject to spoliation without remedy. "Negozio" cannot see "why the silver men should receive such support (sic) from the governments of the world while every other industry is suffering from such fearful depression." I, with other advocates of a bimetallic currency, urge that it is because of government discriminating against silver that the "fearful depression" exists. "Negozio" says that silver exists almost everywhere, meaning in mines I presume. That is so, but it is an accepted saying that it costs 2 dollars of gold to extract one dollar in silver from the mines, and although it may not be absolutely true, nevertheless to anyone who has had any knowledge of the amount of assessments paid into the treasuries of the silver-mining companies in the United States the assertion would seem to gravitate very near the truth. If the statistics were obtainable, I think it would be demonstrated that vastly more money has been spent in working the Comstock Mines in Virginia City, Nevada, than the amount realized from such working, paid in dividends. If "Negozio" or any other man desires to make his fortune in silver mining let him

beware how he ventures upon the undertaking. He had better trifle with a buzz-saw than with a silver quartz mill and mining. The silver that is being produced now (this current year of our Lord is costing more than it is worth. Probably "Negozio," and lots of others will start in asking questions how this can be so, and will doubt the statement. I beg them not to do so in connection with this newspaper silver racket, because it would take time and patience to make it understood—but to satisfy themselves let them ask any Californian whom they may know regarding it. "Negozio" says "X." wonders why the American silver dollar is worth so much more than the Mexican and then instructs me this wise: "The reason of this is that the American dollar can be changed for gold, whereas the Mexican can only be changed for silver." Yes, just so. I had occasion to write before, on January 27th last, in reply to "Omega" who took the *Mail* to task because it suggested that it would not be an act of injustice, or look toward repudiation, if the States redeemed their outstanding bonds with silver dollars, and wrote in this wise: "The United States would pay in the silver coined at the government mints—United States dollars—and the silver dollars of the United States are, to all intents and purposes for which money is used, equal to gold. The faith of the government is behind and covering them, and so long as that is so, no man need fear sustaining loss by holding them." I am glad to know that "Negozio" considers the proposition a sound one. On that point we are agreed. Now let me pass to the free coinage proposition which is advanced by so large a number of the silver advocates in the United States, and which they think, and they urge it with good reasons, would cure the hard times and bring back again an era of prosperity that would be far reaching and embrace the varied enterprises wherever distributed—whether in silver using countries or where gold is now so much coveted. As I have said before, it may yet be that the United States Congress will be the deliberative body that shall ordain free coinage for silver, and in so doing give relief to a waiting world. Free coinage would enable the holder of silver bullion to deposit it at the mint and have it coined into dollars at his command. No more dollars would be coined than there would be a demand for, but bullion would have a fixed value which would interest men in keeping it from pawn to the brokers of England or Germany. If England or Germany wished to take their surplus silver to the United States and have it coined into dollars, they would be entitled so to do; the moment they essayed that rôle the price of bullion would advance all along the line, the dollars of Mexico, the yen of Japan, the rupee of India would feel the stimulus that was given to bullion, and exchange would take the up grade and soon find the par limit. It is nonsense to talk about silver being too abundant; it is tantamount to asserting that there is too much money in the world. Has Japan gotten together money enough to satisfy the needs and demands of thirty-five millions of people? Has any country in the Far East, the money that is required for its development? India and China have been noted for their absorption of silver ever since they have had commercial relations with the Occident. Has either of them money enough? For that matter has any nation in the world money enough? In the last days of the Grand Old Man's Governmental sway there comes up a cry from India which tells too plainly that she has not yet enough to satisfy her needs, and the depreciated value of the rupee is represented as proving of terrible detriment to the development of improvements contemplated by the government. I see that the manufacturers of England are considering this silver question. In self-defence they see they cannot longer sit supine while disaster comes coursing to their doors, threatening with utter ruin their business enterprises. In short, look where you will, you can observe indications that the world is fast awaking to the fact that to rob silver of its value is to cover the world's enterprises with stagnation that threatens to eventually kill. I wait for the good time coming when the poor man's silver shall be as valuable as the rich man's gold. Let me ask all those who have taken me to task because of my advocacy of silver, what are you fighting for? What interest can be benefited by driving silver into a hole? What industry, what enterprise is there that can receive benefit by depreciating the value of silver? Will so doing put bread into the mouths of the hungry? Will it stimulate commerce; will it bring employment to the unemployed thousands who now are clamouring for a chance to labour that they may live? Will it lead to the exploiting of the undeveloped resources of any land? Will it be of the least benefit to the millions who gain their living by the sweat of their brows? If it would help the estate of the hewers of wood and

the drawers of water, I would say Amen and Amen to the endeavour; but while it only heightens and deepens and broadens the distress that environs labour throughout the world, making more unbearable the already desperate condition of the starving multitudes who are at the base of all the prosperity the rich enjoy, who are the sills and foundation of all the greatness the nations possess, and through whose brawn and sinews the world is made what it is to-day, an inhabiting place for the possessors of gold and gold incomes while it does this, I must protest. There are interests far beyond the mere question of gold or silver money for commerce, something far more weighty than the weight of silver dollars in this controversy—the welfare of underfed and underpaid men and women. The children and babes born to poverty have an interest in this thing. Life and death put in their claims in the settlement of the question. The bearer of burdens, knowing no other condition, will not repine at the weight of silver that may be given him or her to carry. The heavier the load of silver the lighter will be their load of life. Was there sense in the idea of adding to the weight of the gold coins of Europe to make them equal to the value of silver established prior to the discovery of gold in California and Australia—as was insisted upon by German financiers? It is history that such a proposition was advocated because gold was becoming so plentiful; nothing was then urged against the more cumbersome silver. Silver has been caricatured in many ways. I have seen a cartoon where a lady was shopping and a cart-load of silver was being hauled for her to make payments with, just as if those who had cart-loads of silver ever paid coin for their purchases—prompt cash. Then I have seen it pictured as being refused by beggars, while we all know that the average giver of alms to the street mendicants never goes deeper into his money stock than a copper or two.

To follow the teachings of the gold advocates to a logical conclusion we should discard silver altogether as money. We should do our best to ostracize it in the marts of trade, having none of it. If it is well to cause a shrinkage of thirty-eight per cent., why not continue the good work until a silver dollar shall not represent fifty cents, aye, ten cents, in gold. If an ounce of silver is altogether too heavy to be carried or handled when it represents the value of a gold dollar, it would help it beyond measure to have it represent only ten cents, so that one might carry ten of them when he went on a high old spree, just for a change. I am charged with looking at this question from the standpoint of the importer. Well, what if I do? Am I wrong in so doing? Importers have some interest in the commerce of the Far East; they have some standing among those whose fortunes may be affected. When, in the interest of the holders of gold, the importers are driven to ruin and bankruptcy, I fancy there will be weeping and wailing in other quarters, and others than they will curse the projectors of the scheme to make gold the only medium of commercial exchange.

Your truly,  
Yokohama, August 24th, 1886.

### THE BLUFF WATER SUPPLY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I shall be obliged if you will allow me to reply through your columns to various questions that have been put to me relative to the Bluff Water Supply.

1. I am taking the matter up spontaneously, and in the interest of consumers; not professionally, or at the instance of the Kencho.
2. The water would have to be raised to the level of the Bluff by means of a force pump.
3. No exact survey or calculations having yet been made, it is difficult to ascertain accurately the amount to be charged. But, assuming the number of houses to be supplied to be 250 at least, the maximum average charge per house would be \$2.50 per month, giving 20 to 30 gallons of water per head per diem.
4. This charge would not include the cost of house service pipes and fittings, or extra supply for gardens, horses, cattle, &c.
5. Fire-service is included in the above estimate; and the supply for this purpose would be as copious and efficient as in the Settlement.
6. The foregoing estimate is believed to be an outside one.

Yours, &c.  
Yokohama, August 23rd, 1886.

### NAGASAKI.

(FROM OUR CORRESPONDENT.)

Nagasaki, August 18th.

I wired you briefly on Monday morning giving you the disastrous results of the serious disturbance which took place on the previous night between men from the Chinese ships of war now in harbour and the Japanese police. I regret to say that the casualties have since been aggravated by the death of two Chinese and another police officer who were wounded in the melee. At the present moment, it is impossible, with any claim to strict veracity, to give an account of the origin of this deplorable affair—indeed, as usual in such cases, it seems little likely that the absolute truth will ever be known. On one point, however, most statements would appear to agree, that the quarrel arose in a brothel in town, that a policeman was called in to settle it, and that he was most wantonly set upon and killed by the Chinese who came to the aid of their countrymen. This story may vary in minor details, but the sad fact remains that a Japanese official was literally murdered in the discharge of his duty. The chief offender is said to have been quickly arrested, and it was to rescue him that the attack in force was made by the Chinese on the police station in Umegasaki. Most of the police staff being absent on cholera prevention duty, assistance from outside was, perhaps, only too willingly lent the authorities to defend the station. The fight, which up to this time had been pretty general in the streets leading to the police station, then became serious, the officers using their swords, and the Chinese whatever weapons they could lay their hands upon. The Umegasaki Police Station is situated within the foreign concession, and at about 11 o'clock the streets were impassable. The Chinese were driven off after three determined efforts to get possession of the building; a large number taking refuge around their Consulate, while the Japanese mob which had then assembled were kept in check by the well directed efforts of the police. At this time, Governor Kusaka, Mr. Enlie, H.B.M.'s Consul, and other officials were on the scene, but it was much later before anything like order was restored. I refrain, at present, from comment, in deference to most conflicting statements upon this lamentable occurrence, but it is perhaps well to point out that there had been trouble of a much less serious but somewhat similar nature on the previous Friday, and it would have been, I think, a wise precaution on the part of Admiral Ting to have refrained from granting general leave to his men until the bitterness engendered thereby had passed away. It is also generally conceded that, in spite of this, the quarrel was quite unpremeditated on either side; and comparatively little feeling has since been manifested by the Japanese on the subject. Captain Lang and other foreign officers of the Chinese Navy testify to the usual good conduct while on leave of the men concerned; so that, whatever may be the result of subsequent investigations, the fact of both parties being totally unarmed at the outset shows that there was neither disposition to quarrel nor any idea after breaking out that it would reach the dimensions it unfortunately ultimately attained. The wounded have been carefully tended by Dr. Beukema, of the Government Hospital, and the medical officers of H.M.S. *Rapido* and the Chinese Squadron, and are reported to be doing well.

The authorities have, I understand, just laid before the Consular body, a plan for the reclamation of that part of the harbour situated between Deshima and the Custom House. Continual dredging for the past two years has proved the utter futility of attempting to keep open even a moderate sized channel for the traffic by boats to the town by that means, much less of preventing the more important object of the silting up of the harbour itself. The scheme is, therefore, to fill in some 14,000 tubos in such a way that the existing channels will be left free for the passage of boats and to lay out the land reclaimed as a public garden. The scheme is a liberal and spirited one on the part of Governor Kusaka and the authorities, and deserves every support from the foreign community. Objection may be made by some to the loss of their so-called "water frontage," but such a plea would be more imaginary than real, because at low tide the frontage at Deshima is simply a mud flat of pungently offensive character, and both stream and tide will remain with them under the proposed improvement. The situation for a public garden is all that could be desired, and laid out with the usual taste of the Japanese in such matters, it could not fail to prove a great boon and attraction to the port.

I have just learnt that a telegram has been received here announcing the loss of the steamer

Madras on Taichow Island, the crew having been saved. H.M.S. *Sapphire*, which arrived yesterday from Hongkong, experienced the full force of a typhoon in the Formosa Channel, losing her jib-boom, one cutter, and generally sustaining much damage. She leaves to-day for Port Hamilton.

The following reference to the Nagasaki affair is an extract from a private letter:—"I presume you have heard full particulars by wire of the brutal murder of a native policeman by Chinese sailors, who afterwards created a riot in the town and made an unsuccessful attack upon the police station in the Settlement. So far as the Chinese were concerned it was a most disgraceful affair, and had not the townspeople helped the police the result would have been far more serious to the Japanese. The general opinion is that the Chinese were entirely to blame from first to last; but whether they will acknowledge it to the satisfaction of the Japanese Government remains to be seen."

The following account of the riot at Nagasaki is taken from *The Rising Sun and Nagasaki Express* of August 21st:—"On Sunday night last the usually very quiet town of Nagasaki was for about three hours the scene of probably the most disgraceful riot ever witnessed here resulting in the death of two Japanese police, one Chinese man-of-war officer, and four Chinese man-of-war sailors, in addition to the wounding, in various degrees, of about twenty Japanese police, ten Japanese residents, three Chinese officers, and over fifty Chinese sailors. Before recounting Sunday night's proceedings, it is necessary to go back to the night of the previous Friday, when, from what we can learn, a party of Chinese sailors, more or less intoxicated, visited one of the licensed brothels in Vori-ai-machi, and commenced to create a disturbance, whereupon the proprietor sent for the police, one or two of whom are always stationed at the foot of Maru-yama. A policeman named Kurokawa answered the summons and succeeded in apparently pacifying the disturbers. Shortly afterwards, however, the sailors, six in number, came down to the police box, whether by accident or premeditation we are unable to say, but we are strongly inclined to favour the latter opinion. They seemed to be very excited, and shouted and gesticulated in front of the police box. Kurokawa spoke to them, and was in the act of stepping out of his box to endeavour to persuade them to retire quietly, when one of them drew a sword and struck him over the head with it, inflicting a serious wound. The policeman immediately closed with his opponent, and after receiving several cuts on his hands he succeeded in disarming him. The Chinese then took to their heels, but were overtaken in Funadaiku-machi, where Kurokawa, after a severe struggle with the whole party, succeeded in arresting his assailant and taking him to the Hamono-machi police station. In consequence of this unprovoked attack on the police, it was then reported, upon reliable authority, that the Governor requested the Chinese Consul to advise the Commanders of men-of-war not to send their crews ashore. To what extent this well-meant advice was heeded may be gathered from the fact that, on Sunday afternoon, some four hundred men were allowed to come ashore, without a single picket to keep them in order! Beyond the usual indescribable din, and petty quarrels over disputed accounts for liquor, eatables, and sundries, inseparable from a mob of low-class Chinese, nothing occurred to lead any one to suppose another attack was meditated, until about 8.30 p.m.,—the corresponding hour at which the police were attacked at the foot of Maru-yama on the previous Friday. At that hour an unusual number of sailors congregated at the Chinese grog-shops in Hirobaba, and several of them commenced to jeer and throw pieces of water-melon, etc., at the policeman stationed at the cross-road. No notice was taken of them for some time, as the policeman was noted for being very quiet and inoffensive, but as the Chinese gradually became bolder,—as they usually do when the odds are about a hundred to one in their favour,—and attempted to take the staff away from the policeman, a private message was sent to the Umegasaki station, reporting the state of affairs. Sad to say, however, before assistance could arrive, the unfortunate policeman was entirely surrounded, and beaten and stabbed to death in the space of a few minutes,—in fact before it was thoroughly realised by the few native bystanders that anything of so serious a nature was being carried out. The number of Chinese then began to rapidly increase, and as the police arrived to endeavour to arrest the offenders and put a stop to further violence, it was noticed that many of the Chinese were armed with swords, sword sticks, spears, etc., part of which had been previously

purchased in the native town, ostensibly as curios, and the remainder furnished by their compatriot residents in Shinchi and Hirobaba. The mob proceeded towards Kago-machi without any opposition, and after a short consultation at the Temple steps, known as "Chudan," they continued their march along Funadaiku-machi, attacking every one who came in their way. They were there met by several police, who endeavoured to persuade them to desist, but were severely wounded for their pains. At the foot of Maru-yama, they were met by a party of seven police sent from the Hamano-machi station, who made a brave stand for a short time by blocking the way up with jirikishas, from behind which they fought until they were all more or less wounded (from the effects of which one of them died the following morning), and were compelled to retreat to the bridge connecting Shik'ku-machi with Kajiya-machi. Here, with the assistance of a number of residents,—who by this time began to realise the danger of the situation,—they succeeded in checking the mob, who thereupon turned back, fighting as they went. Swords, spears, knives, sticks, tiles from the roofs, stones, etc., were now freely made use of on both sides, and pretty lively fighting continued until the Chinese succumbed in front of the Umegasaki police station. As the excitement subsided, steps were taken to remove the dead and wounded to the Government Hospital, where the accommodation not proving sufficient, the balance of Chinese were taken to the Seamen's Institute. Measures were also taken to prevent Chinese sailors from returning to their ships, and as they were captured they were sent to the Chinese Consulate, there to be kept under guard the remainder of the night. The following day great indignation was manifested when full particulars were known throughout the town, and as there has always been a smouldering enmity between the two nationalities, the bare rumour that the Chinese were coming ashore again that night was sufficient to arouse their patriotism to such a pitch that the scene of the previous night's fray was literally crowded with men secretly armed and fully prepared to fight should occasion arise for doing so,—which fortunately did not. Such are the principal facts of the case so far as we have been able to learn. The matter is now being fully investigated by the proper authorities, after which it will remain with the Governments concerned to endeavour to settle the matter amicably. At the same time, there is not the slightest doubt but that the Chinese as a body were throughout entirely in the wrong. In attacking the policeman at Maru-yama, on Friday, they were guilty of a serious crime, which in their own country would in most cases be punishable with death; and the cold-blooded murder of the policeman at Hirobaba showed a natural inclination to callous brutality which none but the most degraded of human beings would be capable of displaying. In taking this view of the case we do not wish it for a moment to be understood that we consider all the Chinese ashore on the occasion of the disturbance to have been equally guilty, nor all the Japanese equally innocent. In fact we believe that several Chinamen were killed and wounded who took no active part in the fray,—for which their countrymen who murdered the policeman and ran riot through the town were entirely to blame. As usual under such circumstances as these, it will be difficult, if not impossible, to convict the ring-leaders. All that the respective Governments can do will be to settle the present affair in the best way they can, and in future endeavour to prevent the repetition of what certainly can only further embitter the feeling against one another, without adding very much to the credit of either. The matter has been fully reported to the Tôkyô authorities, who have ordered Mr. Kiyowara, of the Home Department, Mr. Hatoyama, of the Foreign Department, and Mr. Kowadzu, of the Judicial Department, to proceed to Nagasaki to thoroughly investigate the affair. The result of their investigations will be submitted to a special commission, presided over by Count Ito. Three Chinese officials have also been despatched from the Tôkyô Legation.

#### LETTER FROM LONDON.

(FROM OUR SPECIAL CORRESPONDENT.)

London, July 10th.

"All day long the noise of battle rolled" in the Arthurian legend, and so it does now day after day. You open your *Times* in the morning, and under foreign intelligence find the views of the foreign press on the election; then come speeches from Mr. Gladstone, Lord Salisbury, Lord Randolph Churchill, Mr. Goschen, Lord Hartington, filling three or four columns, and ending like this "the

right honourable gentleman or the noble lord sat down amid enthusiastic plaudits, again and again renewed, having spoken for two hours and twenty minutes." Then there are the minor fry (amongst whom Sir William Harcourt is now numbered) whose speeches no one reads but their own friends; then letters about the election, succeeded by leading articles on it, and so to the end,—nothing but Ireland and the election. Yet somehow people do not grow tired. Sir Henry Maine in his recent book on Popular Government speaks of the instinct of an Englishman for sport having much to do with the interest he takes in politics. He loves the bustle and turmoil of the conflict, and likes to see a good fight fought with pluck and endurance. And this election is being fought with wonderful pluck on both sides. There is no talk of rest, even for the aged Premier, who is the pluckiest of all the gladiators, and who bears alone the brunt of the battle on his side. He has no assistant except Mr. Morley to whom the country will listen, and so he has been waging the war practically single-handed against old friends as well as old enemies, and against all the veterans who have marched for so long under his banner. The battle is really, like the old fight of St. Athanasius, *Gladstone contra mundum*. Early next week, before this letter has got far on its way, your readers will be able to forecast of the result.

Meantime a few of the features of the contest, which may easily escape notice so far off as Japan, may be referred to. To say nothing of the manner in which the great Liberal party is split up into fragments, when Mr. Chamberlain advises his friends to vote for a Tory against a Radical, and Lord Hartington considers Sir Edward Reed so unsound that he goes all the way to Cardiff to speak against him—never has a contest been fought in which every other question was so completely submerged. Lord Salisbury "adjures" (his own word) all Conservatives to vote for the Unionists straight, not to oppose Unionist Liberals by candidates of their own; there is, he says, a time for every thing, and the time for other questions is not now. Again, to a wavering Conservative who says he does not like to support the Unionist Radical, for the latter is in favour of disestablishment, the Conservative leader writes:—"Do not fear for the Church in this Parliament. It will not be touched; if it is, the House of Lords will take care that you shall have an opportunity of voting upon it. All the fads are swamped and out of sight; even the very powerful temperance party cannot get its followers to vote for its leaders. Again, I question whether in our time there has ever been an election in which there was so much reviling and personality, Mr. Gladstone appears to me to have led the way during the campaign by attacking ordinarily sound Liberals at the railway stations he passed through, and then by assailing Mr. Goschen and Mr. Chamberlain, at Edinburgh. I must say that I think the Grand Old Man has hit below the belt more than once; he said for example that Mr. Chamberlain who is now denouncing the land scheme, produced one of his own to the Cabinet which was printed at his request. Nothing is said of the nature of the scheme, but the phraseology left in the mind the impression that it was almost the same as the one he was now denouncing. Herbert Gladstone the following day referred to some details of Mr. Chamberlain's scheme: hereupon, the latter replies that Gladstone junior could know nothing of the affair except through breach of confidence of some member of the Cabinet (which was one for Gladstone senior's nob); that he never laid any scheme before the Cabinet, but only communicated to the Premier, at the latter's request, an outline of his notions on the subject; that it was not printed at his (Mr. Chamberlain's) request, but at Mr. Gladstone's special request, and finally that he will not allow this red herring to be drawn across the track, and therefore, beyond denying flatly each detail alleged by Mr. Gladstone, he refuses to say another word now on the subject. Mr. Chamberlain is a tough and wary opponent, and appears at the present moment to be the most cordially hated man on the Unionist side. Time alone can show whether he will emerge in a higher position from the contest or not. But about Mr. Goschen's high position there can be no doubt. The last few weeks have proved him to be, with the exception of the Premier, the most powerful platform speaker in England. At Newcastle and at Edinburgh he met audiences which were violently hostile to him, and mastered them before he was done. If your readers can turn to *The Times* reports of these speeches, they will observe how the repeated hisses and interruptions of the early parts of the speeches grow fainter and less frequent, until at the end they appear to be converted into genuine applause. Another point in the election is the heat of *The Times*, usually so sober even when it takes a side. It has lately been using very strong language with

Original from

regard to Mr. Gladstone's methods. It accuses him of poisoning the springs of political life at their source by his misrepresentations, and tells him that appeals to the honour and justice of his country would come better from a man who had successfully vindicated his own honour and honesty. It talks of certain of the Prime Minister's tactics, as "hideous immorality," and so on. I think there is little doubt that the activity, energy, and vehemence of *The Times* from the outset has lent cohesion to the Unionists; it has been the string which bound the faggot. There is just one more point in this election, and I have done with it. Mr. Parnell and his lieutenants are for the first time stumping England, and are received with enthusiasm by enormous audiences in Manchester, Liverpool, Plymouth, Cardiff, and other places. The Irish leader has over and over again declared that this reception of him will exercise a great influence for good in Ireland, and I believe it will. I doubt whether we shall hear again in the present generation those savage denunciations of England, or see that glee at English disasters, of which we have heard and seen so much in Ireland in recent years. Abuse of certain statesmen and parties we shall undoubtedly have if the elections negative Home Rule, but, I am persuaded that in the end, the effect of the late debates in Parliament, and of the present contest (assuming it to be against the Premier) will be a soothing one on the sore in the Irish body politic. I should say too that Mr. Parnell's speeches are of a very high order; they are sober and statesmanlike; these are very little declamation and abundance of argument. The same may be said of the speeches of Mr. Sexton and Mr. T. P. O'Connor, the two orators of the Irish party.

Sir George Bowen has lately been discoursing before a distinguished audience at the Royal Colonial Institute, on the Federation of the British Empire, and his lecture has been published at great length and commented on widely in the press. I believe success has not invariably attended Sir George Bowen's efforts in the various high posts he has filled, but certainly there are very few men—perhaps amongst colonial governors Sir Hercules Robinson is the only one—who has the same wide and varied experience of the Empire, and therefore his contribution to the great discussion of the future, if it is not actually of the present, is an interesting and instructive one. There is just one small point about the address, which has struck me, that is, the extraordinary wealth of quotation; as Sydney Smith said of Macaulay, he overflows with learning and stands in the slops. It occupies a little more than a column of *The Times*, and in that space we find quotations from the following:—Mr. W. E. Forster, Aristotle, Mr. Herman Merivale, Sophocles, "a high authority" on the history of the American War of Independence, Adam Smith, Burke (three or four), Lord Beaconsfield, Professor Seeley, Pliny, Cicero, Sir George Bowen (bailing Lord Dufferin as *Burmanicus*), Claudian, and there are besides references to Washington, Hamilton (of the *Federalist*), Sir Charles Dilke, and others. Perhaps there are many more recondite allusions wrapped up in words unknown to me; perhaps the full lecture contained many more references than these, but I think this is a tolerably comprehensive and numerous list. All that was wanting was a quotation from Confucius. Sir Robert Fowler, when Lord Mayor of London, was noted for the copiousness and frequency of his classical quotations, but he was nothing compared with Sir George Bowen.

The book of the coming publishing season is sure to be Mr. G. A. Sala's autobiography, which is promised early in the autumn. Mr. Sala is, and well deserves to be, the *doyen* of British journalism. Very few parts of the civilised world, and very few great events of the time are unknown to him by personal experience, and his knowledge sits on him so gracefully that it is no wonder he is popular as a writer. In some departments of English learning, notably bibliography, he is in the first rank, and his taste in cookery, as well as his knowledge of the literature of the subject, are (as readers of his "Echoes of the Week" in the *Illustrated London News* will know) extensive and peculiar, like Sam Weller's acquaintance with London. In a speech somewhere a few years ago (for to his other accomplishments he adds that of being a capital after-dinner orator) he said that he wrote an average of 600 leading articles a year, besides a host of other things! One would think that the mere physical effort of writing so much would be beyond the capacity of any one except a trained copyist. Possibly, however, he is one of the few leader-writers, like Lord Sherbrooke and Mr. Leonard Courtney, who can dictate one or even two leaders simultaneously, to a short-hand writer. Besides his vast and varied experience, I believe the secret of his power to write a leader on anything at a moment's notice, is that he has kept

carefully arranged and indexed scrap-books and common place-books for many years. This was also the habit of the late Charles Reade, with whom the preparation of a novel was as laborious as if he had been writing a history. In reading Mr. Sala's articles one is very often reminded of the story (of Max Adeler, I think) of the man who met the Wandering Jew, and had some conversation with him. At every turn one is startled by such sentences as these:—"One day I had a difference with Cleopatra about that fellow Mark Antony: she said," &c. &c.; "the Black Prince was in a great fright before that battle in France; I dined with him the night previously, and he ate nothing," &c. &c. Mr. Sala does not go so far back as the Wandering Jew did; but no one seems to die in any part of the Globe, of any note, whom he did not meet somewhere, and of whom he has not something new to say. Yet this head of English journalism, who turns to gold every thing that he touches, is perpetually complaining that he would have been better off as anything else. He is never tired of saying that had he been a lawyer, or a doctor, or a horse-jockey, and given to his occupation the industry and talent he has given to spinning out articles, he would have been a rich instead of a poor man, a Lord Chancellor, or a Baronet, in place of a nobody. Journalism, he says, is the worst paid, most harassing and thankless work in which a man can engage in England. This is not cheerful for men who look forward to making their bread by the press; but all "newspaper men" devoutly believe it to be true. Wealth, "beyond the dreams of avarice," there is in English newspapers, but it goes the way of the proprietors,—as perhaps, all things considered, and especially the ancient doctrine of supply and demand, it should do.

As straws show how the wind blows, it may be worth while noticing that a few days ago—in fact on the forty-ninth anniversary of the Queen's accession, *The Times* devoted a leading article to some reflections on the changes which have passed over the world during the present reign. There was the vast increase in the British Empire, and its political as well as physical growth, the ups and downs in France, the formation of United Germany, the American war, and other stupendous events of that nature. Amongst these, and as an example of what has been accomplished in the Far East, the writer referred to the social and political revolution in Japan, and to the position now occupied by that country. It is not surprising that any one discussing recent changes in the world should refer to Japan; but Japan must be pretty well *en evidence* when a writer giving a column or so to the great events of the world's history during the past half century turns to her to point his moral.

The Marquis Tseng is at present travelling about in Lancashire, receiving addresses from Chambers of Commerce, corporations, town councils, boards of this and that, and replying to them all in excellent style. The only speech of his that I need specially refer to here is one in reply to the address of the Manchester Chamber of Commerce, in which he deprecated giving him the credit for the good relations existing between China and this country. These, he said, were due to a variety of causes, chief amongst them being the presence of Chinese envoys in Europe, and the telegraph. The latter prevented trouble arising in Peking through the conduct of an individual; it made every act of a minister instantly subject to the revision of his superiors at home, while, by the presence of envoys of each country in the capital of the other, the people began to know each other better, and to see that when the superficial crust was removed a common human nature and human feeling existed below. Envoys too, said His Excellency, were like doctors, they had their hands on the pulse of the nation to which they belonged as well as on that to which they were accredited; they gave life and form to the dry bones which alone the telegraph could put at their disposal. It was a very neat and appropriate reply, and but for the whirl of the elections which swallow up everything in their vortex, it would receive some attention here, for the subject with which it deals is one of much importance, viz., the influence of steam and the telegraphs on the political and diplomatic relations of nations, and the position of diplomatic representatives in the new state of affairs. What have been called "prancing pro-consuls," who make wars and annex provinces of their own bats, are now all but impossible; the British public in these days can hardly awake one morning to find themselves in the middle of a war without previous warning. Then there is the allied subject of the effect the telegraph has on the character, the fibre, if I may put it in this way, of British officials. Does it destroy the old fearlessness of responsibility and initiative so characteristic of British of-

ficers abroad, and create a class of men who are mere machines, set in motion in Downing-street, and who avoid responsibility as they would the fiend?

## LETTER FROM SAN FRANCISCO.

(FROM OUR OWN CORRESPONDENT.)

San Francisco, July 31st.

Since I last wrote, a week ago, hardly anything has transpired which would be of interest to your readers. The Grand Army of the Republic is assembling in this city for the annual reunion, and the streets are gay with bunting, and noisy with the clangor of brass bands. It is reckoned that six or seven thousand veterans or sons of veterans will visit the coast; the trains from the east stretch an inordinate length along the track, and are laden with dirty, tired, bedraggled, perspiring crowds, to whom the cool breezes of the Pacific seem air from heaven. In Washington, Congress is still wrestling with the last of the appropriation bills; the day fixed for adjournment was passed over by common consent. Many members have left to look after their political fences; the others chafe at the delays which keep them captives through the dog-days in the hottest city of the east.

A melancholy story reaches us from Labrador. The forbidding coast of that inhospitable region is inhabited by a few fishermen of the Esquimaux or Indian race, with here and there a British exile. These people lead such wretched lives that they ought to welcome death when it comes. The barren soil grudges them not only food but fire; when storms or ice cut off their access to the seal fisheries, they starve. Every year or two relief ships laden with provisions have to be sent from Quebec to keep them alive. This spring was late, with an unusual prevalence of east winds, and from some reason or other, the inhabitants failed to lay in their usual stock of provisions last fall. In April and May, the food supply began to give out. A sledge party which has just returned from Cape Chudleigh and Cape Mugford, on the north-eastern extremity of Labrador, reports that nearly one half the people have perished of cold and hunger. The thermometer in June was 18° below zero; the ice was from ten to a hundred feet thick, and above this snow hummocks rose like mountains. The seals kept well out to sea, and the fishermen were unable to catch them. Most of the corpses had been denuded of their clothing, which was appropriated by the survivors to protect them against the cold. A relief expedition has been fitted out by the Canadian Government; but unless the ice broke up soon after the sledge party left, the miserable Labradorians will be past all succour when it arrives.

The wretched story of the Greeley expedition has again been dragged to light by the revelations of Sergeant Connell, one of the survivors. This man endeavoured to secure a life position in the Signal Service; failing in this, he says that he feels it to be a duty to make a clean breast of all he knows. It is not a pleasant tale. He disbelieves the current scandals about cannibalism. But he admits that the bodies of the dead were mutilated, and he more than hints that the mutilation was done in order to provide bait to catch shrimps with. He charges Greeley with having murdered Henry, who was shot, and he accuses him of maligning the character of Dr. Pavy and others whom he disliked. Connell's story was telegraphed all over the country, and elicited strenuous denials of its truth from other survivors of the expedition. They say that Connell was notoriously untruthful, and a chronic grumbler. People are sick of the whole business. It was wretchedly mismanaged, and ended in dire failure. That the members of the expedition, under the cruel pangs of hunger, with death staring them in the face, committed acts for which it would be hard to hold them responsible, is beyond question. Greeley can never retrieve his lost reputation. But people feel that the expedition is one which ought to be forgotten if possible, and that no one but a ghoul would take pleasure in stirring it up.

The descendants of the filibusters of the ante-war era are trying to get up an excitement about the case of Cutting, the American editor, who is in jail at El Paso del Norte. Cutting, who seems to be an ill-conditioned fellow, always quarreling with somebody, once ran a newspaper in the Mexican town of El Paso; it failed, though he tried to make it sensational by abusing every one. Then he crossed the river and started a paper in the American town of El Paso, which is only separated from the Mexican town by a short bridge. In his new paper, he went on railing at the Mexicans, and not content with this, he crossed the river, and repeated his diatribes by word of mouth on Mexican soil. For this he was arrested, under the Mexican laws.

He immediately notified the world that he proposed to play the part of martyr. Several Mexican citizens offered to give bail for him, but he refused, and sent over to his friends heart-rending accounts of his sufferings in a Mexican dungeon. He appealed to the Government at Washington, and an inquiry was instituted—with what result no one knows; it is quite likely that Mr. Bayard found that sympathy would be ill bestowed on a man who had obviously courted martyrdom for the sake of notoriety. The Mexican officials have set down the case for trial next week. The prisoner having refused to employ counsel, the Court has assigned a lawyer for his defence; and this, the newspapers tell us, is another instance of the brutal treatment to which Americans are exposed in Mexico. It looks as if Mr. Cutting might over do the business.

People felt, last week, almost as if they had seen a ghost when the name of Hinton Rowan Helper floated through the papers once more. Thirty years ago, Helper, who was a resident of North Carolina, wrote an abolitionist book. It pleased the North, and infuriated the South to such an extent that, in those fiery days of proslavery and anti-slavery approval or disapproval of the Helper book came to be regarded as the test of political orthodoxy. An address was printed, addressed to the northern people advising them to read the book; it was signed by the leading members of the then struggling Republican party. The South declared that every signer should be marked down for political slaughter, and sure enough, when John Sherman—now President of the Senate—ran for speaker of the House, he was defeated because it was shown that he was one of the signers, and Mr. Pennington, who was to the full as bitter an opponent of slavery as Sherman, was elected instead. During the war, little or nothing was heard of Helper, and people had almost forgotten his evidence, when now he looms up as the champion of a scheme for a continental railway from Behring's straits to Cape Horn. He is actually applying to the legislature of the Argentine Republic for a subsidy for his road. Some newspaper having suggested that there must be some mistake—that Hinton Rowan Helper must be dead, he replies by threatening a libel suit to prove that he still lives.

The New York Anarchists have again brought themselves into notice. A Brazilian frigate is lying in the harbour, and on board of her is a Brazilian Prince, a son, I believe, of the Emperor, and a nice, gentlemanly young fellow. The authorities thought to pay the young man a little attention by giving him a jaunt to West Brighton. As the party were about to start the following elegant epistle was handed to the directors of the Sea Beach Company:—

To the President of the Sea Beach Railroad Company, the Directors of Such Company and Other Bandit Lovers and Royal Lickspittles: It is publicly announced that you intend feting this Brazilian princelet who is now here, and in conjunction with that fete you will entertain and banquet oppressor Martine and the bloodhound Fellows. It is further announced that many other lickspittles of royalty and the accursed aristocracy are crazy with a desire to pay honors to this princeling. This affair has been duly discussed in committee, and it has been resolved that this entertainment is a disgusting spectacle of homage to princelings and representative tyranny. It is now time that such rites shall be done away with and an example be made. This entertainment to August Leopold, Prince Hog, Martine, Oppressor, Fellows, Bloodhound, must not take place. If you persist to entertain these representatives of tyranny then revenge shall fall upon you. Your life and those of other principals in this fete shall be forfeited and taken at the earliest opportunity. This opportunity will not be long before being reached. By order,

SOCIAL REVOLUTION COMMITTEE.

July 26, 1886.  
Be warned and countermand the fete. Your lives are now in our hands and the responsibility shall now be with you.

Less would have been thought of the matter, and it would probably have been dismissed from consideration as a bad hoax, but for the discovery under one of the seats in the upper cabin of a long black bottle with a wire and fuse attachment which was spitting fire when it was found. A deck-hand seized it and threw it overboard, so that there was no explosion. But Mr. Martine, the District Attorney, and his assistant Colonel Fellows, seem to think that it was filled with dynamite, and that the excursion party had a narrow escape. The event will not be without its effect on the judge and jury who are now trying the dynamiters at Chicago. It hardly needs the gift of prophecy to enable me to predict that some day, it will be my duty to report to you an explosion in some large city, that will cost lives which the country can ill spare.

## LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, August 21st.

### THE QUEEN'S SPEECH.

The House of Lords has voted the Address in reply to the Speech from the Throne after a short debate.

### MILITARY FORCE IN IRELAND.

Major-General Sir Redvers H. Buller will shortly proceed to the South of Ireland and rigorously enforce the law.

### THE GOVERNMENT'S IRISH POLICY.

The Irish policy of the Government is to be considered during the recess.

London, August 22nd.

### REVOLUTION IN BULGARIA.

A revolution has broken out in Bulgaria, and Prince Alexander, who has been compelled to abdicate, has been transported from Bulgaria. The provisional government which has been formed relies upon the protection of Austria.

London, August 21st.

Prince Alexander has been imprisoned by the Pastirag, and a provisional Government has been formed.

London, August 23rd.

The Bulgarian army exhibits symptoms of a revolution in favour of Prince Alexander. The intervention of Russia is considered probable.

London, August 24th.

A second provisional government at Tirnova has now been formed, which is in favour of Prince Alexander, and this revulsion of feeling is extending.

## CHESS.

By Dr. S. GOLD. From the Chess Player's Chronicle.

BLACK.

WHITE.

White to play, and mate in 3 moves.

Answer to Chess Problem of August 21st, 1886, By Mr. S. LOYD.

- |                       |                |
|-----------------------|----------------|
| White.                | Black.         |

## MAIL STEAMERS.

THE NEXT MAIL IS DUE

From Hongkong, per O. & O. Co. Tuesday, August 31st \*  
From America, per P. M. Co. Tuesday, August 31st.†  
From Shanghai, Nagasaki, & Kobe, per N. V. K. Thursday, Sept. 2nd.

\* Gadic left Hongkong on August 24th. † City of Peking left San Francisco on August 17th.

THE NEXT MAIL LEAVES

For Europe, via Hongkong, per P. & O. Co. Sunday, August 29th.  
For Hakodate, per N. V. K. Monday, August 30th.  
For Shanghai, Kobe, and Nagasaki, per N. V. K. Wednesday, Sept. 1st.  
For America, per O. & O. Co. Thursday, Sept. 2nd.  
For Kobe, per N. V. K. Friday, Sept. 3rd.

## TIME TABLES AND STEAMERS.

### YOKOHAMA-TOKYŌ RAILWAY.

TRAINS LEAVE YOKOHAMA Station at 6.35, 8.00, 9.50, 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50, 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

TRAINS LEAVE TOKYŌ (Shimbashi) at 6.35, 8.00, 9.15, 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50, 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

FARES—First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90.

Those marked with (\*) run through without stopping at Teitumai, Kawasaki and Onari Stations. Those marked (†) are the same as above with the exception of stopping at Kawasaki Station.

### TOKYŌ-MAYEBASHI RAILWAY.

TRAINS LEAVE TOKYŌ (Uyeno) at 5.25 and 9.25 a.m. and 12.25 and 4.50 p.m.; and MAYEBASHI at 5.25 a.m. and 12.25 and 4.50 p.m.

FARES—First-class (Separate Compartment), yen 3.80; Second-class, yen 2.28; Third-class, yen 1.14.

### TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI at 6.50 and 9.55 a.m., and 1.00 and 4.10 p.m.; and YOKOKAWA at 8.25 and 11.30 a.m., and 2.40 and 5.45 p.m.

### TOKYŌ-UTSUNOMIYA RAILWAY.

TRAINS LEAVE TOKYŌ (Uyeno) at 9.25 a.m. and 4.50 p.m.; and UTSUNOMIYA at 9.30 and 4.55 p.m.

FARES—First-class, yen 3.50; Second-class, yen 2.10; Third-class, yen 1.05.

### SHIMBASHI, SHINAGAWA, AND AKABANE JUNCTION.

TRAINS LEAVE SHINAGAWA at 8.49 and 11.49 a.m., and 2.44 and 6.29 p.m.; and AKABANE at 9.55 a.m., and 12.50, 4.05, and 8.35 p.m.

FARES—First-class, yen 70; Second-class, yen 46; Third-class, yen 23.

### KOBE-OTSU RAILWAY.

TRAINS LEAVE KOBE (up) at 5.55, 7.55, 9.55, and 11.55 a.m.; and 1.55, 3.55, 5.55, 7.55, and 9.55 p.m.

TRAINS LEAVE OSAKA (up) at 4.45, 7.6, 9.6, and 11.6 a.m.; and 1.6, 3.6, 5.6, 7.6, and 9.6 p.m.

TRAINS LEAVE KYOTO (up) at 6.46, 8.46, and 10.46 a.m.; and 12.46, 2.46, 4.46, 6.46, and 8.46 p.m.

TRAINS LEAVE OTSU (down) at 5.45, 7.45, 9.45, and 11.45 a.m.; and 1.45, 3.45, 5.45, and 7.45 p.m.

TRAINS LEAVE KYOTO (down) at 6.45, 8.45, and 10.45 a.m.; and 12.45, 2.45, 4.45, 6.45, and 8.45 p.m.

TRAINS LEAVE OSAKA (down) at 6.25, 8.25, and 10.25 a.m.; and 12.25, 2.25, 4.25, 6.25, 8.25, and 10.25 p.m.

FARES—Kobe to Osaka: First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90. Kobe to Kyoto: First Single, yen 2.25; Second do., yen 1.40; First Return, yen 3.55; Second do., yen 2.10. Kobe to Otsu: First Single, yen 2.85; Second do., yen 1.70; First Return, yen 4.30; Second do., yen 2.55.

### OCEAN AND COASTING STEAMERS.

Steamships are regularly despatched from the Port of Yokohama for the following destinations:—

FOR EUROPE—The P. & O. Company's steamer sails fortnightly on Saturday, via Inland Sea Ports, making connection with the English mail at Hongkong, for Marseilles and Plymouth. The Messageries Maritimes Co.'s steamer sails fortnightly on Sunday, carries the French mail, and makes connection at Hongkong with the mail-boat for Marseilles.

FOR SAN FRANCISCO—The steamers of the O. & O. Co. and the P. M. Co. sail hence, approximately, every 10 days.

FOR CHINA—The steamers of the Nippon Yusen Kaisha sail weekly (Thursday) for Shanghai, calling at Kobe and Nagasaki. Steamers of this Company also run to Korea and Vladivostok, at intervals, their sailing notices appearing in the local papers.

### YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatoba daily at 8.30 a.m., and 12.00 m., and 4.15 p.m.; and leave Yokosuka at 6.30 and 11.00 a.m., and 4.00 p.m.—Fare, 20 sen.

*Satsuma Maru*, Japanese steamer, 1,160, G. W. Conner, 27th August.—Kobe, Mails and General.—Nippon Yusen Kaisha.

## PASSENGERS.

## ARRIVED.

Per British steamer *Thibet*, from Hongkong:—Mr. E. C. Adams, Mr. W. W. E. Hart, Mr. P. P. Rogers, Mr. and Mrs. G. H. B. Wright, Mr. and Mrs. Ho-tung, Miss Ho-soo, Mr. Benjamin, Rev. J. C. Davidson, and Rev. Chas. Bishop, in cabin; Mr. Shing-ting, Mr. Loo-shang Chee, and Mr. Chun-shee, in second class; and 23 in steerage.

Per Japanese steamer *Niigata Maru*, from Kobe:—Messrs. A. Thomas, A. A. Therns, and J. Slutchter in cabin; and 37 Japanese in steerage.

Per Japanese steamer *Nagoya Maru*, from Shanghai and ports:—Mr. Charles Hannen, Mrs. Kildoye, Mrs. Goto, Messrs. Taguchi, Yabe, and Tsuruzawa in cabin; Mrs. Kitajima, Mrs. Mifugi, and Mr. Yamagata in second class; and 1 European, 2 Chinese, and 52 Japanese in steerage.

Per French steamer *Mensaleh*, from Hongkong via Kobe:—Mrs. Osada, Messrs. A. Dubourg, Korschelt, Wing Hing, De Villaret, and 22 Japanese.

Per Japanese steamer *Tokio Maru*, from Kobe:—Mr. Burnside and 12 Japanese in cabin; and 103 Japanese in steerage.

## DEPARTED.

Per British steamer *Belgie*, for Hongkong:—Mrs. Ringer, Messrs. Gower, J. Campbell, San Hen, and Chun Hen in cabin.

Per American steamer *City of Rio de Janeiro*, for San Francisco:—Mr. Geo. B. Glover, Mr. A. P. Happer, Jun., Rev. and Mrs. W. W. Royall and three children, Mr. W. Dallas, Mr. C. H. Taylor, Mr. L. G. MacKenzie, Captain Sibelin, Mr. J. J. Howard, Mr. E. W. Benson, Mr. S. Z. Sawada, Mr. M. Shimugi, Mr. M. Sakamoto Lord Kesteven, Miss F. Wheeler, Mrs. E. D. Gamewell, Major Cholmeley, Captain D. McNeil, Mr. A. C. Smith, Mr. F. Deardorf, Mr. S. Tukito, and O. Swore in cabin.

Per French steamer *Tanais*, for Hongkong, via Kobe:—Mr. Payne in cabin.

Per Japanese steamer *Omi Maru*, for Shanghai and ports:—Mrs. Naylor, Miss Hesser, Miss Porter, Messrs. Shizio, K. Chang, F. Chomley, Gotsuji, M. Kirkwood, Ideura, Karada, Willbourne, and E. Sugimura in cabin; and Mr. Oia in second class; and 2 Chinese and 49 Japanese in steerage.

## CARGOES.

Per French steamer *Tanais*, for Hongkong, via Kobe:—Silk for France, 86 bales, for England, 5 bales; total 91 bales.

Per Japanese steamer *Omi Maru*, for Shanghai and ports:—Treasure, \$20,000.00.

## REPORTS.

The British steamer *Travancore*, Captain J. Logan, reports:—When S.W. from Kii Channel distant about 80 miles experienced a strong gale from south S.W. and West and a heavy cross sea, and from thence into port strong south wind and heavy sea.

The British steamer *Galley of Lorne*, Captain Pomeroy, from Kobe, reports very strong winds in Kii Channel, and from Osima moderate southerly wind and high sea.

The British steamer *Thibet*, Captain W. D. Mudie, from Hongkong via ports, reports:—Owing to bad weather, we lay at Yura-no-uchi for thirty hours.

The Japanese steamer *Niigata Maru*, Captain Drummond, from Kobe, reports light winds at E.S.E. and fine and clear weather throughout the passage.

The British steamer *Straits of Gibraltar*, Captain Dewar, from Shanghai, reports light southerly winds and clear weather throughout the passage.

The Japanese steamer *Satsuma Maru*, Captain G. W. Conner, reports:—Left Hakodate the 24th August, at 7.30 a.m. and experienced light breeze from N.E., sky overcast; at 10 a.m. wind increasing to a strong gale, and high seas; put back and came to an anchorage at Cape Blunt. At 1.30 p.m. gale decreasing with confused sea, weighed anchor and proceeded to Oginohama. Weather moderate, arrived at 7.30 a.m. the 25th, and left at 2.40 p.m.; thence to port fine weather. Arrived at Yokohama the 26th August, at 4.37 p.m.

The Japanese steamer *Tokio Maru*, Captain Wynn, from Kobe, reports light variable winds to Oshima; thence to port light S.W. winds and fine weather.

## LATEST COMMERCIAL.

## IMPORTS.

The country Markets are reported to have shown no symptoms of revival since the termination of the "Bon" festival, and dealers consequently have little disposition to increase their liabilities with fresh business, while they can with difficulty keep their engagements as regards clearances of contracts falling due. Sellers, in view of this state of things, have wisely not been pressing sales, or the present nominal quotations would probably have to be considerably reduced.

**YARNS.**—Sales of English spinnings amount to 300 bales for the week, and 28/32s. have declined 50 cents per picul; only 50 bales of Bombays are reported sold, and prices are 25 cents per picul lower for all counts, with rather a weak feeling in consequence of the very large arrivals.

**COTTON PIECE GOODS.**—Sales are reported of 750 pieces Velvet, 300 pieces Dyed Shirtings, 500 pieces Twills, and 1,000 pieces Prints, but all other goods and particularly Grey Shirtings have been quite neglected and prices are all nominal.

**WOOLLENS.**—2,500 pieces Mousseline de Laine, 1,000 pieces Italian Cloth, and 2,000 pairs Blankets have been sold at very full prices.

## METALS.

The business doing is not large, but the better feeling noticed last week continues. The state of the Market generally is unchanged from last report.

**IRON.**—Nail-roads neglected, other kinds moving a little.

**WIRE NAILS.**—As before, good assortments are saleable at improved prices.

**TIN PLATES** wanted at quotations, the stocks on hand being run down to very small proportions.

Flat Bars, 1 inch	2.55 to 2.65
Flat Bars, 1 1/2 inch	2.70 to 2.80
Round and square up to 1 1/2 inch	2.60 to 2.80
Nailrod, assorted	2.40 to 2.50
Nailrod, small size	2.60 to 2.70
Wire Nails, assorted	4.25 to 5.50
Tin Plates, per box	5.50 to 5.75
Pig Iron, No. 3	1.20 to 1.25

## KEROSENE.

No change of any sort in this Market. Buyers are well supplied for present requirements and will not enter into new business (except on their own terms) until they have worked off their present stocks. Holders, on the other hand, are perhaps not quite so firm and have a lingering hope that buyers will presently meet them half-way. Deliveries maintained. Quotations unchanged.

Devoe	1.70 to 1.72 1/2
Comet	1.65 to 1.67 1/2
Stella	1.60 to 1.62 1/2

## SUGAR.

There is nothing to report from the Sugar Market.

	PER PICUL.
White, No. 1	\$7.25 to 7.30

White, No. 4	4.90 to 5.00
White, No. 5	4.10 to 4.15
Brown Formosa	4.50 to 4.60

## EXPORTS.

## RAW SILK.

Our last issue was of the 20th instant, since which date there has been much less doing in this Market, and Settlements for the interval are not more than 240 piculs, divided thus:—Hanks 65 piculs, *Filatures* and *Re-reels* 175 piculs. In addition to these figures the native Kaisha have shipped about 160 piculs to America per *City of Rio*, which are included in the statistics given below.

As mentioned above, trade has fallen off very much and the last few days very little has been done. Holders are now not quite so strong in their demands, but their idea of a reduction in price is not likely to be of such a nature as to induce buyers to operate freely. We leave quotations unchanged as per last week's circular, for although holders have in the meantime raised their pretensions considerably, we think they would now be inclined to do some business at the prices made this day week.

Arrivals continue on a free scale, and the Stock-list has increased by 600 piculs on the week. Still holders put a bold face on the matter, and now assert that prices cannot go down very much; although most of them have apparently given up the hope of any farther rise in the immediate future. If buyers continue to hold off we may have to record lower values next week.

There have been three shipping opportunities during the week:—the U.S. mail of 21st, with the French and German mails of 22nd. The former (P. M. S. *City of Rio de Janeiro*) had no less than 679 bales for the American trade; of this quantity 183 bales were shipped by the *Doshinsha*. The M. M. steamship *Tanais* carried 91 bales for London and Lyons, while the Nord-deutscher Lloyd steamer *Stettin* also took 8 bales for Lyons. Export from 1st July to date is now 2,180 piculs, against 1,710 piculs last year and 2,956 piculs to same date in 1884.

*Hanks*.—Not a large business: what has been done being for the European trade at the following prices:—*Annaba* \$125, *Takasaki* \$600, *Hachioji* (old) at \$535. Sellers in this class are fairly strong and quotations well maintained.

*Filatures*.—Considerable settlements on the 20th instant; but little doing since that date, and holders who have been asking an advance on last week's rates would probably do business at those figures without murmuring. Among the purchases noted a week ago were *Kaimetsu* and *Katsusha* at \$770: sellers were unable to obtain any advance on these figures although they made a strong fight for it. A parcel of *Hagiwara* is understood to be going forward by next steamer on consignment terms; but a parcel of *Buyosha* taken into godown has been rejected.

*Re-reels*.—Not much done in the better grades; some few parcels medium *Yosha* and *Bushu* taken at \$675 to \$685, but the demand for America seems to have dried up on the basis of present values here.

*Kakeda*.—Nothing done here. Prices are nominal; supplies are coming in fairly well and the assortment on offer is becoming more attractive.

## QUOTATIONS.—(NEW SILK.)

Export from 1st July	2,500	2,200	3,850
Stock, 27th August	\$500	4,700	3,400
Available supplies to date	5,000	6,900	7,250

## WASTE SILK.

A good amount of business in this branch; the settlements recorded for the week amounting to 850 piculs, divided thus:—*Pierced Cocoons* 300 piculs, *Noshi* 350 piculs, and *Kibiso* 200 piculs.

The settlements this week have been increased by the purchase up county of about 400 piculs, by the *banto* of a foreign firm. Buying is by no means general at the present high range of prices, being confined almost entirely to a few Swiss firms. Dealers are very firm for all kinds of Waste, in spite of increased arrivals. The "available supplies" to date are about 3,000 piculs more than to same date last season.

The *Tanais* (22nd instant) had 119 bales (*Cocoons* 44, *Noshi* 51, *Kibiso* 23, *Neri* 1) chiefly for the South of Europe. Total shipments are now 1,284 piculs, against 721 to same date last year and 1,082 on 27th August, 1884.

*Pierced Cocoons*.—The trade goes on at about last rates; buyers complain that quality is not over-good this year.

*Noshi*.—Considerable buying of the better kinds at high prices. Among the settlements are *Oshu* \$195, *Bushu* \$160 to \$165, *Yosha* (assorted) \$125, and a small parcel *Mino* at \$145.

*Kibiso*.—Not so much passing in this kind. Prices for best *Filature* are pushed up to \$165 (but without buyers at anything over \$160), while for the product of the *Tokushu* filature a still higher price is wanted.

## QUOTATIONS.—(NEW WASTE.)

<i>Pierced Cocoons</i> —Good to Best	\$130 to 150
<i>Noshi</i> — <i>Filature</i> , Best	180 to 190
<i>Noshi</i> — <i>Filature</i> , Good	160 to 170

<i>Sendai</i> & <i>Hamatsuki</i>	600	600	<i>Mawata</i>	140
<i>Taysam</i> Kinds.	205	205	<i>Sundries</i>	110

Total piculs..... 5,500 Total piculs..... 5,650  
\* Raw Stock—900 piculs Old, 4,600 piculs New.  
Waste Stock—550 piculs Old, 5,100 piculs New.

## TEA.

A good demand continues, and transactions have been about 3,100 piculs of all descriptions. This makes settlements for the present season about 172,405 piculs, compared with 137,845 piculs same time in 1885. Buyers have been paying fully one dollar more than last week, and the market closes very firm. This is owing to the large prices prevailing in the producing districts which are reported

to be fully two dollars higher than here. There are about 2,000 piculs of Tea dust now on offer, and this quantity is included in the estimated stock, which amounts to about 9,000 piculs. The usual weekly shipments of Teas from Kobe and Yokohama are as follows:—From Kobe the bark *Carrie Delap* has 200,968 lbs. for New York, 240,875 lbs. for Chicago, and 279,822 lbs. for Canada, aggregating 721,725 lbs. This vessel has arrived here, but has not sailed for her destination yet. The steamship *Devonshire* took from Kobe 58,384 lbs. for New York and 81,416 lbs. for Canada, making a total of 139,800 lbs. From Yokohama the *City of Rio de Janeiro*, which sailed the 21st inst., took 559,873 lbs. distributed as follows:—119,512 lbs. for New York; 200,452 lbs. for Chicago; 2,500 lbs. for St. Louis; 2,730 lbs. for St. Paul; 18,758 lbs. for Portland (Oregon); 175,540 lbs. for San Francisco and 40,381 lbs. for Canada. The Suez Canal steamer *Port Jackson* took 57,865 lbs. for New York and 86,195 lbs. for Canada, aggregating 144,060 lbs. She sailed the 21st instant. The Russian steamer *Moskwa* took 492,260 lbs. for New York and 15,460 lbs. for Portland (Oregon), total 507,720 lbs. The above steamer sailed the 24th instant via Honolulu.

## THE GREATEST WONDER OF MODERN TIMES.

## HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

## HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

# LIEBIG COMPANY'S

*For Liebig*  
TRADE MARK

## EXTRACT OF MEAT

FINEST AND CHEAPEST  
MEAT-FLAVOURING  
STOCK, FOR SOUPS,  
MADE DISHES AND SAUCES.  
Annual Sale, 8,000,000 Jars.

"Is a success and boon for which Nations should feel grateful."—See Medical Press, Lancet, Brit. Med. Jour., &c.

To be had of all Storekeepers and Dealers throughout India.

**CAUTION.**—Genuine ONLY with fac-simile of Baron Liebig's Signature in Blue Ink across Label. The title "Baron Liebig" and his portrait having been lately largely used by dealers having no connection with Baron Liebig, the public are hereby informed that the Liebig Company are the only manufacturers who are able to offer the article with Baron Liebig's guarantee of genuineness.

**LIEBIG'S EXTRACT OF MEAT Co., Limited, Fenchurch Avenue, London, England.**

Invaluable for India as an Efficient Tonic in all cases of Weakness.

Keeps good in the hottest climates, and for any length of time.

Printed and Published for the PROPRIETOR, at No. 72, Main Street, Settlement, by JAMES ELLACOTT BEALE, of No. 12, Bluff, Yokohama.—SATURDAY, August 28th, 1886.

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to him; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 4TH, 1886.

### DEATH.

At Tsukiji, Tôkyô, of cholera, on the 27th instant, ARTHUR KING, of Glasgow, Scotland, aged 38 years. Interred at Nomi-mura, Tôkyô, on the 29th instant.

### SUMMARY OF NEWS.

THE construction of an aqueduct at the Suidobashi has been begun.

THE negotiations regard to the Nagasaki affair remain *in statu quo*.

H.E. TAKASAKI, Governor of Tôkyô, visited all the hospitals in the capital the 28th instant.

MR. IWASAKI YANOSUKE will go shortly, it is said on a three years' visit to European countries.

CHOLERA is increasing in Tôkyô. The number of new cases reached 347 on the 2nd instant.

It has been decided to construct water-works at Osaka, the supply to be taken from the Yoshinogawa.

A FACTORY for the manufacture of buttons from pearl shell has been started at Toba, in Mie Prefecture.

H.I.H. PRINCE ARISUGAWA paid a visit of inspection the 30th ultimo to the Naval Section of the Kaigunsho.

THE Japanese emigrants to the Hawaiian Islands sent home a sum of yen 58,900 from January to July of this year.

MAJOR-GENERALS SAKIYA and YAMAJI will shortly, it is rumoured, receive promotion to the rank of Lieut-General. Colonel Hasegawa

and three other officers of similar rank will be promoted to the rank of Major-General.

MR. ENDO, Commissioner of the Japanese Mint, will shortly make a tour of inspection of the principal mines.

THE Etchu Steamship Company has increased its share capital to yen 500,000 in order to extend its business.

THE construction of a new war vessel, to be named the *Atsuki Kan*, has been commenced at Onohama Dockyard.

THE new Japanese Legation at Peking will be opened in October, the construction of the buildings having been completed.

DURING the week, rumours of pro-Russian intrigues and of Chinese interference in Korea have caused some anxiety.

MR. KOGA, adviser to the Hiroshima Court of Appeal, who was promoted in rank some time ago, died of cholera the 28th ultimo.

RESIDENTS in Tôkyô have contributed a sum of yen 601.50 for distribution among the nurses engaged in the Tôkyô cholera hospitals.

THE Light House section in the Department of Communications proposes to erect a light house at Ishihara, on the island of Tsushima.

THE fruit crop in the neighbourhood of Tôkyô has been very large this year, the yield being above the average of the past 30 years.

THE returns of convict labour in Japan show that the prisoners of Kobe Gaol last year turned out more than a thousand tons of matches.

THE Tea trade at Kobe has considerably fallen off, and the stock accumulated is quite a million *ken*, consequently prices are on the decline.

LIEUTENANT-GENERAL VISCOUNT TORIWO, who is at present in Europe, has intimated his intention of returning to Japan about March next year.

FROM the 28th ultimo the weather underwent a sensible change. The great heat seemed to be ended by a severe thunderstorm which occurred that morning.

MESSRS. TECHOW AND RENDLEH, advisers to the Cabinet, whose terms of engagement terminate in February next, have been re-engaged for a period of two years.

THE Tôkyô Merchants' and Manufacturers' Association are now discussing a draft memorial drawn up by a committee of their number in reference to treaty revision.

MR. SHIOTA, Japanese Minister to China, who had been absent from his post for sometime on account of ill-health, returned to the legation at Peking the 16th ultimo.

NARA was formerly celebrated for the production of the finest kind of writing brushes and ink, also for the manufacture of a very superior kind of muslin, but of late years these trades

have declined. Determined to stimulate their revival, however, some of the principal residents are about to establish a Chamber of Commerce.

IT is stated that Captain Yata, who is at present in London, has forwarded to the Government information relating to certain changes in the organization of the British Navy.

THE Nippon Yusen Kaisha will remove temporarily, before the end of this month, to the present branch office, in the vicinity of which the head office will be constructed of brick.

THE passenger and goods traffic on the Naoetsu-Sekiya line has daily increased since the line was opened a short time ago. The railway has proved a great convenience to the district.

THE Oyster Canning Factory at Nemuro, which has hitherto been conducted under the supervision of the Branch Office of the Hokkaido Administration, will now be leased to private persons.

IT is rumoured that Count Kawamura has been offered the succession to Mr. Hanabusa, Japanese Minister to Russia, who returned to Japan the other day. The Count, however, is said to have declined the offer.

THE roughest part of the road between Takeda and Chitani, in Tajima, seven or eight miles of which has hitherto been very difficult to traverse, has just been graded and improved at a cost of nearly 5,000 yen.

THE Tôkyô Law Association, at a meeting the other day, decided to send to the family of the late Mr. Takahashi, President of the Association, a pair of flower vases accompanied by a letter of condolence.

THE *Wakanoura Maru*, chartered by the Government to convey a detachment of police to Okinawa, put into Oshima in a heavy gale, where she lay two days and nights before being able to resume her voyage.

A VERNACULAR journal, referring to the gradual revival of trade in several industries, says:—"It is difficult to arrive at the true cause of the abnormal exportation of porcelain to China during the first half of the present year."

UNTIL the present time it has been permissible to place postage stamps either on the face or the back of letters, but as this custom has been the cause of much inconvenience to post officials, new regulations on the subject will shortly be issued.

PRELIMINARY arrangements for a railway from Wakayama to Osaka are far advanced, and the estimates show that there would be sufficient passenger traffic to make the line pay, without reckoning the income to be derived from the carriage of goods.

REPORTS from various parts of the country give glowing accounts of the condition of the crops. Rain has fallen copiously and there is no longer any danger of drought; indeed, in places several rivers have overflowed their banks, but there has been no damage of note, the condition of the

Original from

land being such as to almost immediately absorb the superabundance of water. Wells have consequently risen, and mills been set a going again.

THE percentage of deaths from cholera has been high in Kobe and Iliogo. From its first appearance to the 24th ult., the number of cases was 1,665, and of these 1,406 terminated fatally. In the remainder of the Prefecture there were 2,999 cases and 2,453 deaths.

THE Import trade remains without material alteration, and no movement of importance is immediately expected. The sale of Yarns has been small, the market closing weak with almost nominal prices. Cotton Piece-goods have received some attention, and the Woollen trade has been moderate in extent at slightly higher rates. The Metal market continues to look up, though actual transactions have not been extensive. Enquiries, however, are made from quarters which indicate a resumption of business immediately the hot weather is over. The demand for favourite assortments of Wire Nails has been fairly good, and a few lots of Tin Plates of the right make are still wanted. There is no alteration in Kerosene so far as prices and sales go, buyers and sellers maintaining the position they have held for weeks past. Large arrivals of oil, however, come to hand and more floating cargoes are not far off. Sugar is a drug in the market. The Silk business has been quiet, and a small amount only has been done. Without speculating, buyers here cannot pay the prices demanded, and as arrivals come free, stocks accumulate, and will certainly continue to do so until holders moderate their views or rates are raised at places of consumption, as trade is impossible to any great extent under existing conditions. Waste Silk has been bought to the tune of 500 piculs, but these figures would have been largely augmented were holders not so stiff, foreign markets being unable to pay the figures demanded here. With the weight of a heavy stock, however, sellers must shortly bend. The Tea trade has very considerably fallen off, both here and at Kobe; at the two ports over 50,000 piculs of leaf more have been purchased at this date than at same time last year. Reports from American markets are not cheerful, and indicate low prices and large stocks. Exchange had gone up a step early in the week, but again receded, remaining fairly steady at the close.

#### NOTES.

A TELEGRAM from Tsushima, dated August 24th, 10.30 p.m., says that Mr. S. Hisamizu, of the Japanese Consulate in Ninsen, had just arrived (in Tsushima), and had despatched several telegraphic messages in an European language to the Department of Foreign Affairs. Commenting upon this, the *Nichi Nichi Shinbun* confesses that the news of Mr. Hisamizu's arrival in Tsushima caused it some uneasiness at first, inasmuch as the coming of that official had been immediately preceded by intelligence indicating considerable disquiet in Korea. The Chinese Government, it was said, having received information which pointed to renewed coquetting with Russia on Korea's part, had taken serious umbrage, and directed its representative in Seoul to adopt emphatic measures. It seemed not unreasonable to connect Mr. Hisamizu's visit to Tsushima with this complication. But the

*Nichi Nichi* assures its readers that careful enquiry in official quarters shows the two things to be entirely unrelated. The journey of Mr. Hisamizu was undertaken on account of business which falls within the ordinary functions of Mr. Takahira, but with regard to which full instructions had to be obtained from the Minister of State for Foreign Affairs. The direct line of telegraph not being available, and the matter being of a pressing nature, it was deemed necessary to despatch Mr. Hisamizu to Tsushima, by special steamer, so that he might be able to use the wires from that island. Having obtained the necessary information, he was to leave Tsushima on Wednesday.

It must be admitted, we fear, that Korean affairs are not quite in as settled a state as could be wished. The rumours that have lately been following one another, though unsubstantial and even extravagant at times, have at any rate to be regarded as the proverbial smoke that indicates the existence of some fire. China's present policy with regard to the miserable little Kingdom, if persisted in, is bound to plunge herself and her neighbour into a sea of troubles. She will neither take the peninsula under her protection, nor leave it to its own resources, but by a series of spasmodic interferences and abandonments invites the very results which are most to be dreaded.

The *Tsukushi Kan* left Shinagawa at 6 a.m. Tuesday for Nagasaki. It is expected that her final destination is Korea, where she goes to protect the Japanese residents in the event of any emergency which may arise from Russo-Chinese-Korean complications. The *Nichi Nichi Shinbun* gives this as a mere rumour, but adds that in view of the disquiet said to exist in Korea, the *Tsukushi* may probably be under orders to proceed thither.

Referring to rumours current in Osaka and elsewhere with regard to Korean affairs, the *Nichi Nichi Shinbun* says that, as usual where men's tongues are concerned, there appears to be much exaggeration. Enquiries made in official quarters disclose the fact that the Ministers of the Right and Left have been degraded, but the stories current about measures to restrain the king personally are not worthy of credence.

More detailed intelligence of the complications in Korea was received on Monday in Tôkyô. Owing to the temporary suspension of telegraphic communication with Jinsen, the first definite news reached Nagasaki by the *Tsuruga Maru*, on the 29th instant, and was thence wired to Tôkyô. It will be remembered that vague rumours were circulated, some days ago, of renewed Russian intrigues in Korea. The Koreans, who appear to think that they entered the comity of nations either to exploit their neighbours' purses or to sell themselves to the highest bidder, are again inclining to Russian protection, the inclination this time having extended to the King and his principal ministers. Before this scheme had reached maturity, China became more than suspicious, and her representative in Seoul, Mr. Yuen Shi-kai—the same official who played such a prominent part in the disturbance of 1884,—invited the commanders of the Korean royal guards to dine with him, the 15th instant. During dinner he informed his guests that he had received a telegraphic intimation from Li Chung-tang to the

effect that, inasmuch as Korea had alienated herself from the Middle Kingdom and sought Russian protection, China proposed to despatch, in a few days, a strong body of troops to "remonstrate" against this breach of confidence on the part of her tributary. The Koreans evidently put their own interpretation upon the form which this "remonstrance" would take, for they immediately fell into a state of serious trepidation. The alarm was shared by Court and people alike. The Chinese representative seems, however, to have proceeded resolutely on the hypothesis that the royal assent had not been obtained by the Russo-philos. He caused the palace to be strictly guarded, and exercising his usurped authority through the king, procured the degradation and banishment of the first and second Ministers, with two of their principal colleagues, on the distinct charge of negotiating a secret treaty with Russia. Other Korean officials implicated in the affair were imprisoned, but what their number was or whether more violent measures were resorted to, we have no information. These steps, openly sanctioned by the King, appear to have constituted a temporary check to the trouble.

Thus much seems to be tolerably trustworthy. But there is also an inexplicable and scarcely credible rumour of an attack upon the foreign legations in Sôul. How such an outrage can have been twisted into the programme, it is hard to conceive. Of course there is a bare possibility that the mob, which in Korea appears to be in a general state of preparation to "go for" foreigners, may have construed China's "remonstrance" into a comprehensive anti-Western declaration. But we are disposed to withhold credence in this part of the story until the receipt of some corroboration. There is, however, one item which lends an air of truth to the rumour; namely, that 40 American man-of-war's men have entered Sôul to assist in protecting the legations. If that be so, the Treaty Powers may fairly ask China either to declare her attitude towards Korea frankly and intelligibly, or to desist from spasmodic interferences with the little kingdom's foreign policy.

There are said to be nine Chinese war-vessels lying at Jinsen. The *Nichi Nichi Shinbun* accounts for the presence of such a strong force by supposing that not only two of the ships lately at Nagasaki, but also a squadron which recently sailed from Shanghai, were under orders for Korea. The Shanghai squadron is said to have consisted of seven ships. According to the *North China Daily News*, its destination was Nagasaki, where a strong naval demonstration was contemplated in view of the fracas of the 15th instant. But we do not imagine that China entertained the silly notion of intimidating Japan, or converting a sailors' brawl into an international quarrel. At all events the ships went to Jinsen, not to Nagasaki. We suspect that their number is exaggerated, as an independent telegram from a foreign source in Shanghai put them at four. There is also an American vessel lying at Jinsen, and it is now known that the Japanese man-of-war, the *Tsukushi-kan*, has proceeded thither. The *Nichi Nichi Shinbun* conjectures that of the nine Chinese ships, three are probably transports or despatch-boats.

Another item of intelligence is that 140 Chinese have entered Sôul disguised as merchants.

The exact date of this event is not given, but we gather that it was shortly before the disturbance of the 15th instant. The men are supposed to have been soldiers, and if the supposition be correct, their disguise is doubtless attributable to the Tientsin Convention which forbids the despatch of either Chinese or Japanese troops to Korea without the consent of both empires. The attack upon the foreign legations—if anything of the kind took place, which we greatly doubt—was evidently a trifling affair, probably amounting to nothing more than a shower of stones and tiles.

It appears that Ming-yon-ik has proceeded to Tientsin in a Chinese gun-boat to explain the state of affairs to the Viceroy Li. Perhaps the occurrence will rouse China to the danger of her impossible fast-and-loose policy towards Korea, and teach her that if she continues the game of let go and hold fast, somebody will assuredly join the sport uninvited. In that case a complication which might easily have become serious will have proved beneficial to the whole East.

The *Jiji Shimpō* adds an item of intelligence to the effect that Viceroy Li has enquired of the St. Petersburg Government whether any secret treaty exists between Russia and China, and has received an answer in the negative.

THE Japanese papers have published the following telegrams during the week:—

(*Choya Shimbun.*)

Tientsin, August 23th.

All the Chinese men-of-war in Nagasaki have been ordered by Li Hung-chang to touch at Korea as soon as possible.

(*Hochi Shimbun.*)

Nagasaki, August 26th, 11 p.m.

It is rumoured that disquiet prevails in Seoul, but positive reports have not been received.

(*Mainichi Shimbun.*)

Nagasaki, August 26th (Forenoon).

Mr. Ching, who was despatched from the Chinese Legation in Tokyo, visited the Prefect of Nagasaki to-day.

Nagasaki, August 27th (Forenoon).

The Chinese Consul received a telegraphic despatch from Li Hung-chang last night. In all probability the message contained his instructions as to the third meeting of the conference.

The Chinese Squadron is, it is said, making preparations to leave.

(*Nichi Nichi Shimbun.*)

Nagasaki, August 27th, 4.30 p.m.

Mr. Drummond, legal adviser to the Chinese Government, arrived this morning.

Nagasaki, 27th, 8.15 a.m.

The *Ting-yuen*, which was to have left for Tientsin the morning of the 26th, is still here.

Kumamoto, August 27th.

A battery of artillery was despatched to Nagasaki yesterday.

[This battery is sent simply as a relief. Although there are no barracks at Nagasaki, a battery of artillery is stationed there in order to fire salutes when necessary. The present detachment is sent not by special order, but simply as a matter of routine.]

Kumamoto, August 27th 11 a.m.

The ceremony of pre-enting colours to the 20th Regiment has just taken place.

(*Jiji Shimpō.*)

Nagasaki, August 27th.

The wife of Prefect Kusaka and other twenty-four ladies have presented a blanket to each of the injured police constables.

(*Mainichi Shimbun.*)

Nagasaki, August 27th (Noon).

The Chinese Consul has replied to the Prefect of Nagasaki that he and Admiral Ting are only to investigate the provisions of the indictment, but that they have no power to impose any punishment.

(*Jiji Shimpō.*)

Nagasaki, August 28th (Afternoon).

It is rumoured that the Korean Government has leased Quelpart to Russia.

Nagasaki, August 29th, (Afternoon).

It is stated that all the Chinese men-of-war will leave to-morrow.

The third sitting of the conference has not yet taken place.

Count Kawamura, Court Councillor, left to-day.

Disquiet prevails at in Kan-kyodo, Korea.

Kobe, August 28th (Afternoon).

Mr. Kiyoura Keigo, Chief Commissioner of the Police Bureau, is expected to arrive to-morrow from Nagasaki.

Messrs. Kirkwood and Deura arrived this morning and leave to-night for Nagasaki.

Bakan (Shimonoseki), August 28th.

It is rumoured that a collision has occurred between Russians and Chinese in Korea.

Nagasaki, August 30th (Forenoon).

The Chinese Representative, Yuen, has surprised the King of Korea by intimating that a large military force will be sent from China. Great excitement prevails in Seoul. Kin-Ka-Chin and Kin-Ka-Li have been exiled. Bin-yong-ik has gone to China. The disturbance at Seoul was caused by a proposal made by Bin-yong-ik that he should appropriate the full power of administration.

Bin-yong-ik has gone to China to explain the secret treaty made with Russia.

Boku-sei-jin has also gone to China.

Li-Kiu-gan is to leave for Japan as Ambassador.

(*Mainichi Shimbun.*)

Nagasaki, August 29th (Afternoon).

Captain Lang and Mr. Drummond visited the Prefectural Government Offices and conferred with the Governor in separate apartments for a short time.

(*Nichi Nichi Shimbun.*)

Nagasaki, August 30th, 6.30 p.m.

The enquiry has been postponed at the request of the Chinese authorities.

The *Oni Alarn* arrived this evening.

Sailors from the Chinese ships are now landed and walk freely about the town.

Nagasaki, August 31st, 8 a.m.

The sailors of the *Ting-yuen* have hitherto been confined to the ship. From ten to twenty are now landed at a time to purchase necessary commodities, but those who land in the forenoon return to the ship by noon, and those going ashore in the afternoon must be off by dark. One marine officer accompanies each party.

Nagasaki, August 31st, 1.15 p.m.

Mr. Drummond has taken up his quarters at the Chinese Consulate, and is now examining the indictment which was forwarded from the Japanese authorities. He does not seem to be busily engaged, however, as he takes long walks daily.

Kumamoto, August 30th, 8.30 p.m.

A battery of artillery stationed at Nagasaki returned to Kumamoto the 28th instant, on the arrival of its relief.

(*Mainichi Shimbun.*)

Nagasaki, August 30th, 8.15 p.m.

The third meeting of the enquiry is fixed for the 4th September.

Shanghai, August 31st (Forenoon).

The Chinese sailors of men-of-war stationed in various Chinese ports, had been confined to their ships for some time, but are now allowed to land.

Nagasaki, August 31st (Afternoon).

The Chinese Consul has received instructions from Li Hung-chang in regard to the recent disturbance. It is stated that the despatch emphasizes the importance of taking up an amicable and peaceable position.

Messrs. Kirkwood and Deura arrived this morning and visited the Prefectural Government offices.

(*Nichi Nichi Shimbun.*)

Nagasaki, August 31st, 7.10 p.m.

(Delayed in transmission.)

Telegraphic despatches sent from the British Consul at Nagasaki to the Legation in Peking treble in number and length those despatched to the Legation in Tokyo.

(Whence is this information procured?—*Ed. J.M.*)

The Chinese Consul is making enquiries for the purpose of identifying the Japanese residents who assisted the police constables during the recent disturbance.

Nagasaki, September 2nd, 2 p.m.

Governor Kusaka has received instructions from the Government to discuss matters with Mr. Kirkwood.

(*Mainichi Shimbun.*)

Nagasaki, September 1st, 1 p.m.

Messrs. Drummond, Yang, Counsellor, and Tsai,

Consul, have been appointed to represent the Chinese Government at the sitting of the enquiry.

Nagasaki, September 2nd, 1 p.m.

Instructions have arrived from Count Ito to-day, which probably relate to the third sitting of the enquiry.

The Chinese representatives have had a meeting at the Chinese Consulate to investigate the circumstances of the disturbance.

THE observation made by Her Majesty's Consul, Mr. J. Troup, that Bombay yarns appear to be supplanting English made yarns in the consumption of the Hyogo and Osaka Consular district, is worthy of careful consideration. A decrease of deliveries in English yarns from 4,198,300 lbs. in 1884 to 2,328,800 lbs. in 1885, accompanied as it is by a corresponding increase of imported Bombay yarns, is a fact which, standing itself and alone, might well cause careful inquiry; but instead of being exceptional we meet everywhere in the East the phenomenon that Indian yarns successfully compete with and gradually supplant the English made article. In the Calcutta market both have met as competitors, and since 1880 the relative position of English and Bombay yarns has been exactly reversed. In 1880 there were imported to Calcutta 17,301 bales of English yarns and 14,047 bales of Bombay yarns, but in 1885 Bombay imported 17,287 and Great Britain only 14,912 bales. The same, or rather a still greater, relative change is to be noticed when we examine the trade reports for Hongkong. In 1875, among the imports of 16's.-14's. yarns, there were of Bombay yarns 3,000 bales against 16,000 from England; in 1877 there were 16,000 Indian bales against 12,000 from England; and while in the five years after 1877 the number of Bombay bales imported was 20,000, 40,000, 39,000, 55,000 and 75,000 respectively, the imports from Great Britain remained virtually stationary, showing the corresponding numbers of 13,000, 12,000, 19,000, 15,000 and 11,000 bales. The Bombay manufacturers enjoy, of course, advantages such as arise from the perfect security to life and property which under English rule has always been extended to India in as full a measure as to any other part of the British Empire. Improved spinnings consequent on the introduction of English machinery, directed by English intelligence, have given to India's manufacturing interest and to her export industry an impetus such as has arrested the attention of merchants and statesmen throughout the world. Add to this all the advantages which are naturally realized by an abundant supply of cheap and willing labour, and it becomes tolerably evident why Indian competition has of late become so formidable not only to the United States and Russia but also to Great Britain herself in markets which she had formerly practically monopolized. Over and above all these natural advantages, surely formidable enough, there has been a steady and as yet unarrested decline in the gold value silver in the money markets of the world, and as long as this decline continues to be equivalent to a premium on exports, we may look forward to an increase rather than to a relaxation of Indian competition in the markets of Eastern and Southern Asia.

A CORRESPONDENT of the *Nichi Nichi Shimbun* writes from Tientsin to the following effect, under date June 20th:—Since the opening of the Japan Mail Steamship Company's Nagasaki-Chefoo-Tientsin line, on March 24th this year, five runs have been made up till June 16 with each vessel. Various merchants from Nagasaki

and Osaka have come over to this port, some of them bringing merchandise with them. The number of these merchants was as follows: 1st vessel, 2 (from Nagasaki); 2nd, 2 (from Osaka); 4th, 8 (from Nagasaki and Ninsen); and 5th, 1; in all 13, of whom 5 have left for home. The merchandise brought here by these merchants was: porcelain ware (280 cases), timber (103 pieces), lamps (20 cases), soap (50 cases), matches (5 cases), lacquered wares (2 cases), paper (7 cases), mushrooms (22 cases), wood charcoal (400 sacks), soy (14 casks), nagasuzu-imo (100 bags), nitric acid (2 cases), sulphuric acid (1 case), sundries (165 cases), etc. Of these commodities, porcelain and sundries have been disposed of in the most satisfactory manner. Upon the whole Japanese goods have thus far been received with marked favour, the net profit after subtracting the cost of transportation, being in some cases over 30 per cent. There are here many Chinese merchants who are paying special attention to the importation of Japanese articles. Several of them have offered to become the agents of Japanese to advance money, or to let them buildings gratis, in the hope of becoming their consignees. Our merchants, however, have rejected all these offers. One Chinese has obtained a piece of ground in the French Settlement, with the object of opening a special hotel for Japanese, and of acting as a consignee of Japanese merchandise. He has already obtained the services of a Japanese student here as interpreter. Whether this merchant is trustworthy or not, I am not yet in a position to judge, but should he really commence business as proposed, he will certainly afford more or less convenience to Japanese. Among the merchants of Nagasaki and Osaka, there are many who are desirous of entrusting their business here to an agent. An English merchant, who is agent of the Japan Mail Steamship Company, has offered his services to various Japanese as agent. If either an Englishman or a Chinese undertakes to serve as a factor, there is no doubt that considerable encouragement will be given to the importation of Japanese goods. But our merchants would do well to put their business in the hands of a Japanese firm. The amount of Japanese goods imported into this place being, however, too small to maintain a special Japanese factor, a good plan will be to establish a firm here dealing in some profitable commodity, such for instance, as *Kombu*,—the value of last year's import of this article amounting to 120,000 taels,—and to make that firm agent for all the other varieties of Japanese goods imported here. While at first our goods were welcomed with extraordinary favour, this state of things is gradually passing away, and the prices of our commodities have somewhat depreciated. The primary cause of this change is no doubt the circumstance that, at the time of the first sailing of the *Tsuruga Maru* Chinese merchants were busy in filling their stocks, it being then immediately before the *tango* festival, which is in China the period for the settlement of accounts for the first part of the year, just as the *bon* is in Japan. Besides this primary cause, there are several secondary considerations which have contributed to bring about the change in the demand for Japanese goods. Among these circumstances may be mentioned the want of capital on the part of Japanese merchants, the want of a bank where they can obtain money

orders, and the competition among them for the sale of articles of the same kind. The Chinese merchants are distinguished by their power of union, by means of which they not infrequently defeat foreign merchants. Seeing that our merchants are deficient in capital, and nettled at the refusal of the Japanese to permit them to act as agents, they seem to have combined to boycott Japanese commodities.

\* \* \*

The *Nichi Nichi* comments on the above subject as follows:—The Tientsin correspondence, which we published in our last few issues, will, we believe, enable our readers to understand something of the business done in the north of China. To Shanghai and other southern ports, our goods have been imported for many years, but direct trade with the northern part of the Middle Kingdom dates from the opening of the new mail line of the Nippon Yusen Kaisha to Tientsin, Chefoo, and Ninsen. It may be seen from our correspondence, that several merchants of Nagasaki and Osaka have visited Tientsin with the object of establishing business there. As the quantity of Japanese goods imported to Tientsin is very small, it would be erroneous to regard the reception they have met with as a sure basis of future calculation, but we may safely take it as a trustworthy sign of their adaptability to the demand of Tientsin. Hitherto Japanese articles of commerce have been sent to Tientsin by way of Shanghai and other ports, but now, as a direct route has been opened, and as it has, moreover, been found out that most of our goods are adapted to the taste of the people of Tientsin, it will be possible to create a valuable market for our manufactures. With regard to the mode of disposing of our commodities, our correspondent urges the necessity of putting the business in Japanese hands, but to us it seems that that question is of secondary importance. What is of primary importance is the opening of a new market for our goods. In accounting for the gradual depreciation in the price of our merchandise in Tientsin, our correspondent alludes to "the want of capital on the part of Japanese merchants, the want of a bank where they can transact business, and competition among them for the sale of similar articles." In this we entirely agree with our correspondent. While the Chinese merchants are remarkable for their power of combination, our merchants are deplorably deficient in that quality, and, moreover, they are in general wanting in capital. It is this frequently happens that our merchants are forced to yield at a critical moment, and thereby incur enormous losses. They are, moreover, in the habit of indiscriminately despatching goods in any direction from which they hear a promising report, without seeking to know the extent of the real demand; and thus they are led to engage in ruinous competition among themselves. We cannot help warning those of our merchants who are thinking of engaging in the Tientsin trade of this pernicious practice, so common among our countrymen. Lastly we would advise them to maintain the quality of their articles. It is too frequently the case with our tradesmen to gradually deteriorate the quality of their commodities, and this circumstance is a most potent factor in lowering values in foreign markets. The Chinese merchants are far more cunning than the Japanese, but in point of keeping promises and maintaining the credit of their articles, they can be favourably

compared with the Western people. To be beaten by the Chinese in commerce, in consequence of the dishonesty of our merchants, would surely be discreditable in the highest degree.

The vernacular journals of the capital furnish from time to time items which, if preserved, would soon fill a scrap-book with curiosities of literature. There has been nothing more comical, however, for some time in the Japanese papers than a paragraph which recently appeared in an English journal published in Tōkyō, as follows:—

Cavalry regiments in the Prussian army are being carefully drilled in the art of swimming their horses across rivers. At the word "dismount" the soldiers divest themselves of their clothing, which, with their weapons, etc., is placed upon a raft, which is swiftly ferried across the river, while the men take the horses by the head with one hand and swim with the other. The feat is said to be performed with the utmost precision and rapidity, whole regiments crossing and recrossing in an astonishingly short time.

It will probably be apparent to the writer (when pointed out) that on the order "dis-mount" being given, cavalry proceed to leave the saddle in accordance with the instructions laid down to effect that simple movement. But to say of Prussian cavalry that "at the word 'dismount' the soldiers divest themselves of their clothing," is something which might be related for the edification of the R.M.L.I., but which would certainly not go down with a trooper of the Garde Dragoner.

The Canton correspondent of the *Hongkong Daily Press*, writing on the 16th inst., says:— "A great sensation has been caused here by the issue of a circular by order of the Viceroy and Governor in which a compulsory loan is announced, to be subscribed to by all persons of means, according to their ability. Though it is a forced loan nominally, the people, warned by past experience of the ways of their officials, regard it as a squeeze, and hence the announcement has been received with anger and dismay by the more opulent classes, many of whom declare their intention of resisting it to the utmost of their ability. Resistance, however, will probably be useless; they will have to bleed to the tune it pleases the Viceroy, and attempts to evade contribution will be likely to involve the recalcitrant in serious trouble. The circular, a copy of which fell into my hands yesterday, is addressed to the rich citizens of Kwangtung, and sets forth at considerable length that since the Franco-Chinese War the revenue has run short, on account of the necessity imposed on the Government of buying arms and ammunition, building gunboats, and constructing forts and other defence works. The estimated deficit is upwards of three million dollars, which includes the amount of contribution to be sent to Peking and the interest on the Foreign Loans. The best way of meeting this deficit, the circular proceeds to intimate, is for the Chinese capitalists to lend the money to the Chinese Government, when by that means the interest will not go to outsiders but remain in China. Interest will be given on the loan at the rate of from three to four per cent., which will be paid yearly. The capital is to be repaid after the Foreign Loan have been paid off, but no date is fixed. Receipts for the amount subscribed, stamped with the seals of the Provincial Treasurer and the Salt Commissioner, will be given, for the subscriber to hold. The wealthy citizens are asked to come forward and embrace this favourable offer, those who can afford it with

their several tens of thousands and other with their thousands of dollars. Unfortunately, like Didymus, the native capitalists are of a doubting turn of mind. They say that they would not mind lending the money on good security even at a small rate of interest, but they are convinced that they will see neither principal nor interest, and that the receipts would not be worth the paper they are written on.

THE following note is published by the *Tokyo Independent*:—"A good deal has been said about the manner in which Counts Inouye and Yamagata transgressed the quarantine regulations upon their arrival in Hakodate in the *Satsuma Maru*. The steamer came directly from an infected port and should have been thoroughly examined and disinfected before dropping her anchor in the harbour. It appears, however, that after waiting forty minutes at the quarantine station outside, the responsible official allowed the steamer to enter the harbour without having done anything more than very hurriedly inspecting the crew. This gave great offence to the Governor of Hakodate, who deemed it a direct infraction of the quarantine regulations, and complained rather bitterly of the inconsiderate haste of the two Cabinet Ministers. It was, to say the least, a regrettable occurrence, as one would expect the high authorities to be the first to respect the laws they enforce." We are authorized to state that this is altogether a misapprehension. The *Satsuma Maru* did not come to Hakodate "directly from an infected port." She had called at Oginohama en route, and had there been thoroughly disinfected. After due inspection at the Hakodate quarantine station, she was allowed to enter the harbour at Hakodate because she had a clean bill of health from the officials at Oginohama, just as a ship disinfected at Nagaura is allowed to come into Yokohama. The story of the unbrage and complaints of the Governor of Hakodate is a pure fabrication.

THE Custodian of the Vienna Museum has been protesting against the craze for Japanese art. He declares that the essence of that art, in spite of its unsurpassable technical finish, is caricature, and that all Japanese artistic representations are more or less distorted. The *North China Daily News*, we observe, applauds the truth of this verdict, but, for our own part, we are inclined to think that if Herr von Falke and our Shanghai contemporary had deliberately taxed their ingenuity to devise a false verdict, they could not have been more successful. These critics probably derive their knowledge of Japanese art from Hokusai's pictures and the little carvings called *netsuke*. Every one else who has studied Japanese art—and a good many experts have done so—declares that its charm is fidelity to nature; fidelity close enough to detect a principle which finds full expression in no other art; namely, that symmetry without regularity is the law of nature's working. It is a case of Herr von Falke against the world, and we are disposed to go with the latter.

THE *Fiji Shimpō* has the following:—"On account of their geographical position and their many useful products, the Okinawa islands are naturally coveted by other countries. In fact China's intention to reopen the Rikyu question is constantly referred to by the press. But in spite of the importance of these islands, the

means of communication between them and the mainland are very imperfect; no telegraphic connection exists, and a steamship plies there only once in a month. Surely this state of things must be highly dangerous in cases of emergency. As we have repeatedly pointed out in these columns, the islands must before all other things be connected with Satsuma through Oshima, by a submarine cable. Suppose that the present Nagasaki affair had taken place in Okinawa, how would it have been possible to obtain trustworthy and speedy reports of the trouble? The distance between the chief island of the group and Satsuma is only 373 marine miles, so, that, at the rate of yen 2,000 per miles the expense of laying a cable would not amount to yen 1,000,000, calculating on the most liberal basis. The expenditure of a million yen is nothing compared to the enormous advantages, strategical and otherwise, which would result from the laying of a cable. The course of events in the East strongly illustrates the necessity of promptly undertaking the work.

THE *Mainichi Shimbun* reproduces the following from the *Nagayo Zasshi*:—"The Yaeyama group, which lies south of the Okinawa Prefecture and is the southern extremity of Japanese territory, has hitherto been little known to the public. Mr. Tajiro Yasuharu, who went to the islands last year on official business, to investigate their condition and products, returned to Tokyo the other day. The following gives the name and the number of inhabitants of each member of the groups:—

NAME OF ISLAND	CIRCUMFERENCE IN KILOMETERS	HOUSES	POPULATION	AVERAGE POPULATION PER HOUSE
Ishigaki	30 34 20	1,507	8,173	5.42
Nishinaka	32 20 18	212	1,035	5.05
Taketomi	2 16	129	801	6.23
Kerama	4 1 35	95	403	4.25
Hattoma	31 43 2	15	121	4.34
Shiraki	2 24 19 7	226	103	4.59
Kuro	3 1 37.5	105	540	5.14
Nonaka	3 21 20	110	949	8.63
Yamashiro	27	310	4,274	13.79
Yonaguni	2 9 18	none	—	—
Ujae	1 18 35	none	—	—
Kayashiro	21 40	10,000	—	—
Total		2,641	13,783	5.22

\* 1st class buildings 14; 3rd class buildings 18. † Approximate. The timber on the islands consists of *shitan* (hard wood generally imported from China) ebony, *sab*, cocoa palm, &c. It is believed that good results would follow the introduction from India of tropical trees."

STREELY it is singularly bad statesmanship on China's part to assume a procrastinating attitude with regard to the Nagasaki affair, and to throw obstacles in the way of its settlement. There are some causes so bad that to attempt to bolster them up by diplomacy is like adding galle to error. The only possible way of extenuating the miserable fracas at Nagasaki was to regard it as the work of ignorant, excited, and ill-disciplined sailors. China's friends—among whom we venture to reckon ourselves—could only hope that her alacritude to disavow and punish the offenders would outrun Japan's desire to prosecute them. That would certainly have been her best way to mitigate the disgrace. But, judging from her evident disposition to procrastinate enquiry, and from the rumours which reach us as to the bearing of her officials, she seems to imagine that something may be gained by adopting a defiant, if not an aggressive, attitude. It is said—and we believe with truth—that the first advances came from Japan's side. Prefect Kusaka, who before his appointment to Nagasaki had shown himself a man of excellent temper and common-

sense, appears to have understood at once that the matter fell within the competence of the local tribunals, and that it need not in any way disturb the good relations between the officials of the two empires. But the Chinese were evidently unprepared or unable to endorse this sound view. Perhaps they doubted their own ability to be just under circumstances so humiliating, and doubting, thought to evade the dilemma by gasconade. At all events, they were with difficulty brought to substitute enquiry for demand, and we now hear that, instead of doing their best to settle the affair quietly and amicably, they are raising sundry difficulties and have brought over an English barrister from Shanghai. Japan has thus been constrained to employ foreign counsel also. It is easy to foresee what the case will become in the hands of the gentlemen of the long robe. Delay, recrimination, and bad blood will be the least regrettable results, and Chinese diplomacy will enjoy the credit of converting a local molehill into an international mountain. They are bad advisers who urge her to defend such conduct as that of her sailors at Nagasaki. One would imagine, too, that at this particular juncture she ought to be courting, not alienating, Japan's friendship.

MR. N. P. O'CONNOR, late H.B.M.'s Chargé d'Affaires in Peking, has been gazetted a Companion Bath. It will be remembered that the decoration of C.M.G. was conferred on Mr. O'Connor only last year, so that this additional honour, coming after so short an interval, is very significant. No doubt the proximate cause of the distinction was the success which crowned Mr. O'Connor's efforts in the negotiations with regard to the Burmah complication. But throughout his career in China, Mr. O'Connor displayed rare tact and ability. He is perhaps the only English representative who has carried away from Peking not only the applause of his own countrymen in the East, but also the good will of the Chinese Government; a dual achievement which does him high credit.

THE Relief Volunteer Steam Fire Engine Company, of which Mr. W. C. Bing has had charge since the departure from Yokohama of Mr. Rohde, had a wet drill on Saturday morning, for the last time under the command of the present captain. After the drill, the company was drawn up in line and Mr. O. Kiel, on behalf of the committee and members, gave an address, in which he announced Mr. Bing's departure shortly from Yokohama, adding some kindly words of farewell. Mr. Bing briefly replied, expressing his thanks for the hearty co-operation he had always received from all members of the company, which had tended so much to the efficiency of the corps and its harmonious working. Mr. Bing, who, we understand, leaves in a few days for home, has been highly popular with the company, and is certainly a loss to the Fire Brigade. Mr. Clarence Martin is spoken of as the probable acting captain until the position is filled.

THE *Fiji Shimpō* refers to the information which it recently published concerning telegrams supposed to have been sent from the British Legation to the Foreign Office in London. Our contemporary says that it does not guarantee the accuracy of every item of news which it ventilates, and adds that it would be a great error on the part of the public to suppose that all

information with regard to telegrams is obtained from the employés of the Telegraph Bureau. This explanation does not mend matters much, for in the particular case under consideration the intelligence published by our Tōkyō contemporary must have come either from the telegraph officials or from the British Legation. The simple fact, we imagine, is that some gossip practised his inventive powers at the expense of a reporter of the *Fiji Shimpō*. It is impossible to avoid such accidents altogether.

THE negotiations at Nagasaki seem to be temporarily suspended. From the *Nichi Nichi Shimbun's* correspondent we learn that although the Chinese Consul protested against the behaviour of the Japanese police on the 13th instant, he did not prefer any similar complaint with regard to the fracas on the 15th. This intelligence does not appear to have any value. The same correspondent says that the bodies of the Chinese killed in the affray were greatly cut about, being all more or less incomplete. The police officials are said to have been much shocked by the condition of the bodies when handing them over, and it is expected that this mutilation will form a subject of complaint on the Chinese side. The total number of constables engaged in the affray of the 15th is put at about 30, that of the Chinese sailors being over 300. It will be observed, however, that a previous account estimated the Chinese at 200. In the *Fiji Shimpō* we read that the Chinese residents are reported to have been placed *au courant* of the plan of the 15th the day before it was put into execution, and some are said to have packed up their goods in consequence. It is also rumoured that during the night of the 15th some field-pieces were brought to the Hatoba in a boat, from the Chinese war-vessel then lying in the dock, but that, as the fracas was over before they could be landed, no use was made of them. The *Fiji's* correspondent adds that, with reference to this rumour, he made enquiries at the dock-yard, and was told by a watchman there that he, the watchman, had observed men engaged in moving field-pieces on the night of the 15th. We do not imagine that much credence can be attached to this story.

THE illness of Mr. A. King terminated fatally on Saturday night. He survived the attack of cholera, but succumbed to the fever which ensued. Mr. King came to Japan in 1872. He was among the first batch of scientists and experts selected to form the foreign staff of the Imperial Engineering College in Tōkyō. Subsequently, he accepted the important and arduous post of manager at the factory and ship-building yard of Ishikawajima. In everything connected with mechanical engineering he was a man of exceptionally thorough knowledge and wide attainments. Only a few days before his fatal illness, the works under his care were visited by the head of a leading English firm, who subsequently paid a very high tribute to the remarkable versatility and competence of their manager. It will be difficult, if possible, to replace Mr. King. The malady which carried him off at the early age of 38, cut short a career already distinguished for excellent service and full of promise for the future.

THE *North China Daily News*, speaking of Treaty Revision in Japan, says:—"For years

their American friends have been preaching to the Japanese that they were grossly cheated when the existing treaties were forced upon them by foreigners; that foreign nations constantly impose import duties of 30, or 40, or 50 per cent., and that it is truly patriotic to impose such duties, as by them a country's labour is protected against unscrupulous alien competition." We do not think that Japan's American friends were ever so singularly illogical as the *North China Daily News* seeks to show. Duties are paid by consumers, and if the Japanese have hitherto been prevented by treaty from subjecting foreign manufactures to heavy imposts—supposing that they ever had any desire to do so—they have simply been prevented from taxing themselves. How can it be called "gross cheating" to withhold them from doing that? We say nothing about "unscrupulous alien competition," for that is obviously a bit of giddy persiflage. Our Shanghai contemporary is curiously behind the times. The idea that Japan seeks to establish a protective tariff was exploded long ago. What she seeks is to recover the control of her tariff—a power exercised by all independent nations in the West.

As bearing out what we have frequently written with regard to the singular supineness of British merchants in the matter of acquiring the language of Eastern countries, the following extract from the July number of the *Quarterly Review* is interesting:—

Speaking generally of the prospects of British trade in Asiatic markets, we must again call attention to some of the causes of the success that our commercial rivals, the Germans, generally meet with there. Their progress in Asia Minor, and in other parts of Turkey, has been remarkable. To a large extent, this is due to the vigour with which they have studied the local languages. Their mastery of the native dialects in Asia Minor has left them in almost unopposed possession of the trade of a region comprising 508,800 square miles, occupied, by sixteen millions of people. English and Scotch firms are content to deal with houses in Smyrna and Constantinople. German firms send polyglot travellers of their own everywhere. They may be seen any morning, accompanied by Turkish cavalry guards, setting forth at dawn from the Asiatic side of the Bosphorus; from Broussa, the great silk mart of Turkey; from Seraikeny, the terminus of the Smyrna and Aiden Railway, and from other places with their samples and stock on pack animals behind them. The German representatives are allowed to make considerable educational grants, with the result that most Christian, and many Mohammedan, children in Turkey are being trained by German teachers. Were it not for a subsidized German college, supplemented by an American school near Constantinople, the children of Englishmen would find it difficult to procure a first-rate training there. The study of local dialects, and the keen cultivation of local markets, has been in Asia, as in Europe, the keystone of the commercial success of Germany.

RUSSIA seems to be qualifying for the epithet which Freeman applied to her a few months ago, in respect of her attitude towards Serbia and Bulgaria, "a subtle, dangerous enemy, who lies in his den waiting to pick up some profit, however base, out of any disturbance that he can stir up among his neighbours." When Reuter told us that an insurrectionary movement, directed towards the deposition of Prince Alexander, had taken place in Bulgaria, and that the insurrectionists enjoyed the protection of Austria, the news did not sound improbable. Bulgarian union was certainly not welcome to the House of Austria. It portended a continuance of the disasters which drove the Hapsburgs from Milan and Venice. Therefore when Austria directed—for assuredly, had she been so minded, she could easily have restrained—the march of the temporarily-insane Servians upon Bulgaria last year, she appeared to obey a traditional instinct. England, on the contrary,

with frankness worthy of the occasion, espoused the cause of national freedom, and though she rendered no material aid, it is certain that her political influence must have sensibly contributed to Alexander's success. An insurrection against the Prince's rule might, therefore, have been taken, without inconsistency, under Austria's aegis. But it appears that Russia is the real stirrer-up of strife. She it is who has sought to disturb what has been well termed, "the purest revolution of our times." To this day the peculiar temper displayed by the Czar towards Prince Alexander last year is not clearly understood. People are puzzled to say how much of it was attributable to purely personal resentment, how much was the outcome of deliberate policy. That it was not a passing fit of ill-temper is proved by recent events. The Czar is evidently resolved not to have an united Bulgaria unless he can control the little Power according to his own bent. This is not surprising. What puzzles us rather is the seemingly easy failure of an insurrection which enjoyed such high patronage. Russia has been singularly unhappy in her foreign policy of late years. The only impression left by her doings of 1885 in Bulgaria was one of bungling, mismanagement, and disappointment. Then came the pregnant utterances of the Czar on the occasion of his visit to the Black Sea—utterances that rendered the whole world uneasy. Then came the Batoum coup, a paltry business which really seemed designed to proclaim Russian untrustworthiness rather than to accomplish anything tangible. And now finally comes this flash in the pan in Bulgaria; an insurrection which was apparently snuffed out by sheer inanition when it had already acquired sufficient success to be formidable if stoutly pursued. What does all this pettifogging policy mean? Turning to Korea, we find the same sinister influence at work, stirring up trouble and setting nations by the ears for selfish ends. So we are disposed to think that Freeman's definition was not much exaggerated after all.

It would be interesting to know how much carbolic acid is used at present in Tōkyō. The quantity must be pretty considerable. Some of the streets, especially in the Shiba district, are absolutely redolent of the drug, and one can always tell that one is in the neighbourhood of a police station by the prevailing odour of prophylactics. Some people are disposed to laugh at it all—especially foreigners, whose immunity encourages merriment. But there seems little room for doubt that great success has attended the efforts of the authorities to combat the epidemic. Its progress is no longer unchecked. Instead of decimating whole streets as it used to do, we see it now driven to assume almost a sporadic character. A household attacked in a certain locality does not necessarily mean that the neighbours are to be visited. On the contrary, the attention thus concentrated on the latter and the vigorous steps taken to protect them, often have the effect of stamping out the disease in that particular spot. Having regard to the fact that only some two hundred people are daily attacked out of a population of nearly a million, and also to the erratic nature of the malady's progress, some observers are disposed to question whether the term "epidemic" is properly applicable. It is necessary, however, to remember what a struggle is perpetually made to scotch the disease. Were it

unopposed, we should probably have a very different record. Judging from the wide-spread nature of its first appearance in the capital, there was every reason to apprehend a general outbreak. The early records were as follows:—

DISTRICT.	DATE.	CASES.
Nihonbashi-ku	June 10th	1
Kitatoshi-ura-gori	June 13th	1
Kojimachi-ku	June 14th	1
Honjo-ku	June 15th	1
Kyobashi-ku	June 15th	1
Shiba-ku	June 16th	1
Hongo-ku	June 16th	1
Shitaya-ku	June 16th	1
Nihonbashi-ku	June 17th	1
Asakusa-ku	June 17th	1
Fukagawa-ku	June 18th	1
Nihonbashi-ku	June 19th	1
Kanda-ku	June 20th	1
Shitaya-ku	June 20th	1

Thus, during the first eleven days, twelve different districts were visited, and in only two of them did more than one case occur—these were, Nihonbashi-ku, three cases, and Shitaya-ku, two cases. In 1881, the malady behaved very differently. It advanced with such regularity from place to place that the scene of its approaching ravages could almost be predicted. On that occasion the Sanitary Bureau published a chart setting forth the course of the epidemic from day to day, and, that course, once defined, seldom underwent any appreciable change. To show how dissimilar the conduct of the epidemic has been this year, we have prepared a table, giving the dates of the first appearance of cholera in each district, and the number of persons attacked up to 24th August. The districts are placed in the order of their visitation:—

DISTRICT.	DATE OF FIRST APPEARANCE OF DISEASE.	NUMBER OF CASES UP TO AUGUST 24TH.
Azabu-ku	June 8th	59
Nihonbashi-ku	June 10th	941
Kitatoshi-ura-gori	June 13th	99
Kojimachi-ku	June 14th	95
Kyobashi-ku	June 15th	602
Honjo-ku	June 15th	267
Shiba-ku	June 16th	205
Shitaya-ku	June 16th	178
Hongo-ku	June 16th	220
Asakusa-ku	June 17th	479
Fukagawa-ku	June 18th	305
Kanda-ku	June 20th	691
Koishikawa-ku	June 20th	88
Minamitoshima-gun	June 21st	36
Minamikatsushika-gun	June 21st	213
Ebara-gun	July 4th	105
Ushigome-ku	July 6th	75
Higashitama-gun	July 8th	5
Minami-adachi-gun	July 14th	36
Yotsuya-ku	July 16th	34
Akasaka-ku	July 22nd	25

It will be seen that, at the outset, the epidemic did not show marked partiality for any particular locality. It was pretty evenly distributed over the whole city, except Akasaka-ku, Yotsuya-ku, and Ushigome-ku, which were quite exempt. But from the middle of July, when the disease may be said to have become really active, a marked local difference was observed in its ravages. Nihonbashi-ku, Kyobashi-ku, Fukagawa-ku, Kanda-ku, and Asakusa-ku were thenceforth chiefly afflicted, after them, but at a considerable interval, coming the districts of Honjo, Shiba, Hongo, and Shitaya, while of the rural divisions Ebara and Minami-Katsushika suffered most. We may remark here that these two rural divisions lie at opposite extremities of the city, Ebara being on the southerly side of Shinagawa and Minami-Katsushika on the north-east of Mukojima. From the beginning of the present month, the returns of Nihonbashi-ku became the worst, and that locality remained at the head of the list until the 24th-25th instant, when Kanda-ku took the lead. The maximum number of cases in the former district, in 24 hours, was 66—August 9th-10th—but in the latter the record for the 24th-25th showed 78 new cases. In attempting to explain the course

of the epidemic, the first fact which suggests itself is the marked prevalence of the disease in those parts of the city which are most crowded, worst drained and farthest removed from the point where the aqueduct enters the city—namely, Nihonbashi, Kyobashi, Kanda, Shiba, and Asakusa. The districts nearest to the aqueduct are Yotsuya, Akasaka, Koishikawa, Kojimachi, and Azabu, and these, it will be seen, may almost be said to have enjoyed immunity. An analysis performed by the Sanitary Bureau last year, if we remember rightly, showed that the best well-water in Tokyo is in Yotsuya, Akasaka, and Kojimachi, so that these districts are quite exceptionally fortunate in the matter of water, and are, at the same time, elevated and clean. Remarkable immunity has been enjoyed by the dwellers in Ginza, but whether brick houses or a better style of living is responsible for this, seems an open question.

Our Shanghai contemporaries are seldom very fortunate in the accounts they obtain of Japanese events. We are not surprised, therefore, to find them ventilating some curious *canards* about the Nagasaki disturbance. The *North China Daily News* has two versions. One is that a Chinese sailor gave a Japanese some money to procure water-melons. The Japanese failed to appear with either the melons or the money, and the Chinaman went in search of him. "This led to an altercation, resulting in the death of a policeman and the wounding and arrest of the Chinaman." Was there ever such a delightfully vague account? Its beauty is enhanced by a corollary that neither the Chinese, who sent for the melons, nor the Japanese who received the commission, could speak the other's language. Another version is that "the Chinese thought they could do in Japan what they do in China—go ashore, rob, and create disturbances—but that they found out their mistake when it was too late."

THERE appears to be an impression that the disestablishment of the Roman Catholic Church in China is the cause of the removal of a Roman Catholic cathedral, now standing within the Imperial precincts at Peking, to a site at a distance from the Palace. The *St. James's Budget* talks of this step as though it were a part of the scheme for the severance of all the Roman Catholic Missionaries in China from political associations. The fact is, we believe, that the cathedral interferes with a pet project of the Empress for enlarging the Palace grounds. Her Majesty desires to take into the Imperial precincts the celebrated Marble Bridge and the lakes on either side of it. The wish is comprehensible, for the lakes and bridge constitute the only naturally picturesque object in Peking. But the people of Peking will not benefit by the step. Negotiations for the removal of the cathedral had been in progress long before the appointment of a Papal Nuncio to Peking was talked of, and though the latter proposal may have afforded a favourable opportunity to terminate the discussion with regard to the cathedral, the two things certainly do not bear to each other the relation suggested by the London journal.

An English gentleman, who passed through Nagasaki, en route from China, while the Chinese squadron was lying there and before the first disturbance—on the 13th instant—says that

he was astonished by the rude and insolent bearing of the Chinese liberty-men. They made themselves a perfect nuisance in the streets, jostling unoffending passengers and insulting women. This gentleman adds that if the flagrantly offensive and indecorous behaviour of the Chinese surprised him, he was not less struck by the forbearance and good temper of both the Japanese constables and civilians. He expresses his confidence that in any other country either the Chinese would have been "run in" forthwith, or their conduct must have immediately led to scenes of violence. This testimony, coming from a wholly independent source, is in itself conclusive as to the causes which finally provoked the fracas of the 15th. It is borne out, also, by evidence from other quarters. There remains no room to doubt that the Chinese, if they did not deliberately provoke a quarrel, behaved, at all events, in a manner which could not fail to provoke one, and which would certainly have accomplished that result much sooner in another country. By the light of these facts it becomes easy to understand the alacrity with which the citizens of Nagasaki arrayed themselves against the Chinese roughs the night of the 15th. It has been hinted that the arms raised against the Chinese on that occasion were nerved with, perhaps, excessive animosity. Suppose, however, that this trouble had occurred in an English or American town, how would things have fared with the foreigners? Suppose that a Chinese squadron visited Portsmouth or San Francisco, and that, after the sailors had wandered about the streets for four or five days hustling men and insulting women, a party of from two to three hundred landed and made a murderous assault upon the police, why we doubt whether so much as one of them would get back to his ship without a fractured skull or a broken limb. It seems to us that China would do well to keep her blue-jacket braves out of Japanese territory altogether for the present. The open ports had previously remained quite free from such wholesale turbulence, and—apart from the peace and security of the Japanese people—the foreign residents have a right to demand that the privileges enjoyed conjointly by the several nationalities shall not be grossly abused by one to the inconvenience and peril of all.

THE *Hochi Shimbu* says:—We have repeatedly pointed out in these columns that so long as the position of Korea remains unsettled, that country will be a constant source of trouble and complication to both Japan and China. At the time of Mr. Kim-yo-kun's outbreak, not long ago, we took up the ground that the status of Korea ought to be definitely settled once for all. We are now again informed of a disturbance in Korea. Rumours of a disquieting nature had been circulating for some time, but as the matter seemed to form one of the secrets of diplomacy, we were not able to ascertain the truth until the arrival of the *Tsuruga Maru* at Nagasaki. The history of Russia's designs upon Korea is not a matter of yesterday, nor is it at all doubtful that there exists in Korea a certain faction which desires to be delivered from the Chinese yoke by the aid of Russia. Indeed, it was at one time rumoured that a secret treaty of alliance had been concluded between the two countries. Under such circumstances, the English occupation of Port Hamilton could not but stimulate the desires of Russia. The news

of China's indignation upon finding that Korea was courting the protection of Russia, and of the consequent complications, is now beyond all doubt authentic. It is also certain that the Korean Government, finding China untrustworthy, and, moreover, indignant at her oppressive interference, had decided to ask the protection of Russia. Whether they did so in pursuance of a secret treaty already in existence, or whether a new treaty has been concluded, remains to be ascertained. However that may be, China has vigorously interfered in the Korean affair and seems to be intent on defeating any aggressive designs that Russia may have in contemplation. The report of the entry into Seoul of Chinese soldiers in disguise ought to be carefully examined into by our Government. In any case, the present complications may lead to serious consequences, involving countries other than Korea and China. Some people say that the immediate cause of Korea's application for the protection of Russia was the fear that Mr. Kim might go to Russia, and, under her auspices, seek to plot against his native country. That may or may not be true. We again repeat that so long as Korean affairs remain unsettled, both Japan and China will constantly suffer on account of the peninsular kingdom.

FRENCH papers recently ventilated the question whether Great Britain would not probably be willing to make concessions in Egypt in consideration of similar concessions in the New Hebrides on the part of France. The line of argument generally adopted is that now, after securing an alternative route to India by way of Canada, England can afford to be comparatively indifferent as to the fate of the Suez Canal. To the French public this mode of reasoning may have seemed sufficiently conclusive, and it certainly cannot be gainsaid that, since the completion of the iron link connecting Halifax with the Pacific Coast, the Suez Canal has in a measure ceased to have that paramount interest to British statesmen which it had but a short time ago. As the sudden seizure of Port Hamilton disconcerted Russia's plans on the Western Coast of the Pacific, so the construction of the Canadian trans-continental railway marks another commercial and political victory of Great Britain and one on which she may look with unmingled and complete satisfaction. But, granting all the advantages of that railway, present and prospective, it is not likely that they will weigh so heavily in the balance with English statesmen as to cause them to under-estimate the importance of the Suez Canal, and no trifling consideration will induce them to relinquish any of the very substantial and dearly bought advantages of Great Britain's present position in Egypt. The Suez Canal is to-day as necessary for English commerce as it ever was, for the great freight-carrying trade will be scarcely affected by the opening of an alternative route across the American continent. While the commerce of the continental nations has admittedly made great progress, their combined trade in connection with the Suez Canal is yet far from being anything of like importance with that of Great Britain. According to the statistical report of last year, 76.77 per cent. of the total net tonnage that passed through the canal was carried in British ships, while France, the next commercial and political competitor, figures with but 9.05 per cent. After France come Holland with 3.98 and Germany with

3.14 per cent. The rest falls to Powers who have scarcely any interest in the Canal, and who, with the exception possibly of Russia, have never prominently figured in matters affecting the Egyptian question. In view of the great importance of the Suez Canal to the British merchant, it is not likely that English statesmen will sacrifice vital interests in Egypt for the sake of French concessions in the Pacific, the less so as M. Freycinet has already practically withdrawn his hands from the New Hebrides and is not in a position to offer a *quid pro quo* either in Europe or Australia, although French papers intimate that the cession to England of one of the islands of the Tahiti Group as a coaling station would be, in view of the future completion of the Panama Canal, a fair equivalent on the side of France for substantial concessions in the administration of Egypt.

THE *Fiji Shimpō*, discussing the news of the departure of two Chinese men-of-war from Nagasaki, says that China's movements are ever vague and uncertain, and, as her actions are never regulated by consistency or regularity, no one having dealings with her can anticipate with confidence what course her policy will take. In illustration, the *Fiji* cites her action in Korea and Annam, and hazards the conjecture that similar vacillation will mark her conduct in reference to the disturbance at Nagasaki. It would have been desirable as a precautionary measure to require that the four vessels constituting the Chinese squadron should be retained in Nagasaki till the conclusion of the present negotiations; steps being taken, should it become absolutely necessary that one of them should depart, to ascertain that none of the authors or accomplices of the recent riot formed part of the crew. For if any guilty person were thus removed, the circumstance would furnish the Chinese officials with pretexts and excuses the skillful employment of which would greatly hinder the settlement of the affair. If one ship is to leave the port unquestioned, there is no reason why all may not similarly depart. The *Fiji* does not suppose such an event would actually occur, but there can be no question of the importance of having all the Chinese vessels at Nagasaki during the progress of the negotiations, so that any evidence required may be at once forthcoming.

By a vote of 28 to 15 the Congress of the Chambers of Commerce of the British Empire has adopted a resolution urging the remonetization of silver. The actual language of the resolution was:—"This Congress recognises that the diminishing supply of gold during recent years has been an important factor in the existing depression of trade, and believes that the remonetization of silver would afford some relief to this state of things." It is a guarded resolution, but one which must nevertheless exercise a considerable influence on this great question. The distribution of votes, too, is significant—nearly two to one in favour of bimetallicism. Indeed the ratio would have been more than two to one had not the Bombay Chamber of Commerce instructed its representative to vote against remonetization, on the ground that it would injure India. Nothing could be better for the export trade of India than gold monometallism in countries which compete with her. She wants—as the Bombay delegate frankly told the Congress—to supply not only herself but the

countries that surround her with her own cotton manufactures, and in this design she is materially helped by currency laws which enable her to undersell her gold-using rivals. In these considerations the Bombay Chamber found a reason for wishing to keep things as they are, but assuredly it is not a reason that will appeal to English manufacturers. The resolution adopted by the Congress may not produce any immediate result. But it shows that business men are at length awaking to the truth. It has to be supplemented, too, by the third Report of the Royal Commission on the Depression of Trade, which says that "the question of the depreciation in the value of silver merits early and separate examination with reference to the currency as a whole and with reference to the home monetary system and its relations to India, the Colonies, and foreign countries."

PERHAPS it is taking too high a view of journalistic functions to suppose that they are primarily concerned in elevating the moral tone of society. But certainly it is not too sanguine to expect that to lower that tone as much as possible shall not be their chief object. A responsibility attaches to those who have the ear of the public. When they take advantage of their position to persuade the people that unscrupulous selfishness and personal aggrandisement are the mainsprings of all political action, they are abusing their privilege to the full extent of their power; doing everything they can to represent humanity in a degraded light; to place the motives that guide it on a despicable level. It seems to us that the *St. James's Budget* has been persistently performing this evil part since it came into existence. It resolutely refuses to suspect a Liberal statesman of either patriotism, integrity, or purity of purpose. It tars every action of Mr. Gladstone and his associates with the brush of jobbery and venality. It proclaims with almost fanatic emphasis that to derive the impulses of human conduct from any source but selfish trickery and low ambition is to dub oneself a simpleton. Mr. Gladstone, the *St. James's* declares, "has long been a curse to his country," and the injury she suffers at his hands "all springs from error that is the worst of errors in a statesman; the unscrupulous pursuit of personal ambition, the satisfaction of personal vanity and vindictiveness." So on, week in week out, this leading Conservative journal bids the people of England look as low as possible for the motives of their statesmen; educates them to gauge political ethics by the most degraded standards. It is a creditable rôle for a great journal to perform.

THERE is bad news for milk drinkers. Milk has been proved, it would seem, to be the channel through which scarlet-fever is usually disseminated. The investigations of Drs. Klein and Power at the Brown Institution show that scarlet-fever is the effect of a micro-coccus, which is itself produced by an eruptive disease in cows' udders. The disease in the animals is trifling. It does not affect their feeding powers or milk supply, and is consequently all the more likely to escape detection. The theory of causation advanced by Dr. Klein is thus epitomized by a London journal:—"The micro-coccus is present in the ulcerated udder of the cow. The beast seems healthy in all material respects, and is milked in the regular course. The fingers of the milker become infected with the

matter on the udder, and squeeze minute particles of it into the milk. But milk has been proved by experiment to be an admirable medium for the rapid multiplication of the micrococcus, and it has also been proved by experiment that the creature thus cultivated in milk, when introduced into a calf by inoculation, produces a far more virulent type of disease than that disseminated by contact, and one which closely corresponds in all its symptoms to scarlet fever." The direct experiment upon the human subject has not, of course, been tried. But it scarcely seems necessary. The theory is already pretty clearly established.

THE conclusion and ratification of an extradition treaty between the United States and Japan still further accentuates the anomalies of extraterritoriality, as certain Powers interpret the term. Great Britain, on the grounds that extradition having ceased, with her, to be a purely a function of the executive and become a judicial act, and that by treaty she has acquired the privilege of performing all judicial acts as regards her own subjects in Japan, claims that she is entitled to pursue and arrest within Japanese territory Englishmen flying thither to escape the consequences of crimes committed elsewhere. The contention is intelligible enough, but scarcely, as we think, tenable; since, if pushed to its logical consequence, it means that each of the Treaty Powers is competent, by independent legislation, to extend extraterritorial privileges as much as it pleases, without any regard to the Treaty which confers those privileges. At all events, we have now an emphatic declaration from the Government of the United States that, in matters relating to extradition, the Treaties have no-wise altered Japan's status as an independent empire.

President Cleveland's announcement that one reason for the conclusion of the Extradition Treaty is "because of the support which it will give Japan in her efforts towards judicial authority and complete sovereignty," seems worthy of the liberal attitude which the United States have always adopted towards this country. It may be said that this treaty, accompanied by such an announcement, is the second practical evidence which the United States have given of their good will. Of professions there has not been any stint, but with the exception of the restoration of the Shimonooseki indemnity, nothing tangible had been done until now. Henceforth there will be less justice on their side who claim that America's friendship has hitherto been *vox et prateria nihil*.

THERE must be a considerable resemblance between the state of Florence at present and that of Tôkyô. We read of the former:—"Florence is everywhere scented with carbolic acid, the streets are of incredible cleanness," and measures are prepared for "the careful isolation and disinfection of chance cases of cholera should any occur." Florence has escaped so far, but our experience in Japan tells us that these precautions are not necessarily effectual.

LORD SALISBURY's health has become a source of great anxiety. He lately underwent a careful course of treatment at the waters of Royat, but the result has been disappointing. Reports of his complete recovery were circulated, but it is said that they are contradicted by his aspect. His gait has become feeble, his stoop is more

pronounced than formerly, and the exhaustion produced by any physical exertion is described as painfully evident. The anxiety through which he passed during the elections, and subsequently in his attempts to form a coalition Cabinet must have tried him greatly. The impression is that his share of work as Premier will be confined, for some time at all events, to the most general direction of affairs.

ONE of the harbour constables was the author of a prompt rescue from drowning on Monday evening. A Chinese child, which had been playing with a companion in an empty boat near the Mayeda-bashi, fell overboard accidentally and was being carried rapidly away by the current when the occurrence was noticed by the occupants of a police boat in the vicinity. The constable on duty, Nakagawa Seiichi, at once ordered the boatmen to pull quickly to the spot, and on reaching the place where the child had already all but disappeared beneath the surface, sprang over-board to its assistance. Fortunately the boatmen were able to second the officer's efforts, and the child was restored to its mother, little the worse for its aquatic diversion.

CHOLERA in Tôkyô remained pretty constant until the 2nd instant. On that day it suddenly sprang to 347 cases. The following are the figures:—

DATE.	NUMBER OF CASES.	DEATHS.	
		FORMER PATIENTS.	NEW PATIENTS.
25th Aug.	296	111	63
26th	236	83	83
27th	202	76	91
28th	273	118	64
29th	258	95	68
30th	278	110	76
31st	293	138	97
1st Sept.	347	126	98

The conspicuous diminution on the 27th, when violent rain and northerly winds broke up the hot weather, is remarkable.

THE following subscriptions to the fund for relieving the families of sanitary officials, received at the Kanagawa Kencho, are acknowledged with many thanks:—

	Yen.		Yen.
Already acknowledged, 1,402.1		Mr. McSweeney	1
Captain Saunders	10	Mr. H. M. R.	2

Mr. F. S.	1	Total	1,483.1
Mr. A. N. G.	1		

THE cholera returns for Yokohama during the past week were:—Saturday, 28th ultimo, new cases, 10; deaths, 4. Sunday, new cases, 10; deaths, 5. Monday, new cases, 13; deaths, 10. Tuesday, new cases, 9; deaths, 6. Wednesday, new cases, 9; deaths, 5. Thursday, new cases, 13; deaths, 7. Friday, new cases, 24; deaths, 13. Total cases, 88; deaths, 50; against total cases last week, 81; deaths, 65.

THE *Jiji Shimpô* publishes a telegram saying that two French ships—the *Turenne* and the *Laclochtrie*—visited the island of Oki on the 26th instant. Admiral Rieunier and Captain Dupuis landed from the *Turenne*, and spent some time at the District Office. The last port of call of the ships had been Tsuruga, and they were supposed to be en route for Fusan. They sailed again after three hours.

THE value of isolating the shed for soldering leaky tins of kerosene where oil is stored in large quantities has just been well illustrated at Hongkong, the destruction of the erection at Bowington used for that purpose having in-

volved the loss of a few dollars only, whereas had a fire broken out in the soldering shed, as that place was situated some time ago, it would have caused the destruction of more than half a million cases of oil.

MANY persons who have recently returned from Nikko and Ikaio, on comparing notes, agree that a rather violent shock of earthquake was felt on Sunday night shortly before half-past nine at both those places. The phenomenon was also observed in Yokohama at the same time, which shows that the movement included a large area.

THE fifty Chinese constables of the Hongkong Police who were recently bowled out in receiving hush-money from gambling-houses, have been several times up before the Magistrate, but no decision has yet been given from the Bench. They are allowed out on \$100 bail, and about a dozen have bolted.

WE learn from a private letter that cholera has reached Nagano *ken*, and that 25 persons have died in Oiwake. Also in the small village of Karuisawa, containing a population of 451, nine persons had succumbed to the malady during the past week.

A TELEGRAM to the Osaka Shôsen Kaisha, from its steamer *Asahi Maru*, which arrived at Kagoshima from Riukiu, the afternoon of the 22nd ultimo, says that everything was in a normal condition at the islands up to the time of the steamer's departure.

CARL STROMBLAD, a Swede, shot himself through the heart with a revolver at a house in Gage-street, Hongkong, in consequence of a quarrel with a woman named Brantley, who resided there. The jury returned a verdict of "suicide whilst of an unsound mind."

ACCORDING to a telegram published in the *Nichi Nichi Shimbun*, the Chinese Consul at Nagasaki has consented to receive the indictment prepared by the Japanese officials with regard to the fracas of the 15th ultimo.

THE total number of cases of cholera which occurred in Tôkyô from the outbreak of the disease on June 8th to noon of August 24th was 5,043, and the number of deaths 3,056, the rate of mortality being 60.5 per cent.

J. NELSON, one of the crew of the American schooner *Dakotah*, who was attacked by cholera about eight days ago, died in hospital the afternoon of the 25th ultimo.

RUMOURS that Korea has leased Quelpart to Russia are again in the air, but can scarcely be reconciled with the larger story that the peninsular Kingdom has been trying to hand itself over bodily to Russia.

THE Honorable Sir Francis Plunkett is expected to return to Tôkyô to-morrow (Sunday) evening. He will probably remain in the capital until the 11th, when he will again visit Nikko.

A TELEGRAM received on Thursday in Tôkyô says that Mr. N. R. O'Connor C.B., who was lately in Hongkong, will arrive in Japan about the 7th instant.

THE *Kilmory* took 2,445 tons rice from Nagasaki, for Falmouth f.o., the steamer *Laju* 2,365 tons for Europe, and the steamer *Sikh* took 100 tons for the Colonies. This continued demand has driven up value in spite of large supplies.

## REFORM OF THE JAPANESE STAGE.

A POWERFUL movement has been inaugurated in Tôkyô for the improvement of the histrionic art. Among the promoters of the scheme are many of the leading men of the Empire. The details of their project are not yet public property, but enough has transpired, and enough is known of the present condition of the stage, to enable us to say that sweeping changes are contemplated. We are not at all surprised that the attention of reformers has turned in this direction. The drama has not appreciably partaken of the social revolution now progressing in Japan. In all its essentials it remains exactly where it was twenty-five years ago. A profession degraded partly by accident, partly by the caprice of a tyrannous etiquette, its capabilities as an instrument of popular education and refined amusement have still to be developed. In Europe the character of the drama has always conformed to the character of its patrons. If the same rule be applicable in Japan, the nation derives much credit from the story of its stage. Excluded rigorously from the patronage of the noble and the educated classes, the histrionic art has nevertheless maintained a level considerably above mediocrity. Not only are the actors skilful—often, indeed, of the highest powers—but the stage has never been converted into a platform for popularizing vice and immorality. It is true that Japanese comedy is frequently broad. It sometimes employs materials that are banished from the daylight of Western decorum, and derives inspiration from incidents that would shock fastidious delicacy in Europe. But these are its exceptional methods. And even at their worst, they are relieved by an element of naturalness and simplicity. They illustrate with fidelity the fundamental difference between Japanese and European morality—a difference which may be best described, perhaps, by saying that, where the latter employs circumlocutions, the former uses plain noun substantives. Westerners, wont to deal in euphemisms with bated breath, are apt to draw erroneous conclusions from the out-spoken bluntness of the Japanese. They infer moral debasement such as would accompany a similar absence of reserve among themselves. This is simply to mistake artlessness for obscenity. As well might we confound the undisguised diction of the Pentateuch with the prurient plainness of "Love in a Wood" or "The Country Wife." If Japanese comedy sometimes reminds us of JUVENAL and ARISTOPHANES, it never recalls WYCHERLEY or CONGREVE. If it sometimes raises a laugh at the grosser phases of life, it never becomes a vehicle for presenting to public imagination what is immoral in company with what is attractive. Therefore we say that its character does credit to its patrons, for these have hitherto been confined to the middle and lower classes.

Looking back into history, we do indeed find that names illustrious as those of HIDEYOSHI (the Taiko) and IEYASU are associated with the development of the histrionic art. But from the time when a law—how inspired the records do not tell—relegated the whole actor class to a rank only just above the Helots, or Eta outcasts, theatres have always been forbidden ground to the aristocracy. Under the disabilities of such a ban it is not wonderful that the actor has never conceived a large idea of his own social importance. His art he appears to have held in the highest esteem, if not reverence, but his own status in society he regarded as virtually hopeless. One consequence of this was that he set no store by conventionalities which an exalted station dictates. A vicious life could not add much to the disgrace he was already condemned to suffer. The depraved tendency thus inspired did not want for assistance. Fate, with its usual waywardness, willed that the *Geisha* should seek in the actor's society solace for her constrained service in circles where the actor's presence was tabooed. With these gay little *dansesuses*, the object of acquiring money was generally to spend it on an actor. One can easily guess how it fared with the actor in the absence of social restraint and in the presence of such strong temptation. Besides, he had not even the solace of knowing that his emoluments would be proportionate to his talents. Poorly recompensed, anxious to shine in his little world by the help of externals, and obliged to purchase or hire the greater part of his own wardrobe, he was tormented by the constant company of debts. In common with his art he suffered from the numerous abuses of theatrical management. The lessee of a theatre was at the mercy of the capitalist; the actor, at that of the wardrobe-owner. The lessee generally had nothing but his license; the capitalist, a list of the theatre's liabilities, which, contracted some in the present, some in the past, generally aggregated a sum beyond all possibilities of liquidation. The bulk of the theatrical wardrobe was owned by merciless monopolists who extorted the last *sen* for the temporary use of a costume. The lessee, on the other hand, received from the capitalist at each representation just enough money to defray current expenses, and for this accommodation was required not only to repay the advance, but also to set aside, from the takings, interest at the rate of fifty or sixty per cent. Thus actor and lessee alike were always weighed down by a heavy load of debt. We cannot wonder that enterprise was without vitality under such conditions; that no attempts were made to improve the stage or its scenery; that audiences were obliged to remain eternally content with accessories which would not have been out of place in an European peep-show. The whole system was so defective that reformers were

deterred by the magnitude of the task. Not less in need of change is the custom of holding representations which last from morning to evening. The waste of time thus entailed, and the unwholesome effects of sitting so many hours in a crowded, ill-ventilated building, are not the only evil features of this habit. People who spend the day looking at a play have to eat, and from this necessity there springs up around the theatre a little city of tea-houses, all adding to the costliness of the entertainment and subtracting from the productive capacity of the population. So that, in every direction, there is ample room for reform. The movement, we are glad to know, is in hands which render its success certain. Its ultimate result will be a thorough reconstitution of the stage, and a corresponding change in the status of the actor. Let us hope that the reformers will also obtain the repeal of the law of 1830 which prohibited mixed companies of male and female actors. The names of TSU, KUNI, and SHIMADA MANKICHI remind us what the stage in Japan owes to woman's wit. And even though it were possible for men to play women's rôles perfectly, or to rise to the higher planes of their art in company with the painted, powdered shams that do duty as maids and matrons at present, the motive of the prohibition would itself remain unworthy of the theatre which the reformers contemplate.

## SILVER AND ITS OPPONENTS IN THIS SETTLEMENT.

1.

THE importance of the silver problem induces us to devote a few lines to the considerations advanced by correspondents whose letters we recently published. At the same time, we confess that we approach the task with a feeling of disappointment, for it seems to us that those of our fellow-residents who have undertaken the advocacy of gold monometallism exhibit a most unfortunate tendency to ignore all the arguments hitherto put forward on the other side.

We are confronted, in the first place, by the familiar objection that the production of silver has become too abundant to permit its use as a medium of exchange. To that increased production, we are informed, must be chiefly attributed the decline in its gold price, and it is further added that to seek to arrest the decline by establishing a fixed ratio between the prices of the two metals would be an arbitrary and unnatural proceeding.

As a partial reply to this objection we suggested the advisability of determining how much of the depreciation in the gold price of silver is attributable to its demonetization and how much to its abundance.

Our correspondent "Negozio" retorted, with evident satisfaction, that "in suggesting such a comparison we had struck one of the heaviest blows at silver." This bold

announcement naturally prepared us for some conclusive demonstration. We imagined that "Negozio" had collected statistics which would prove beyond doubt that the abandonment of the free coinage of the white metal had affected its gold price to only a trifling degree, and that the main cause of the decline was over-production. Instead of this, our correspondent begs the whole question. He declares that "silver was only demonetized when it was found impossible to keep it at a fixed value with gold," and that its demonetization was undertaken by European Governments because "they saw that the discovery of extensive silver-mines in many parts of the world would produce such a quantity of the metal that its gold value would considerably decrease." Of this novel declaration he furnishes no evidence whatsoever. Nay, he does not even adhere to it. In the very next paragraph of his letter he writes thus:—"A time came when the two metals, like every other metal, must sever their union. The great gold mines of Australia, the Cape, and California were discovered, and such quantities of the yellow metal were poured into the market that although silver had been also discovered, in large quantities, gold was the more plentiful, and the value of the two metals, for the first time, varied, with silver actually at a premium."

We have thus two diametrically opposite statements; first, that silver was demonetized because its excessive production and the consequent impossibility of maintaining its gold price were foreseen; secondly, that the demonetization took place when gold being more plentiful than silver, the latter was at a premium.

Nor do "Negozio's" contradictions stop here. His object is to show that the gold price of silver has depreciated through over-production, not in consequence of demonetization. Yet he affirms that if only the United States would follow the example of the European monometallic nations, and demonetize silver, there would ensue such a depreciation of that metal as to "surprise the world," and in fact, "silver would no longer be looked upon as a precious metal but be used only as copper and nickel." He thus asks us to believe that, although the demonetization of silver by several great nations, where its coinage had been perfectly free, did not seriously depreciate its gold price, its demonetization now by one nation, where its coinage is limited, would forthwith reduce it to the level of nickel and copper.

Such arguments might be left to refute themselves without much danger to the cause of bimetallism. Our object, however, being, not to controvert "Negozio" or any one else, but to arrive at the truth, we proceed to state a few facts bearing upon this phase of the question.

The fundamental mistake made by many people who discuss the value of silver with

reference to its production is that they argue about it as about merchandise: they fail to distinguish between metal and money. The former, indeed, is merchandise, but so soon as it has been stamped at a mint, and has become a legal medium of payment at a fixed rate of value—so soon, in short, as it has become money—it acquires special properties. One of these properties is that it possesses a certain independence with regard to the rate of its production. Wheat, silk, and similar staples are consumed virtually as fast as they are produced. Over-production in any one year may therefore affect their value in the ratio which the excess bears to the produce of a normal season, other things being equal. But the case of metal used as money is wholly different. The production during each year is added to the total stock already existing in the world. The latter is a large multiple of the former, and a still larger multiple of any excess or deficiency which the former may show in a particular year. To fix our ideas on this point let us use figures. The quantity of silver coin in the world in 1877 was estimated at 3,500 millions of dollars. The annual production of silver at that time was about 75 millions of dollars. Five years previously the annual production had been 50 millions. Of this production only a portion was converted into coin. For the sake of simplicity, however, let us assume that the whole was minted—the assumption being highly unfavourable to our side of the argument. Then it appears that the increase of production—twenty-five millions—was only the one hundred-and-fortieth part of the whole stock, so that, until this increase had accumulated and been added to the stock during a period of more than thirty years, the quantity of silver coin in the world would not have received an increment of twenty-five per cent. from that cause. This calculation represents the case in the best possible light for our opponents. Yet it plainly demonstrates two things: first, that the scare about the over-production of silver is largely exaggerated; secondly, that to demonetize, within the space of a few years, the huge stock of silver hitherto used as coin, must have affected the value of the metal to a degree admitting no comparison whatsoever with the paltry influence of over-production. Silver, so soon as it is demonetized, becomes mere merchandise. Its uses are thenceforth practically confined to the arts and manufactures. Any increase of its production under such circumstances depreciates its value in the same way and to the same extent as an excess in the production of wheat or silk reduces the market-prices of those staples. These considerations render it easy to understand why silver, since it ceased, in great part, to be money and became merchandise, has steadily and persistently fallen in value as compared with gold. There are other

considerations with respect to gold itself, but we omit them for the moment.

In 1848 the annual supply of gold was eight millions sterling. In 1852, owing to discoveries of new gold-fields in Australia and elsewhere, the supply rose to 38 millions. Between 1852 and 1856, it averaged 29 millions. Now, never at any time in the history of silver has anything comparable with this been recorded. The average annual production of silver from 1863 to 1867 was 14 millions sterling; the average annual production from 1867 to 1881 was 18 millions. Writers who raise such an outcry about an increase of less than 30 per cent. in the production of silver, forget altogether that an increase of from three hundred to four hundred per cent. took place in the production of gold not many years ago. The reason that the one phenomenon strikes them forcibly while the other escapes them, is, as we have stated above, that since the demonetization of silver in Europe the quantity in which the metal is produced has acquired an immensely increased influence on its market value. People observe it under wholly altered conditions, and attribute to it an instability which would belong in a still greater degree to gold were the latter deprived of its uses as money.

Here let us refer for a moment to "Negozio's" contention that the Governments of Europe demonetized silver because they foresaw its over-production and consequent depreciation. England demonetized silver in 1816, on resuming specie payments. There was at that time no question whatsoever as to the production of silver. Theoretical arguments in favour of a single standard were alone considered. France followed suit in 1850, just when the *placers* of Australia and California had begun to add unprecedented sums to the gold of the world; just when Holland and Belgium, fearful of a gold deluge, were legislating against the yellow metal; just when Russia was prohibiting the export of silver. Germany took the fatal step in 1872, when the prophecies of M. CHEVALIER with regard to the depreciation of gold were still occupying the attention of economists. Of the action subsequently taken by other Governments it is unnecessary to speak, because, when they declared their allegiance to gold, the value of silver had already been seriously perturbed by its demonetization, and the example of the three leading nations of Europe had become in a sense imperative.

We conclude, therefore, that the question of the production of silver had nothing whatever to do with the *origin* of its demonetization in Europe, and that its depreciation of late years, as against gold, is principally the result of its demonetization.

Perhaps the strangest feature of this controversy is the apparent inability or unwillingness of the gold monometallists to admit the converse of their own proposi-

tion. For, if so much importance attaches to the apparent abundance of silver, what shall be said of the unquestionable deficiency of gold? If profusion disqualifies the former metal to perform the functions of money, surely palpable and constantly growing scarcity ought to be equally fatal to the latter's claim. The annual production of gold has fallen to eighteen millions sterling. The best authorities calculate that the amount absorbed by the arts, by Oriental demand, and by wear and tear of the currency is seventeen millions a year. There remains thus only one million to meet the monetary wants of the whole western world. Is it conceivable that such a state of affairs can fail to produce a financial crisis? The monometallists meet this dilemma with the invariable reply—"As civilization progresses the need of metallic media perpetually diminishes. Cheques, bank-notes, and clearing houses take the place of silver and gold." Let us hear what a very great authority, Mr. ROBERT GIFFEN, thinks with regard to this point. Writing in 1872, he said:—"It is supposed that the gradual perfection of the Clearing House arrangements have economized currency in the interval since 1850. In England there are two standard currencies—the sovereigns, which are in the pockets of the people and are used as small change, and the Bank of England notes, which are used for large payments. The economy of the Clearing House arrangements, it is conceived, applies only to the latter currency. So far as the use of sovereigns is concerned, the necessities and habits of the people are unchanged. Deposit banking was quite as much developed in 1850, in proportion to the population, as it is now. What the Clearing House has accomplished is not anything which applies to the mass of the people in their use of sovereigns, but only something which applies to the arrangements among bankers themselves in which notes only are used." The well-known essay from which we take this extract was written for the purpose of combating the alarm caused by the immensely increased production of gold which resulted from the discoveries in Australia and California—an increase without parallel in the history of silver. Mr. GIFFEN, perhaps the most distinguished monometallist of his time, arrived at the conclusion that "every increase of population and business since 1850 must have involved a proportionate expansion of the sovereign circulation," and he showed by elaborate and exhaustive calculations that a total addition of nearly sixty per cent. to the volume of the gold currency during a period of nineteen years was not in excess of what was demanded by the increase of population, wealth, and industry.

Thus when threatened, fourteen years ago, by a deluge of their favourite metal gold, the monometallists emphatically refused to admit that the use of notes,

cheques, and clearing houses materially relieved the demand for metallic media, and they further maintained that the development of population, wealth, and industry required that the volume of coins in circulation should be doubled every thirty-five years. Threatened now by a gold famine, they turn upon their heel and announce that the functions of metallic media of exchange are being rapidly usurped by paper or relieved by clearing houses, and that no addition need be made to the volume of coins in circulation. Can the public be reasonably expected to accept both of these doctrines?

II.

The present crisis may be said to have commenced in 1873. Since that time Germany, the United States, and Italy have absorbed 220 millions sterling of gold—"an amount," as LAVELEYE says, "equal to the whole production of the metal for the past ten years." England used to coin an average of four millions sterling annually. She only coins a little more than one fourth of that amount now. A similar or even greater decrease is observable in the coinage of other countries. England used to absorb  $4\frac{1}{2}$  millions sterling of gold annually. Between 1877 and 1884, on the contrary, she parted with eight millions. Not only are the mines of Australia and America far less prolific than they were, but a great and constantly increasing portion of their products is locally absorbed, and the remainder available for exportation to Europe steadily diminishes. Thus, while Australia sent to England an annual average of seven millions sterling between 1871 and 1875, she sent her only seven hundred thousand in 1884.

But it is useless to multiply figures. They are within reach of anyone who cares to study this great subject. The most bigoted monometallist can no longer deny that there has been thrown upon gold a burden which it is incapable of supporting. The consequence is universal misery. We need not describe it, for it is unfortunately familiar to us all.

"Until 1870," says LAVELEYE, in an essay published three months ago, "silver was the principal and, as LOCKE said, the true monetary metal all over the world; England alone had a gold standard. A few countries, like France and the United States, retained a little gold in circulation by the bimetallic system; after 1873, suddenly and universally, save in India, the free coining of silver is prohibited, and gold coin, heretofore a luxury, becomes all at once the sole means of international exchange. And this change takes place simultaneously with a decrease in the production of gold and an increase in the activity of trade. The result is an unexampled fact in economic history. The mints in several large countries suspend coinage. Can it be admitted for a single instant that such revolutionary measures would be without effect on the economic world?"

Turn now to the two stock objections raised by monometallists. The first and principal of these is the problem of establishing a fixed ratio between the values of silver and gold. It is admitted that trade is seriously hindered by the constantly increasing difficulty of making exchanges between the two metals when they no longer bear a settled relation to one another. This obstruction is virtually of the same nature as that experienced in the trade with countries which have an inconvertible currency. It is fatal to sound and healthy commerce. No one denies that to remove such an obstacle would immensely benefit the mercantile world, apart from the other and incomparably larger issues involved in the remonetization of silver. "But," object the monometallists, "you cannot establish any fixed ratio between the metals. The thing is wholly impracticable." This opinion is variously expressed by our correspondents.

First, we have "Cent Per Cent," who, with all the characteristic assurance of the monometallist, writes:—

The bimetallic theory is not worth argument, and will not hold water for two minutes; the mere fact of its being founded upon a proposed agreement or conspiracy to confer a fixed value upon an article of produce, which that article does not really possess, is fatal to it, and would prove utterly impracticable.

This gentleman settles the question easily and comfortably. He dismisses with a wave of the hand as wholly unworthy of notice, such men as CERNUSCHI, LAVELEYE, FRAVEN, GIBBS, and so forth. To him silver is simply "an article of produce." He cannot see that it has become so by demonetization, and that gold would fare similarly were it similarly dethroned from its place as coin.

Next, we have "A Yankee," whose thoughtful and moderate writing is in pleasant contrast with the airy dogmatism of "Cent Per Cent.":—

Will you yield me the courtesy of your columns to ask your correspondent, "X," what precedent he finds in financial and commercial history or experience to warrant his belief that it is possible to fix by law a ratio between gold and silver independent of the market price of either. That these metals are commodities is a trite dictum. The merchant is said to *sell* his tea, but this act of selling is equally a purchase. He buys with it gold or silver, and the coins he receives therefore have a market value just as his tea has, and their only worth is their power of being exchanged for a service. \* \* \*

The purchasing power of money is regulated by the intrinsic value of the metal it contains. The impress of the government stamp on a coin is nothing more than an assay mark—a guarantee of its genuineness.

This writer is apparently unconscious of the conspicuous contradiction which his own statements present. In one breath he asserts that "the purchasing power of money is regulated by the intrinsic value of the metal it contains;" in the next that "the only worth of silver or gold coins is their power of being exchanged for a service." Silver and gold derive their "power of being exchanged for a service" from the enactments which declare them legal tender. Remove either of them beyond the scope of those enactments, as silver has been removed, and what be-

comes of their "power of being exchanged for a service?" If neither silver nor gold were used as coins, how much coin, or silk, or labour would a man give for a lump of either metal? How, then, about "the purchasing power of money being regulated by the intrinsic value of the metal it contains?"

It never apparently occurs to the formulators of such objections that, not between silver and gold alone, but also between copper and gold, a fixed ratio is already maintained, for coinage purposes, entirely irrespective of the relative market prices of the metals. An ounce of silver can be bought for less than forty-five pence. It is issued to the public in coin by the mint of England at sixty-six pence—the seignorage being thus over 30 per cent. Copper, of which pence are made, has a metallic value exactly one-fourth of its value as coin. Several years ago, when this difference—in the case of silver and gold—was only twelve per cent., a question was raised in the House of Commons as to the justice of paying wages in coins the metal of which was worth much less than their face values. The House of Commons might as well have occupied itself with an inquiry into the economical morality of using shells or pieces of cloth as media of exchange in savage countries. A discussion took place, however, and Mr. HUBBARD settled the matter, conclusively as economists agreed, by the following declaration:—

It is quite true that silver, rather than gold, is the medium through which the wages of the labouring classes are paid; but to show that the labouring classes are injured by the Mint regulations, it must be demonstrated that the shilling they now receive commands a smaller quantity of the necessities of life than would a shilling coined as an integral measure of value. The shilling now circulating derives its purchasing power, not from the silver it contains, but from its being by law a twentieth part of a pound—the golden standard. The artisan's shilling is intrinsically the twenty-second part of a pound, but how do these facts affect his interest, if he can always, with twenty shillings or two hundred and forty pence, secure the value of a pound?

We do not at all under-rate the difficulty of establishing a fixed ratio between gold and silver, but neither can we admit for a moment the impossibility of the project. Many considerations point to its feasibility. In the first place, we recall the fact that the two metals held a course nearly parallel during three centuries, and that only when silver was demonetized did the price of gold suddenly rise, within the space of a few years, from 15.63 to 20.76. In the divergence of the two, now that they are exchanged for one another just like other commodities—the one being maintained at a scarcity value, and the other cut off from its principal source of demand—in their divergence under these circumstances, we recognise, not a natural condition, but a result of the very legislation which the bimetalists would invoke in an opposite direction but with greater discretion.

We observe, in the second place, that the cost of production is by no means a

true measure of the value of money. MILL justly says:—"Alterations in the cost of production of the precious metals do not act upon the value of money except just in proportion as they increase or diminish its quantity, which cannot be said of any other commodity." If, by remonetizing silver, a strong stimulus were given to mining, so that, in a few years, the yield was doubled, trebled, or even quadrupled, still this increased production could bear but a small ratio to the large stock in existence, and would exercise a correspondingly trifling influence upon the value of the metal. Supposing that the present production of silver were trebled, the yearly increments, even if wholly converted into coin, would have to accumulate during fully a quarter of a century before they doubled the volume of the silver currency. Even on this extravagant hypothesis, would the finance of the world be greatly disturbed? We are not without a precedent to guide us in replying. Between 1841 and 1850, the annual production of gold and silver, combined, averaged 14½ millions sterling. Between 1866 and 1870, it averaged 41½ millions. The production nearly trebled in twenty years. Yet, during that time, prices did not rise more than 20 per cent., at the outside. The increase of population, the growth of commerce and the development of industry which took place under such happy circumstances, absorbed a large portion of the extra production. Another point, clearly demonstrated by CAIRNES with regard to the gold-flood of 1850-70, is equally true of silver, *mutatis mutandis*. If the crop of silver becomes so large as to cause a fall in the value of the metal, that fall leads to its being substituted for gold. A quantity of gold is thus disengaged from purposes which it was formerly employed to serve. The result is that both metals fall together in value, "the depth of the fall being diminished as the surface over which it has taken place has been enlarged." This is one feature of the compensatory, or equilibrating, action of a double standard, which in itself constitutes a strong argument in favour of bimetalism. Hence it was that, during several centuries, down to 1873, gold and silver never diverged far from the ratio of 15 to 1. Even the great discoveries in Australia and California did not raise the gold price of silver as much as five per cent., and it has been proved that their permanent effect did not exceed one and a half per cent. "A depreciation of 10 or 15 per cent. in the measure of value spread over a quarter of a century is hardly of a kind to produce any social disruption," says GIFFEN. We fail, therefore, to appreciate the insuperable difficulty of establishing a fixed ratio between gold and silver—though of course it could not be such an extravagant ratio as that contemplated by "Negozio;"—and we regard as altogether chimerical the apprehension that to re-

monetize silver would flood the world with the white metal.

Perhaps we ought to add that what we have written above is by no means intended to serve as an exposition of the case for silver. Our aim has simply been to meet the points raised by our correspondents.

#### THE BURMAH SETTLEMENT.

IT is welcome news that negotiations at Peking have finally led to an amicable adjustment of the dispute between China and England with regard to Burmah. One point advanced by the Chinese manifestly deserved favourable consideration. It had reference to the question of frontier. So long as Burmah remained a weak and virtually helpless Power, there was no pressing necessity to mark out the exact extent of the Burmese dominions. But when the country passed into the hands of England, the frontier affair assumed a new complexion. China was then plainly justified in asking to have things placed on a distinct and unmistakable footing. Of course, as the frontier had never before been accurately traced, its delimitation presented some difficulty. The Chinese at first wanted to have Bhamo on their side of the line, and with this object proposed as boundary the Shevely River, which flows into the Irrawaddy some fifty miles below Bhamo. England, on the other hand, proposed the Tapeng River, which enters the Irrawaddy just above Bhamo. Even the latter arrangement would have ceded to China a considerable slice of territory hitherto included by cartographers in the Kingdom of Burmah. The former was objectionable for many reasons, but chiefly on this account—that China accompanied it by a declaration of her intention to make Bhamo an open port. Now the only practicable route to Bhamo is by the Irrawaddy, which from the town to the sea lies within England's newly acquired territory. Great Britain would thus have been in the position of having to police a long stretch of river in order that it might afford a secure road to the merchantmen of rival Powers. Of course such a settlement could scarcely be tolerated. China's second claim had reference to suzerainty. Burmah is another of those States towards which she affects to stand in some shadowy relation of chieftainship. Silly and unpractical as the claim seems, Great Britain was not unwilling to entertain it on grounds of friendship. Lord SALISBURY proposed an ingenious arrangement by which Burmese tribute would have come, as of yore, to Chinese coffers, only the hands that transmitted it would have been religious—those of the heads of the Buddhist Church in Burmah. The story goes that this compromise seemed quite acceptable to China, but that before it could be embodied in a treaty the Conservative Cabinet fell, and its Liberal successors did not endorse the

scheme. Thenceforth the negotiations hung fire and it was expected that they could not be carried to a conclusion before the arrival in Peking of Marquis TS'ENG, who had taken a prominent part in their conduct at the outset. But Mr. O'CONOR, by tact and adroitness, has succeeded in closing this inconvenient question. The exact details of the settlement are not yet public property, but we have reason to believe that they are quite satisfactory, and that they were elaborated in a manner calculated to cement the friendly understanding between the Courts of Peking and St. James. It is an open secret that the reason of Mr. O'CONOR's protracted stay in Peking after the arrival of Sir JOHN WALSHAM, was that he, Mr. O'CONOR, might carry to a successful issue the negotiations which he had conducted so ably up to that point. One immediately good result of the settlement is that it will finally deprive the Burmese dacoits of all hope of Chinese assistance. There is good reason to think that these troublesome folks had laid out for themselves a rôle similar to that played by the Black Flags in Tonquin. The latter had to fight a long time on their own account before China came actively to the irassistance, and the dacoits might fairly anticipate similar coöperation from their neighbour, if only they could make a stand stout enough to be worth supporting. The treaty, however, puts an end to all this, and the Burmese insurgents will probably weaken considerably when they appreciate the loss of their last hope. With regard to the prospects of trade in Upper Burmah, so much has been written that we refrain from touching the subject again. One thing, however, has to be noted; namely, the growing belief that, despite Mr. COLQUHOUN's sanguine predictions, the Bhamo route will never be available as a principal means of commercial communication with Yunnan. To tap that supposed El Dorado the West River, via Canton and Pese, seems to be the only really practicable road. Between Bhamo and Szechuen, the province on the north of Yunnan, there are said to be three of the largest valleys in the world, with deep ravines between mountains thirteen thousand feet high. The Yangtze is the way to reach northern Yunnan. As for Burmah, it is, for its own sake, well worth the pains England is taking to acquire it.

#### THE PANAMA CANAL.

THE most damning indictment yet preferred against the Panama Canal has been prepared by M. LEROY-BEAULIEU. While the general public busies itself considering what progress the work has made, and whether or no the engineering difficulties are surmountable, the editor of the *Economiste* examines the financial aspects of the scheme as they are now presented to the world. Seven hundred millions of francs

have already been expended on the enterprise, and six hundred millions more are asked for, not to finish the canal, but "to carry it to such a degree of advancement as will leave no doubt of final success." The new loan cannot be obtained at a cheaper rate of interest than from 7 to 8 per cent. At present a sum of 45 millions of francs is needed annually to pay interest on capital and general expenses. If the financial programme now contemplated be pursued, this sum will amount to 55 millions in 1887, to 70 millions in 1888, and to 88 or 90 millions the following year, so that if seven or eight years elapse before the completion of the work, the whole of the new loan of six hundred millions would barely suffice to defray interest and general expenses, without devoting a shilling to the actual digging of the canal. Nor is this the whole story. From the report of M. ROUSSEAU, who was despatched by the Minister of Public Works to examine the condition of the canal, it is quite evident that six hundred millions will not be enough to finish it. They will only bring it to a stage from whence the end will be discernible. And this, too, on the supposition that the whole of the money is devoted to the work of construction, whereas, in point of fact, the greater portion of it would go to pay interest. Year by year the sum required for the latter purpose would increase and that applicable to the former diminish, so that, in the end, at least two milliards would probably have been expended before a ship passed the Isthmus. What is the prospect of recouping such an immense outlay of capital? The gross earnings of the Suez Canal amount, at present, to sixty-five millions of francs annually, and the most sanguine estimate does not contemplate any such return from the Panama Canal, at least for several years after its completion. Moreover, five per cent. of the traffic receipts have to be paid to the Columbian Government. But the greater part of the capital of two milliards, will have been borrowed at about 7 per cent., so that the gross earnings will not suffice even to pay half of the charges on account of interest. In the face of such figures M. LEROY-BEAULIEU naturally pronounces the enterprise quite hopeless unless the Governments of some of the Great Powers interest themselves in it. He appeals to the United States, to England, to Germany, to Italy, to Russia, to Holland, and to Spain, to assist in this great work of civilization. Not by subventions. History is grateful to SAÏD PACHA and to ISMAÏL PACHA for the enormous sacrifices they made in behalf of the Suez Canal—sacrifices which, in ISMAÏL's case, amounted to some dozens of millions of francs and his Khedival crown. But history deters others from following their example. Moral, not material, aid is required. The Great Powers need only guarantee the interest of the capital sunk. If they do so, funds for the

prosecution of the work may be obtained at about 34 per cent. interest; and as, in that case, another milliard would probably suffice to complete the canal, the annual payment on account of interest on the new loan would not exceed 32 millions. Then, by charging 10 francs per ton—which is 50 centimes more than the charge at the Suez Canal—a gross receipt of 40 millions annually might be anticipated from the commencement, and this would be enough to pay the guaranteed interest and the cost of maintenance. Should the traffic attain anything like the dimensions anticipated by M. DE LESSEPS, the capitalists who have already sunk six hundred millions in the enterprise will fare well enough; but should the work be carried on by private enterprise, they will get nothing at all, and, moreover, immense sums of French money will have been spent for the benefit chiefly of England and America. Such is M. LEROY-BEAULIEU's way of looking at the matter. He does not see why France should deliberately lose at Panama a sum equal to half of the indemnity she paid to Germany, and he roundly denounces the whole enterprise, in regard of the blindness of its promoters, as a parallel to the war of 1870. The former will, in his opinion, be as irreparable and almost as large a disaster as was the latter. No one has hitherto spoken so plainly and with such authority on the subject of this unfortunate scheme as the editor of the *Economiste*. His verdict will doubtless carry immense weight in France. Whether the Governments of England and America will find the enterprise sufficiently attractive to pledge their country's credit in its behalf, is a question which we should be disposed to answer in the negative.

#### CORRESPONDENCE.

[Our leaders must distinctly understand that we are in no sense responsible for the sentiments or opinion of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

#### BISHOP BICKERSTETH.

TO THE EDITOR OF THE "JAPAN MAIL."  
DEAR SIR,—Will you kindly publish the enclosed correspondence and oblige.

Yours very truly,

E. CHAMPNEYS IRWINE.

Yokohama, August 28th, 1886.

(COPY.)

Hakodate, 20th August, 1886.

REVEREND AND DEAR SIR,—I regret that through a mistake the document of which I enclose a copy did not reach me till a few days since.

May I now ask you to lay it before your Church Committee at their next meeting, and to enter a copy upon the Register of the Church where you minister.

I am your faithful Servant in Christ,

EDW. BICKERSTETH,  
Bishop.

The Rev. E. C. Irwine.

(COPY.)

In the name of God, Amen.

To all the Faithful in Christ Jesus throughout the World, and especially to the British Residents and to all others whom it may concern in Japan.

Greeting,—Be it known unto you by these Pre-

sents that We Edward White, by Divine Providence Archbishop of Canterbury, Primate of all England and Metropolitan, having received from Her Most Gracious Majesty Queen Victoria Her Royal Licence under Her Sign Manual authorizing us to consecrate our beloved in Christ, The Reverend Edward Bickersteth, M.A., a British subject, to be a Bishop to the intent that he should exercise his functions as Bishop of the Church of England in Japan, did, on the Second day of February, 1886 (being the Feast of the Purification of Saint Mary the Virgin), in pursuance of such Royal Licence, consecrate him, the said Edward Bickersteth a Bishop accordingly (calling to Our Assistance Our Right Reverend Brethren in Christ—Frederick, Lord Bishop of London, Thomas Legh, Lord Bishop of St. Albans; James, Lord Bishop of Hereford, Edward, Lord Bishop of Lincoln; Edward Henry, Lord Bishop of Exeter; and William Walsham, Bishop Suffragan of Bedford) the Rites of the Church of England, as prescribed in the Book intitled: "The Form and Manner of Making and Ordaining and Consecrating of Bishops, Priests, and Deacons," being in all things duly observed, he having first taken the oaths required in this Behalf.

Given under our Hand and Seal this 11th day of February in the year of our Lord, 1886, and of our Translation the Third.

[SEAL.]

(Signed) EDWARD CANTUAR.

Christ Church Parsonage, Yokohama,  
(copy.) August 24th, 1886.

RIGHT REVEREND AND DEAR SIR,—I beg to acknowledge the receipt of your letter of the 20th instant, and its enclosure. The Members of the Congregation and the Governing Body have already been made acquainted with the same interesting particulars of your consecration, as they were reported at length in the journals six months since, but they will be happy to receive them from yourself. I regret that I cannot enter them upon the Register of the Church, as there being no Parish, one does not exist.

Christ Church is a purely local and congregational body, formed of men of all nationalities, and its worship, though following the English ritual, is conducted on soil which forms no part of any English diocese. It is self-supported, receives no grant from State or Missionary bodies, and, as I ascertained from high legal authority some years ago, its Members, Officers, and Ministers are not within the scope of any Ecclesiastical authority, English or derived.

The standards of reference for its general management, ritual, and finance are its trust deeds alone.

Let me conclude by saying that as a Bishop of the same communion as myself you have always been a welcome and honoured Visitor to my Church, and received with the respect that is due to your rank and position. My congregation has also exhibited in a very practical manner its interest in the Missionary work for which you were especially chosen.

I need hardly re-assure you that this interest will continue to be felt by us all, and I desire for you all possible happiness.

I have the honour to be, Right Reverend and dear Sir, yours faithfully,

E. CHAMPNEYS IRWINE.

To the Right Reverend Bishop Bickersteth,  
Hakodate.

#### A RUSSIAN PRINCE AT VLADIVOSTOCK.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—We have read with much surprise an article in your much respected paper of Saturday July 24th, and as it seems to have been written with an object, I most respectfully beg you to insert the following in your next issue.

The American alluded to in your issue of July 24th, would have done well had he never come to this country at all: it would have been better for the Americans interested, and would also have saved the police some trouble. It is very strange that the author of the article should have got things all on the wrong side, as the undersigned also an American with full knowledge of the affair, begs to state that the Russian Prince fulfilled all his obligations to the American to the very letter, and procured privileges as was agreed. But the enterprising American made whales out of salmon, and obtained money, and valuable contracts under such false pretences; and in the garb of a Russian Prince he duped his own countrymen. The American never fulfilled any part of his contract, neither with cash nor with vessels, but instead produced certain invalid documents for the approval of the Russian Prince.

In regard to a steam launch capable of running at the rate of 13 knots per hour: upon the arrival here of the American, he demanded from the Russian Prince nothing less than \$10,500 dollars as the cost of same. Nothing of the kind was ever ordered by the Prince, but in the month of June the launch arrived in a vessel chartered by other parties of this place, and it was then ascertained that the real cost of the launch was only \$5,000, and that this money had not been paid by the American, but by another who was unlucky enough to have been connected with his great enterprise. It is therefore evident that the speculative American wanted money from the Russian Prince, which somewhat reverses the statement in your former article. Fortunately the Russian was a little too sharp to be made a dupe of, and the American, finding the game would not work in Siberia, started very suddenly, and left, it is hoped, for more genial climes. Your article explains the circumstances through which the American came here, but the reader would no doubt take great interest in knowing how and why he left a country so undeveloped as Siberia.

I am, Sir, your obedient Servant,  
THE OTHER AMERICAN REFERRED TO.  
Vladivostock, August 24th, 1886.

We greatly regret the original statement. Believing, from circumstances which lately came to our knowledge, that we had been misled, we had already taken steps to procure exact information from Vladivostock. Our correspondent's letter comes, therefore, most opportunely.—Ed. J. M.

#### THE PRESS AND THE TELEGRAPH DEPARTMENT.

MINISTÈRE DES COMMUNICATIONS,  
Administration des Télégraphes.

Tokio (Japan), 25th August, 1886.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to an extract from the *Jiji Shimpō* appearing in your issue of Monday the 23rd instant, under the heading "Notes from Japanese Papers," and to your editorial note attached thereto, it is hardly necessary for me to remark that the subject matter, as well as all similar items appearing from time to time in that or other native papers, are emanations from the several reporters' brains.

As in all other countries, the employés of the Japanese Telegraph Department are pledged to secrecy as to all matters connected with the duties of their office.

During the past fifteen years only two instances have occurred in which that pledge was violated, and the discovery was, in each case, followed by punishment, under the Criminal Code, and by dismissal.

I am, Sir, your obedient Servant,  
WM. H. STONE,  
Secretary.

[We are glad that this explanation has been given. The *Jiji Shimpō's* reporter stated that, between the 10th and the 20th instant, no less than nine telegraphic despatches, relating to the Nagasaki affair, had been sent from the British Legation to the Foreign Office in London. In point of fact no such telegrams were sent at all, but nevertheless the impression conveyed to the public by the *Jiji's* item, with regard to the privacy of the Telegraph Bureau, was decidedly disappointing. Editorial supervision cannot be immaculate, but this is hoped that our Tokyo contemporary will watch the purveyors of such rumours more carefully.—Ed. J. M.]

#### ADOPTION OF EUROPEAN COSTUME BY JAPANESE LADIES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In two of the recent issues of your paper, I observe that you caution Japanese ladies against a too rash adoption of the European costume. I further notice that you speak from rhetorical, economical, and in some respects sanitary points of view. As to the soundness of all your observations, I entertain not a particle of doubt, and it is with the greatest diffidence that I now ask your courtesy to allow me to lay before the public, through the medium of your paper, some of the more important considerations which have induced our ladies to abandon their native garments in favour of the Western costume. I do not claim that those considerations have seriously entered the mind of every female advocate of the costume reform, for, as may easily be imagined, and as generally happens in all movements of similar nature in any country, the number of ladies who have thoroughly and soberly considered the nature and the scope of the question is necessarily very small, the majority being, in a greater or lesser degree, mere dupes of fashion.

The first consideration refers to health. This point is, in the estimation of all intelligent Japa-

nese ladies and of every male advocate of the female costume reform, probably the most important among the considerations which have influenced the decision in favour of the adoption of Western garments. Certainly the latter are not entirely free from unhealthy features, and so far as the direct connection between the garments and the body is concerned, there may not be much difference in the sanitary qualities of Japanese and Western costumes, although, fashionable dress aside, I am inclined for many reasons to regard the latter as more healthy. But when we consider the relative advantages of the one and the other in all their remote and complex relations to the health of the body, the foreign costume has many points of decided superiority over the Japanese. The extremely delicate and treacherous health of the Japanese women is no doubt in a large measure attributable to the peculiarly strained relations hitherto maintained between the sexes, and to the nature of the education prescribed for women. But there is no gainsaying the fact that the nature of their dress has also had an important share in deteriorating their physique. Apart from moral considerations, to which I shall presently allude, the mere thought of the physical inconvenience of walking in Japanese dress keeps women indoors, thus predisposing them to inaction. I may here note that the same cause has produced the same result in the case of men, though in a less degree. Beside the difficulty of motion caused by the dangling of clothes at each advance of the foot, which applies to the case of men and women alike, there is another circumstance peculiar to women, which greatly interferes with respiration and hampers the freedom of the motion of the lower limbs. In order to make this circumstance intelligible to those persons who may not have closely observed the mode of wearing Japanese female clothes, it will be necessary to enter into some details. The garments of Japanese women are made considerably—8 to 12 inches—longer than practically necessary. To tuck up this superfluous length, the dress is very tightly fastened over the hips by means of a slender girdle of cloth; a few inches above this point a second girdle is passed round the waist, thus confining the surplus portion of the garments between these two pieces of cloth. Around the waist and over the upper girdle is passed the *obi* twice and fastened at the back, forming a large and high knob. In order to keep this protuberant ornament in position, a third girdle is passed through its upper portion and fastened in front just above the upper edge of the *obi*. The last girdle very narrowly compresses the lower pairs of ribs. Thus it will be seen that the hard pressure applied on the body from the lower part of the chest down to the very bottom of the abdomen offers a serious interference to every respiratory effort,—and here it is well to remember the large share which a woman's abdominal muscles play in her respiratory action,—while the compression of the hips is inconsistent with a free motion of the lower limbs. Indeed, the compression of the abdominal region is so great, that women actually complain that they cannot take a hearty meal with their *obi* regularly fastened. It will now be admitted that, all things considered, the Japanese dress constitutes a very serious obstacle to the elevation of our women.

The second consideration has reference to morality. Everyone will admit that Japanese garments are very objectionable from moral points of view. I believe that the effect of keeping indoors necessitated by the inconvenient nature of our dress, is decidedly demoralizing. This alone constitutes a very powerful argument in favour of the adoption of the Western costume. But there is another and more important circumstance demanding our attention. The frequent exposure of the body which the open nature of the Japanese dress entails, despite careful management on the wearer's part, cannot but have a very pernicious influence on her delicacy, accustoming her, as it does, to view with indifference the display of parts of the body which the refined susceptibility of the modern age requires to be concealed. We thus think that by adopting the Western costume, we shall add another civilizing influence pregnant with important and beneficial results.

These are two most important considerations that agitate the minds of the Japanese ladies, who have now so zealously taken up this question of the dress reform. There are many other considerations of more or less importance, of political and social character. As you rightly observe, the one serious difficulty in the way of complete and immediate achievement of the reform is the question of economy. My limited acquaintance with the cost of foreign costume forbids my launching an opinion on this point. But by skillful management, it seems possible to make use of the various fine silk fabrics made in this country, in conjunction with foreign

Original from

made goods. No one feels more keenly than our women themselves the evil influences, sanitary and moral, of their native garments; and as you rightly remark, they have now resolutely commenced the work of reform, and will accomplish their object in the not remote future.

I remain, Sir yours truly,

A JAPANESE REFORMER.

Tôkyô, August 27th, 1886.

[Speaking of unwholesome compression, how does the *chi* compare with the Western count? And speaking of exposing the person, how about a modern European ball-dress?—Ed. J.M.]

### THE SILVER QUESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I thank you for publishing my letter in your issue of yesterday, and also for the comments which appeared at the foot of that letter. Allow me to reply to them, and I will do so in the order in which they appeared. You say that my letter may be summed up as follows, viz:—

- 1st. That silver is produced in too great quantities to possess a fixed value; and
- 2nd. That silver is too cumbersome to serve for the purpose of currency;

and you say "In regard to the first point, has it ever occurred to 'Negozio' to compare the effect produced upon the gold value of silver by its demonetization with the effect which can reasonably be attributed to any increase in its production." Why, Sir, I consider you have struck one of the heaviest blows at silver in suggesting such a comparison. I have spent considerable time in studying this silver question, and I have come to the conclusion that silver was only demonetized when it was found impossible to keep it at a fixed value with gold. The very fact of European Governments throwing their surplus silver upon the markets for sale is a convincing proof that they saw that the discovery of extensive silver mines in many parts of the world would produce such a quantity of metal that its gold value would considerably decrease. It is true that the throwing of those large sums of surplus silver upon the market had a deteriorating effect upon the value of silver, but it was only the natural consequences of an over-produced metal, and the wisdom of the governments who sold it is proved by the decline in the value of silver which has steadily continued. If the government of the United States would follow suit and disgorge from its vaults the millions of useless dollars it keeps there I believe it would be a very useful lesson, for we should then know the genuine value of silver and it would be such a surprise to the world, and to the silver kings especially, that silver would no longer be looked upon as a precious metal but be used only as copper and nickel, viz., as a medium for small national payments and not as a standard coin.

You say "During the long centuries when the world was bimetallic why was not 'Negozio's' apprehension realized? Why did not the silver-swamping take place in those days, or at any rate show some symptoms of taking place?"

Well Sir, the world has been revolutionized during this last century and consequently we cannot make comparisons for we have few statistics to guide us. But from what I can learn most of the international transactions in those times were paid with gold, and it is pretty certain that gold was the metal which travellers carried with them. I have, however, retraced the course of international trade during the last fifty years, and I have found that up to 1870 there was continuously rapid growth, a growth which had a continuous run and no check, except the usual ebb and flow of the tide. To satisfy this growth there was a constant demand for silver and gold to carry on the trade, so that when gold could not be obtained silver was readily taken—and as much of it as could be got—at a fixed ratio with gold. It was this continuous demand which enabled the silver holders to command a fixed price for their metal and this continued as long as there was a limited supply of both metals. But a time came when the two metals, like every other metal, must sever their union. The great gold mines of Australia, the Cape, and California were discovered and such quantities of the yellow metal were poured into the market that although silver had been also discovered, in large quantities, gold was the more plentiful, and the value of the two metals, for the first time, varied, with silver actually at a premium. And not only was silver at a premium, but as a proof that gold was really cheap, produce and manufactures rose in price until in 1872, when they were at their highest they were worth more than double the gold that they were in 1860. But these gold-fields soon showed signs of being exhausted while the silver mines, on the contrary, became more numerous and more productive, therefore

when the growth of commerce received its first great check in 1875 and the demand for coin consequently became limited, the premium on silver (the plentiful metal) was transferred to gold (the then becoming scarce metal) and has steadily continued ever since.

Now, I can scarcely understand how bimetallicists can hope to see the two metals restored to a proportionate value, for they know that silver has been at a premium, and they know why it was at a premium. How is it that now it is at a discount they cannot see plainly the cause? Iron makers might just as well ask why their iron is not worth as much gold as it used to be, and cotton manufacturers, why cotton should not have a proportionate value with silk. When gold became plentiful, silver holders kept their silver and demanded a premium for it because they knew gold was plentiful and they did not know but that it would continue plentiful. But now that gold has become scarce and the yield of silver so plentiful that it cannot be found use for, they cry out bitterly against the holders of gold for demanding a premium on their metal in proportion to the excess of one over the other.

Now, Sir, if silver is not now produced in too great quantities to possess a fixed value, how is it that its value is continually on the decline, and how is it that although the government of the United States has for several years coined several millions of dollars more than it requires and which are never used, still it is unable to stop the downward tendency of silver? Further, if every government did as the United States does, and coined millions of silver more than it required on purpose to keep silver on a par with gold, would not every other industry have a right to demand that the respective governments should stock their products with the same object and then what would become of this accumulated surplus? Also, if the dollar were restored to its original value, would not 35 per cent. be added to its present value and would not that extra 35 per cent. added to the profit on silver mining cause such an increase in the production of the white metal that the world would be over-run with it? If you could clearly and satisfactorily answer these questions you would, I am sure be doing a great public service, and would relieve the commercial world of a perplexity which is daily becoming more serious.

Then again you say, "As to the idea that the white metal is too cumbersome 'Negozio' need only look to India and Japan. Is the use of silver attended by the inconveniences he contemplates?"

Well, Sir, it is seven years since I first visited India, and I can say that then you could scarcely get a servant to accept a paper note for his wages, and that in commerce, among the natives out of every Rs. 1,000 paid or received as between man and man Rs. 900 would be the average of silver and Rs. 100 only, the average of notes. People looked with suspicion upon notes then as being spurious coin, but now they prefer them because they are easier to carry and they have every confidence that their value in coin can be procured in coin. But for the paper note in India being limited to Rs. 5 there would be a serious decrease in the use of silver, and this use is continually lessening in proportion to the money actually in circulation. As to Japan, I leave you to decide whether I am right or wrong. Are not the people clamoring for more paper money, and did not they refuse to exchange it for silver when the government raised paper to par? Look at the paper notes being used every day, and can you honestly say that the people do not prefer them to silver and that this preference is simply because the latter is too weighty and cumbersome?

Sir, you say "my arguments have been discussed and as you think, exploded time after time." It may be that they have, but until a solution is found to the difficulty now so seriously impeding international commercial transactions through the uncertainty in the values of money, I am afraid I shall not be persuaded to think with you.

In conclusion, I thank your correspondent "X." for the name he has given to me and those of my way of thinking viz:—"Gold Bugs." I sincerely trust the odour which proceeds from our ideas may not be as obnoxious to commercial men and the public in general as that which proceeds from the actions of the "Silver Bears" which he so admirably represents.

Yours faithfully,

NEGOZIO.

Yokohama, August, 25th, 1886.

[It is impossible to answer this letter in a foot note, and we have no space today in our leading columns.—Ed. J.M.]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—“A Yankee” asks me for a precedent in financial and commercial history or experience to warrant the belief that it is possible to fix by law a ratio between gold and silver independent of the

market price of either. Precedents are good guides sometimes. To remove scruples and doubts relative to matters generally, precedents are to be venerated. “A Yankee” will excuse me when I remind him that it is as honourable to make precedents as it is to follow those established. I shall not attempt to produce any precedent as asked for, but instead will ask “A Yankee” not to reject the teaching to be derived from the current history of Yankee-land. The United States has been making, and is now establishing, the most glorious precedents known to the world. Shall the United States be hampered and guided by what has been done? Her whole history tells of disregard of precedents. She has been the pioneer on the course pursued by herself. The genius of her government is against her being led by any precedents. The United States has established a ratio between gold and silver as money. When she puts her mint stamp upon 412 grains of silver, she makes it for the purposes of her citizens equal to a gold dollar; she is coining silver dollars and gold coins, not for exportation, but for home uses. She can hardly keep up with the home demand because of the yearly increase of her population. “A Yankee” corrects my date. It was 1873 instead of 1876 when Congress passed the law making silver a legal tender for five dollars only, and discontinuing the coinage of standard dollars. He also tells you that the coinage of the standard dollars issued from the U.S. Mints was only \$8,045,838, up to that date. Surely that amount of money in silver dollars, even supposing them to have all been floated, could not have been considered so excessive as to be a burden in the marts of trade. In this connection it will be remembered that in 1870 England amended her laws governing her minted coins, making silver a legal tender to the amount of £2, and for no greater sum. Germany had taken action in the same direction. England and Germany were both heavy holders of United States Bonds, that had been purchased with coin at a rate varying from forty-five cents on the dollar up to par; these bonds were payable in the paper money of the United States; to engineer their payment in gold was an object to the holders both at home and abroad, and here comes in one of the precedents established by the U.S. All the millions of bonds actually paid off have been paid in gold, and although, as “A Yankee” tells you, there is some \$270,000,000 in standard silver dollars in the United States, she is still paying for her bonds, whenever there is a call made for their redemption, gold coin. The charge is made that the people will not have the silver dollar, while the truth is they cannot get them. Bond holders are generally men of wealth and easy means—they want their interest in gold. It is for the interest of the national banks to keep silver out of the channels of circulation, that their bills may be more extensively used. All the power of the minted aristocracy is ranged on the side of gold, and every Secretary of the Treasury has discriminated against silver, paying out gold all the time. As the law does not elevate the one coin above the other—and cannot justly do so—it follows that no action can be taken against the Secretary of the Treasury for persistently ignoring silver in his disbursements. The United States Congress is the reflex of the sentiment of the people. The people desire silver, and silver they will have. When President Hayes vetoed the Bland Bill, giving his reasons why silver should not be coined, and predicting dire calamity to follow if it was entered upon—it was promptly passed over his veto, and it takes two thirds of the members of Congress to enact a law over the veto of the President. The last Congress had the battle over again. The gold forces, backed by the advocacy of President Cleveland, attempted the repeal of the Bland Bill, that the coinage of silver should cease. Not only was the attempt defeated, an overwhelming majority voting for silver, but a law authorising free coinage came very near being passed. Every member of Congress knows exactly what the majority of the people in his district desires; or he thinks he does, and acts from what he knows or thinks he knows. The vote taken in the U.S. Senate on the 30th of July last tells volumes in regard to the determination of the people of the United States. I refer to the vote ordering the Secretary of the Treasury to receive, for a period of six months, from and after the passage of the act, all trade dollars that may be tendered in payment of customs duties, and every debt or obligation that may be due the Government at their par values. That I consider a long step in the direction of free coinage, all the trade dollars, something over 30,000,000, I believe, being now in the hands of holders in the United States. The fiat of Congress goes forth and the 73 cents of silver in the trade dollars becomes the equal of 100 cents in gold. I cannot produce a precedent for this action in all the history of commerce or

finance. The United States appears singular in the readiness she has to assume loads. Startling surprises come from her so often that really there is no telling what she may not undertake, and, best of all, she never has failed; she knows no such word as *fa-tal*. I have faith to believe that in this matter of silver money the world will have to follow her lead. The history of the advancement of the United States in material wealth during the last two decades is so astonishing and difficult to comprehend, that one dare not presume to set bounds or limits to what she may attain. To advance the idea that the United States supplicates the aid of any other country or government in the interests of her silver money is absurd; a nation that can liquidate the hundreds and thousands of millions of bonded indebtedness that the United States has liquidated, finding the gold wherewith to do it, never using a silver dollar in the process, can take care of all the silver that may be turned out by her mints. "A Yankee" says that in 1878 it was proposed to pay the bonds of the United States in silver, worth at the time 80 cents in gold; that there was a panic in American securities in London and that U. S. Bonds fell considerably, and it was stated that over \$50,000,000 was sold by England. So much the worse for the English seller. Then it was only the proposition that scared; now when it is competent for the U. S. Treasury to redeem bonds in silver at its option, the premium value of U. S. Bonds is as high as they ever held. America took the \$50,000,000—and was the gainer in so doing. No, "A Yankee" and all other gold standard advocates must divest themselves of the idea that the United States asks any quarter for its silver money. What she urges is that conjoint action may be taken in regard to silver; that the burden of depression that is now weighting down the commerce of the world may be lifted; that the brutal and tyrannical laws, passed in aid of gold and to bring silver into contempt, shall be swept away. She sees the world so shrunken through the agency of steam and electricity that the people and industries of no one country can suffer from any cause but that the whole world feels the effect synchronously. The people of the United States think that the estate of labour all the world over would be benefited by again giving silver an international value; that the industries of the world would emerge from the blight that now covers them, because of the fall in the values of the silver monies of the silver-using countries—and they ask other nations to do as they are doing in the interests of humanity.

That, and nothing more, is the request made; and I am much mistaken if the better sense of the governments of the world interested in this matter will not very soon see the truth of this gold and silver business, and join hands with the United States silver fanatics in good earnest.

Yours truly,  
X.  
Yokohama, August 27th, 1886.

#### TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—This discussion has become so general that, as an interested party, I beg to claim a little space. My views, like those of other people, are largely influenced by my preconceived notions. Of these one of the principal is that money, in my regard, is a check or tally for work done—the work of muscle and of brain. Once performed, this labour is an unalienable quantity and deserves to be represented by a token which may not be defaced; that is, by an amount of money which can purchase of the necessities and comforts and luxuries of life, a share, bearing the same proportion to the sum total of such goods, as that labour bears to all the labour which has produced the coveted commodities. The greater the production—the more hard work men do in a right direction, the greater is the common comfort of all who do not shrink, provided that the money which each receives fairly represents in amount his share of the work. What weight of gold or silver or copper matters little to-day, so that each shares it with his fellows to the like extent as he has shared the labour.

Now, suppose the money, the tokens, remain constant in amount for this day and next. Tomorrow's tale is very different if mankind's activity is augmenting. To-day my work, and its remuneration, is a certain fraction of the whole. Tomorrow, the same amount of labour will form a smaller fraction of the whole world's work, and my remuneration of to-day, if I keep the token, will be forthwith enhanced; it will represent more labour to-morrow than it does to-day. This is the unearned increment. It seems clear that to avoid practising this great evil, there is but one course open, *viz.*, to continually measure labour by the same standard. And there's the rub, to constitute an invariable token for an amount of work that is without question unalterable. It's done, there is an end of the work; but its effect remains to

benefit somebody, and we want an equivalent for the energy put forth in it. To say that ingenious appliances modify the value of labour is misleading; they enable it to be more productive; we do not want more money because labour is more effective, but because there is more labour.

This is the expansion of currency *pro rata* with the activity of nations; and if there is not enough of one metal for our purpose we must use another, and give one or both nominal values, as coin. We give paper nominal values as notes.

These, Sir, are my reasons for following you upon the silver question—this is the question from my point of view. Whether gold be plenty or scarce, or whether silver be much or little an object of human desires, I should like to know that my labour in Japan would guarantee me as fair a portion of this world's goods, as the same energy used in England; and I would waive every claim that the guinea laid by in the stocking of my remote ancestor deserves to command more good things to-day, than he could to-day acquire by the sweat that procured him that guinea.

One of your correspondents tells us that gold is a marketable commodity, and that merchants buy it with tea. This is a riddle. If it is so indeed, they may buy it all for me; but let them introduce some indestructible metal and call it money—tallies for men's labour. Another correspondent depreciates bi-metalism as a conspiracy to confer a fictitious value upon an article of commerce, silver. There is a good precedent for this. He ignores the conspiracy of nations that has conferred upon gold a value far higher than the just deserts of those who extracted it from the earth.

It is heartless work fighting for people who won't lift a hand for themselves, and this letter will, if it fails to evince an acquaintance with history, commerce, or even with gold dollars, at least convince you that your efforts to maintain the right of this question are appreciated by

Yours, &c.,  
A MECHANIC.  
Yokohama, 29th August, 1886.

#### TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I was in doubt about this gold and silver question. It was too deep for me to fathom. The arguments *pro* and *con* bewildered me. But my eyes have been opened by the statement of "Negozio,"—who appears to have studied the thing closer than any one who has written on the subject—in this morning's issue of the mail:—"If the government of the United States would follow suit and disgorge from its vaults the millions of useless dollars it keeps there, I believe it would be a very useful lesson for we should then know the genuine value of silver and it would be such a surprise to the world, and to the silver kings especially, that silver would no longer be looked upon as a precious metal but be used only as copper and nickel." I propose from this day out to array myself on the side of silver. To contemplate the possibility of the entire silver interest in the world being so depressed that it shall only be of the value of copper shocks me to my nerve centre, and if the United States is the only bulwark against the possibility of this consummation, I say God help her to maintain the position she now occupies. I try not to believe that it would be as bad as predicted by "Negozio" but there is no telling but that he may be right. Think of it, and the condition of Japan with its silver; what would become of us all if our silver assumed a copper value? It must be with pride that every American contemplates the stand his Government has taken to keep the world from ruin—I think I will migrate to Yankee land and become naturalized that I may feel the pride that must be experienced by an American citizen.

Yours, &c.,  
A CONVERT.  
August 28th, 1886.

#### TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—While "X," "A Yankee," "Cent per Cent" and "Negozio," have been writing and venting what they know, and what they don't know, about silver, I have wired for something reliable in regard to the subject matter. You know that America boasts of very many clairvoyants and astrologers. I hunted through the American newspapers for the best advertised one. I hit upon one, the greatest living clairvoyant and fortune teller; tells past, present and future, love, business, marriage &c., &c. I wired to the party, sending the fee as charged in payment of consultation, a long information about silver, and what would be the result of the controversy in the United States over the coinage of the Bland dollar. The reply received inclines me to think that "Negozio" has had dealing with some Wizard. But here is the substance of the reply: Within three years from date the United States will stop the coinage of silver,—but before the expiration of that period, silver will

so fall in value that the present dollar will be worth only 31 cents in gold. What silver has been coined will be thrown upon the market before the end of four years from now. As a commodity dollars will sell for 9½ cents a pound, or about the present price of copper. (See, "Negozio" is correct). Copper will sell for 9.16 of a cent a pound and iron will command about 68.116 cents per ton. A day's wage for skilled labour will be 4½ cents. Common labourers will receive 32.16889 of a cent per month, the labourer boarding himself. Wheat will sell for 34.00000 of a cent per cental. Cotton will be 3.8877 of a cent a pound. In fine, everything will be cheap. A good farm, with mansion, necessary barns and out houses, will be bought for \$85. The sight of gold money will cost a laboring man the wages of a month, whenever he shall indulge his curiosity to look at the yellow metal. A steamship of 3,000 tons burthen will be bought for \$602.50, but most of the ships now afloat will rust and rot at their wharves. Churches will not be open at all, as religion will be too great a luxury to indulge in, but taxes will have to be paid as now, for governments must be maintained; also the interest on the bonded indebtedness of the nations must be paid promptly as it matures. A few men in the world will have all the gold, but there will be plenty of subsidiary coin for the necessities of the poor of the world, as the present supply of silver dollars and the minor coins of that metal, with the copper coins, will remain in circulation, receiving their value as established by the joint action of the nations. The silver dollar will take the value of half a cent. Of the present copper cents it will take only about 1,000 to represent the value of half a cent, or 200,000 of them will be equal to the value of a dollar in gold. There will be no difficulty about small change. All the trouble will be to get hold of it. There will be scarce opportunity for men to sell their labour, so it will tend to elevate the character of the race, making people sustaining and independent. The question that burns so deep to-day between capital and labour will be solved. Capital will make no demands upon its old antagonist. The world will rest easy because it will have witnessed the consummation desired by the advocates of a gold standard, and the outrage of stamping 412 grains of silver and making it the equal of a gold dollar in exchange value will be a memory only. The amount of misery there will be in the world you must suppose for yourself. As I believe in this sort of thing, pinning my faith upon communications received direct from the other world through clairvoyant mediums, I shall act in conformity with the information received, and not be left out in the cold. I charge nothing for the advice I now proceed to give your readers, which runs in this wise:—Realize everything you can legitimately compass into gold. A few, very few dollars in gold salted down now will make the fortune of the holder, entitling him to sit in the conclave of the gold kings when they shall convene to rejoice over the victory won for the yellow metal. Let no man scoff at the information herein written or at the advice given, but receive it as gospel truth from

Yours truly,  
Yokohama, August 30th, 1886.

#### TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I am happy to learn that "X," would not support any set or class of men at the expense of the general public; I, likewise, would not advocate class interests to the detriment of the commercial world, consequently I believe that "X" and I are aiming at the same goal, although we believe in different courses to get at it; and I again trespass upon your valuable space in the hope that by a judicious examination of those courses we may come to a decision as to which would be the easiest and best to adopt. "X" says "I only wish to see the holder of silver placed again in possession of what was his before the holders of gold so manipulated matters that he was left at their mercy and subject to spoliation without remedy." I sincerely wish that silver holders were in the same prosperous condition as they were when silver was last valued at a fixed ratio with gold, but I also wish to see silk holders, cotton holders, metal holders, and all other holders of merchandize, in that same happy condition; however, I cannot see that the gold holders have manipulated matters to bring about the present unprofitable state of commerce; on the contrary financiers (not gold holders) may have done a great deal; but I believe that the silver miners and all other miners manufacturers and producers are greatly responsible for their present condition. "X" says it costs two dollars of gold to extract from the mines one dollar of silver. That may be so, for I know that some mines are worked at a loss, many at a bare profit, and that few are really remunerative. But if silver miners will persist in

producing silver at a loss and forcing it upon markets when it is not wanted, have they anyone to blame but themselves? The same thing applies to almost every other industry. The idea uppermost in the minds of most manufacturers and producers has been, to best their fellow competitors, and in doing so they have glutted the market with merchandize and have thrust their goods on the buyers at almost any price. Can "X." deny that silver miners have thrust their metal on the market in a similar manner, and as silver is only purchased with gold, can he blame the buyers of silver for refusing to purchase a largely increasing metal except at a considerable discount? The very fact that silver producers were compelled to yield to what "X." calls the manipulations of the gold holders, appears to me a proof that so much silver remained on the market that it was not worth more gold than it realized. This blind love for producing merchandize irrespective of profit, has been going on for the last ten years, and now that almost everyone is ruined by it, people turn round and lay the blame on the gold. This reminds me of the fable of the Fox and the Grapes. The foxes have been jumping and scratching to get at the grapes and they have not only tired themselves out in their eagerness to get at the longed for fruit, but they have scratched away the very ground which helped them the most to reach the first. Now they look up from the hole they have made for themselves and cry out to the fortunate grapes, "You villains! see what an awful fix you have placed us in." The fact is that in the selfish desire to accumulate wealth the commercial world in all its branches has been engaged in a wreckless war of competition, and that war has impoverished the litigants to the advantage of gold holders only, because it has made gold worth so much more. I am afraid that "X.'s" idea of the benefits which the free coinage of silver would confer on the commercial world are rather optimistic. Supposing that the United States were so philanthropic as to receive silver from other countries, coin it into dollars for them and then allow them to leave those silver dollars in the States and take gold dollars away in exchange; how long would the States be able to do this? And when all the gold of the States had been drained away by the influx of these silver dollars, would the American silver dollar be worth as much gold as it is now, or would it not be valued according to its silver value, as are the dollars of the East where there is no gold coin to uphold them? This would really be a grand opportunity for the silver holders but it would be of very short duration, and when the run was over and America had no gold left, the value of the yellow metal would so rise that, like the gold mohur of India, it would in all probability become too scarce to be used as a standard coin. But even this would not raise the purchasing value of silver in the East and it would considerably diminish its value in the States and in Europe. However, one great advantage might be derived from it, for it would in all probability drive out the gold coinage and leave the world with an universal silver coinage, however cumbersome, thus destroying effectually the evils of the bimetal system. It is this bimetal system—these fluctuations in the value of the silver coins of one nation and the gold coins of another, and the actions of those who manipulate those constant fluctuations—which is the curse to commerce, for it makes it uncertain, unstable and unprofitable; therefore I should welcome any system which would destroy this dual uncertainty in exchange. But are the States likely to adopt such a course? I think not; therefore I ask "X." whether he does not think it would be easier, instead of overthrowing the gold coinage of Europe, the States, etc., to get the silver using countries (India, China, Japan, etc.) to adopt a gold coinage for international purposes. The exports of all these silver using countries are greater than the imports, consequently they would require very little gold to start with and they would gradually acquire more of that metal as their exports continued to increase over their imports and they would still be able to buy their silver for the use of the people as they do now, while it would circulate at a much higher rate and yield them the extra profit, to the benefit of their respective countries. If this could be done it would throw the manipulators of exchange to the wind, establish a permanent and almost unvarying coinage, and give to commerce that stability which it has lost since the fluctuations in silver became so severe. I quite agree with "X." that the world has not enough coin (he means coin and not money) for its requirements, but what I regret is that every day the world seems to have a greater love for paper money. In my opinion there is no greater enemy to silver than those nice convenient small pieces of spurious money known as paper notes. "X." waits for the good time to come when the poor man's silver will be worth as much as the

rich man's gold. Well, if "X." wants to see that, I think he will first have to get the poor man to refuse to give his silver for the rich man's paper, thus stopping the rich man from trading with the poor man's silver, and then he will have to teach the poor man to look upon his silver as being worth so much gold and to make up his mind not to part with it unless he get that amount of gold for it. In my opinion it is this paper money—which people are so fond of, and which is being thrown before the public to draw from them their coin and place it in the hands of financial manipulators—which makes the silver coin so cheap, because the paper is made to be its substitute. I have carefully gone through "X.'s" letter in your issue of the 26th and I think I have answered all the points on which we differ. However in his letter published in your issue of yesterday he deals only with silver and its value in the States. All other gold using countries keep their silver coins on a fixed value with gold, so there is nothing in "X.'s" last letter which refers to the international use of silver. I have read "A Convert's" letter in your issue of to-day. He has jumped into print too quickly. I recommend him to read my letter, again and perhaps he will then see the mistake he has fallen into.

Yours faithfully,

NEGOZIO.

Yokohama, 31st August, 1886.

### THE SITUATION IN KOREA.

(Translated from the *Nichi Nichi Shinbun*.)

The situation in Korea seems to attract considerable attention from the public. Since yesterday morning (26th), telegraphic messages have arrived at our office, without interruption, from our provincial contemporaries, containing enquiries as to the state of Korean affairs. To these inquiries, we have nothing to reply beyond what we published in our last issue, that a certain Chinese official, indignant at Korea's coquetting with Russia, has adopted energetic measures of remonstrance, as the result of which considerable disquiet exists in Korea. This information reached us some days since, and, considering it in conjunction with Korean correspondence that we had previously received, we thought it not unlikely that the information above mentioned might have some foundation to rest upon. We deeply regretted that, telegraphic communication with Korea being at present unavailable, we had no means of ascertaining the true situation in the peninsular kingdom, till we received news of Mr. Hisamizu's arrival at Tsushima from Ninsen on the 24th instant, and the despatch by him of telegraphic messages to the Foreign Office in Tokyo. Believing that some unusual event must have occurred in Korea, we lost no time in making enquiries in the proper directions. It appears that Mr. Hisamizu's journey had no reference to any such matter, but was necessitated by affairs within the ordinary function of the *Chargé d'Affaires*, for which the Foreign Minister's instructions had to be speedily obtained. It was therefore necessary that Mr. Hisamizu should proceed to Tsushima by a special steamship to make use of the wires there, no direct telegraphic communication being available; and on an answer being received from the Foreign Minister, Mr. Hisamizu was to leave Jagahara for Ninsen the following day. It thus became evident that there was no connection between Mr. Hisamizu's voyage and the occurrence of anything unusual; also that up to the date of his departure, no such event had taken place at Seoul. Still the rumour as to the disquietude of the Koreans in consequence of the vigorous action taken by the Chinese towards the Korean Government, seems not entirely groundless.

It is already well known that a certain section of Korean statesmen are inclined to favour reliance upon Russia. Early last year, it was extensively rumoured that a secret party of Korean officials had crossed the frontier into Russia. The object of these emissaries was not definitely known, but it was generally suspected that their mission was to ask the protection of Russia. Since then nothing has transpired to justify this suspicion, but we are not at all sure that a secret understanding has not been all the while maintained between the two countries. In order to understand the situation correctly, it is most important that we should consider the relations of China and Russia to Korea. The relations between China and Korea are restricted to the observance of a few nominal formalities, such as the use of the Chinese calendar by the former, the sending of tribute and ambassadors, etc., and as her internal administration and foreign relations are entirely left to the discretion of Korea, that country is indisputably an independent State. Nevertheless, China, basing her right of sovereignty over the peninsula upon

the observance of the empty formalities above alluded to, has always termed Korea her "eastern dependency" and put her at the head of all her tributary States. When Japan opened Korea and acknowledged her as an independent country, and when the United States of America, England, Germany, France, Italy, and Russia, following our example, successively concluded treaties with the peninsular kingdom, China did not utter a word of protest against this recognition of Korea as an independent State, and in all diplomatic communications, the Middle Kingdom has skillfully avoided allusion to this matter. From the outset, however, China has never in reality renounced her claim of sovereignty over the peninsular kingdom, and since the opening of the latter for foreign intercourse the Chinese have never lost any opportunity of bringing that country more and more under their sway, until now they seem to have established a protectorate over it. At first China suspected this country of having territorial designs upon the peninsula, and it was no doubt to defeat such designs on our part that she so zealously interfered, of late years, in Korean affairs. But, now-a-days, the higher officials of China plainly understand that Japan has no such intention upon Korea. If they still pursue the same policy of active interference, it is evidently because they are afraid of Russia, which is always pressing the Middle Kingdom from the north. Should Russia once cross the Korean boundary, and, taking possession of every point of strategic importance in the peninsula, turn her attention to China, the three eastern provinces will be for ever lost to the Middle Kingdom. China, therefore, perfectly understands that a Russian occupation of Korea is the great danger to her safety, and is resolved to shield the peninsular State from such a menace. Should it become necessary, to incorporate it into her territory as an outlying province, she will do so, rather than abandon it to the encroachments of Russia. Similarity of interests seems to have drawn together China and England against the northern Power, for it is rumoured that a secret understanding exists between the two countries. China acknowledged England's sovereignty in Burma, without a word of remonstrance, while on England's part it appears that she makes it her policy to protect Korea against Russia in China's interest. On the side of Russia, her designs upon Korea have lately become very active, and while, on one hand, despatching her war-vessels to the coast of Kankyodo, on the other, she has caused her Representative to demand permission to lease a port for naval purposes. These movements on the part of Russia could not fail to make China feel more keenly than ever the dangers of the situation. The recent voyage of Admiral Ting to Genoa and Vladivostok was no doubt undertaken to observe, in the first place, the condition of the Russian fleet, and in the second, to show the strength of the Chinese navy to Russia. The discovery that Korea is courting the protection of Russia ought naturally, under present circumstances, to have led to energetic action on the part of the Chinese officials, as reported. It may be supposed that this unfortunate discovery has been made in connection with the negotiations at Seoul respecting the question of a naval port. However that may be, it is quite natural that, so long as China intends to use all her powers to protect Korea from Russian aggression, she cannot look with indifference at any circumstance calculated to thwart her plans.

It seems impossible to avoid the conclusion that Russian harbours aggressive territorial designs upon the Korean peninsula. Even granting that she has, as asserted by some people, no craving to acquire such bleak and barren territory, it is now beyond all contradiction that she intends to obtain a naval port on the coast of Kankyodo, either at Lazareh, Genoa, or Peking; for she constantly chafes under the inconvenience of lacking a port on the Pacific, open all the year round. If she has not yet resorted to force to accomplish her object, that is owing, in the first place, to want of proper opportunities, and secondly to the circumstance that she as yet has had no supreme necessity of actual occupation. It is now nearly 200 years since territorial disputes began to mark the relations between China and Russia, and each encroachment of Russia in Mongolia and Manchuria has made China feel more and more deeply the dangers of the situation. Russia has most probably awakened to a sense of the fact that a vast change has taken place in China's defensive capacity, and that she has now comparative confidence in her own strength. Moreover, the relations between Russia and England, which have been pacified since the settlement of the Afghan frontier complications, are full of darkening clouds which will one day burst forth in Central Asia. Russia therefore cannot be blind to the possibility that, even without an express treaty of alliance between China

and England, identity of interests against her will, in time of necessity, unite them in alliance. She is naturally apprehensive that, should things be allowed to take their own course in Korea, not only will the chance of invasion be lost to her, but her object will be thwarted by England and China. Under these circumstances, England's occupation of the highly important strategic position of Port Hamilton with the view of check-mating Russia, and her retention of that post after the restoration of amicable relations with her old enemy, cannot but inspire Russia with the idea that the time has arrived to acquire an important naval post on the Korean littoral. This, in our opinion, has been the cause of the negotiations at Seoul as to the lease of a port. The threat, which Russia is reported to have made, that in case diplomatic means prove insufficient, she will resort to force, must be regarded as empty intimidation. From the outset we regarded this question of a naval depot as a serious affair, and we are not at all sure as to what will be the consequences of the negotiations. In what connection Korea's dependence upon Russian protection has been evolved, is still unknown, and although we are not sure that the story is true, still it is quite reasonable to suppose that, among the many factions of Korean politicians, there may be some who have secretly plotted to place their country in such a position towards Russia. That there is probability in such a supposition may be seen from the rumours current early last year with regard to the despatch of emissaries to Russia and the secret schemes of Mr. Müllendorff. But it is equally probable that, finding themselves powerless in the late negotiations as to the lease of a port, the Korean Government have been compelled to give secret sanction to Russia's request, while the latter in return has pledged herself to assist Korea in times of emergency, and that Chinese resentment has been excited by this transaction. These are, however, merely conjectures, and whether they are consistent with actual facts or not can only be ascertained after the arrival of fuller news.

It is generally known that there exists in Korea no political party of fixed principles, and that the Government is an arena of factional contests. It is true that several years ago the Liberal party (which relied upon Japan for the civilization of Korea), and the Conservative party (which looked to China for the protection of the country), were in existence; but since the interference of China in Korean affairs, the Liberal party has lost its former influence, and after the two disturbances at Seoul, political power was entirely centred in the Conservative party, which follows the lead of China in small as well as large things. It seems as if the whole nation were pervaded with a spirit of dependence upon foreign countries, one faction leaning towards Japan, one towards China, and others towards still another Power. Various as are the objects of the different political factions, they agree in one thing, their dependence upon a foreign State. When she first concluded a treaty with this country, Korea showed a marked disposition to follow our lead in advancing the civilization of her people; but later, when power fell into the hands of the Conservative party, they turned their eyes towards China, and were only anxious to seize every bidding of the Middle Kingdom. It finally became apparent that the will of the Korean Government was overruled by the influence of the officials sent out by China, but the Koreans seem still to have had confidence in their western neighbour until the spring of last year, when Port Hamilton was suddenly seized by the English and formally occupied. China did not take at the time, and has not since taken, any step to restore the group to its rightful owner; nor has she been able to prevail upon France to recall her missionaries from Korea. Still more recently, at a supreme moment, when Russia pressed on Korea the question of leasing a port, China could not shield the latter country from the aggression of the former. The Koreans thought Japan could not be depended upon, but their choice of China has been hardly more fortunate for them. Under such circumstances, they may have deemed it advisable rather to court the protection of Russia than to depend upon China and fall a prey to the aggression of other countries. We may therefore conclude that China's excessive interference in Korean affairs without affording corresponding protection in times of difficulty has alienated the confidence of the Korean people, and led them to seek protection elsewhere. This, in brief, is what has been suggested to our minds in relation to the situation in Korea, as revealed by the news of a Chinese official's energetic remonstrances to the Korean Government with regard to the alleged dependence of the latter upon Russia.

### A DISMAL RESURRECTION.

(FROM OUR OWN CORRESPONDENT.)

New York, July 24th, 1886.

It may appear a curious proposition, that Japan should be in any way concerned with the electoral system of the United States, but there must be occasions when patriotic Japanese deeply regret the frequency of change in Washington administrations. The installation of a new President and Cabinet every four—or at most every eight—years may or may not meet the domestic requirements of American politics, but it certainly reduces the diplomatic machinery of the Republic to a condition of almost absolute incapacity. In many cases, the United States alone have to suffer from the irregularity with which their foreign relations are conducted. It need not seriously disturb the great Powers of Europe to discover that the men selected to represent America have few or no qualifications for the posts they hold; nor does it especially distress them when, as in the case of Austria to day, the Legations are left vacant. The telegraph is always available, and if Ministers or Chargés get themselves hopelessly entangled, the Secretary of State can find a way to extricate them,—not always without ridicule, but after some fashion generally accepted as satisfactory. But the position of Eastern nations is essentially different. The inconveniences of their intercourse with America are not necessarily brought about by incompetency on the part of Envoys sent to them. On the contrary, it has been well known, in late years, that the skill and tact of more than one United States Minister in the Far East have gone far to counteract the evil occasioned by the indifference and ignorance of their superiors at home. By a fortunate accident, Mr. Bingham held his office for an uninterrupted term of twelve years, and the benefits of that prolonged tenure, both to his own country and to that to which he was commissioned, were of an importance that can hardly be over-estimated. It needed all his strength and dexterity, however, to prevent the State Department, at various times, from upsetting his good work and reconverting the Legation at Tokyo into a secondary bureau for the transaction of the business of other Powers. The appointment of a new Secretary of State, not to speak, for the moment, of more complicated influences, would sometimes render it necessary for him to rebuild the whole structure of organization which some rough, reckless hand had foolishly knocked to pieces. Thus it is that Japan has cause to lament the recurrence of a general election every four years. It may be taken for granted, without a single question, that the incoming men know nothing at all about the East, and care as little as they know. Of course they think they care. Some of them might be surprised to be told they do not care. There is a very pretty superstition, running all over the United States, that this country is a sort of guardian angel to Japan,—that it acts as guide, philosopher, and friend to the rising empire of Asia. If I may express my personal conviction in a phrase tinged with current slang, I shall say that the American Government does not guard, nor guide, nor philosophize, nor befriender worth a cent, in this particular connection. It has pleasant words to say, at odd intervals, but the idea of supporting those words by deeds of practical value seldom enters its counsels. It acts as a new type of Samaritan might act, who, seeing a plucky little fellow laid out and bound down by thieves, gets off his mule, crosses over and inspects the situation, and says—"You have made a good fight, my chappie, and I would not object to giving you a hand; only I have business relations with that worthy priest and the excellent Levite who have just passed by, and to tell you the truth, I have some dealings with the thieves who got the better of you a while ago. I think I shall have to consult them, before doing anything. However, if you get over this by yourself, come and see me in Samaria. We'll have some figs."

Persons who take a different view of America's attitude may suggest that a practical purpose was displayed in the willingness to draft a certain treaty, eight or nine years ago, and in the restitution of the Shimonoseki money at a later date. These incidents do not weigh very heavily with me. As to the treaty, it had nine good clauses. I think nine was the number—which were utterly nullified by the addition of a tenth, providing that the document should never become operative until pretty nearly all the Powers of the earth would agree to it and do likewise. This was like a child's game, where after piling cards, architecturally, to a fair height, it is thought amusing to pull away the foundation, and bring the edifice tumbling to the ground. Public curiosity respecting the origin of that singular tenth clause was very great at one time. It may be remembered that His Excellency Count Tera-

shima was understood to assume the responsibility of it, in a note published in the *Tokio Times*. But the Assistant Secretary of State at Washington was afterward kind enough to make some inquiries for me, and from him I learned that Mr. Evarts took it upon his shoulders. Here, then, were two distinguished statesmen claiming the authorship of a stipulation which could not be particularly creditable to either. If Mr. Evarts did insert it, I do not believe it was of his own impulse. In any case, he could not have given it much thought. It was only a detail about Japan. Let it slide. The calm, considerate, well-balanced suggestions of the British, Dutch, or French Minister at Washington were naturally entitled to far more consideration in the decision of a point like this. So much I gathered when looking into the question on the spot, and so much for the abortive treaty. Passing to the Shimonoseki matter, I cannot see that Americans have much ground for self-glorification in that proceeding. I happen to have in my possession letters written in 1882 which made it pretty definitely certain that the money would be restored within a limited time. The authority was sufficient, and I then thought something to be truly proud of might ensue. But if any hint had been given in those letters that the interest of the fund might possibly be retained, and only a portion of the capital given back, my serenity would not have been so complete. However, the affair is getting to be ancient history, and it is understood on all sides that Japan was well enough contented to receive even this partial avowal of contrition. If Japan was satisfied, no one else ought to complain. Only I beg to enter my mild protest against the theory that the refunding of the Shimonoseki indemnity was the most noble, high-minded, and magnanimous act ever recorded in history.

To return to my theme; it is certainly a pity, after successive years of incessant labour on the part of the diplomatic agents and friends of Japan,—labour inspired by the hope that at last some glimmering of the true state of things may be conveyed to the Department of State, or possibly to a higher authority,—that a new body of officials must repeatedly appear upon the scene, all involved in the same dense obscurity as that which had enveloped their predecessors, a little while before. At such periods, the question necessarily arises, whether it is better to give it up forever, or to start again from the beginning. Hitherto the latter course has been patiently adopted, and up to the present time there is no sign that it will be abandoned. But the discouragements are undeniably severe. Only the other day, a telegram from Japan brought the freezing intelligence that the United States Envoy had been instructed to commence proceedings for treaty revision upon the old, defunct, worm-eaten principle of "co-operation;" the principle which Mr. Bingham fought to death years ago, and which, after being slain by him half a dozen times over, now shakes itself alive again and comes smiling to the front, the Department of State (if I may venture a disrespectful allusion to that august institution) acting as corpse-reviver. There is no contradiction, in official circles, of the alleged fact. We are compelled to accept it as true. The individuals who seem to be responsible for so monstrous an order smile complacently when questioned, assume an air of inflexible superiority, and are apparently unconscious that they have taken a ridiculous "header" into the dark ages. What can be said or done when a gentleman whose voice is potent in the discussion of Eastern affairs tells you that the British Minister at Yedo probably has opportunities of observation which are not open to the American Minister at Tokyo, and *vice versa*; and therefore that a comparison of their separate experiences will be productive of good; or when a shining light of finance remarks that to give Japan permission to regulate her own tariff would have a bad influence upon Korea, which might insist upon the same privilege. And these are average specimens of observations by men of station, law-givers, preservers of the country's reputation, when Japan is brought forward as a political topic.

I am bound to acknowledge, however, that Japan is not often thus brought forward. It is impossible to interest the average Senator or Representative in the rights and vital necessities of a nation of thirty-five millions, so long as a single post-office worth one hundred dollars a year remains unapportioned; and, while the conflicting claims of a thousand shrieking contestants for one small clerkship keep the intellects of Cabinet Ministers perpetually strained, the just and shamefully neglected demands of an entire race fall upon deaf ears. Yet the band of modern Sisyphi, the American advocates of honest treatment for Japan, keep at their work, with apparently the same courage and cheer as when they took up their task two or three decades ago.

Sometimes I wonder what sustains them. They have done the best they could, during upwards of a year of this administration, and they are rewarded by the stupefying announcement that the Secretary of State has ordered the Envoy in Japan to return to the system of "diplomatic cooperation." Of course they do not fail to observe that, at critical moments, the whisper of some Secretary of an European Legation,—who has been opportunely transferred from Tokyo to Washington, and who necessarily "knows all about it,"—is sufficient to overbalance all the attested facts and statistics which industry can gather and present in effective form. I suppose they will push their way through the remaining years of this régime, and then, whether they have made an impression by that time, or not, they must confront the newly elected of 1888, with what luck we have only to wait and see. At the very worst, they cannot be expected to encounter so mortifying a repulse, nor to witness the repetition of so gross a blunder, as this attempt to resuscitate the mummy of "cooperation."

### LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, August 11th.

Some days ago, the President transmitted to the Senate the new treaty with Japan. The instrument, together with the brief message which accompanied it, appeared in the papers last Friday. They read as follows:—

TO THE SENATE OF THE UNITED STATES.

I transmit herewith for your consideration, with a view to its ratification, a convention for the extradition of criminals, signed at Tokyo on April 29th, 1886, by the Plenipotentiaries of the United States and the Emperor of Japan. The negotiation which led to the conclusion of this convention was caused immediately by the case of a forger in San Francisco, who, having fled to Japan, was delivered up to the authorities of the State of California. It was not possible for the Government to ask his surrender, but the Japanese Government, of its own motion, caused his delivery as a friendly act. It then suggested the conclusion of an extradition convention between the two countries. The suggestion was favourably entertained by this Government, not only on account of the importance of such a treaty to the execution of the criminal laws of the United States, but also because of the support which its conclusion would give to Japan in her efforts toward judicial authority and complete sovereignty.

GROVER CLEVELAND.

The following is the full text of the treaty:—The President of the United States of America and his Majesty the Emperor of Japan, having judged it expedient, with a view to the better administration of justice and the prevention of crime within the two countries and their jurisdiction, that persons charged with or convicted of the crimes or offences hereafter named, and being fugitives from justice, should, under certain circumstances, be delivered up, they have named as their plenipotentiaries to conclude a treaty for the purposes, that is to say, the President of the United States of America, Richard B. Hubbard, their Envoy Extraordinary and Minister Plenipotentiary near his Imperial Majesty, and his Majesty the Emperor of Japan, Count Inouye Kaoru, his Imperial Majesty's Minister of State for Foreign Affairs, First Class of the Order of the Rising Sun, etc., who, after having communicated to each other their respective full powers, found in good and due form, have agreed upon and concluded the following articles:—

Article I.—The high contracting parties engage to deliver up to each other, under the circumstances and conditions stated in the present treaty, all persons who, being accused or convicted of one of the crimes or offences named below in Article II., and committed within the jurisdiction of the one party, shall be found within the jurisdiction of the other party.

Article II.—1. Murder, assault with intent to commit murder, and manslaughter; 2. Counterfeiting or altering money, or uttering or bringing into circulation counterfeit or altered money, counterfeiting certificates, coupons of public indebtedness, bank notes or other instruments of public credit of either of the parties and the utterance or circulation of the same; 3. Forging or altering and uttering what is forged or altered.

4. Embezzlement or criminal misappropriation of the public funds committed within the jurisdiction of either party by public officers or depositors, and embezzlement of any person hired, salaried, or

employed to the detriment of the employer or principal.

5. Larceny of the value of \$50 and upwards and robbery.

6. Burglary defined to be the breaking and entering by night time into the house of another person with the intent to commit a felony therein.

7. The act of entering, of breaking and entering, the offices of the Government, public authorities or the offices of banks, banking houses, savings banks or trust companies, insurance or other companies, with the intent to commit a felony herein.

8. Perjury or the subornation of perjury.

9. Rape.

10. Arson.

11. Piracy by the law of nations.

12. Murder, assault with intent to kill, and manslaughter committed on the high seas on board a ship bearing the flag of the demanding country.

13. Malicious destruction of or attempt to destroy railway trains, vessels, bridges, dwellings, public edifices or other buildings when the act endangers human life.

14. Fraud by a banker or a trustee or any officer, or a director of a bank or trust company of a bank or trust company, made criminal by any law for the time being in force.

Article III.—If the person demanded be held for trial in the country in which the demand is made, it shall be optional with the latter to grant extradition or to proceed with the trial, provided that unless the trial shall be for the crime for which the fugitive is claimed, the delay shall not prevent ultimate extradition.

Article IV.—If it be made to appear that extradition is made with a view to try or punish the person demanded for an offence of a political character, surrender shall not take place, nor shall any person surrendered be tried or punished for any political offence committed previously to his extradition.

Article V.—The requisition for extradition shall be made through the diplomatic agents of the contracting parties, or in the event of the absence of these from the country or its seat of government, by the Superior Consular officers. If the person whose extradition is requested shall have been convicted of a crime, a copy of the sentence of the court in which he was convicted authenticated under its seal, and an attestation of the official character of the Judge by the proper executive authority, and of the latter by the Minister and Consul of the United States or of Japan, as the case may be, shall accompany the requisition. When the fugitive is merely charged with crime, a duly authenticated copy of the warrant of arrest in the country making the demand, and of the depositions on which such warrant may have been issued must accompany the requisition. The fugitive shall be surrendered only on such evidence of criminality as, according to the laws of the place where the fugitive or persons so charged shall be found, would justify his apprehension and commitment for trial if the crime had been there committed.

Article VI.—On being informed by telegraph through the diplomatic channel that a warrant has been issued by competent authority for the arrest of a fugitive criminally charged with any of the crimes enumerated in Article II. of this treaty, and on being assured from the same source that a request for the surrender of such criminal is about to be made in accordance with the provisions of this treaty, each Government will endeavour to procure the provisional arrest of such criminal and keep him, not exceeding two months, to await the production of the documents upon which the claim for extradition is founded.

Art. VII.—Neither of the contracting parties shall be bound to deliver up its own citizens or subjects under the stipulations of this convention, but they shall have power to deliver them up if in their discretion it be proper to do so.

Art. VIII.—The expenses of the arrest, detention, extradition, and transportation of the accused shall be paid by the Government which has requested the extradition.

Art. IX.—The present treaty shall come into force sixty days after the exchange of the ratifications thereof. It may be terminated by either of them, but shall remain in force for six months after notice has been given of its termination. The treaty shall be ratified and its ratification shall be exchanged at Washington as soon as possible.

In witness thereof the respective plenipotentiaries have signed the present treaty in duplicate and have thereunto fixed their seals.

Done at the city of Tokyo on the twenty-ninth day of April in the eighteen hundred and eighty-sixth year of the Christian era corresponding to the twenty-ninth day of the fourth month of the nineteenth year of Meiji.

[SEAL]

RICHARD B. HUBBARD.  
INOUE KAORU.

The publication has elicited from a few well-informed newspapers the expression of a wish that our treaty of 1858 might be so revised as to do justice to Japan—to concede to her the right of making her own tariffs, and to abolish extra-territorial jurisdiction. But the interest taken in the question is languid. Ex-Governor Low, who has gone to Asia, is credited in certain circles with being charged with a diplomatic errand to Japan, but there seems no adequate basis for the story.

Prince Fushimi, brother of the Mikado of Japan, has been here for two or three days. He has been spending some months in travel in the East, and he is said to have acquired some knowledge of American institutions without, however, having learned our tongue. He dresses in American style, and is said to be fond of American fashions and American cookery. He will probably arrive in Japan simultaneously with this letter.

Congress adjourned last Thursday, having accomplished little beyond the passage of the Presidential Succession Act, which became a law last January. One or two landed grant forfeitures were decreed, notably that of the Atlantic and Pacific; Fitz John Porter was restored to the ranks of the army; beyond this, the first session of the 49th Congress accomplished nothing which will detain the historian. Politicians are becoming masters of the art of how not to do it. They dodge so many questions that when they do pass a bill, it generally turns out to be a tub to the whale, which amuses the cetacean and does no body any harm or any good.

There are indications of more lively times already. The relations between the President and the leading members of his party in the House are not cordial. Messrs. Carlisle and Morrison complain that Mr. Cleveland has not given them the support to which they were entitled; that in the matter of appointments their advice has not been considered; that the counsels of Republicans often carry more weight at the White House than the warnings of Democrats. They admit the President's honesty, but they question his intelligence. They say that he is stupid, and pig-headed. They declare that he has got it into his head that he can constitute a political party all by himself, and that his plan is to follow the example of Louis XI., and to break down the politicians by allying himself with the non-partisan bourgeoisie. On the other hand, friends of the President retort by denying Carlisle and Morrison's fitness for leadership. They admit their intelligence, but they question their courage. They charge that they have not name enough to carry out the policy on which they have settled: that instead of tying to a line of policy, and sinking or swimming with it, they are for ever seeking alliances with the enemy at the cost of principle. They arraign the Democratic leaders for cowardice in not weeding out of the party members like Randall, who oppose all distinctively Democratic measures. They aver that time-servers and compromisers have never commanded the respect of the American people, and never will. And they demand that Col. Morrison, who is neither in accord with the President, nor capable of enforcing discipline in the Democratic ranks, should retire to make room for a leader who is made of sterner stuff.

The quarrel is likely to become envenomed as the next Presidential election approaches. As matters now stand, Mr. Cleveland is a forced conclusion for 1888. The situation may change between now and then. But unless some radical change should occur, the Democrats will be compelled to nominate Cleveland for their own sake. He evidently proposes to force the fighting in his own State, and to crush out disaffection wherever he finds it. Shortly after his inauguration, the comic newspaper *Puck* hit off the situation in one of those happy caricatures which are more eloquent than words. The late John Kelly, the leader of Tammany Hall, was depicted as an Indian chief brandishing a tomahawk, and roaring at Cleveland—"Which shall it be, peace or war?" The President, smiling loftily, replies—"War, Johnnie, war." Day before yesterday, Mr. Cleveland threw down the gauntlet to the Democratic malcontents in New York by removing the Collector of the Port, and appointing Mr. Magone in his place. Magone is a country politician of high character, and statesmanlike repute; he has never allied with Tammany, and represents the better element of the party. The appointment means notice to Tammany that it must cease plotting treason under penalty of being cast out into uttermost darkness. The notice will not be thrown away on politicians whose object is power. And simultaneously, it will attract the good-will of the large body of citizens to whom wholesome administration is more important than party. It will strengthen the mugwumps, and weaken the force of the attacks of the Blaine organs, which accuse Cleveland of Bourbonism.

The opinion is so general that, without serious errors, the Democrats will elect the President in 1888, that the manoeuvres of the Republican leaders create more amusement than concern. Blaine is at his cottage at Bar Harbor, entertaining Jay Gould and Patrick Ford of the *Irish World*. Logan is here, making speeches against the Chinese in the hope of winning the support of the Pacific coast. The *Tribune* continues to weary its readers with incessant snarls at the Cabinet. John Sherman is laying pipe with assiduity and care; sublimely unconscious that a mine is being dug under his feet which will probably blow him and his hopes to the winds of heaven long before the next Republican convention meets. The death of Samuel T. Tilden, which took place last week, has revived the cry for vengeance on the authors of the crime of 1876, and if Mr. Sherman could read the handwriting on the wall, he would be uneasy.

The legislature of this State is sitting in extra session to devise a system of irrigation of southern California. It is generally understood that the extra session was called by the Governor in pursuance of a bargain by which certain southern counties agreed to get him re-nominated if he would favour their views on irrigation. He complied; but the session had no sooner met than it discovered that the irrigation system proposed would in effect create a monopoly of water in favour of a syndicate which had laid hands on all the water sources under the name of prior appropriators. This cooled the ardour of the members who were not retainers of the conspirators, and for the past two weeks the legislature has been hopelessly floundering. The chances are that the session will accomplish nothing but the substitution of a Republican as U.S. senator in the place of Mr. Hearst, whose friends were instrumental in having it called.

#### CHOLERA INFECTED LOCALITIES.

##### NOTIFICATION NO. 22 OF THE DEPARTMENT OF STATE FOR HOME AFFAIRS.

It is hereby notified that the following localities have been declared infected with cholera:—

Province of Oshima, under the Hokkaido Administration Board.

Province of Sado, under the Niigata Prefectural Government.

Saitama Prefecture.

Ibaraki Prefecture.

Yamanashi Prefecture.

Nagano Prefecture.

Aomori Prefecture.

Province of Ugo, under the Akita Prefectural Government.

Yamagata Prefecture.

Ishikawa Prefecture.

COUNT YAMAGATA ARITOMO,

Minister of State for Home Affairs.

August 28th, 1886.

The following are the weekly cholera returns from infected localities, from August 16th to 22nd:—Tokyo City 1,460 patients, 882 deaths, average percentage of deaths 60.41; Osaka City, 973 patients, 751 deaths, average 77.18; Kyoto City, 80 patients, 57 deaths, average 71.25; Kanagawa Prefecture, 476 patients, 295 deaths, average percentage of deaths, 61.97; Hyogo Prefecture, 237 patients, 185 deaths, average 78.06; Nagasaki Prefecture, 166 patients, 84 deaths, average 50.60; Niigata Prefecture, 217 patients, 1,150 deaths, average 52.9; Chiba Prefecture, 680 patients, 364 deaths, average 53.53; Okayama Prefecture, 183 patients, 144 deaths, average 75.61; Wakayama Prefecture, 285 patients, 210 deaths, average 73.68; Ehime Prefecture, 203 patients, 125 deaths, average 61.58; Hiroshima Prefecture, 523 patients, 362 deaths, average 69.22; Miye Prefecture, 70 patients, 53 deaths, average 75.71; Toyama Prefecture, 1,160 patients, 406 deaths, average 42.67; Yamaguchi Prefecture, 186 patients, 133 deaths, average 71.50; Kochi Prefecture, 175 patients, 138 deaths, average 78.86; Fukuoka Prefecture, 217 patients, 138 deaths, average 73.57; Saga Prefecture, 126 patients, 74 deaths, average 58.73; Fukui Prefecture, 790 patients, 406 deaths, average 62.79; Shimane Prefecture, 212 patients, 177 deaths, average 55.19; total 10,373 patients, 6,254 deaths, average 60.29.—*Official Gazette*.

A tea merchant, named Okanoya, reported a few days ago to the Yokohama Tea Association that among the tea brought to him from Jinuma-mura, Shimosa, eight packages contained spurious leaf. The association are now making enquiries to discover the offender.—*Bukka Shimpō*.

THE REVOLUTION IN BULGARIA.

A Regency has been established at Sofia. Prince Alexander has had a splendid reception at Limburg.

London, August 30th.

Prince Alexander has arrived at Rustchuk, and has had a most enthusiastic reception.

DESTRUCTIVE EARTHQUAKE.

An earthquake has occurred in Greece, which has caused great destruction to property and a terrible loss of life.

London, August 31st.

THE REVOLUTION IN BULGARIA.

Prince Milan has congratulated Prince Alexander on his return. Prince Alexander, in reply, said he desired the friendship of Prince Milan.

London, September 1st.

CHINA AND KOREA.

Fearing Russian designs, China has sent nine ironclads to Korea, where she landed a number of soldiers in disguise, whom the Korean mob have attacked.

THE REVOLUTION IN BULGARIA.

The Russian Consul at Sofia, who was found to be implicated in the revolt, has been recalled. Prince Alexander has arrived at Timova.

London, September 2nd.

TERRIBLE EARTHQUAKE IN THE UNITED STATES.

An earthquake has occurred at Charleston (Southern States, U.S.A.), which has destroyed three-fourths of that city and caused an enormous loss of life.

EARTHQUAKES IN EUROPE.

Shocks of earthquake continue on the shores of the Mediterranean.

["SPECIAL TELEGRAM" TO "JAPAN MAIL."]

Nagasaki, August 31st.

AFFAIRS IN KOREA.

Letters received here last night from Seoul state that in consequence of a rumour that the King is seeking Russian protection, the Chinese Minister has demanded ships and troops to be sent, and has seized the telegraphs for his own use. Ming-yon-ik has been taken to Tientsin. Nine Chinese men-of-war are at Chemulpho, and great excitement exists.

For Europe, via Hongkong, per P. & O. Co. Sunday, Sept. 12th.

#### TIME TABLES AND STEAMERS.

##### YOKOHAMA-TOKYO RAILWAY.

TRAINS LEAVE YOKOHAMA Station at 6.35, 8.00, 8.50,\* 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50,\* 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

TRAINS LEAVE TOKYO (Shimbashi) at 6.35, 8.00, 9.15,\* 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50,\* 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

FARES—First Single, yen 1.00; Second do., *sen* 60; First Return, yen 1.50; Second do., *sen* 90.

Those marked with (\*), run through without stopping at Tsurumi, Kawasaki and Omiya Stations. Those marked (†) are the same as above with the exception of stopping at Kawasaki Station.

##### TOKYO-MAYERASHI RAILWAY.

TRAINS LEAVE TOKYO (Yueno) at 5.25 and 9.25 a.m., and 12.25 and 4.50 p.m.; and MAYERASHI at 5.25 a.m., and 12.25 and 4.50 p.m.

FARES—First-class (Separate Compartment), yen 3.80; Second-class, yen 2.28; Third-class, yen 1.14.

##### TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI at 6.50 and 9.55 a.m., and 1.00 and 4.10 p.m.; and YOKOKAWA at 8.25 and 11.30 a.m., and 2.40 and 5.45 p.m.

##### TOKYO-UTSUNOMIYA RAILWAY.

TRAINS LEAVE TOKYO (Yueno) at 9.25 a.m. and 4.50 p.m.; and UTSUNOMIYA at 9.30 and 4.55 p.m.

FARES—First-class, yen 3.50; Second-class, yen 2.10; Third-class, yen 1.05.

##### SHIMBASHI, SHINAGAWA, AND AKABANE JUNCTION.

TRAINS LEAVE SHINAGAWA at 8.49 and 11.49 a.m., and 2.44 and 6.29 p.m.; and AKABANE at 9.55 a.m., and 12.50, 4.05, and 8.35 p.m.

FARES—First-class, *sen* 70; Second-class, *sen* 46; Third-class, *sen* 23.

##### KOBE-OTSU RAILWAY.

TRAINS LEAVE KOBE (up) at 5.55, 7.55, 9.55, and 11.55 a.m.; and 1.55, 3.55, 5.55, 7.55, and 9.55 p.m.

TRAINS LEAVE OSAKA (up) at 4.45, 7.6, 9.6, and 11.6 a.m.; and 1.6, 3.6, 5.6, 7.6, and 9.6 p.m.

TRAINS LEAVE KYOTO (up) at 6.46, 8.46, and 10.46 a.m.; and 12.46, 2.46, 4.46, 6.46, and 8.46 p.m.

TRAINS LEAVE OTSU (down) at 5.45, 7.45, 9.45, and 11.45 a.m.; and 1.45, 3.45, 5.45, and 7.45 p.m.

TRAINS LEAVE KYOTO (down) at 6.45, 8.45, and 10.45 a.m.; and 12.45, 2.45, 4.45, 6.45, and 8.45 p.m.

TRAINS LEAVE OSAKA (down) at 6.25, 8.25, and 10.25 a.m.; and 12.25, 2.25, 4.25, 6.25, 8.25, and 10.25 p.m.

FARES—Kobe to Osaka: First Single, yen 1.00; Second do., *sen* 60; First Return, yen 1.50; Second do., *sen* 90. Kobe to Kyoto: First Single, yen 2.25; Second do., yen 1.40; First Return, yen 3.55; Second do., yen 2.10. Kobe to Otsu: First Single, yen 2.85; Second do., yen 1.70; First Return, yen 4.30; Second do., yen 2.55.

##### OCEAN AND COASTING STEAMERS.

Steamships are regularly despatched from the Port of Yokohama for the following destinations:—

For EUROPE—The P. & O. Company's steamer sails fortnightly on Saturday, via Inland Sea Ports, making connection with the English mail at Hongkong, for Marseilles and Plymouth. The Messageries Maritimes Co.'s steamer sails fortnightly on Sunday, carries the French mail, and makes connection at Hongkong with the mail-boat for Marseilles.

For SAN FRANCISCO—The steamers of the O. & O. Co. and the P. M. Co. sail hence, approximately, every 10 days.

##### YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatoba daily at 8.30 a.m., and 12.00 a.m., and 4.15 p.m.; and leave Yokosuka at 6.30 and 11.00 a.m., and 4.00 p.m.—Fare, 20 *sen*.

## REPORTS.

The British steamer *Gaelic*, Captain Pearne, reports:—Left Hongkong the 24th August, at 3.35 p.m. and experienced light variable winds and smooth sea throughout the passage. Arrived at Yokohama the 29th August, at 4.02 p.m. Time, 4 days, 22 hours, and 25 minutes.

The American ship *Republic*, Captain Smith, from New York, reports:—Crossed the equator the 1st June, long. 30° west; passed Cape Good Hope the 1st June; passed Anjer the 31st July; arrived at Rock Island the 27th August, at 6 p.m. Experienced fine weather throughout the passage.

The American steamer *City of Peking*, Captain H. C. Dearborn, reports:—Left San Francisco August 11th. Winds from W. to S.W. entire passage, with much fog and smooth sea.

The British steamer *Breconshire*, Captain Waring, from Hongkong, reports fine weather throughout the passage. Passed large ship bound west off Van Dieman Strait.

## LATEST COMMERCIAL.

## IMPORTS.

Very little change has been noticeable in the state of the Market during the past week. There has been rather more doing in a few Fancy Cottons, but, on the other hand, plain Cottons are without improvement, and most descriptions of Cotton Yarn are quoted lower with little disposition for business on the part of dealers. Clearances continue poor.

YARNS.—Sales for the week consist of 250 bales of English spinnings and 100 bales Bomboys, the Market being very quiet at the close, and prices mostly nominal.

COTTON PIECE GOODS.—Sales are reported of 500 pieces 10 lbs. Shirtings and 3,000 pieces 9 lbs., 1,100 pieces T. Cloths 7 lbs., 1,500 pieces Velvets, 2,000 pieces Twills, 1,500 pieces Silesias, 1,000 pieces Prints, 250 pieces White Shirtings, and 150 pieces Cotton Italians.

WOOLLENS.—3,500 pieces Mousseline de Laine 500 pieces Italian Cloth, 250 pieces Cloth, and 1,500 pairs Blankets have been disposed of at slightly higher prices.

## METALS.

Decidedly more enquiry in nearly all departments, but without leading to very many sales.

IRON.—Nailrods are getting more into favour, other kinds also being asked for, but it is likely that much business will not be entered into until the hot weather is past.

WIRE NAILS.—The demand continues, especially for favourite assortments and small sizes.

TIN PLATES.—A few small lots of good make could be quoted at fair values.

	PER HULL.	PER HULL.
Flat Bars, 1 inch	\$2.70	to 2.75
Flat Bars, 1 1/2 inch	2.50	to 2.90
Round and square up to 1 inch	2.50	to 2.80
Nailrod, assorted	2.40	to 2.50

Wire Nails, assorted	4.50	to 5.50
Tin Plates, per box	5.60	to 6.00
Pig Iron, No. 3	1.20	to 1.25

## KEROSENE.

The position of buyers and sellers is just the same as it has been for some weeks past. In the meantime two or three vessels have arrived, and stocks are now 500,000 cases. Deliveries continue on a good scale, but buyers will not enter into fresh transactions until they have cleared all their present holdings. No change in quotations until there is some fresh business to record.

	PER HULL.	PER HULL.
Devco	Nom. \$1.70	to 1.75 1/2
Comet	Nom. 1.65	to 1.67 1/2
Stella	Nom. 1.60	to 1.62 1/2

## SUGAR.

Sugar continues dull, and quotations are more or less nominal.

	PER PICUL.

White, No. 3	5.00 to 5.05
White, No. 4	4.90 to 5.00
White, No. 5	4.10 to 4.15
Brown Fortified	4.50 to 4.60

## EXPORTS.

## RAW SILK.

Our last issue was of the 27th August, since which date we have had a quiet Market with a moderate amount of business. Settlements for the week are entered as 140 piculs, divided thus:—*Hanks* 100 piculs, *Filatures* and *Re-reels* 35 piculs, *Kakada* 5 piculs. The native Export Kaisha have also taken about 90 piculs for yesterday's O. and O. steamer.

There has been only one good day's business during the week, when a buyer for Europe took 100 piculs old and new *Hanks*. Prices are easier without much quotable change; holders generally are more inclined to offer their goods, but not at prices which will enable buyers to operate. Limits from abroad are still much under the lowest quotations ruling here, and it remains to be seen whether the daily increasing Stock will cause holders to give way.

Arrivals continue on a liberal scale, and the Stock-list now registers 6,500 piculs. Settlements to date just equal those to same date last season, but the available supplies are much greater; the high prices ruling here have undoubtedly had the effect of hurrying Silk in from the producing districts.

There have been two shipping opportunities during the interval.—The English mail, 29th ultimo, and the American mail yesterday. The former (*Thibet*) had 60 bales for Europe, and the *Gaelic* carried 219 bales for the American Market. Total shipments to date are now 2,403 piculs, against 2,674 last year and 3,943 piculs at same date in 1884.

*Hanks*.—Quite a revival in the demand for Europe; and two or three large parcels have been settled in *Hachioji* sorts at \$500 for new staple and \$520 for last year's produce. The better kinds quite neglected, being strongly held at high prices.

*Filatures*.—Small languid business, buyers not being able to pay the figures demanded by holders. What has been done seems to be for Europe, and the Silks which went forward per *Gaelic* were bought some time ago and have been held over a steamer in foreign godowns. The transactions noted are a parcel *Inase* at \$800, with *Bishu* fil. at \$680. To-day a small sale of *Rokkoshu* is reported at \$790, a reduction of \$10 on last price paid (and of \$40 on last price asked) for this chop.

*Re-reels*.—Two or three parcels have been put through at quotations. One lot *Five Girl* chop reported at \$710, with ordinary *Foshu* kinds at \$695 and \$675. Dealers are coming round asking for offers, but do not seem disposed to make any great reduction at present.

*Kakada*.—One small transaction only—a parcel *Chochu* taken into godown at \$720.

No business in other sorts; and the country trade does not seem to run upon coarse Silks at the present moment.

## QUOTATIONS.—(NEW SILK.)

Hanks—No. 1	\$650 to 660

## Export Tables, Raw Silk, to 3rd Sept., 1886.—

	SEASON 1886-87.	1885-86.	1884-85.
Europe	615	710	2,041
America	1,813	2,072	2,247
Total	2,428	2,782	4,288
Settlements and Direct	2,700	2,700	4,200
Export from 1st July	2,700	2,700	4,200
Stock, 3rd Sept.	6,500	4,900	4,200
Available supplies to date	9,200	7,500	8,400

## WASTE SILK.

A fair week's work has been got through in this branch, and Settlements for the interval are about 500 piculs, distributed thus:—*Pierced Cocoons* 70 piculs, *Noshi* 300 piculs, and *Kibiso* 130 piculs. No direct Export so far.

Quotations must be left unchanged; although in some kinds business could be done at a fractional reduction, in others holders are very strong. Foreign Markets do not seem to respond at all freely to the rigid attitude of dealers here, and we hope to see lower prices ere long, as the Stocks increase.

The P. & O. steamship *Thibet* (29th instant) had on board 138 bales (*Pierced Cocoons* 40 bales, *Noshi* 80 bales, *Kibiso* 7 bales, *Mawata* 5 bales) for various European ports. The Export to date now reaches 1,668 piculs, against 751 piculs last year and 1,752 piculs to same date in 1884.

*Pierced Cocoons*.—Buying goes on steadily at quotations, both for Europe and America. Exporters, however, do not seem eager to pay present rates and holders do not smooth matters for them.

*Noshi*.—Considerable business here—*Oshu* at \$195, *Bushu* \$160 to \$170, *Foshu* (assorted) \$120 to \$135. Many buyers complain that the limits given by their clients abroad are at present quite impracticable.

*Kibiso*.—Not a large trade this week. *Filatures* are strongly held at top quotations. In other sorts we notice *Oshu* \$130, *Mino* \$100, *Foshu* \$65, *Bushu* \$40.

## QUOTATIONS.—(NEW WASTE)

Pierced Cocoons—Good to Best	\$130 to 150
Noshi-to—Filature, Best	180 to 190
Noshi-to—Filature, Good	160 to 170
Noshi-to—Filature, Medium	—
Noshi-to—Oshu, Good to Best	190 to 200
Noshi-to—Shinshu, Best	150 to 160
Noshi-to—Shinshu, Good	—
Noshi-to—Shinshu, Medium	—
Noshi-to—Bushu, Good to Best	160 to 170
Noshi-to—Joshu, Best	150 to 160
Noshi-to—Joshu, Good	120 to 130
Noshi-to—Joshu, Ordinary	110 to 115
Kibiso—Filature, Best selected	150 to 160
Kibiso—Filature, Seconds	130 to 140
Kibiso—Oshu, Good to Best	130 to 140
Kibiso—Shinshu, Best	100 to 110
Kibiso—Shinshu, Seconds	90 to 95
Kibiso—Joshu, Good to Fair	85 to 90
Kibiso—Joshu, Middling to Common	70 to 80
Kibiso—Hachioji, Good	60 to 55
Kibiso—Hachioji, Medium to Low	50 to 40
Kibiso—Neri, Good to Common	30 to 25
Mawata—Good to Best	250 to 260

## Export Table, Waste Silk, to 3rd Sept., 1886.—

	SEASON 1886-87.	1885-86.	1884-85.
Waste Silk	1,277	751	1,478
Pierced Cocoons	301	—	274
Settlements and Direct	1,668	751	1,752
Export from 1st July	3,300	400	4,100
Stock, 3rd Sept.	7,100	6,100	4,580
Available supplies to date	10,400	6,500	8,680

*Exchange*.—Foreign advanced yet more, but has now receded again; and is called steady at the following rates:—LONDON, 4 m/s. Credits, 3/1; Documents, 3/1 1/2; 6 m/s. Credits, 3/1 1/2; Documents, 3/1 1/2; NEW YORK, 30 d/s., 74 1/2; 4 m/s., 76; PARIS, 4 m/s., fcs. 3.88; 6 m/s., fcs. 3.90. Domestic unchanged, Kinsatsu being quoted at par with silver.

## Estimated Silk Stock, 3rd Sept., 1886.—

	RAW.	PICULS.	WASTE.	PICULS.
Hanks	1,420	1,420	Pierced Cocoons	1,300
Filature & Re-reels	3,520	3,520	Noshi-to	2,810
Kakada	715	715	Kibiso	2,610
Sendai & Hamatsuki	630	630	Mawata	180
Taysam Kinds	215	215	Sundries	200
Total piculs	6,500	6,500	Total piculs	7,100

## TEA.

Buying has not been very brisk during the week, the total business being only 1,975 piculs, against 3,100 piculs for the week previous. Total Settlements for both ports are:—Yokohama, 174,040 piculs; Kobe, 106,300 piculs; making a total of 280,340 piculs, against 220,120 piculs in 1885. The condition of the market is not very firm, and sellers would no doubt make concessions on prices now ruling. The home markets are in a very weak condition through the excessive shipments of Teas

from Japan. The bark *Carrie Delap* is expected to get away to-day with a full cargo of Tea via Port Moody.

Common	\$12
Good Common	13 1/2 to 15
Medium	16 to 17
Good Medium	18 to 20
Fine	21 to 23
Finest	25 & up'ds

## EXCHANGE.

Exchange, which had further advanced a few days ago, has again receded, but is fairly steady at quotations.

### NOTICE TO CORRESPONDENTS.

Notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 11TH, 1886.

### DEATH.

On the 9th inst., at the General Hospital, WILLIAM SULLIVAN aged 43 years.

### SUMMARY OF NEWS.

THE *Gakushu-in* (Nobles' School) will open the 20th instant.

PRINCE LOUIS NAPOLEON left Kyôto the 7th instant for Nogahama.

CHOLERA in Tôkyô has rapidly diminished during the past week.

MR. N. R. O'CONNOR, C.B., C.M.G., arrived in Yokohama the 9th instant.

RECENT reports from Ise state that heavy rain has fallen throughout the province.

COUNTRESS SAIGO, who has been staying at Ikao, returned to Tôkyô the 6th instant.

THE Kyôdoden School will be removed the 18th instant to new premises at Konodai.

PRINCE IWAKURA and family, who had been staying at Ikao, returned to Tôkyô the 7th inst.

THE branch telegraph office at Ueno, close to the station, will be opened shortly for public service.

THE Honorable Sir Francis Plunkett, K.C.M.G., and Mr. Von Holleben have returned to Tôkyô.

It is stated that the military authorities have decided that the daily beef ration to be served out to the troops shall be one *kin* (1½ lb.), and that

the Tôkyô Garrison will be placed on the new diet from the 1st September.

PRINCESS SANJO, mother of the Lord Keeper of the Privy Seal, left the capital the 3rd instant for Ikao.

THE Kobe authorities are said to have given permission for the opening of theatres on the 1st instant.

MR. MORI, Minister of State for Education, who has been staying at Ikao, returned to Tôkyô the 1st instant.

THE Nagasaki Prefectural Government despatched 50 newly enlisted police constables to Tsushima the 22nd ultimo.

COUNT AND COUNTESS INOUE left Hakodate the 7th instant for Oginohama, whence they propose to return to the capital by land.

MR. MISHIMA, Chief of the Metropolitan Police, will return to the capital about the 10th instant, his health having greatly improved.

A TELEGRAM to the Naval Department announces that the trial trip of the *Cuebi Kan*, built in France, took place the 2nd instant.

THE Government has granted *yen* 1,000 to the family of the late Mr. Nishimura Sadaaki, in recognition of his long public service.

THE total value of gold, silver, and copper coined at the Osaka mint from November, 1876, to March, 1886, was *yen* 126,896,310.77.

THE cattle plague in Saitama Prefecture has now disappeared, and the offices in connection with the pestilence were closed the 3rd instant.

CHIARINI, who moved last week to Tôkyô, and pitched a tent at Kanda capable of seating 5,000 persons, is drawing crowded houses.

THE total number of visitors to the Museum at Ueno, from the 1st to the 31st ultimo, was 3,551, and the number that entered the gardens 5,311.

THE Kyôto Education Association is rapidly becoming a flourishing institution, and of its six hundred members many are female teachers.

THE Eiwa-gakko at Aoyama has postponed the date of reopening after the holidays till the 20th instant in consequence of the prevalence of cholera.

ALTHOUGH the cholera still lingers in Osaka *fu*, the epidemic is on the wane, and from the surrounding districts it is reported to be steadily decreasing.

THE number of students to be admitted this year to the Military College is 7 from the Imperial Body Guards and 23 from garrisons throughout the country.

It is stated that the Kanagawa Prefectural Government have in contemplation considerable alterations in the plan of the native portion of Yokohama.

VISCOUNT HIJIKATA, chief secretary of the Cabinet Office, who was promoted to the office of

Court Councillor the 3rd instant, has been attached to the suite of H.I.H. Prince Haru.

A COMPETITIVE exhibition of marine products will be held at Yamagori, Sekishu, Shimane Prefecture, for seven days, beginning on the 22nd instant.

NEW rice from Goshu, put on the market at Otsu, was quoted at *yen* 5.80 per *koku*. The grain is of high quality, much superior to that of last season.

THREE sailing transports, ordered by the Naval Department from the Kawasaki shipbuilding yard, will, by agreement, be completed before August, 1887.

THE recently established Refuge in Osaka has already housed fifty-six children, and it has been determined to start a school in connection with the institution.

MR. NISHIMURA SADAOKI, senator, who was promoted, the 6th instant, to the rank of fourth class of first grade, died the same day after a lengthened illness.

MR. KONDA MAKOTO, a retired teacher of the Naval College, who was promoted the 4th instant to the rank of fifth class of first grade, died from cholera the same day.

It is stated that Mr. Shimada Kinjiro will be appointed to the office of Director of the Tôkyô Rice Exchange, vacant by the resignation of Mr. Kawara Ejiro.

M. LE CHEVALIER R. DE MARTINO, the Italian Minister, who had been staying at the country residence of Mr. Tanaka Fujimaro at Tomioka, returned to Tôkyô the 7th inst.

LARGE quantities of material are being forwarded to the track of the Tokaido Railway, the construction of which will be rapidly pushed forward from the commencement.

A TEA examiner of Osaka, who recently discovered some dealings in spurious leaf, ultimately traced their origin to a Chinese, who refused to give up his principal's name.

A GOOD deal of land has this year been placed under cotton, and the long spells of dry weather experienced this summer being suitable to the plant, the crop is a remarkably heavy one.

MR. SHIODA, Japanese Minister to China, will, it is rumoured, proceed to Tientsin to visit Li Hung-chang on some important business in connection with the Nagasaki disturbance.

THE Russian *Chargé d'Affaires* and Madame Speyer returned to the capital the 2nd instant from Nikko, as the new minister is expected to arrive at Yokohama about the 9th instant.

A NUMBER of engineers and workmen were despatched from Shimbashi the 6th instant to take part in the work of laying the Utsunomiya-Shirakawa line, which is being pushed on rapidly.

It is stated that Marquis Hachisuka Mosho, Japanese Minister to France, who has been re-

Original from

called, will return to Japan in the *City of Sydney*, which left San Francisco the 4th inst.

It is stated that the regiment of infantry stationed at Tsushima will shortly be reinforced by a battery of artillery, the guns and equipment to be furnished from the Osaka command.

CERTAIN members of the defunct Liberal Association are said to be framing a petition to be presented to the authorities praying for the release of Mr. Kim from the Bonin Islands.

THE Naval Department has intimated to the Cabinet Office its intention of engaging one English and one German teacher for the new Naval College which it is proposed to establish shortly.

It has been stated that the Naval Department intend to establish an arms factory at Yamashina, in Yamashiro, involving an outlay of 6,000,000 *yen*, and that the works will be commenced next year.

LETTERS from Shikoku report violent storms and floods, five feet of water covering the land in the vicinity of rivers. No particular damage to property occurred, however, and the flood entirely subsided in twenty-four hours.

PRINCE SANJO KIMIYOSHI, son of the Lord Keeper of the Privy Seal, is indisposed, and is attended by Dr. Ito Masanari, first physician of the Imperial Household, who was recalled by telegram from Shiohara.

ALTHOUGH it has been stated that the Tokaido Railway cannot be completed under three years, the Government is said to have come to a determination to have the line open in twenty-one months from the cutting of the first turf.

THE proposed establishment of a Training School for nurses at Kyôto has been favourably received, and a large number of persons are assisting the committee to obtain contributions to bring the scheme to a successful issue.

It is stated that the foreign representatives who have been staying at Atami and Ikao will return to Tôkyô before the 20th instant to make preliminary arrangements for the reopening of the Conference on treaty revision, which is fixed to be held the 5th proximo.

THE negotiations at Nagasaki with reference to the recent disturbance caused by Chinese liberty-men, are still proceeding. They are said to have assumed a friendly complexion, but much surprise is generally felt at the delay in bringing the offenders to justice.

It is not an uncommon thing to find an advertisement in vernacular papers in which liquor is publicly foresworn, but a *Wakayama* journal recently published an announcement as follows:—"I, the undersigned, am particularly addicted to saké, and my intention is to drink as much as I can in future."

FIRE, caused by spontaneous combustion, recently broke out in a quantity of pitch-pine lumber, stored for pit-work on Takashima Island. A large quantity of timber was destroyed, also several workshops and houses, but the loss, though serious, will not interfere with the working of the mine.

It is stated that Mr. Nishi Tokujiro, an unattached Envoy Extraordinary and Minister Plenipotentiary, will be despatched to Russia

to succeed Mr. Hanabusa, and that Marquis Saionji, Japanese Minister to Austro-Hungary, who returned to Japan the other day, will shortly leave for Vienna to resume his duties.

THE road through the Hibiya Parade Ground, recently reported as about to be closed to vehicular traffic not on Government service, will remain open as hitherto, on account of the inconvenience which the stoppage of public traffic would entail. It is, however, decided that the road will be closed while troops are being drilled.

A WEALTHY farmer of Okumura, observing the deterioration of the stock through the admixture of inferior blood, has determined to restore the reputation of the Tajima breed by engaging in stock raising on an extensive scale. As a commencement he has leased a large area of pasture land and purchased 200 head of selected beasts.

THE alteration in diet on account of the prevalence of cholera in Osaka has had the effect of greatly increasing the consumption of beef, as shown by the number of cattle slaughtered at the abattoirs in that city. The use of milk also shows a considerable increase, the six dairies now in operation in Osaka having together 200 milch cows.

REPORTS from Kochi state that that place has been visited by a violent thunderstorm, which uprooted a large number of trees and blew down many houses, including the thread factory. In one village fifteen houses were washed away, and other damage done, and the overflow from the Nido-gawa caused considerable destruction to crops in the neighbourhood of its banks. Fortunately no lives were lost, but the flood is said to be greater than has been witnessed there for the past thirty years.

No change of importance has to be noted in the Import trade, but symptoms of improvement are said to be visible in the country markets, and dealers in the capital are confident of a revival in due course. Prices generally have been steady, though Yarns have seen but small sale at slightly easier rates. The principal item dealt in in the Piece-goods trade has been gills. Shirtings, of which 13,000 pieces were sold. Woollens were not entirely neglected, and rates remain unaltered. The Metal trade continues much as last reported, and in Kerosene there is no change whatever beyond additional arrivals, much of which has come to hand sea-damaged, and large quantities will no doubt be submitted to auction. There is nothing to report in Sugar. Considering the condition of the Silk market a rather large business was done in the principal Export, which was further increased by shipments on Japanese account, but the trade is in anything but a satisfactory state, though certain holders are making due allowance for the steadily rising exchange. In Waste Silk there has been a large business, which, however, has made no impression on the stock, arrivals come so freely. The motto of holders is "no surrender," notwithstanding the rise in exchange, but buyers will probably stop to draw breath after this week's operations. The Tea market has been somewhat agitated, prices fluctuating daily, but eventually settling down about a dollar a picul dearer. The total business, however, has not been great, arrivals having fallen off, and now scarcely keep pace with the demand. Exchange has gone up by strides, and exhibits every appearance of still higher rates.

## NOTES.

AMONG the items of news telegraphed from Nagasaki to the vernacular press, that which announced that the Chinese Consul had consented to receive the indictment prepared by the Japanese against the Chinese rioters of the 15th ultimo, seemed to require a good deal of explanation. It was scarcely possible to conceive any circumstances which could justify the Consul in refusing to receive the indictment, unless, indeed, he laboured under the silly impression that by doing so he should irrevocably commit his side to the position of defendant. The *Chingai Shimpô*, an Osaka journal which often publishes important intelligence in advance of its Tôkyô contemporaries, gives a detailed and apparently trustworthy account of the affair. The indictment—of which a translation has already appeared in these columns—was prepared by the Public Prosecutor, Mr. Hayashi, and entrusted to Mr. Haneno, Senior Public Prosecutor of the Nagasaki Court of First Instance, who proceeded to the Chinese Consulate in the forenoon of the 24th ultimo, and presented the document, together with minutes of the evidence on which it was based, to the Chinese Consul. The latter, however, refused to accept it, asserting that, as it had not yet been established which side was in the wrong, the question who should occupy the position of plaintiff and who that of defendant, was still open. Mr. Tsai is said to have further maintained the improbability of either side occupying either of those positions in its entirety, from which it would seem that he contemplated a court of arbitration rather than a tribunal of justice. At all events, he explained that he was still engaged collecting evidence, and that until the process was complete, he could not possibly accept the Japanese indictment. Of course Mr. Haneno argued strongly against such an irrational position, but the Chinese Consul remained firm. It was then decided that the Chief Public Prosecutor, Mr. Hayashi, should himself carry the indictment to the Consulate, but that, in the meantime, Mr. Hatoyama, Director of the Bureau of Investigation of the Department of Foreign Affairs, should pay a visit to Mr. Yang Shu, the Chinese Secretary of Legation, under whose direction the Consul was understood to be acting. The visit was made in the afternoon of the same day (24th). Messrs. Hatoyama and Yang are old friends. After taking about various matters, the conversation turned upon the indictment, and in answer to a question from Mr. Yang, Mr. Hatoyama intimated very plainly that, in his opinion, the Chinese Consul had made a mistake. "Mr. Tsai may imagine," Mr. Hatoyama is reported to have said, "that the culpability of either side, and therefore the position to be occupied by each in the trial, being still undetermined, he is under no obligation to receive the Japanese indictment. But, in truth, whatever uncertainty exists is due to the fact that the evidence on the Chinese side is not fully collected. We, on our side, have collected and examined the evidence of our own people, and are in a position to declare that certain of our sailors having violently assaulted certain of our police officials, we require your Consul to institute proceedings against the wrong-doers. Should you, on the contrary, after your evidence is collected and examined, find that it inculcates any of our policemen, then it will be perfectly open to you to prefer your own

indictment, and carry your action before our courts of law, where, you may be well assured, every effort will be made to bring the guilty parties to justice." These very obvious and incontrovertible considerations failed to move Mr. Yang. Mr. Hatoyama accordingly adopted a different tone. The treaty between Japan and China, he pointed out, expressly stipulates that, in the event of a Chinese subject committing a crime against the person or property of a Japanese in Japan, the Chinese Consul must receive the complaint of the Japanese and institute public proceedings. In such a case, therefore, as the disturbance at Nagasaki, the Japanese Public Prosecutor has a right to prefer an indictment, and the Chinese Consul is under an obligation to receive it. The latter's refusal would be a distinct violation of the treaty, and must lead to diplomatic representations of an unpleasant nature. These arguments, which were advanced and replied to in English, are said to have satisfied Mr. Yang. At all events, Mr. Hayashi, the Chief Public Prosecutor, arrived at the Consulate, having the indictment, just as Mr. Hatoyama was taking leave, and the Consul received the documents without further protest.

A rumour, emanating from a Chinese source and ventilated by an official whose reputation as a "disseminator of gup" is becoming proverbial, asserts that the delay in the progress of the negotiations at Nagasaki is due to Japanese, not Chinese, procrastination. Considering that the Japanese indictments and minutes of evidence were prepared and presented nine days after the occurrence, whereas the Chinese have not yet got their case together, it is plain that such a story merits no credence whatsoever. On the whole, we are by no means inclined to find fault with the very deliberate nature of the proceedings. The more time the Chinese have to examine the matter, the better will they be persuaded of their inability to support the position which they were originally disposed to assume. There is good reason to think that the report forwarded to Li Chung-tang at the first blush was of an extremely misleading character, and that it disposed him to issue instructions which, in view of their entire incompatibility with the actual facts, must have rendered a peaceful settlement extremely difficult. Subsequently, when the truth, in outline at all events, found its way to Tientsin, the Viceroy materially modified his views, and it is now understood that nothing in the attitude of either Government indicates captiousness or unreason.

The *Rising Sun* and *Nagasaki Express* of August 28th, says:—With reference to the recent disturbance created in the native town by Chinese men-of-war's men, there is not much news of importance to add to the report published in our last issue, in consequence of the official enquiry into the matter being conducted with closed doors. Messrs. Kiwoyura (Home Department), Hatoyama (Foreign Department), and Kawadzu (Judicial Department), have been deputed to watch the case on behalf of the Japanese Government, and three Chinese officials on behalf of the Government. The Court of Enquiry was opened at the Kencho on the 19th, but the meeting was, we believe, only of a preliminary nature. The second meeting took place at 10 a.m. on the 21st, with what result we are, of course, unable to say.

On Sunday, the 22nd, another Chinese sailor died at the temporary hospital at No. 15, Oura (the Seamen's Institute), being the eighth Chinese which, with the two Japanese, brings the total number of deaths up to ten. On Monday, the Chinese torpedo cruiser *Che-Yuen* and gunboat *Wai-Yuen* left port, bound to Korea. The *Che-Yuen* came out of dock at 2.30 p.m. on Thursday, and, together with the flag-ship *Ting-Yuen*, is expected to leave early this a.m. Of the wounded, about half of the Japanese have recovered and the remainder are on a fair way to convalescence. Of the Chinese, a few have thoroughly recovered, and have been sent on board their respective ships; about thirty more, however, still remain under treatment, of which two are reported to be very doubtful cases. Later accounts of the fighting on the night of the 15th are published in recent issues of our native contemporary the *Chinjei Nippo*. They give somewhat minutely details of the affair, but in the main agree with the report published in our last issue. A full and authentic official report will no doubt be published at the conclusion of the enquiry.

Japanese papers publish the following telegrams:—

(*Nichi Nichi Shimbun*).

Nagasaki, September 3rd, 9.15 a.m.

The following information was received from Jinsen last night:—

"Soul appears to be quiet at present.

"The sailors of the American war-vessel, who entered the capital the other day, have left for Jinsen.

"The Russian legation officials at Soul state that Russia was not at all concerned in the recent affair. China, however, seems to believe that there was something in the form of a secret relation between Korea and Russia, and it is supposed that this suspicion is correct.

"A rumour is current at Jinsen that a Russian squadron will shortly arrive."

Nagasaki, September 2nd, 4.15 p.m.

(Delayed).

The third sitting of the enquiry has not yet been convened. Since the arrival of Mr. Drummond from Shanghai and Mr. Yang, from Tokyo, the Chinese negotiators seem to hold a bolder tone, but according to Japanese and foreign residents it is clearly established that the disturbance was caused by the Chinese sailors.

Nagasaki, September 3rd, 7.15 a.m.

Mr. Drummond has suggested to the Chinese Legation in Tokyo, through the Chinese Consul, that he should return to Shanghai till the date of the next sitting be fixed when he can come to Nagasaki in time to take part in it, but the Chinese Minister has requested him to defer returning in the meantime.

(*Mainichi Shimbun*).

Nagasaki, September 2nd, 2 p.m.

The investigations into the circumstances of the recent affair by the various representatives having been completed, the third sitting will be opened in a day or two.

Nagasaki, September 3rd, 9 a.m.

At a meeting held by the foreign consuls yesterday at the Sahakiro, the British Consul alone declined to admit that the Chinese sailors were solely to blame for the recent disturbance.

(*Cui grano salis*,—*Lo. J. M.*)

Nagasaki, September 1st (Afternoon).

One police constable has recovered, and left the hospital this morning.

Nagasaki, September 2nd (Afternoon).

Mr. Tsai, Chinese Consul, has informed the Japanese representatives that, having received the indictment, he is desirous that the Chinese war vessels should return to China.

Nagasaki, September 2nd (Forenoon).

Messrs. Kirkwood and Drummond and Captain Lang met at the Chinese Consulate last night and had a conference until past 11 o'clock.

Nagasaki, Sept. 3rd, 6.40 p.m.

The *Ching-yuen* and *Ting-yuen*, the departure of which from Nagasaki had been postponed, leave to-morrow. In all probability their destination is Korea. Messrs. Drummond, Tsai, and Yang have paid a farewell visit to the flag-ship.

Nagasaki, Sept. 3rd, 6 p.m.

Li Hung-chang is stated to have instructed H. E. Tsu, the Chinese Minister to Japan, to represent

the Peking Government at the next sitting of the enquiry.

It is rumoured that the sittings held up to the present will be regarded as null and void, and the proceedings will be commenced anew.

(*Hochi Shimbun*).

Nagasaki, Sept. 2nd, 9.10 p.m.

(Delayed).

The *Higo Maru* has arrived from Jinsen, but brings no fresh news.

Nagasaki, Sept. 3rd, 7.15 a.m.

A Chinese man-of-war which was recently stationed in Korea, has left suddenly for Tientsin.

(*Nichi Nichi Shimbun*).

Nagasaki, September 3rd, 7.10 p.m.

(Delayed through interruption.)

The *Ting-yuen* and the *Ching-yuen* left this port at 10 a.m.

Messrs. Kirkwood and Hatoyama will take part in the third sitting of the enquiry, but the date is not yet fixed.

(*Mainichi Shimbun*).

Osaka, September 4th (Forenoon).

A party of about forty of the gendarmic of Osaka received private orders last night to proceed for Nagasaki.

Nagasaki, September 3rd, 9.40 p.m.

The date of sitting has been again postponed. [A telegram, dated Nagasaki, 11th 30th ultimo, states that the third sitting of the enquiry was fixed for the 4th, but according to the above message it seems that the sitting arranged for yesterday has been again postponed.]

(*Nichi Nichi Shimbun*).

Nagasaki, September 5th, 3.15 p.m.

Governor Kusaka and Messrs. Hatoyama and Kirkwood propose to open a sitting of the enquiry as soon as they have received letters of authorization from the Government.

Nagasaki, September 6th, 5.40 p.m.

The first sitting of both Chinese and Japanese representatives was held at the Prefectural Government office to-day from 10 a.m. till noon. Governor Kusaka and Messrs. Hatoyama and Kirkwood represented the Japanese Government, while Consul Tsai and Messrs. Yang and Drummond, who were escorted by police, represented the Chinese Government. The next sitting is expected to take place the 8th instant.

(*Mainichi Shimbun*).

Nagasaki, September 5th (Afternoon).

Governor Oseko and an escort of police inspectors and constables arrived at Naha the 24th ultimo.

Nagasaki, Sept. 3rd (Afternoon).

The Korean affair presents no unusual feature, but it is said that among the foreign representatives and residents some have gone to Jinsen under the apprehension that something serious may take place shortly in Soul.

One Russian war-vessel arrived at Nagasaki this evening, and cleared immediately, her destination being unknown.

Nagasaki, Sept. 6th, 6.20 p.m.

The third sitting of the enquiry was held to-day and the other sittings are expected to be held daily after the 8th instant.

Nagasaki, September 7th, 7 a.m.

In Chinese quarters it is said that the *Ting-yuen* and *Ching-yuen*, which left for home the 3rd inst. will return to Nagasaki shortly.

Nagasaki, September 7th (Forenoon).

Judging from yesterday's sitting the enquiry is going on all right, and will be concluded satisfactorily without any extraordinary discussion.

(*Hochi Shimbun*).

Nagasaki, September 6th, 7.15 p.m.

The third sitting of the enquiry was held this morning.

(*Nichi Nichi Shimbun*).

Nagasaki, September 8th, 6 p.m.

The enquiry was re-opened this morning, lasting from half-past nine till twelve. The sittings, it is expected, will continue every day.

(*Mainichi Shimbun*).

Nagasaki, September 7th, 5.18 p.m.

The next sitting of the enquiry will be held to-morrow morning at half-past nine and in future the conference will sit every day at the same hour.

Nagasaki, September 8th (Noon).

Mr. Kirkwood, who had proposed at one time to return to Tokyo, has been obliged to abandon his intention as the sittings will be held every day.

(*Fiji Shimpō*).

Nagasaki, September 8th (Forenoon).

The enquiry is to open again at the Koshin Kan to-day at eleven o'clock. Governor Kusaka, and Messrs. Hatoyama and Kirkwood represent the Japanese Government, while Consul Tsai, and Messrs. Yang and Drummond represent the Chinese Government.

(*Nichi Nichi Shimbun*).

Nagasaki, September 9th, 9.21 p.m.

At yesterday's sitting Constable Kurokawa was called and examined.

(Mainichi Shimbun).

Nagasaki, September 9th, 11.25 a.m.

Another sitting of the enquiry was held yesterday and witnesses were called for to day's enquiry.

Nagasaki, September 8th, 7 p.m.

The Chinese Consul states that if the second disturbance was caused by the Chinese it should have been reported directly to the Consulate, but as it was not he has been much troubled in judging who was right and who wrong; and therefore it would be advisable to take steps on the basis of both sides having precipitated the fighting.

THE *Fiji Shimpō* publishes the following correspondence from Korea, dated August 5th:—Min-yon-ik has presented a memorial to the King. Min advises the King in the first place to entrust the management of affairs of state to the Tai-wōn-kun. The latter is His Majesty's father, and has the confidence of both Koreans and foreigners, and, moreover, the strained relations now existing between the royal Father and son has been brought about by their listening to the words of interested instigators. Min is confident that should His Majesty place trust in his father, the latter will serve the country with patriotism. No one but Min could speak so boldly without receiving sentence of death. He then proceeds to advise the King (1) that eunuchs should be abolished; (2) that the *tōgosen* money be withdrawn from circulation; (3) that the sale of offices be discontinued; (4) that official positions be not monopolized by the Min family, as such a course is against the wishes of the nation; (5) that more weight be attached to foreign intercourse; (6) that the laws of the land be so administered as to command the respect of the people; and (7) that soldiers be dressed in Western uniforms. The King has accepted all the proposals, except the first one relating to the recall of the Tai-wōn-kun to power. Min-yon-ik has ever been distinguished for his disinterested impartiality, and this memorial has still more enhanced his reputation. He has dismissed his *betsugunshoku*. Formerly *betsugunshoku* were councillors of military officers, and every military household is now provided with two *betsugunshoku*. They are paid by the Government, but at present they are nothing more than domestics. Their abolition throughout the country would save an expenditure of 10,000 *koku* of rice, and 5,000 *hiki* of linen. The example of Min-yon-ik is being followed by all the military officers. He has also abolished the *hokō* (a sort of police), who were stationed at the residences of members of the Royal family and at foreign legations. They did not discharge their duty properly, and worse than that, they were receiving double pay from foreigners. The total number is said to have been seventy or eighty. Min applied to the King for permission to wear European clothing, but in this he was unsuccessful.

\* \* \*

The *Nichi Nichi Shimbun* says:—We have been enabled, by telegrams received from Nagasaki, to learn some particulars relating to the difficulties in Korea. Circumstantial information as to Korea's dependence upon Russian protection has not been received, but there is no longer any doubt as to the discovery by China of some such fact. There are people who suppose that Korea has secretly treated with Russia to lease either Lazareff or Quelpart to the latter Power. We confess that we are not entirely free from similar suspicions, but for the present we must confine ourselves to stating that China's energy has been called forth by mixed sensations of fear and indignation.

sequent upon the discovery of the existence of a secret alliance. According to the telegrams thus far received, the announcement of the action taken by China was made in the course of an entertainment given by the Chinese Representative to the generals of the four divisions of the Royal Guards, and this was speedily followed by the punishment of the Ministers of the Right and Left for the crime of concluding a secret treaty with Russia, and the imprisonment of two courtiers on a charge of using the Royal seal without the King's permission. It thus appears that Mr. Yuen has forced the Korean Government to take these measures, with the object of making the reported treaty inoperative, on the plea (1) that in concluding it the Ministers of the Right and Left acted without the King's cognizance, and (2) that the Royal seal attached to the instrument was used without the sanction of the King. The Chinese Government may be contented with such an explanation, but it is difficult to tell what Russia will say to it. As to Min's journey to Tientsin, there is no doubt that it has been undertaken with the object of apologising to Li Chung-tang. The fact that at the time of the departure of the *Tsuruga Maru* there were in the port of Ninsen nine Chinese men-of-war shows that the matter has been seriously taken in hand by the Chinese Government. The 140 Chinese who were sent to Sōul from Ninsen in the disguise of merchants were, no doubt, soldiers. It would have been an open violation of the Tientsin treaty to send them in uniform. The disquietude at Sōul seems to have been general, for forty sailors of the American war vessel were also sent to Sōul to protect the Legation. The news of an attack on the foreign Legations by the populace must not be too readily credited, for the later telegram from Sōul does not allude to it. But from past experience of Korean mobs, it is not at all improbable that they should have again assaulted the foreign Legations, to gratify their feelings of antipathy to foreign intercourse. It may, however, be supposed that Mr. Yuen had taken sufficient measures to secure the safety of the foreign Legations and of foreigners, for he has had enough experience in the past in reference to those matters. The difficulty having been for the present settled by the punishment of the two Ministers and two courtiers, and the journey of Mr. Min to Tientsin, the affair will probably not lead to any actual explosion. But what line of policy will China pursue in Korea? What will Russia do with the secret treaty? And in case Russia does not approve of China's interference, what measures will the latter country force upon Korea? These questions are fraught with grave importance for the whole East. It is true that Li Chung-tang is reported to have received an answer from Russia to the effect that there exists no treaty of alliance between that country and Korea. It is further rumoured that Li Chang-tang has stated, in answer to a certain inquiry, that the fact of the actual dependence of Korea upon Russia has not yet been discovered. These are diplomatic secrets, and for the present we are unable to ascertain their truth. But sooner or later facts will make clear in what direction affairs are drifting in Korea.

\* \* \*

Japanese journals continue to publish a good deal of correspondence about Korean affairs.

but the tone of their intelligence has undergone a change. They no longer lay stress upon the intrigue with Russia, but show rather a disposition to charge the Chinese Representative with dealings of a decidedly tortuous character. We have often dwelt upon the dangerous nature of the rivalry which exists among the various political factions in the peninsula, and pointed out that therein lies a constant source of peril to the national peace. With the leaders of these factions patriotism seems to occupy a place quite secondary to self-aggrandisement. The partiality displayed by one party for China, by another for Russia, and by a third for independence by means of Japanese aid, is simply the outcome of selfish ambition. It ought to be the immediate object of Chinese diplomacy, as it certainly is in the interest of China's safety, to check these rivalries, and to prevent their effects from becoming visible in Korea's foreign relations. But it would appear, from the correspondence in Japanese journals, that Mr. Yuen, the representative of the Middle Kingdom in Sōul, has been throwing his influence into the scale in favour of the Min faction against the Kin, and that the secret treaty with Russia which the latter were charged with concluding, was somewhat in the nature of a squib manufactured to serve the purpose of the Mins. The Tōkyō press, indeed, clings to the idea that the treaty had some reality, and that intrigues had actually taken place between certain Russian officials and the leaders of the Kin faction. But our own information goes to show that the supposed Russian treaty was nothing more than a pretext devised by the Min leaders for the purpose of overthrowing their Kin rivals. Mr. Yuen joined hands with the Min, wittingly it is said, and the downfall of the Kin Ministers was effected at the cost of some disturbance at home and considerable agitation abroad.

\* \* \*

One can easily conceive that China's purpose might be served by placing the political power in Korea completely in the hands of a faction upon whose coöperation and subservience the Cabinet in Peking could rely. But if this was Mr. Yuen's purpose in the recent complications, his method of achieving it was unhappily clumsy. There was no occasion to drag Russia into the affair, and there is great probability that the officials who have been deposed on a false charge of seeking Russian protection, may be driven to turn in the very direction which they are unjustly suspected of having taken. Altogether Mr. Yuen cannot honestly be called a successful diplomat. It was he who directed the movement of the Chinese troops against the King of Korea's palace, in December, 1884. His nomination to represent China at the Court of Sōul was not, under these circumstances, very welcome to Japan, but was condoned for the sake of the abilities he was supposed to possess. This nomination took place, it will be remembered, just at the time that Mr. Mollerorff was supposed to have been helping or instigating Korea to turn her eyes Russia-wards. Mr. Yuen's patrons declared that he was the only official who could be trusted to detect and frustrate such intrigues. Perhaps his anxiety to vindicate his reputation for anti-Russian zeal had something to do with the recent ferment. At all events, those who desire to see the peace of the Orient preserved may be permitted to hope that he will be re-

moved from a sphere where his mischief-making propensities find so many opportunities to be active.

Our Sôul correspondent writes as follows, under date August 27th:—"Just as the mail closed a couple of days ago, Judge Denny was about to leave Sôul probably for reasons connected with the recent complications. The Foreign Representatives here were much incensed by the arrogant conduct of the Chinese in banishing, or procuring the banishment of, four young officials who held important positions in the Government. On finding that other nations were interested in the affair and that they objected to the policy pursued by the Chinese, the King recovered his courage, recalled the degraded Ministers, and reinstated them in their former posts. Judge Denny's departure was, at the same time, postponed, and an appearance of quiet was restored. On the 26th instant, a party of twenty marines from the U.S.S. *Ossipee* arrived at the American Legation. Their coming to the capital was unfavourably criticized in some quarters on the ground that their presence might be an additional cause of disturbance, but such objections have not, so far, been verified by events. The whole affair appears to be regarded by the foreign residents as a clear case of Chinese interference with Korea's domestic concerns. The excitement which has been caused may be temporarily allayed, but whether it can be permanently settled is another question. Conditions well adapted to trouble exist, for rice is still very dear, and the people are at least as much disposed as usual to talk themselves into a state of excitement. As for the designs attributed to Russia, they have no existence in public knowledge. At the moment of writing there are no less than 13 war ships of different nationalities at Chemulpho—a force amply sufficient to awe the Koreans, who are easily intimidated."

FORTUNATELY Japan has had no experience of a genuine cholera epidemic as the term is understood in Europe. When we remember that Naples, with a population only half that of Tôkyô, had over three thousand cases daily during the epidemic of last year, while in the Japanese capital the daily seizures have not yet reached three hundred, the difference becomes very apparent. Tôkyô, indeed, is only suffering a twentieth part of the evil which overtook Naples. The greater immunity enjoyed by the Japanese metropolis is doubtless due, in part at any rate, to the remarkably cleanly habits of its inhabitants. But until Tôkyô has a properly distributed water supply, returns of the epidemic must be looked for. More and more clearly is it recognised that water is at once the most facile and the most fatal means of communicating the two most destructive among zymotic diseases, Asiatic cholera and typhoid fever. At Lariano, in Italy, where the cholera is now raging with greatest virulence, the people of the low, flat district in which the town lies have to drink from wells infected by drainage. Under such circumstances it is admitted that the disease is ineradicable until it runs its course. Italy, indeed, seems to resemble Japan closely so far as the wells are concerned. "In the larger cities," we read "the house is generally a square, round a courtyard in which is the well, subject to the drainage of all the cesspools in the square around." The correspondent of *The Times* writes:—"It is often the case, as I know from

personal experience, that these wells furnish a water which, while apparently bright and pure, responds to chemical tests with the most significant display of infection." Precisely the same might be said—as we know by expert analyses—of the wells in Tôkyô. Since the wells in Rome were closed by order, "the health of the place has improved so much that from having one of the worst sanitary records among the Italian cities it has now one of the very best." It is confidently predicted that when a similar step has been taken in all the Italian towns, and when, like Rome, they are supplied universally with mountain water, cholera will disappear from the peninsula. We have the experience of London also to guide us in this matter. In 1849, out of every 10,000 inhabitants 60.1 died of cholera. Dr. Percy Frankland writes:—"This was the very time when the water-companies rapidly restored to the citizens of London the drainage matter which the sewers had discharged." Again, during the epidemic of 1854, it was shown that, "whereas the mortality amongst the population supplied with the comparatively pure water of the Lambeth Company was only 40 per 10,000, that of the population supplied with the foul water of the Southwark Company was 130 per 10,000." In Tôkyô itself, during the present epidemic, the districts supplied with comparatively pure water—Akasaka, Azabu, Yotsuya, and Kojimachi—have escaped almost scot-free.

The sudden increase of cholera which took place on the 1st instant in Tôkyô is attributed, indirectly, to a cause which should have operated in a contrary direction; namely, the change from a long spell of exceptionally warm weather to comparative coolness. At daybreak of Saturday, the 28th ultimo, Tôkyô was visited by a storm of thunder and heavy rain, which lasted, with little intermission, till noon of the 29th, inaugurating that pleasant freshness of atmosphere which generally precedes the advent of genuine autumn weather in Japan. The citizens of the capital are supposed to have been betrayed into some degree of carelessness by this presage of invigorating temperature. In a certain sense the explanation is satisfactory, since it indicates a cause easily remedied. The whole history of this epidemic shows that, through whatsoever medium the germs are communicated, they only find a home in the bodies of poor, unhealthy, badly nurtured or roughly living folks.

With rather unwonted capriciousness the cholera seems to have turned back from Kanda-ku to Nihonbashi-ku. The latter now stands easily first on the list, whereas the former has receded to the third place. The returns for the 1st instant were:—Nihonbashi-ku, 94 new cases; Kyôbashi-ku, 67; Kanda-ku, 39, and Shiba-ku, 34. The remaining districts are all below these figures.

Happily the cholera seems now disposed to take a downward course in Tôkyô. It apparently reached its climax on the 1st instant, when 347 new cases were reported. Its course during the present month has been as follows:—

DATE.	NEW CASES.		DEATHS.	
	NEW CASES.	OLD CASES.	NEW CASES.	OLD CASES.
September 1st	347	126	98	
September 2nd	321	176	99	
September 3rd	310	102	65	
September 4th	291	125	135	
September 5th	272	111	96	
September 6th	243	92	90	
September 7th	215	95	95	

It should be added that these records refer to the interval between mid-night and mid-night, not between mid-day and mid-day as we supposed and stated in a previous issue. Thus the numbers given above are from 12 o'clock on Monday night to 12 o'clock on Tuesday night. Perhaps it is still premature to draw any hard-and-fast inference from these figures, but, as they stand, they are certainly encouraging, especially when taken in connection with the fact that every day brings us nearer to the crisp, invigorating weather of autumn. Tôkyô is peculiarly unfortunate in one respect. Since the early part of July, the city has not been visited by any rain sufficiently heavy to replenish the wells and flush the sewers. The neighbouring districts have been much happier. To the north and west heavy showers have fallen at comparatively short intervals, and as the principal rivers which enter the capital come from those districts, we have the curious spectacle of a parched city standing by the side of overflowing streams. Even a typhoon would be welcome to clear the air and wash the streets. But without this aid the poison seems to be losing its virulence. Experience shows that the descending side of a cholera curve is in general very irregular. Especially towards the end, it is apt to trail off into a series of zigzags, some of whose vertices reach alarming heights. We have seen such a phenomenon in Yokohama during the past few days, and we shall doubtless see it in Tôkyô also, although the general tendency of the disease may be downwards.

The cholera in Tôkyô continues to abate with remarkable rapidity. The latest returns are as follows:—

	NEW CASES.		DEATHS.	
	NEW CASES.	OLD CASES.	NEW CASES.	OLD CASES.
September 8th	168	76	50	
September 9th	150	65	79	

To fully appreciate these figures, it is necessary to remember that the disease did not assume epidemic proportions in the capital until August 3rd, when the daily number of cases for the first time exceeded one hundred. We have now returned to the state of affairs which existed between that date and August 8th; that is to say, to the state of affairs which existed during the first week of the epidemic. Of course it would be premature to indulge in any feeling of complete confidence yet, but we may at least assume that the climax has been passed and that the disease has distinctly passed to the descending side of the curve. There can be no doubt that this happy result is largely due to the indefatigable exertions of the authorities and to the thoroughness of their sanitary precautions.

Tsukiji has acquired an unenviable reputation in this epidemic. Japanese residing there have suffered very severely, and even foreigners have not enjoyed their usual immunity. A few days ago, a missionary lady, who had been obliged to close the school over which she presides in consequence of the appearance of cholera among the pupils, was herself attacked by the disease. Her life was saved with difficulty, after a course of very vigorous treatment by the Rev. Dr. Macdonald. The same physician was subsequently called to see an American gentleman, whose symptoms were of a highly disquieting character. In this second case the progress of the disease was happily arrested before it reached an acute stage. Tsukiji is proverbial for bad water, so that its evil record is not surprising.

Original from

We have before us the first number of a new Tōkyō journal, the *Commercial Telegraph* (*Shōgo Dēmpō*). It appeared on the 1st instant, after a prefatory announcement issued a considerable time ago. The editor is Mr. Fujisawa—that is to say, the nominal editor, according to Japanese newspaper methods of to-day. The second number is promised for the 8th instant, and thenceforth the paper will be published every evening, Sundays and national holidays excepted. In size it is somewhat smaller than the *Fiji Shimpō*, and like the latter it eschews the old-fashioned white paper, using in preference a light straw-colour. A novel feature of the new journal is that its leading article follows everything except the advertisements. The first page and a portion of the second are devoted to items of news—telegrams from various commercial centres throughout the empire, market reports for Tōkyō and Yokohama, and foreign exchange. Then, under the heading of "Miscellaneous Intelligence," we have matters relating chiefly to commercial affairs, and correspondence, home and foreign. This brings us to the second column of the third page, where we find the commencement of a series of occasional articles, the present series being a collection of practical hints and useful rules of conduct for young business men. The remaining space on the third page is occupied by the leading article, and the fourth page is filled with advertisements. Judging by the first number, the *Commercial Telegraph* appears to be well edited. It gives many evidence, of vigorous thought and sound common sense. The leading article is inspired by that stalwart and liberal spirit to which the *Hōchi Shimbun* has accustomed us—the spirit of young Japan. The writer, after pointing out that nature has indicated a commercial route to his country, strongly criticizes the abuses and corrupt practices which have hitherto hindered her gradual development. Having regard to the not distant opening of the whole empire to mixed residence, he compares the condition of Japanese business men to that of soldiers lying asleep under a shower of cannon-balls. To correct these abuses and rouse the attention of the nation is the object of the *Commercial Telegraph*. Of course it is not yet possible to speak with any certainty of the journal's future, but if it remains true to the promise of its first number, it cannot fail to be a great addition to the press of Japan. It has no evening rival, for the *Kōmei Shimbun* does not stand upon the same platform. We ought to add that the *Commercial Telegraph* is printed in character with *kana* adjoined.

THE *Fiji Shimpō* writes in a complaining strain of the difficulties with which Japanese journalists have to contend. Newspapers, says the *Fiji*, have become a most powerful instrument of civilization. Compared with the press, education, religion, Government decrees, etc., have but little influence upon a people. In Japan, however, the power of the newspaper has not been and cannot be exerted to its full extent. The news furnished by the Japanese press is of the most meagre character, and the condition of journalism as a profession is on the whole little short of a reproach to the nation. Instances have not been wanting of late in which conservatives lagging behind the times have had their eyes disagreeably opened to the rising influence exercised by the press in this country, but as yet

Japanese journalists are confined to a plane far below that occupied by the press in civilized countries. For this no doubt the journalists of the present day are themselves greatly to blame, but it would be unjust to lay on their shoulders all the responsibility for the shortcomings of the press. A Japanese gentleman who had spent some time abroad once complained bitterly after his return home of the state of Japanese journalism. Much that he said was true, but one could not help thinking at the time that his ignorance of the present state of society in Japan led him to make his strictures too severe upon journalism in this country. For instance the blame for the insignificant size of newspapers and for the meagre news they contain can with justice and reason be laid only on the shoulders of society, for, if larger and more extended support were given to the press, improvement in the newspapers would naturally follow. The gentleman mentioned above, complained that Japanese journals lend themselves too easily to the publication of anonymous correspondence. But it might be pointed out that as the Press Regulations provide that correspondents are liable to the same penalties as editors, few persons care to give their real names in connection with newspaper correspondence, and conductors of journals are often obliged to publish letters written by persons whose real names they do not themselves know. The Press Regulations also compel the press to remain silent on many subjects of the greatest national importance, for they subject editors to the supervision of each Minister of State as to matters falling within his particular jurisdiction. For these and many other reasons, newspaper writers are forced to resort to the use of vague and ambiguous expressions, intelligible only to those engaged in journalism. The nation is now, however, within sight of the opening of a National Assembly and the granting of mixed residence, so that the hope may be fairly indulged that there are brighter days in store in the near future for journalism.

No one will be greatly disposed to envy Messrs. Krupp's success in securing the contract to supply some fifteen hundred tons of steel rails to the Chinese Government. Last year, a combination among the English and continental rail-makers kept the price of steel rails up to £4 10s. per ton, but when this arrangement—which the English manufacturers ought never to have concluded—came to an end in the spring of the present year, the price immediately fell to £4. With the latest appliances and under the most favourable circumstances it was understood that even the £4 figure could be reduced. But Messrs. Krupp are believed to have taken this contract at £3, and how they can possibly fulfil it without loss is a mystery. Indeed, the idea is that they are fully prepared to make a loss in the hope of securing future orders. We have never heard that bread cast in this fashion upon Chinese waters came back even after many days.

M. PASTER's cure for rabies has proved a god-send to folks other than those bitten by mad dogs or wolves. A story is told of a young French lady whose papa was too economical to take her to Paris. She got herself scratched; said the wound was inflicted by a dog, and was

carried off in consternation from her native town in the Dardogne to the much desired capital. Mr. G. M. Crawford tells, also, of "a Wall street millionaire, who had the subtlety of Venice and Judea combined, with the smartness of a Yankee. He saw one day in an almost forgotten scratch on the face of a beautiful daughter an opportunity to bring her out in Europe with *éclat*. He had read in the papers that M. de Freycinet was the intimate friend of Pasteur's son-in-law, and when he arrived at the Rue d'Ulm subscribed, on learning that no fee was taken, a sum represented by four ciphers." (How much was that, we wonder). "Next evening he and the young lady occupied the President's box at the Théâtre Français, and they were fairly launched *dans le monde Parisien*."

SOME little indignation was aroused in England, a short time ago, by the news that a youth named Henry Williams had been sentenced to a month's imprisonment, under the Vagrant Act, for sleeping in a boat which he found drawn up on the beach. The clerk of the Justices who delivered this sentence has written to *The Times* to explain. He says that, owing to frequent thefts of compasses and so forth from fishermen's boats, notice had been given that the next person found in a boat at night without lawful excuse should be made an example of. He also relates that Williams told several lies to the police; that a skeleton key was found on his person; that he is wanted for another offence, and that had the Magistrates been disposed to go to the limit prescribed by law, they might have sentenced the culprit to three months instead of one. After the publication of these details, pity for Williams will not be so plentiful

THE last British Consular Trade Report for Tōkyō, or Yedo, as the capital was then called, was for the year 1873. It bears the signature of Mr. Martin Dohmen, and its would fill about half of a column of this journal. Mr. Dohmen had only two pieces of information to impart; namely, that the British employés of the Japanese Government numbered, at the time, ninety-seven, and that the total number of foreigners resident in Yedo, the Legations included, was 350. He explained his curious reticence with regard to innumerable subjects which might properly have found a place in the Report, by saying that the information which a foreigner could procure from native sources was incomplete and untrustworthy, and that "foreign merchants took little or no interest in native enterprises." We greatly doubt whether either of these reasons possessed, even in 1873, the force Mr. Dohmen attributed to it. Certainly both are equally valueless now. A Consul can procure almost any information he seeks, and the interest of the foreign merchant has ceased to be a matter of choice and become one of necessity. Yet Tokyo, perhaps the largest and most important field for exploitation in respect of commercial and industrial information, remains quite outside the scope of Consular research.

In the published Instructions to Consuls of January 1st 1879, we find that they are directed to embrace in their Trade Reports "Trade and Commerce, including a description of Exports and Imports, of domestic trade, of market prices, of the operations of tariffs, trade-laws, banks, and of monthly rates of exchange; shipping

and navigation, including notice of British, foreign, and coasting ships; matters relating to ports, harbours, lighthouses, lights, shipbuilding, and all information relating generally to shipping and navigation. Agriculture—describing nature and yield of crops, and any general information connected with the subject. This head should embrace such information as can be given relative to the mineral and vegetable produce of the districts where the Consular officer resides; population and industries. All matters relating to mines and factories, &c., and the employment of the people of the Consular district, including rates of wages. Public works, roads, railways, canals, bridges, telegraphs, and all corresponding information. *General Remarks.*—Under the head should be included all information relative to other subjects to which a Consular Report may allude, but which it is impossible to specify under any one of the divisions above enumerated. Attention should be called to any local or national development of industry or production, more particularly to any such development which may be brought into competition with the industry and production of the United Kingdom, to the bearing of any State interference on it, and to the competition between British Trade and the trade of other foreign countries in the district. Certainly the compilers of these instructions entertained an idea vastly wider than that taken by the present Foreign Office of the proper sphere of a Consul's researches. It seems to us that the perfunctory rôle now imposed on a zealous, highly trained, and exceptionally intelligent body of British officials is a striking illustration of the perfection to which "Government by Clerk" has been carried. Apparently it is much too tedious an operation for a Foreign Office Clerk to read through voluminous reports relating to distant, and to him uninteresting, regions, so he inaugurates the policy of reducing these documents to two or three pages of foolscap, without any consideration for their primary purpose and uses.

THE *Yiji Shimpō* writes:—Rumour has it that, as a result of treaty revision, extraterritoriality will be abolished and the country opened for mixed residence. Even if mixed residence be not granted, the extension of railways will inevitably carry with it the reality of mixed residence, and foreigners will not lose opportunities of making money by investing their capital in industrial enterprises in this country. The question of urgent importance for our merchants and manufacturers is: what classes of industries will most attract the attention of foreigners? Whether our countrymen will be able to maintain their ground in industrial enterprises after the admission of foreigners or not, depends upon the question of whether our merchants and manufacturers will have intelligence and enterprise enough to find out the most promising undertakings and engage in them promptly, before the advent of shrewd and wealthy foreigners. According to one class of people, it is claimed that sericulture will claim the attention of foreigners, in the event of mixed residence, for the present condition of business presents a large field for improvement and profit; while another class maintains that mining enterprises will most attract foreigners' capital. It seems to us that the investment of foreign funds will not be confined to any one class of industry; but it also appears equally probable that mining enterprises will attract the

greatest attention. While possessing vast resources of wealth deeply buried in our soil, we have hitherto confined our efforts merely to what is obtainable from the surface or the superficial strata. Besides such valuable minerals as gold, silver, copper, and iron, the land abound in sulphur and building stones. We hope that our tradesmen and industrial people will not be so imprudent as suffer those almost inexhaustible resources of wealth to be monopolized by foreigners.

THE total number of cholera cases and deaths since the epidemic first appeared, as reported by the Sanitary Bureau of the Home Department, is as follows:—

CITIES AND PREFECTURES.	PATIENTS.	DEATHS.
Tōkyō	3,814	2,052
Tōkyō, 15 Rural Divisions	3,212	1,705
Kyōto	1,836	1,485
Kyōto, Two Upper and Lower Divisions	1,362	1,093
Osaka	14,515	11,112
Osaka, 4 Rural Divisions and Nishinari-gori	8,583	6,803
Kanagawa	3,659	2,236
Yokohama Division	2,498	1,506
Hyōgo	4,540	3,408
Kōbe	1,515	1,255
Nagasaki	673	379

Myasaki	14	12
Kyōshima	10	3
Hokkaido Local Administration	33	14
Branch Administration, Hakodate	240	149
Total	59,187	37,554

The figures for Tōkyō are up to the 17th and for other prefectures to the 16th ultimo.

We observe with much pleasure that Mr. N. Mitsuhashi, hitherto Chief of the Foreign Section in the Kanagawa Prefecture, has been promoted to the position of Junior Secretary. Under the revised constitution, the distinction between Chief Secretary (*Dai-Shukikan*) and Secretary (*Sho-Shukikan*) has ceased to exist. All these officials are now known as Secretaries (*Shukikan*). The number of Secretaries in each Prefecture is only two, and as it devolves upon one of these gentlemen to perform the functions of the Prefect in his absence, the office is one of great importance. Mr. Mitsuhashi's name is well known among the foreign community, from whom his ability and courtesy have won golden opinions. We have already had occasion to allude to his high services in

connection with the cholera epidemic, and we trust that the well merited promotion he has now received is the earnest of greater honours in the near future.

We take this opportunity of alluding to the rapidity with which Mr. Oki Morikata, Prefect of Kanagawa, has moved through the official grades since his appointment in 1880. Under the classification of that time there were three *Chokunin* and four *Sonin* ranks, after which came the *Hannin*. Mr. Oki, in 1880, belonged to the Sixth Rank—that is to say, to the Third *Sonin* Class. By his appointment as Prefect, he immediately passed to the Fourth Rank, or First *Sonin* Class. Under the new classification there are one special and two ordinary *Chokunin*, followed by six *Sonin* Ranks. In the usual course of events, Mr. Oki would have been included in the First *Sonin* Rank. But it is provided that, in cases of exceptional merit, a Prefect or Governor may be raised to the Second *Chokunin* Rank, and this honour has been conferred on Mr. Oki. Briefly speaking, he has accomplished in six years a round of promotion which ordinarily requires fourteen. It is pleasant to find that the reward of merit is so speedy and sure in Japan. None of his predecessors achieved anything like the success which has attended Mr. Oki's administration of the Kanagawa Prefecture, and we know that in congratulating him heartily we express the sentiments of the whole foreign community.

So far as we can judge, the course which the Conservative Government intend to pursue towards Ireland will not be in any respect a marked deviation from precedent. Increased activity in magisterial administration and stronger action on the part of the Dublin Executive appear to be the principal planks in the new platform. The idea of suppressing the National League is said to have been abandoned, and the only special legislation contemplated is a renewal of the Crimes Act of 1872, giving Magistrates power to investigate crimes through sworn testimony, although the commission of the crime is not nominally charged to any one, and providing for trial by special jury as well as for changes of venue in criminal trials when such a course seems advisable in the interests of justice. Against this comparatively moderate programme has to be set the fact that Sir Michael Hicks-Beach is Chief Secretary. The only distinction Sir Michael gained during the recent campaign was owing to his remarkably outspoken threats of immediate coercion—threats the imprudence of which is reported to have been strongly condemned by Lord Salisbury and Lord Randolph Churchill. Indeed, rumour had it that these indiscretions would have the effect of excluding Sir Michael from the Cabinet. His appointment to the office of Chief Secretary is, therefore, very significant, and scarcely tallies with the gentle policy attributed to the Conservative Premier.

Towards the end of July it was becoming evident in political circles that the confidence of Mr. Gladstone's followers with regard to a speedy dissolution of the new Parliament had been considerably modified. England is heartily sick of elections. The people have said their say most emphatically, and are averse to the strain and expense of another contest at the polls. Thus the idea is gaining ground that the Conservatives may look forward to a four years' Original from

lease of power. So long as Mr. Gladstone remains at the head of the Opposition there is no likelihood of a Radical-Unionist coalition, and without such a coalition Lord Salisbury is safe. Apparently the Conservative journals think that the best way to keep Mr. Gladstone at his post is to revile him. *The Times* of July 17th "describes him as resorting to every trick and device to conceal from a deluded people the scope and cost of the conspiracy he has joined. It says he used his power without stint or scruple to blindfold, mislead, and betray the nation, and that he has achieved a tremendous moral fall, without parallel in English history. The *St. James's Gazette* joins in the attack, and declares that Mr. Gladstone must retire, that his mind has lost all sense of proportion, and that he will be happier and able to vary his studies if he retires incontinently to private life." Meanwhile the object of all this abuse is said to be enjoying fine health and buoyant spirits—a condition which does not throw oil upon the troubled waters of his opponents' discontent.

A "TORMENT OF THE TIME" who, six months ago, "seemed likely to die undiscovered to himself and to the mass of the nation he had so grievously deceived and injured," has been "arrested in the attempt to make glory out of the disruption of the empire." The attempt "turned out to be a mad one, a wicked one, and attended by mean and ignoble circumstances of a sort that bring no man prosperity in any nation." If you enquire what those ignoble circumstances were, the answer is "manifest self-seeking, ignoble trickery, desperate mischief-making, crazy petulance, and open concert with an anti-English conspiracy which is only kept alive by foreign money." But the country now knows him; now understands that "there are no means too ingenious for his fatal subtlety to invent, and none so desperate or so wicked that he cannot persuade himself to adopt them." "Burning with spite against a people who have a thousand good reasons for trusting him no more, he is travelling fast on the road to ruin." "The imposture of his reputation is pricked, and collapse is certain and speedy." This is a portrait of Mr. Gladstone drawn by a leading London journal. The privilege of caricaturing public characters has been usurped by the prose-writers of the press as well as by the draughtsmen of *Punch*.

As an example of the way the truth is unscrupulously twisted by political controversialists in England, the comments made upon Mr. Gladstone's correspondence with the Duke of Westminster are very much in point. At the close of this correspondence, Mr. Gladstone, the public was informed, threatened to abolish the aristocracy unless it behaved properly. Turning to the correspondence, as published in *The Times*, we find that what Mr. Gladstone really did say was this:—"The policy of England towards Ireland as a whole has been stamped by the civilized world with discredit, and even with disgrace. We are seeking to cancel a part upon which you seek to shut your eyes, as well as to meet the demands of the present and the future. We think that the honour of England requires to be cleared; and we lament that those who in your position prevent our clearing it should strike a fresh blow at the aristocracy; if, indeed, as I believe, aristocracy is a thing that is good and wise to

preserve on condition of its acting with goodness and wisdom." We do not see how it would have been possible to pervert this statement more grossly than by calling it "a threat to abolish the aristocracy."

THE people of Hongkong are confronted by the old problem in a new form. They want to have a municipality, but if the municipality is to be constituted on the common principle of majority representation, it would pass almost entirely into the hands of the Chinese. That, as the *Daily Press* justly remarks, would be jumping out of the frying-pan into the fire. If, on the other hand, the Chinese be excluded, or only enfranchised so fractionally that their position will remain subordinate, will not the world cry out against the injustice of taxation without representation, and will not a harassing and unwholesome agitation be inaugurated? It is highly creditable to the people of Hongkong that they take stock of such a dilemma, but truly they seem a little sentimental. The question, we imagine, is whether the colony is to be municipally governed by officials selected in Downing-street or by residents chosen on the spot, not at all whether it is to be municipally governed by Englishmen or Chinese. It is a British possession. If the Chinese have flocked there in overwhelming numbers, their attraction is the security enjoyed by life and property under British rule. The mere fact of their coming, though it shows their discrimination, does not qualify them to be rulers. We know the splendid filth of a Chinese town. Perhaps, if the present generation of Englishmen remembered what London was seventy or eighty years ago, they would not tilt their noses quite so high over Chinese sanitation. That, however, is no reason why they should go back to the London of the last century. To hand over the municipal government of Hongkong to the Chinese would be simply to render the place uninhabitable by Englishmen, and we do not suppose that anything of the sort is seriously contemplated. If there is to be a municipality, its entire control by the British residents can only benefit the Chinese settlers.

WE have received from the Nippon Yusen Kaisha newly compiled schedules of sailing dates for the various lines traversed by the steamers of their fleet, and have been requested to draw attention to the principal alteration contained therein, namely, the departure of the Shanghai mail steamer. These boats will now leave on Tuesday at noon, commencing next Tuesday, the 14th inst., with the *Salsuma Maru*, Captain Conner. The hour for receiving cargo, signing documents, and so forth, will be found in the advertisement.

THE Telegraph Office announces that communication between India and the Far East is interrupted. The submarine cable from Madras to Penang gave way on the 31st ultimo, but as the lines via Burmah and Rangoon remained intact telegrams were transmitted without much delay. On the 4th instant, however, the Penang-Rangoon cable also broke down and rendered the direct transmission of telegrams from and to India impossible. This, of course, accounts for the hitherto incomprehensible tardiness of our political news through Reuter, and also for the delay in commercial telegrams of which complaints are made. Telegrams from China and the Straits Settlements to Europe and America and

*vice versa* which would ordinarily be sent by the Southern route are now, perforce, transmitted by the Siberian lines; and the strain thus thrown on these naturally causes abnormal delay to the general traffic. It is expected that the Eastern Telegraph Company's repairing steamer, which is now at work, will succeed in repairing the cable between Penang and Madras very shortly. In the meantime, we are informed, telegrams for India may be transmitted by the circuitous, though somewhat cheaper, route via Siberia and Persia.

THE departure of Mr. D. Fitz-Henry makes a sensible blank in our community. In addition to his high abilities as a business man, Mr. Fitz-Henry possessed social qualities of a most winning character, and it will not easily be forgotten what an energetic, untiring part he took in all matters that concerned either the pleasure or the welfare of the Yokohama public. His selection to establish a branch of the Comptoir d'Escompte in Tientsin is an evidence that his talents are recognised. We wish him every success in his new sphere.

THE cholera returns for Yokohama during the past week were:—Saturday, 4th instant, new cases, 31; deaths, 16. Sunday, new cases, 23; deaths, 13. Monday, new cases, 18; deaths, 12. Tuesday, new cases, 13; deaths, 13. Wednesday, new cases, 11; deaths, 13. Thursday, new cases, 13; deaths, 7. Friday, new cases, 7; deaths, 12. Total cases, 116; deaths, 86; against total cases last week, 88; deaths, 50.

WE understand that the schooner *Arctic*, which has returned to Hakodate, has only 94 sealskins on board and will, after undergoing a few repairs and despatching her catch to Yokohama, start north again at once. A Master proceeds to Hakodate by first steamer to take charge of the schooner, which is at present, and has been since the arrest of Captain Fullen, without an actual commander.

IT may be well to say that the version of the extradition Treaty recently concluded between the United States and Japan, which appears in some of the American journals and was included in the last letter from our San Francisco correspondent, is not the version which has received the signature of the President and the assent of the Senate. The variations are not great, but they suffice to distinguish the two documents.

ONE of the crew of the British bark *Carrie Delap* was attacked by cholera on Saturday. He was brought on shore and conveyed to the hospital, but died after a few hours' illness. On the following day the whole ship's company was taken on shore and subjected to disinfecting processes.

THE Chinese constables of the Hongkong Police recently charged with receiving bribes from the proprietors of gambling houses, have been sentenced to pay a fine of \$30 each or be imprisoned for a month. A dozen or more of the lukongs forfeited their bail of \$100 and cleared out of the colony.

WE note the arrival the 9th inst., by the *City of New York* from Hongkong, of Mr. N. R. O'Connor, C.B., C.M.G.

WE have been requested to announce that the English Service at St. Andrew's, Shiba, Tōkyō, will recommence on Sunday morning next.

## SUPERFLUOUS DIPLOMACY.

THERE is a not unnatural impression that the course of the negotiations at Nagasaki must be more or less impeded by the departure of the Chinese sailors who were concerned in the riot. If these men are to be publicly put on their trial, one imagines that they should be kept at Nagasaki and not allowed to sail off to Vladivostok, or Port Lazaref, or some other virtually inaccessible place. The *Nichi Nichi Shimbun* declines to attach any importance to this consideration. The conduct of the negotiations, says our contemporary, having been entrusted from the first to Captain LANG, the absence or presence of the Chinese Admiral cannot make any appreciable difference; and for the rest, all the necessary evidence was doubtless collected before the departure of the *Ting Yuen*. We are unable to follow this line of reasoning. It seems to us beyond question that the Japanese will be placed at a very considerable disadvantage by the absence of the Chinese ships. Assuming that the final investigation is held in the Chinese Consular Court—for if the case comes into a Japanese Court the witnesses on both sides must necessarily be produced—the Japanese witnesses for the prosecution will give *ex vivo* testimony and be subjected to cross-examination, whereas the evidence for the defence will be in the form of documents prepared by the Chinese themselves. It may be taken for granted that the Japanese authorities will have had no opportunity of examining the Chinese witnesses. Such an opportunity could only occur in open Court during the trial. On the one side, therefore, we shall have witnesses publicly examined by both parties to the suit; on the other, witnesses whose testimony has been elicited and reduced to writing by one party only, and whose sole object in giving their testimony was to exculpate themselves and their comrades. It would be difficult to conceive anything less likely to conduce to the ends of justice. If the Chinese written evidence has been skilfully and judiciously compiled, no oral testimony which the Japanese may produce, however overwhelming, can have practical weight against it. The Chinese will be in the happy position of saying:—"Here is our version of what our own witnesses allege. We cannot go beyond that, nor can we allow you to ask our witnesses any question. Now produce your witnesses, and let us examine them." Such, in our opinion, will be the farcical relation of the two parties to one another. As for the plea that the conduct of the negotiations has been entrusted to Captain LANG—what are these negotiations? Are weeks to be spent discussing whether a gross outrage committed against Japanese life and property in Japanese territory falls within the purview of courts specially appointed by international treaty to investigate, and if

necessary punish, such violations of law and order? The position seems to us perfectly simple. A riot involving serious loss of life occurs in a Japanese sea-port town, owing to the unruly conduct of a large body of Chinese sailors. The Japanese lay a charge against the rioters in the Chinese Consular Court, where the Treaty requires that the case shall be heard and adjudicated. To such action negotiations and *pourparlers* are a preliminary not only wholly unnecessary but insulting to Japan. It is bad enough that, owing to the existence of the extra-territorial system, this empire should be obliged to appear as plaintiff, on behalf of the safety of its own subjects, before Chinese tribunals established within its own territory. The notion of these utterly unreformed, semi-barbarous courts being entrusted with the duty of safeguarding justice in a highly progressive country like Japan, is an outrage to common sense. But the climax of irrationality is reached when the wretched machinery of such courts is made to move in obedience to the proverbially evasive, procrastinating diplomacy of China. From the outset there was no valid reason for importing diplomacy into the question at all. The affair was simply a street riot brought about by the turbulent conduct of undisciplined sailors. All the issues involved might have been settled by an ordinary police-court in a few days. It ought to have been China's object to get them so settled, unless indeed she desires to make the doings of her seamen in brothels and grog-shops a measure of international amity. Her first flagrant mistake, in our opinion, was the despatch of Mr. YANG SHOO, Secretary of the Chinese Legation in Tōkyō, to Nagasaki. By this step the affair was at once removed from its proper and normal route—that of the ordinary processes of law—and an element was introduced which has never been found conducive to the ends of justice. Japan, to her credit—though indeed nothing less was to be expected—has not been influenced by China's bad example, but has persisted in leaving the conduct of the proceedings to the law officers of the Crown and to the local officials. China's second mistake was the summoning of a foreign advocate from Shanghai. Anybody could have foreseen what that meant. And, indeed, our private advices from Nagasaki indicate very plainly that the action taken by Mr. DRUMMOND up to the present is strongly calculated to increase the complications. The employment of a foreign barrister on the Japanese side was an unavoidable consequence of China's action, and we are glad to think that such a step would not have been taken in the absence of a compelling precedent. It is difficult to escape the conviction that, owing to China's blunders and imprudence, this miserable affair will create another source of friction between the two empires. The statesmen

of the Middle Kingdom will, perhaps, derive momentary satisfaction from the reflection that by subtle manœuvring they have obstructed the course of inconvenient justice; but whether this will compensate them for the international effects of their tortuous policy, is a question they will have no difficulty in answering by-and-by.

## THE TRANSACTIONS OF THE TŌKYŌ TEACHERS' ASSOCIATION.

THE Tōkyō Teachers' Association is a society which, formed about two years ago, is working unostentatiously but efficiently to promote the cause of sound education in Japan. Its active membership is limited to teachers directly engaged in preparatory or academic work in this country, and of these no less than 58 are now borne on the Association's roll, including several ladies. The President for the year is Professor C. G. KNOTT, and the Vice-President is Miss M. A. SPENCER. The Association holds monthly meetings—except in July and August—and on these occasions essays are read by the members upon subjects connected with education. It is scarcely necessary to descant upon the great benefits which ought to be derived from such an interchange of ideas and experiences among persons discharging educational functions. A good teacher, like a good physician, ought of course to individualize his methods as far as possible. But there are general traits of Japanese disposition and general difficulties lying in the path of Japanese students, to which, as well as to the peculiar conditions of the country, a general adaptation of educational methods is necessary. These traits, difficulties and conditions are evidently more easily discernible by the concentrated attention of several minds than by the observation of one, and it is in combining the results of individual experiences and deducing from them generally useful inferences, that the Tōkyō Teachers' Association performs its most valuable function. We have now before us the journal of the Association's Transactions for 1885. It contains ten papers, of which the first two are devoted to a consideration of the same question—should science be taught in schools? To this question Mr. J. O. SPENCER replies in the affirmative; Professor KNOTT in the negative. Mr. SPENCER's arguments may be conceived. They are based on the fact that scientific knowledge is essential to the understanding of every modern invention, and that unless a youth studies the principles of science at school, he cannot reasonably aspire to the intelligent acquisition of practical knowledge in later life. That Mr. SPENCER's belief is strongly rooted, the following extract from his paper will show:—

I may say just here, that he teaches science scientifically who develops in the minds of his pupils a knowledge of the laws and causes of the phenomena of nature and leads the pupil

to investigate, classify, and arrange; in short to think intelligently and systematically on the subject before him.

He is the best and truest teacher who most successfully opens the windows of thought both earthward and skyward. So far as subject matter is concerned, I believe history offers no parallel to scientific studies for this double purpose.

He is a true teacher, though clad in a professor's gown or a peasant's frock, who seeks to trace the laws of nature in the tiny flower bell, that hanging over the brook nods and beckons to the mirrored flowers below; in that brook hastening to meet the sea; in that sea pulsating with life and thundering with power on cliff and beach; in that cliff mute yet eloquent with the infinite laws that grasp the smallest grain of sand and yet hold the flaming censers of the heavens in their places. Yes, he is the true teacher who recognizes in his pupils possibilities of infinite compass and tires not until reverently he sends them forth with flaming torch to search the labyrinth, and with golden key to unlock the treasure-vaults, of knowledge.

The time was when scholarship was a tyrant. To think thoughts other than those prescribed by the professors was a sin of no ordinary degree. Men were slaves to tradition and held everything on authority. Now, thank God, that day is past. Men will think, will investigate, and will study science, both in schools and outside of them, no matter what we may say. Science is becoming the universal language; you cannot stop it if you would. That school gets left far behind in the race if it fails to provide means to fit men to understand and use this universal language.

It is unwise to talk about not teaching science in schools; as well say teach no languages or no mathematics.

It will be seen that Mr. SPENCER treats the question very broadly. Reading his essay, we are disposed to doubt whether his enthusiastic admiration of the strength and beauty of science has not carried him beyond the comparatively narrow problem at issue—namely, the relative advisability of studying science at school, or of postponing the effort until the matured mind is more capable of making it successfully. It is from this practical standpoint that Professor KNOTT approaches the question. He is not a whit less emphatic than Mr. SPENCER in his recognition of the part played by science in everyday life. "At every turn," he says, "in the relations of life; at every demand for reform in the laws of society, the true solution will depend upon how far the underlying scientific truths are known. The former misapprehension of these makes present reform necessary. There is an awkward immortality in the mistakes of our ancestors, and our descendants will say the same of us. It is our duty, so far as in us lies, to diminish the possibility of these mistakes in the future; and hence the supreme importance of education of youth as an element in human progress." Holding, however, that the true aim of education is the formation of character not the mere acquisition of knowledge, Professor KNOTT pronounces against the teaching of science in school—by "Science" being understood Physics, Chemistry, Geology, Botany, Zoology, Physiology, Archæology, Psychology, and Sociology. He holds that boys and girls at school have not sufficient time to derive any real advantage from the study of these sciences, and that, even if they had time, the immature state of their intellect would reduce the study to a mere effort of memory without any exercise of reason. At the same time, he is in favour

of teaching scientific truths in school. With reference to this he says:—

Physical Geography, or what I should call for want of a better name Earth-knowledge, is certainly a subject which in the hands of a good enthusiastic teacher can be made most fascinating and instructive. But this is not a Science; it is a collection of facts to explain which one must borrow from all the sciences. I know from experience that children from 12 upwards can be made to take a lively interest in the simpler meteorological, geological, and biological phenomena, and can be made to appreciate the scientific hang of them. The winds and the waves, the clouds and the mists, the swollen winter floods, and the golden and ruddy sunsets that delight the eyes, are so near to us that it is very desirable in these days of mystery-conquering, that our children should know something of their essence. But don't call it teaching Science except in the widest signification of that word, and don't give a big name to it. What I strongly protest against is going through a regular course of physics, chemistry, or physiology, such as is indicated in the elementary text books which are used. The only science which might be studied to the bodily and mental advantage of youth is botany, for much can be effected in it with the field or the hill side or the river bank as the school-room. But let it not be studied at a desk and from a book, but from an enthusiastic teacher under the vault of heaven.

We must confess that in this matter we agree with Professor KNOTT. It seems to us that to teach specialties at school is to ignore the fact which nature so clearly emphasizes—that every mind is cast in a different mould. The enthusiasm of the age in behalf of science is apt to inspire educational excesses of the same nature as those which formerly condemned youth to protracted classical studies of no subsequent use except in the field of literature. What is wanted at school is a system of education confined, as far as possible, to inculcating truths, and familiarizing with facts, a knowledge of which is essential to every one.

After these essays we have one by the Rev. J. M. MCCAULEY, on "The Relation of the Academic to the Evangelistic Work of the Mission." The overwhelmingly important part which education plays in the work of Christian propagandism in Japan gives a special interest to Mr. MCCAULEY'S essay. Evidently conscious of a danger—if the term can be used in such a context—which must have been long patent to close observers; namely, that the Church and its interests may be subordinated to the academic phase of mission work, he seeks to provide an intelligent classification of mission functions, having due regard to their relative importance. His paper is followed by one from the pen of Miss E. P. MILLIKEN, who in terms of kindly sympathy, describes and applauds the system of "object teaching" pursued in the Kindergarten. Then we have an essay by Professor J. M. DIXON on the "Teaching of English to Japanese." Without desiring to draw invidious comparisons, we may say that at no educational institution in Japan have better results been attained in the matter of English instruction than in the Imperial College of Engineering under Mr. J. M. DIXON and his brother and predecessor, Mr. W. DIXON. The essay now before us has, therefore, a special claim to consideration. We shall not follow Professor DIXON into details, but content

ourselves with saying that he seems to have acquired a full appreciation of the difficulties which beset the path of the Japanese student of English, and that his essay cannot fail to be of great value to all engaged in the work of teaching a language which is destined to become more and more important in Japan. The Transactions conclude with an excellent essay by Mr. J. C. BALLAGH on "Commercial Training in Mission Schools," and with concise and interesting Reports on various educational institutions in Tôkyô. The Teachers' Association is to be congratulated on such an able and serviceable outcome of its labours.

#### ASAMA-YAMA.

(COMMUNICATED.)

"NEVER go up a mountain if you can help it," is a maxim I have acted up to for a good many years, taught by experience that, as a rule, the issue is disappointing and not worth the trouble and fatigue. Then, too, there is the going down. When MOHAMMED, as the story runs, asked his famous camel which he preferred, uphill or downhill, the sententious beast replied, "Curse them both." I agree with the camel. Another precept which long wanderings in many lands have brought home to me is, "never put up with discomfort in travel if comfort can possibly be had." Yet, alas for these good resolutions! both of them utterly broke down a few days ago, when I found myself within convenient reach of the steaming crater of the mighty Asama-yama. For, not only did I determine to essay the climb to the very respectable altitude of 8,500 feet, and not only was I the perverted miscreant who beguiled friend C—away from the dreamy indolence of hotel life in August at this most delightful spa called Ikao, but, of the several routes by which Asama-yama may be reached from hence, we chose the least comfortable and easy one, by way of Sannôkura and the Shizuma-tôge. There was some method, however, in the latter show of madness. By taking this road, and sleeping at the Wakasare-no-chaya as the guide-book suggests, we should attain the most advantageous starting-point for the actual ascent, which, according to SATOW, ought to occupy only 2½ hours from that most unsavoury tea-house—a matter of no little consequence to a man, like myself, somewhat stricken in years. We could also count on taking riding-horses, with English saddles (now the pride of Ikao), for a great part at least of the way; and we should, moreover, pass rapidly through the heated lowlands. The knotty point was, accommodation. The first night, to be spent at Sannôkura, was all plain sailing. But how about the second? Was it likely that at the Wakasare-no-chaya, in spite of its high-sounding name, we should find even such simple necessities as bed-dresses, tea, and eggs, and plates to eat

from? We concluded that, in a wild region 4,000 or 5,000 feet above the sea, and at the very foot of such an ugly and untrustworthy customer as Asama-yama, on one except a lunatic would care to keep any but the smallest possible fraction of his worldly goods. So a pack-horse was pressed into the service, to carry a little bedding and food. And the sequel proved that we were right.

It is an easy afternoon's ride—say four hours—from Ikao to Sannōkura, over the lovely heights of Haruna-san and the Tenjin-tōge, which no one with an eye to the picturesque can ever tire of exploring; then down the rugged glen which leads to that time-worn yet beautiful temple of Haruna, standing amid natural surroundings which, for wild and romantic grandeur, have perhaps no equal among all the superlative temple-sites in Japan; on to the little village of Haruna, and then to Sannōkura, over about four miles of undulating and picturesque uplands. At Sannōkura there was a passable inn, and, to our astonishment, ice. That there were mosquitoes goes without saying, for it was August, and we had descended to the contour of about 1,500 feet. There were also fleas; and, ah me! we had forgotten the flea-powder.

Next morning we were up betimes. But the *betto*, whose motto and watchword seemed to be *tadama*, were in no hurry to start. At last we got away, about seven o'clock, in a light but wicked drizzle, and amid a burst of kicking on the part of C—'s pony, which was carefully repeated at intervals for the rest of the morning. After passing Kawaura, five miles from our starting-point, the path rose rapidly, and all traces of habitation and tillage soon came to an end. Then, in a savage glen, narrow, rocky, and watered by a thundering torrent, we found ourselves at the foot of the Shizuma Pass, leading, by a weary ascent of some 1,500 feet over the steepest of zigzags, to the water-parting, 4,830 feet above the sea, which overlooks the lava-strewn uplands that spread away to the foot of the great volcano. We had now travelled about seven miles since leaving Kawaura, and had ascended some 1,800 feet from Sannōkura. Our tough and patient ponies—C—'s with the kicking pretty well taken out of him by this time—gallantly breasted the ascent, and in 55 minutes we were at the rest-house, now deserted and in ruins, that is mentioned in the guide-book, ten minutes short of the actual summit. Here we awaited the appearance of our breathless *betto*, and dismissed the saddle-horses—unnecessarily as it turned out, for the worst of the journey was over, and we might have ridden with ease every step of the way to the Wakasare-no-chaya. But we were bent on doing the remaining two hours on foot, to prepare ourselves in some measure for the work of the morrow.

The drizzle in which we had started was now something more than a "Scotch mist." We were fairly up in cloudland, and there seemed to be no chance of a break in the weather; when, to our amazement and delight, while waiting on the summit for the pack-horse, which, as usual, was far behind, the dense fog-masses that had hitherto enveloped us were swept away and aloft with almost startling suddenness, and, bit by bit, the whole lovely landscape, backed by the gigantic but still cloud-capped ridge of Asama-yama, unrolled itself at our feet, and lay in the brilliant light of as fair an afternoon as ever shone. Looking down from our lofty standpoint upon that smiling and peaceful scene, with its perfect combinations of forest-clad hill and verdant dale, moors of waving grass bright with flowers, and richly-wooded ravines, it seemed difficult to believe that but a century had passed since the awful summer time of 1783, when Asama-yama vomited forth ruin and destruction during a period of more than 40 days, turning the whole region for leagues around into a scorched and dismal waste, and covering the land with its ejectamenta to a depth of many feet. Yet the very ground on which you here stand is nothing but a thick layer of cinders, and, as you advance nearer and nearer to the volcano, further evidences of its fiery wrath are seen, sown plentifully on every hand. It took us nearly two hours to reach the Wakasare-no-chaya, as, at the guide's suggestion, we followed an easier but somewhat longer path from the woodman's hut at Higashi-yama (25 minutes abruptly down from the top of the pass) than that indicated in the hand-book. The road is fairly good all the way, but distinctly against the collar for the last *ri* or more.

The tea-house was, as we had feared, dismal, dirty, and smoky—little better than a shanty, destitute of rooms or any conveniences for guests, and frequented only by packers and pilgrims. We secured the half which was not kitchen, and made ourselves as comfortable as we could, under the steadfast gaze of the company, and in a balmy atmosphere of wood-smoke. Of food there was none, and we plumed ourselves on having taken the precaution to capture a fowl and some rice in the morning, at Kawaura, with which C—'s servant turned out a capital curry, preceded by a slightly mysterious soup. Even the water was none of the best, and had a distinct taste and odour of volcano. At least, however, there was little chance of *bacteria*—which was something. As for rest, we had none—at all events none in the way of sleep. We turned in, hopefully, soon after eight. But then the company, hitherto lost in silent wonder at our doings, began to find their tongues, and did not hold them till close on midnight, during which period the scene had been illuminated by a flaring torch that emitted the most abominable fumes. Long before

this, too, the fleas had found us out, invading us in myriads, and with a vigour that testified handsomely to the appetizing influences of mountain air. After midnight, snoring and the odours of the unwashed were added to our delights. And at two o'clock, just as sleep seemed to be at last, and in spite of every obstacle, coming to our weary eyes, the whole atrocious crew incontinently got up again, as if they had forgotten something before turning in, relit the fire, set that accursed torch once more on high, and started in afresh at their infernal chatter, with a zeal which knew no ending till it was time for us also to rise.

It was useless to start until dawn should afford light enough to make out the half-obliterated trail leading through the high moorland grass to the foot of the volcano, more than a mile away. At 4h. 50m. this was possible, and off we went, after a light breakfast, escorted by a guide from the tea-house, and each of us carrying a heavy detachment of fleas in his clothing. The ascent from this quarter, though extremely steep and tiresome, presents no difficulty whatever. A zigzag track, fairly well marked, and also indicated by small cairns when the bare ash-ridge is reached, climbs a succession of stiff ascents at slightly varying inclines, the average of which is about one in two. Its surface is smooth, and on the whole tolerably firm, though at the higher parts the ashes yield somewhat to foot-pressure. As far as rough mountain climbing goes, a good and tried hill-man might make the ascent in stout slippers. But beware, oh ye of tender feet, or weak of heel and ankle! not to attempt to do it; nay, rather, to have ankle-boots, light if you like, but *boots*, and withal gaitered above, lest, as with poor C—, who, unprepared for hill-work, had only shoes, the hard, sharp grit and cinders torture and lame you when descending. At about 5,500 feet above the sea, and 67 minutes from the tea-house, our path joined that from Oiwake. Here vegetation ends, and the upward way lies over the huge brown and utterly naked ridge that rises to within 15 or 20 minutes of the existing crater; when, descending slightly to the right and crossing a small hollow, you reach the foot of the last steep cone, and soon afterwards find yourself at the crater's edge.

We were favoured with a lovely morning for our ascent, and passed above the clouds just in time to see the sun's first rays leap gladly forth to kiss Asama-yama's crown, and, as his daily stage wore on, swiftly embrace the whole mountain side, kindling its dull colour into warm life, until at length it fairly shone like burnished copper. Now and then light driving mists swept past us and softened the glare; and at this early hour and high elevation, and with a brisk invigorating breeze blowing right across the direction of our path, the solar heat was scarcely felt at any part of

the ascent. It took us exactly two hours and a half to reach the summit from the tea-house. Arrived there, we looked around upon a strange and splendid scene. While half of the landscape was clear, the other half was hidden by a billowy sea of the softest cloud, 3,000 feet below us, fleecy, everchanging, and shining with silvery light of extraordinary beauty. All round from the north, through east to well-nigh south, naught was to be seen but this vast and brilliant ocean, save where here and there one of the higher peaks raised its head, dark, distant, lonely, and half-abashed, above the glossy surface. The rest of the view was, as such views always are, vast, grand, and commanding, showing at a glance the physical configuration of an enormous area, spread beneath as in a model. But for sheer beauty and rarity I am disposed to give the palm to a bird's-eye view of cloudland, seen as we saw it in all the brightness of the morning sun.

Now for the volcano. To say that its sights and sounds are worth the labour of getting there is but a feeble expression of the truth. Short of the tremendous scenes that attend an actual eruption, there is nothing on earth which better conveys to the mind some inkling of one of the most potent and terrible agencies in the whole mechanism of the universe than the spectacle of a live and steaming crater, such as that of Asama-yama. Here, out of the depths of a hideous and to all appearance bottomless pit, with burnt and ragged sides, vast clouds of choking vapour rise angrily and at prodigious speed from the molten matter far below. Smaller jets dart with loud bubbling and hissing from a thousand holes and crevices in the crater-walls. From beneath, at a depth that no one has yet accurately gauged, you hear the ceaseless churning—now a moan, anon a dull roar, and sometimes accompanied by tremors of the ground—which tells of the infernal forces that are ever at work in the bowels of this our Earth—forces the exhaustion of which, at some epoch yet to come, will be the beginning of the end, the knell of all life of whatsoever kind upon its surface. Among all the strange and fearful things that are to be seen in the world's many mansions, is there any the natural phenomena of which are so impressive as those of a live volcano? I think not. And I think that no man, on seeing them for the first time, can help feeling that the occasion is indeed a day in his life.

As for the much-debated question of the size of Asama-yama's crater—to which, by the way, I assign a slightly oval form, rather than circular as stated in the guide-book—estimates, as most people know, have ranged between very wide extremes. While MARSHALL makes the diameter 200 yards, and SATOW states the circumference to be three-fourths of a mile, VON DRASCHE goes to 1,093 yards (1,000 *mètres*) for the

diameter, and the Japanese to  $3\frac{1}{2}$  miles for the periphery. Reduced to a common denomination, and assuming a roughly circular form for the crater's edge, these estimates are nearly as the numbers 10, 21, 85, and 150! Again, a recent correspondent informed you that it would probably take  $7\frac{1}{2}$  minutes' "quick walking" to get round the circumference. I believe SATOW to be not far from the truth. I divided the circumference into two, as nearly as I could by eye, and certainly within very small limits of error, and then proceeded to walk round the windward half-circumference, at a steady pace, learned by some experience, of three miles an hour. It was not practicable to attempt the leeward half without risk of suffocation. The time taken was just six minutes, corresponding with a periphery of 1,056 yards, or 264 yards less than SATOW's estimate. Allowing for a slightly oval form, the longest diameter is probably about 370 yards. The crater-rim is so well marked at nearly every point, and the path to be followed so obvious, that no two or more men attempting the measurement by pacing would be at all likely to take sensibly different ground.

Then, as to the depth—that mysterious, unknown quantity which is so vastly more interesting than the question of circumference. It is held by some who have had good opportunities of judging, that the depth to the surface of the burning matter must exceed 1,000 feet. One witness, indeed, testifies to having seen the bottom itself fully 1,500 feet below him. Professor MILNE, on the other hand, leans to a much more moderate figure, arguing that the greater estimates are contrary to all experience. Your correspondent, just now referred to, claims to have seen the glowing surface by night, at a depth which he sets down at only 200 feet. But, without knowing whether he or any one of his party was an expert at the ticklish work of estimating heights, and without hearing more exact particulars of the manner in which such a very difficult observation was carried out, even in the brightest moonlight assisted by whatever light may have been shed from below, I prefer to rely on my own belief that at the clearest moments I saw the naked crater-wall at a depth of about 300 feet below me. The widely different assumptions of so simple a matter as the crater's span, which I just now instanced, sufficiently show the lengths to which men are liable to err in judgment when face to face with awe-inspiring phenomena. Nevertheless, I strongly lean to the moderate view of this question. The crater-walls are not perpendicular, and the convergence already apparent at the depth to which I was able to follow it favours the belief in my own mind that the true bottom probably lies at between 500 and 600 feet from the surface. It is to be hoped that fortune will be

kinder than she was last April, on the next occasion when Professor MILNE essays to settle this vexed question by actual measurement with a sounding-wire.

The descent to the Wakasare-no-chaya was—for me, at least, with knees that in the past have borne almost daily, for months at a stretch, the jar of similar work—hardly less tiring than the ascent. We reached the tea-house in 100 minutes from the summit, after a total absence of  $5\frac{1}{2}$  hours. And thus ended our ascent of Asama-yama, an undertaking so full of reward that I, for one, shall never forget it.

H. S. P.

### CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

### THE SILVER QUESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your note to "Negozio's" letter in the *Mail* of August 24th, you recommend him to examine "figures comparing the effect produced upon the gold value of silver by its demonetization, with the effect that can reasonably be attributed to any increase in its production." I would gladly be informed where such figures are to be found, for I have been under the impression that such comparison could not be made, as demonetization and increased production were contemporaneous, and, to me, it seems that the two causes cannot be separated, but must be treated together as being the prime reason for the fall in silver.

That the United States is bound by every consideration of public faith and policy to pay its bonds, principal and interest, in gold coin, seems to me so clear that I am surprised it is ever questioned. In 1869 "the faith of the United States was solemnly pledged to the payment in coin, or its equivalent, of all obligations of the United States, not bearing interest, known as United States notes." This has been emphasized time and again by repeated acts, resolutions, and by government practice, and to say that that word "coin" did not mean an equivalent for the coin then used, be it gold or silver, is a quibble or worse. At that time the silver dollar was worth 102.47 cents in gold, and no injustice—except to the United States—would have been done by paying the bonds in silver, but to-day the case is different, and there is very respectable authority for the statement that the silver dollar of 1886 is worth some twenty cents less than its counterpart of 1869, and if the silver men are right the U.S. can to-day pay a thousand dollar bond for which it received that number of dollars in gold (take the bonds sold since 1879 to avoid all dispute) in coins which contain in silver the equivalent of \$730 in gold and \$270—dollars "by act of Congress." It is as competent for Congress to print on a picture of a horse "This is a horse by Act of Congress," and expect it to draw a carriage (to borrow an illustration), as it is to stamp on 73 cents in silver "one dollar" and so make it equal to 100 cents in gold. "X." makes some curious statements about the American trade-dollar. The joint resolution he refers to provided "that for a period of six months the United States trade dollars \* \* \* shall be received at their face value in payment of all dues to the United States," also "that the holder of any United States trade dollar, during the period aforesaid, on presentation of the same at the office of the Treasurer of the United States, may receive in exchange therefor a like amount and value, (italics mine), dollar for dollar, in standard silver dollars or in subsidiary coin, at the option of the holder." These provisions were stricken from the resolution before it left Congress, and, the President not signing it, it is not a law, thank heaven. But note the first part and then turn to "X.'s" statement. "The fiat of Congress goes forth and the 73 cents of silver in the trade dollar becomes the equal of 100 cents in gold." Becomes equal! how? By being received for

dues to the United States. Pshaw! "X." is as well aware as I am that that is not equality, and further more that the trade dollar passes current in the United States—whenever you can get any one to take it—for its *real value* and not one cent more.

But the latter part of the resolution is too good. This 73 cents "made a dollar by fiat of congress" is exchangeable—for gold dollars? Oh! no, your silver men are too sharp for that—"for like amount and value dollar for dollar" in silver.

I find I must correct an impression conveyed by what I wrote in a former letter about the act of 1873. It was in 1853 that subsidiary silver was made legal tender to the amount of \$5, and in 1879 the sum was increased to \$10.

The demands of "X." and those who agree with him, are the purest theory, while their result is eminently practical. They are based on the singular delusion that governments, in some mysterious way, have the power to give value to a thing not inherently possessing it. This has been denied so often by economists that it has become axiomatic. Its disproof can be found in the history of almost every nation. Yet, in spite of all, it thrives and is the foundation of the most widespread financial fallacy of our day. Human knowledge is the sum of human experience, and if it has taught men any one thing it has shown them that for a commercial nation, one of rapid exchanges, gold is the best medium. It has proved itself, by centuries of use, to be exposed to the least variation, and, under a largely increased output, has shown the greatest steadiness. It is ever constant (or practically so) in its promises and its power, and contains in itself its own integrity. The progressive nations of the world have one by one abandoned silver for gold, and each has done it from that motive, just in itself, which has animated men and nations alike from the beginning and will to the end—self-interest. That there is not enough gold in the world cannot be proven, and high authorities can be cited to show that such calculations are not worth the paper they are written on. As improvements are made every day in labour-saving machines, so also is greater intelligence being brought to bear to increase the utility of gold—the greatest economizer of labour. The extension of the clearing house, and the further development of the check system, on the continent of Europe especially; the reduction of gold reserves, which experience, and a better understanding of economic science, are advocating, will all serve to release imprisoned gold and send it forth on its busy mission of good to all mankind. Were gold demonetized depreciation would follow and production must cease. But after a time it would be absorbed in the arts and it would not be very long before it would resume its former value. So it is and will be with silver. To arbitrarily fix its value is impossible. Remonetization would certainly enhance the price of silver, simply increasing the demand. But if this is ever done it must be at an ever varying ratio according to the market price. That is the history of the past, and it must likewise be the practice of the future.

Economists agree that, from the very nature of things, silver must ultimately rise, but this will come about in obedience to natural laws and not those proposed by our silver-loving friends. When a nation throws itself single-handed into such a conflict as the United States is now engaged in—the battle for silver—though we may admire its disinterestedness (according to "X.") and courage, we can not say much for its good sense and judgment, and we wonder why the most practical nation in the world adopts a policy so manifestly opposed to its own interests as a commercial people. It is almost lost sight of now, but the present silver agitation (though it has passed beyond that) had its inception in protection; and just as the 14 millions unprotected wage earners are now taxed for the benefit (?) of the 3 millions employed in protected industries, so the people of the United States are now taxed to the tune of 24 millions a year, the country made ridiculous in the eyes of the world and its highest good jeopardized, because ten years ago a handful of mine-owners saw their profits reduced by the fall of silver, and the result is the piling up of a useless mass of silver which—"X." to the contrary notwithstanding—the people will not have. Whether they can continue so resolutely to refuse it remains to be proven. Let us hope they can for the sake of the good name of the United States.

Yours respectfully,

A YANKEE.

Yokohama, Japan, September 2nd, 1886.

Our correspondent advances a number of statements in the 5th paragraph of this letter, not one of which could, he believe, be proved. Further, he seems to associate the present inexplicable policy of the United States under the Bland Bill with the whole silver question. The two have no connection whatever, so far as we can see.—E. J. M.]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read with much interest the leading article on the Silver Question which appeared in your issue of the 2nd instant and which conveys the idea that I take as  $\equiv$  satisfaction to myself the advantages which any point in the controversy may appear to give to my side of the question. I assure you such is not the case, and if you knew me personally you would soon be assured of the fact. I have no interest at stake, no advantage to gain, and not a single person except yourself knows who is writing these letters. My desire is to remain unknown; at the same time I desire to place all the meagre knowledge I possess on this subject before the public in the hope that I may perhaps do a little towards pointing out to the commercial community where one of the great evils lies which hamper their interests.

In a note which you put at the end of my letter published on the 24th ultimo, you said, "Has it ever occurred to 'Negozio' to compare the effects produced upon the gold value of silver by its demonetization with the effect which can reasonably be attributed to any increase in its production." To this I replied, as appears in your issue of the 28th: "After a long study of the question I have come to the conclusion that silver was only demonetized when it was found impossible to keep it at a fixed value with gold." That is only my private opinion, and I based it upon what I said further on, viz.:—"The fact of European governments throwing their surplus silver on the markets is a convincing proof that they saw that the discovery of extensive silver mines in many parts of the world would produce such a quantity of silver that its gold value would considerably decrease;" and I also went on to say, "A time came when these two metals, like all other metals, must sever their union. The great gold mines of Australia, The Cape and California, were discovered and such quantities of the yellow metal were poured into the markets that although silver had been also discovered in large quantities gold was the more plentiful, and the value of the two metals, for the first time, varied with silver at a premium." Now, Sir, you say in reference to this: "We have thus two diametrically opposite statements: first that silver was demonetized because of its excessive production and the consequent impossibility of maintaining its gold price were foreseen; secondly that the demonetization took place when, gold being more plentiful than silver, the latter was at a premium." I do not know how you can make out that I said demonetization took place when, gold being more plentiful than silver, the latter was at a premium, for I distinctly said that when the value of the two metals varied (not when silver was demonetized), it varied in favour of silver. England demonetized silver in 1816, and as far as I can learn, she did so because of the cry about the enormous yield of silver which the newly opened mines in Mexico were likely to produce. Those mines turned out to be bubbles, probably through mismanagement and were the ruin of a large number of English bondholders. France demonetized silver in 1850, about the time when those mines were reopened and beginning to become productive, but it so happened that about the same time gold from Australia and California began to pour into the markets and kept the two metals equally balanced as far on as 1875. Now, silver had been demonetized sixty years in England and twenty-five years in France, before the market value of that metal varied with gold. Now, as silver held its own for so many years after it was demonetized, perhaps you will tell us how much demonetization has had to do with its depreciation during the last ten years. I admit that if silver had not been demonetized; that is, if all the governments in the world had continued to give so much gold per ounce for it and have continued to coin it without limit, silver would not have depreciated in value with gold. How could its value depreciate when it was made permanent by an universal act? But if silver held its own for such a number of years after this support was taken away I cannot see how anything but over-production can have caused its depreciation now. Sir, you say you expected I was going to support my arguments with figures. I distinctly avoided these because I did not wish to fill up the whole of your paper—and it would require it and more to do the subject justice. However, you have thought well to use figures and to use them in your own way. What is the use of quoting figures of statistics during the time the two metals had one standard value to prove that either demonetization or over-production caused a depreciation in the value of silver when no depreciation had then taken place? If you will favour your readers with the yearly production of silver and gold from 1805 to 1875, and then those from 1875 to the present time they will at a glance see where the over-production comes in. In have

not these figures at had therefore I ask you to favour the public with them. In another case you misconstrue my meaning. When I said "silver would no longer be looked upon as a precious metal, but be used only as copper and nickel," I never meant it to be understood that silver would come down to the same level as copper and nickel. What I intended to say—and I believe that the complete passage conveys that meaning—was that if America threw all her surplus silver on the market the price of silver would be so low that it could not be used as a means of international payment, but that a gold coin would have to take its place for that purpose and that silver coins would be given only a national fixed value with that gold coin, as copper or nickel coins have their fixed value with the same.

Sir, you go on to say that I argue the question of silver as though it were merchandize and that I fail to distinguish between metal and money, and you add:—"The former indeed is merchandize, but so soon as it has been stamped at a mint and has become a legal medium of payment at a fixed rate of value—so soon, in short, as it has become money—it acquires special properties. One of those properties is that it possesses a certain independence with regard to the rate of its production." This is an entirely new theory to me. I was under the impression that money was only coined for convenience of the public first to assure them that it was genuine metal and then that the coin contained a certain amount of metal. And I was under the impression that a man could take a lump of gold and receive the value of that gold in gold coins in those countries where gold is the standard coin, without losing anything but the cost of minting or that he could take a bar of silver and exchange it for its weight in silver coins in those countries where silver was the standard coin. I always considered money merchandize in the strictest sense of the word, in all international transactions, and that its value varied with all other merchandize in as much as to-day it will buy more and to-morrow it will buy less just as the money is plentiful and the articles exchanged for it are scarce, or vice versa. Sir, I think you are regarding money from a national point of view only. A government can stamp a piece of silver and say it shall be worth so much gold, or it may stamp a piece of copper and say it shall be worth so much silver, although the metal in neither is really worth the value put upon it. That is all very well as long as the coins remain in the country, because the people know that their government will give them their proper value when applied for, just as is the case with paper notes. But take those coins out of the country in which they were made and then they will immediately lose their face value and become worth only their metal value. If you sent to Europe 1,000 sen you would not get 10 silver dollars for them, but only the value of their weight in copper at the market price of the day. Just the same with silver coins, you simply get a lump of silver the weight of the coins you have taken or you get gold coins in proportion to their value with silver. But if you take gold, as gold is only payable by gold you get the value of your metal in gold coins. I cannot therefore see how metal when coined into money can have any independent value in international transactions. The gold coins of one nation and another are only valued by the weight of metal in them and not by any face value which a government may chose to put upon them, and it is exactly the same with silver coins. All go by their weight when tendered for payment. I regard everything as merchandize, and I cannot see how converting any metal into coin can enhance its value in the sight of the world. If gold were demonetized to-morrow its value would not depreciate unless new discoveries greatly added to its present quantity. The price of any article is governed by the demand for that article in proportion to the supply; if it is in great demand and scarce, it becomes dear, if it is in the same demand and plentiful it maintains its value, but if it is in small demand and still plentiful it loses its value, while if it is in small demand but scarce it does not depreciate. The nations of the world have shown their preference for gold and as it is scarce it has become dear. Silver is plentiful and in little demand, consequently its value has diminished, I do not therefore see how it is possible to keep the two metals on an equal footing, because everybody prefers gold. It is the natural inclination of the world, and until this inclination is changed a fluctuation between the values of the two metals will continue. It is these fluctuations which hamper commercial transactions; therefore it will soon have to be decided how they can best be avoided. Will it be easier to raise silver to a ratio with gold; to drive gold out of the market as a standard coin and make silver the grand basis of exchange; or to get every nation to place all their coinage under a gold standard?

My opinion is that the latter will be the easiest and that it will be the one which will be adopted, although I shall welcome either if it will accomplish the desired end.

Yours faithfully,  
Yokohama, 3rd September, 1886.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your note to my letter of this date, you express your doubts of my ability to prove certain statements made by me. Setting aside the fact that the burden of proof is on the side of my opponents, I would point out to you that—even had I access to the necessary authorities, which I have not—what might be very clear to me would not be admitted by you to be proof. I embodied in the paragraph referred to, what my limited reading on this subject has brought me to. It is my opinion that silver is totally unsuited to be the sole or principal currency of a commercial country, either permanently or temporarily (admitting the theoretical soundness of the compensatory action of the French bimetallic law within certain limits), and I am therefore unwilling to see it unlimited legal tender; I do not believe that it is afflicted with an incurable disease which is without remedy, any more than I believe that the world can get on without it. Pardon me, too, if I dissent from your statement of the "conspicuous contradiction" in my first letter, as pointed out in your leading columns this morning. You have apparently lost sight of the fact I stated, that the coins the merchant receives for his tea "have a market value," which is "the intrinsic value of the metal they contain." "Their worth"—"their power of being exchanged for a service"—comes rather from the almost universal experience of men that gold and silver have superior advantages as media of exchange. This experience has been crystallized into the minting laws, which determine the amount of either metal which shall be contained in a coin; but with the power of this coin to purchase a commodity or a service, the law has nothing whatever to do, that "is regulated by the intrinsic value of the metal it contains."

If you will look at the statements from my standpoint, that coin is merchandise, they are, I think, not inconsistent.

Thanking you for your patience and courtesy, I am, yours respectfully,

A YANKEE.

Yokohama, September 3rd, 1886.

#### BISHOP BICKERSTETH.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have only on my return from the country seen the correspondence which Mr. Irwine published in your columns of the 31st ult. As, however, no remarks have been made on it in the meanwhile, you will perhaps allow me to say a few words. I have no doubt that in the eyes of many, Mr. Irwine stands as the champion of the rights of Christ Church Congregation against the active aggressiveness of Bishop Bickersteth. The matter is, I believe, capable of being placed in a very different light.

The facts are simply these. For years past English congregations have been growing up in various parts of the world, quite outside of any English jurisdiction—for instance, in Europe, in various towns and watering places in France, Italy, Germany, &c.,—just as the Yokohama congregation has grown up in Japan. These congregations have obtained, in one way or another, English clergymen as Chaplains, and in the interest of the congregations themselves the Bishop of London, or the Archbishop of Canterbury, has appointed Suffragan or Missionary Bishops who should attend generally to their wants and perform such Episcopal functions as might be required. Of course the whole matter is voluntary. The Bishop has not, cannot have, any legal right of visitation. His sole right depends upon the invitation of the congregations themselves. As a matter of fact, however, there has never been, so far as I am aware, any case of a refusal to accept these Episcopal ministrations. And among others for this special reason—the Episcopal supervision is an easy defence on the part of the congregation against indolence, eccentricity, worldliness, or general inefficiency in their minister. If he does not perform his duties in a way befitting a clergyman of the Church, the congregation has a quick remedy in an appeal to the Bishop. Of course they have also another remedy in their own hands in a refusal to any longer continue the payment of his stipend to an inefficient minister. But there is generally a reluctance to adopt this course, and, as a matter of fact, the other method of insisting that their Chaplain should be responsible to the Bishop, and so be in a position to

receive admonition, is the course universally adopted. It is quite plain, then, that Mr. Irwine, instead of really upholding the rights of the congregation against the Bishop, is actually depriving them of a suitable and speedy means of procedure against himself, if the necessities of the case should demand it, and so establishing himself in a position independent of all lawful authority.

To anyone who knows Bishop Bickersteth, the idea that he has in any way presumed upon his position or attempted to arrogate powers to which he was not entitled, is in the highest degree absurd. In sending the Archbishop's letter to Mr. Irwine he acted only in the usual formal manner. And, anxious as I am to avoid all unbecoming harshness of expression, I can only characterize the tone of Mr. Irwine's reply and the haste betrayed in its publication as little less than indecent.

But now there is another, and, to my mind, far more serious, aspect of the case. Does the congregation—for it lies with them—uphold Mr. Irwine in his contention that Christ Church is a brand new Church—a new organization, without any real connection whatever with the great historic Church of England—"purely," as he says, "congregational." For if so, it is formally a schismatic body, and its standards of Doctrine are only such as Mr. Irwine may choose to propose. He is not only its Priest, but its Pope. I cannot think for a moment that the congregation will accept this position. It would be to their great spiritual loss did they do so, and in this case I venture to say that no clergyman of any character or standing would ever again enter the doors of the Church to take part in its services. The evidence, however, to my mind, is all the other way. I have not seen the trust-deeds to which Mr. Irwine refers, but it would take a good deal to persuade me that, however they may be worded, they were intended to separate Christ Church from that body from which it sprung. Its origin, its whole past history, refutes this charge. Would, for instance, its late incumbent have come to Japan to minister to a Church which he did not then believe to be fully in communion with the Church of England, to be absolutely one with it? Or, again, why did Mr. Irwine himself accept—as I believe he did—without protest or murmur, a license from the late Bishop Poole, who was a Bishop of the Church of England sent out under precisely the same circumstances as Bishop Bickersteth? Why did he defer his protest until after some months of intercourse with the Bishop, and then hang it upon so weak a peg as the non-possession of a register? These are circumstances which I think Mr. Irwine may be fairly called upon to explain.

These facts, then, which I have mentioned, all seem to contradict Mr. Irwine's contention, and I feel confident that the congregation of Christ Church will not allow themselves, for any reasons such as Mr. Irwine adduces, to be deprived of the Spiritual Ministrations of Bishop Bickersteth. Nor will they, severing themselves from a great Church whose standards of doctrine have long been settled, place themselves at the mercy of an individual teacher. I cannot believe it, and I challenge Mr. Irwine to state whether his position was taken and his statements published with the knowledge and approbation of the Committee of Christ Church Congregation.

I am, &c.,

A. C. SHAW,  
Chaplain H.B.M. Legation.

Tōkyō, September 4th, 1886.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In reply to a letter of the Rev. A. C. Shaw, which appears in your journal of to-day, let me quote at the outset the Rev. Mr. Shaw's own words. Mr. Shaw says: "The Bishop has not, cannot have, any legal right of visitation." It is obvious that as Mr. Shaw makes this admission, his letter, as an answer to mine, was, to say the least, superfluous.

Mr. Shaw goes on to say that "in the eyes of many, Mr. Irwine stands as the champion of the rights of Christ Church against the aggressiveness of Bishop Bickersteth." It seems to me that it is the "champion" of Bishop Bickersteth who is "actively aggressive," and I extremely regret the exhibition of such a spirit towards me in one with whom I have always been on the most friendly terms.

Mr. Shaw then asks: "Why did he defer his protest until after some months of intercourse with the Bishop?" Simply because I am not in the habit of protesting when there is nothing to protest against, or of interfering in the affairs of my neighbours. Again, Mr. Shaw asks: "Why did he, as I believe he did, without protest or murmur, accept a license from the late Bishop Poole?" I might ask in return: "Where did Mr. Shaw get the material for his belief?" but, supposing that a useless parchment was accepted to humour a dying man, what then?

With regard to Mr. Shaw's last question and the challenge it contains, he has no right to demand explanations from me, but nevertheless I may tell him distinctly that I am entirely responsible for my own actions. I never shoot from behind a tree.

And now let me ask my interrogator, merely as a matter of interest, who constituted the Rev. A. C. Shaw the champion not only of Bishop Bickersteth, but also of the Congregation of Christ Church, whose minister I have been for the past seven years? Disregarding references to "schismatics and 'Popes,'" and his lucid exposition of our affairs, I will call attention to some of the more remarkable of his assertions.

"Episcopal supervision," according to Mr. Shaw, "is an easy defence against indolence, eccentricity, worldliness or general inefficiency in a minister." There may be countries where it is so; but in England episcopal supervision is the slowest and most expensive defence conceivable. I have known a case where "episcopal supervision" was evoked to remove a drunken, degraded clergyman. It took ten years and many hundreds of pounds to get it done, and after all he went back again to his post! Besides, the thing cuts two ways. If the clergy were the easily handled tools of the Episcopacy that Mr. Shaw credits them with being, we should never have had John Wyclif and the English Bible, and we should have had Popery and the Confessional. As it was, when Laud had the pull, we lost the Dissenters, keeping out as noble men as ever lived.

But apart from all this, when the Chaplain of Christ Church is believed by the Committee of the Congregation to come within Mr. Shaw's category of indolence, inefficiency, &c., they will settle the matter with him directly, in the manner of gentlemen, and not go sneaking elsewhere.

Further, the Reverend Mr. Shaw states that "to anyone who knows Bishop Bickersteth, the idea that he has in any way presumed upon his position or attempted to arrogate powers to which he was not entitled, is in the highest degree absurd." Is the Reverend Mr. Shaw aware that his own Minister, the Honourable Sir Francis Plumkett, the Representative of Her Majesty, was obliged recently to request Bishop Bickersteth, to desist from styling himself "Edw. Japan," as that would imply that he was Bishop of Japan, and a territorial jurisdiction to which he was not entitled?

Neither is the Reverend Mr. Shaw, probably, aware that a proposition was recently made by a Bishop to amalgamate the funds of Christ Church with those of the populous centres of foreign life, Tōkyō, Kobe, Nagasaki, Hakodate, and Nigata—in short that those happy places should dance while the community of Yokohama paid the piper! The community is a generous one; but it will hardly appreciate the claims of the *non-ego* being carried quite so far as that!

Finally, let me tell the Rev. Mr. Shaw that if he supposes that his gratuitous interference with our affairs can shake the relations of kindness and confidence that have subsisted for so many years between my congregation, its officers, and myself, he is profoundly mistaken. We shall continue, as heretofore, to work together on the broad basis of Christianity, namely love to our fellow men, and when the interests of my congregation require the presence in my Church of a Bishop or "a clergyman of character and standing," I venture to predict they will both be forthcoming, and I know that they will be gratefully and suitably received.

I remain, dear Sir, yours faithfully,

E. CHAMPNEYS IRWINE,

Chaplain of Christ Church.

Yokohama, September 7th, 1886.

#### TRANSLATIONS FROM NATIVE JOURNALS.

##### THE NAGASAKI AFFAIR.

We translate the following documents, purporting to be the complaints presented to the Chinese authorities with regard to the riot of the 13th ultimo—the first from the *Nichi Nichi Shimbun* and the second from the *Fiji Shimpō*—

Letter of indictment sent by the Public Prosecutor of the Nagasaki Court of First Instance to the Chinese Consul.

About 8.30 p.m. the 13th of August, the 19th year of Meiji, a man named Ohatsu, and four other sailors from your squadron of men-of-war in the harbour, created a disturbance in the licensed brothel of Nakamura Shinzaburo, in Yori-ai-machi, Nagasaki, and destroyed a quantity of furniture and other articles. The proprietor sent for the police, and a police constable named Kurekawa

Original from

Koshiro, stationed at the police office at Maruyama, answered the summons. He endeavoured to pacify the sailors, but as they still continued to be very disorderly he attempted to arrest them and take their names. Upon this they all got away from him, but afterwards presented themselves with many other sailors carrying Japanese swords before the Maruyama police office. Kurokawa observed that Ohatsu was present among these men and attempted to arrest him, but the sailor drew a sword and struck him once on the forehead and again on the top of the head with the weapon, inflicting a very dangerous wound. These facts are apparent from the criminal record made upon the testimony of the police constables Mori Toshihiko, Nishi Tosaku, and Shimauchi Yoshiaki, who were actually present on the occasion; the evidence of the witnesses Nakamura Maukichi, Yamaguchi Gisaburo, Imamidu Buhachi, and Kawaguchi Usaburo; the statements of the constable Kurokawa Koshiro, and of the proprietor of the brothel, Nakamura Shinzaburo; medical reports as to the injuries inflicted; the sale of swords to the sailors by Fusuya Shinzo; the bloodstained uniform of the policeman Kurokawa; the sword made use of by Ohatsu, and other articles. The author of the damage to property being Ohatsu and four other sailors whose names are unknown, and the assailant of the police constable being also Ohatsu, we have to request that you will strictly investigate their actions and mete out such punishment as may be necessary. We also submit for your consideration the question of compensation for the loss and damage sustained by Nakamura Shinzaburo. We are at present investigating this last fact and will forward you full information as it comes into our possession.

Letter of indictment sent by the Chief Public Prosecutor of the Nagasaki Court of Appeal to the Chinese Consul, the 24th ultimo.

On August 15th, the 19th year of Meiji, officers and sailors from the four men-of-war of your country now at anchor in the port of Nagasaki came ashore in large numbers. About 6 p.m. the same day, while the Japanese policeman Sakamoto Hanshiro was on his beat at Hirobaba in your settlement, one of three sailors gave him a violent blow on the breast with his shoulder. Believing that his chief duty consisted in protecting people, the policeman did not take much notice of this, but the sailor again insulted him by flourishing a knife before his face as if to injure him. The policeman still forbore taking offence. Shortly after, another sailor of your country insulted the policeman Kawamura Kintaro, who was on duty at the same place, in nearly the same manner, but Kawamura also overlooked the offence. The movements of the sailors of your country being unusual, two policemen, Fukumoto Tomisaburo and Kuroda Unsho were specially dispatched to Hirobaba. At 8 in the evening, Constable Kitamura Kaoru was sent to relieve Saltamoto and Kawamura, who accordingly returned to the Unegasaki Police Station. Not long after their departure, when the remaining policeman Fukumoto, Kuroda, and Kitamura were walking through Hirobaba-machi, one of your countrymen suddenly attempted to snatch away the official staves of Fukumoto and Kitamura, and further passed his hands over their faces. The policemen refrained from noticing these insults, but had gone only a few paces when your countryman above alluded to again attempted to possess himself of Fukumoto's staff, while another of your countrymen assisted the offender from behind the policeman. When the policeman recovered the staff from the hands of your countrymen, fifty or sixty of the men of your country's war vessels instantly rushed out of the houses of your countrymen, as if in answer to a signal, and surrounding the three policemen, attacked them with swords, sticks, stones, and tiles, killing Fukumoto, and inflicting severe wounds on Kitamura, who fell senseless. The other policeman, Kuroda, was also wounded, but he was able to report the affair to the Unegasaki Police Office. Several policemen were instantly dispatched from the latter office, but by this time more than a hundred sailors of your country had assembled at Hirobaba, and these attacked the policeman with various lethal weapons, under the lead of a man bearing a drawn sword, and clad in black clothes, who appeared to be a naval officer. The sailors of your country advanced as far as the gate of the Unegasaki Police Office. Their number being very large, and these being no other mode of resisting them, the police officials defended themselves with their swords and staves, and after a severe struggle between Hirobaba-machi and the Police Office, the affray ended some time after midnight the same night. The names of those killed and wounded by your sailors and officers are as follows:—

KILLER.—CONSTABLE,  
Fukumoto Tomitaro.

WOUNDED.—(SERGEANTS.)  
Matsuzaki Korenji | Yoshida Kaichiro.

CONSTABLES.  
Miyazaki So. | Miyazu Gohachi.  
Suge Masaji. | Funase Satoru.  
Shibata Kunitaro. | Eguchi Kajiro.  
Kanda Unsho. | Seisho Takoyoshi.  
Kishikawa Tsutakichiro. | Sakamoto Hanshiro.  
Kitamura Kaoru. | Konikawa Nashiko.  
Yamaji Nobukiyo. | Mizusaki Shogoro.  
Kamiyoshi Shigejiro. | Mayeda Iwajiro.  
Kinoshita Saikichi. | Maki Totaro.

POLICE-BOATMAN.  
Watanabe Tsurunosuke.  
EMPLOYEES OF THE PRUGASAKI POLICE STATION.  
Hamada Shigematsu. | Taniyama Eikichi.

On receipt of the news of the disorderly conduct of your countrymen, the Nagasaki Police Office ordered constable Mori Toshihiko to proceed to the spot. He called a *jurikisha* and proceeded at once in the direction of Funadaikumachi, but as he was passing over Shianbashi, he was surrounded by a large crowd of the sailors of your country, who had collected in that vicinity. The policeman was dragged from the *jurikisha* and mortally wounded. Several policeman ran to the rescue, but they were all very hardly pressed by your countrymen, whose strength was now considerably increased by the arrival of numerous sailors from Maruyama. The policemen all received wounds, and were at last compelled to use their swords and staves. After hard fighting the sailors were put to flight. The names of those Japanese who were wounded in this fighting are as follows:—

CONSTABLES.  
Mori Toshihiko (since dead). | Otakara Seiichi.  
Nishi Tosaku. | Sakabe Moon.  
Higashi Heikaku.

This violent conduct of the sailors and officers of your country was caused by the arrest of one of the sailors of your country on a former occasion on account of injury inflicted on a Japanese policeman after a disturbance at a brothel at Maruyama. The officers and sailors of your country's war vessels conspired to retaliate on the police officers. This is proved by the defiant attitude of your sailors at Hirobaba towards our policemen, and the concerted attack made on the policeman who recovered his staff, and further by the conduct of your sailors at Funadaikumachi. Moreover, from the fact that the greatest number of the wounded officers and sailors were from the *Ting-yuen*, to which the man arrested on the former occasion, Okatsu, belonged, and also that most of the caps found where the fighting had taken place bear the name of the same ship,—from these two facts it is evident that the riot was planned by the men of the *Ting-yuen*. The evidence is stated in a separate document herewith included. Beside those officers and sailors who were wounded, there are culprits whose names are marked on their hats found during the affray, and it is believed that beside these there are several more among the men of your country's war vessels. We request that you institute a minute investigation, and mete out punishment with strictness.

August 24th, 19th year of Meiji.

# SPECIAL CORRESPONDENCE FROM SOUL.

(Translated from the *Fiji Shimpoo*.)

August 18th.

On August 14th, Mr. Yuen Shi-kai, the Chinese Minister, invited to dinner at his private residence Generals Min Yon Ik, Kan Kei Kwa, Lisho Ken, Tei Rak Kin, Kin Ki Seki, respectively the Commanders of the Right, Left, Front, Rear, and Special Guards, and Mr. Bin Ei Kan, the Commissioner of Coast Defence. About 3 p.m., when the entertainment was nearly finished, a telegram was put into Mr. Yuen's hands, who immediately opened it in the presence of his guests. The message read as follows:—"Seventy-two companies of a demonstration army stationed at Chin Chen leave at noon by steamships for the capital of Korea." Chin Chen is in the Province of Liao Tung, and it is there that the troops withdrawn from this city last year are garrisoned, together with the Manchurian soldiers. Seventy-two companies (*ying* in the Chinese) do not contain any statement as to its original source. But it was thought that it had been despatched by Li Hung-chang, and that the demonstration army was meant to act against the Korean King. The surprise of the Korean guests was so great that they instantly hastened to the King's palace and informed their royal master of the dreadful news, while Mr. Yuen communicated the message to the Foreign Minister, Jo Shu U. The latter immediately repaired to the palace, and, shortly after,

Mr. Chin Shun Tak, the Prime Minister, also hastened there. The consternation in the palace was immense; the queen had been seriously ill for some days and had been constantly attended by a foreign physician, and the confusion was further increased by her Majesty's falling into a swoon on being acquainted with the news. It was now decided at the palace to ask for reasons why the demonstration army had been despatched, and what demands China had to make upon Korea, and for this purpose Messrs. Min Yon Ik and Kan Kei Kwa were ordered by the King to go to the Chinese Legation. At 6 p.m. they returned, accompanied by Mr. Yuen, the Chinese Minister, who assured the King of the authenticity of the telegram. In reply to the King's question as to the reasons for sending the demonstration army, Mr. Yuen said that, there being numerous perfidious officers round the throne, he could not speak plainly to His Majesty; but, saying he would communicate with the Tai-won-kun, left the place. Min and Kan accompanied him to the Legation, but they soon returned to the palace. In the meantime, the King issued orders to the Generals of the Guards to prepare for emergencies, and the diffusion of this news in the city put the people in great confusion.

The King sent an official of the Court with Messrs. Min and Kan, to the Tai-won-kun's palace, and requested him to confer with Mr. Yuen concerning the matter. The Tai-won-kun readily complied with the royal request, and called at the Chinese Legation, accompanied by the two last named officials; this was at 4 a.m. on August 15th. After conversing several hours with Mr. Yuen, the Tai-won-kun entered the royal palace about 9 a.m., accompanied by Mr. Kan, while Mr. Min remained at the Chinese Legation. The Tai-won-kun told the King that, according to the opinion of Mr. Yuen, Li Hung-chang was offended by the King's conduct the year before last, when the forces of Japan and China having come into collision in consequence of the Soul disturbance, he, the King, made application to Russia for protection and requested that Power to organize his army; which conduct on the King's part had led Russia to create disturbances in the northern part of the peninsula, thereby necessitating the despatch of a naval squadron under the command of Admiral Ting. These circumstances, continued the Tai-won-kun, were believed by Mr. Yuen to have induced Li to send the demonstration army; and the demands of China he believed included the deposition of both the King and Queen, and the beheading of the perfidious officials. To the Tai-won-kun's question as to how the wrath of the Emperor of China could be appeased, Mr. Yuen replied that the King of Korea would have to cut off the heads of his traitorous subjects and lay the whole blame upon them; the traitors referred to being Kin Ka Chin, Kin Kak U, Secretaries of the Home Department; Zen Ryo Mok, the Chief Clerk of the *Shi-in*; and Chô You To, the Governor of Chikusan. After making his report, the Tai-won-kun observed that, the very existence of the Kingdom being at stake, it became necessary to oppose the Chinese soldiers to the last man, and he assured the King that he would be the first to die for his Majesty. The King was immensely pleased with the loyalty of his father, and actually shed tears, as did those around him, at the patriotism of the Tai-won-kun. The latter then advised the King to order the rice merchants in the capital to transport their grain to the nearest garrisons.

After having heard what the Tai-won-kun had to say, the King instantly ordered the four so-called traitorous subjects to be cast into prison, and commanded that they be beheaded by sunset. The order for military preparations becoming known in the city, the wives and daughters of the nobles and rich merchants fled from the capital, for they knew very well from past experience what Chinese soldiers would do. The rice merchants having stopped all private business, the poor were put to great inconvenience, as they knew not how to get food for the next meal. Your correspondent was on that day particularly busy, and went about on horseback, but the streets being full of people and live stock, great difficulty in moving about was experienced. The Russian Minister, Mr. Waerber, secretly informed the King that he should make his Government declare to the Chinese army that there was no foundation for the report of a secret treaty between his country and Korea. The German Minister also had a private interview with the King. The two Ministers held a conference which lasted nearly the whole day.

At 5 p.m. on the 15th, Min-yon-ik left the Chinese Legation for the royal palace. He informed the King that the report of the invasion of the Chinese army was not true, and added that Mr. Yuen felt sorry for his negligence in not ascertaining the source of the telegram before making it public. Min further ridiculed the audacity of the

Original from

Chinese Minister. The contracted brow of the King now relaxed, and the palace was for a time filled with shouts of laughter and sounds of revelry. When the Tai-won-kun was informed of the falsehood by an official sent by the King, he was highly indignant both with Li Hung-chang and Yuen Shi-kai. The King released the four prisoners, and it was stated in the *Official Gazette* of the 16th that they had been imprisoned without offence. On that morning the people knew the truth of the affair, and they manifested intense feelings of indignation against Yuen and Li. But I am sorry to say that Korea is entirely powerless to further remonstrate with China about this affair.

I shall briefly relate the antecedents of the four officials who were imprisoned by the King, and then proceed to disclose the causes that led up to the present affair. Mr. Kin Ka Chin, who speaks Chinese, formerly served at the Custom House at Ninsen; but after his promotion to the secretaryship of the Home Department, he became a very powerful man at Court, and the Ninsen Custom House, Mr. Denny, and the Bureau of Sericulture, were under his control. He had received orders to proceed to Japan as the secretary of the Korean Legation at Tokyo, but being overtaken by fever, he was lying ill in bed when he was arrested on the charge of treason. Mr. Kin-kak speaks Japanese, Chinese, and Russian, and has travelled several times in those countries. He recently returned from Japan, where he concluded the purchase of the steamship *Shima Maru*. He was originally a *heimin* of Kankyo-do; so that it is a special distinction that he was made a Secretary of the Home Department. He had undisputed control over naval affairs. Mr. Zen Ryo-mok had also travelled in Japan, and speaks Japanese well. Subsequently, he became the interpreter of the former Representative of the United States of America, and by this means succeeded in making himself known to the King. He was appointed to the secretaryship of the *Saishu-in*, and was shortly afterward removed to the *Shō-in*. A few days ago he received an appointment to the Home Department to superintend the newly established primary schools and the *Saishu-in*. Mr. Cho Yoo-to is one of the six bastards who acquired great reputation last year. At the time of his imprisonment he was Governor of Chikusan, but he has not much power.

Since his return from China, Mr. Min-yon-ik has presented to the King several memorials and plans to carry out various reforms. But his schemes did not work well, and moreover his memorials brought the King's disfavour upon him. Having been appointed President of the Board of Public Works, he applied to the King for permission to diminish the number of secretaries from thirteen to eight; but the King ordered him to appoint three more, thus bringing the number up to sixteen. Further, he obtained a special fund for the *Official Gazette* Bureau, but the money was in great part appropriated for the newly established primary schools. These circumstances he attributed to the action of the four gentlemen, a sketch of whom has just been given. This may be regarded as an instance of the defeat of an influential relative of the King by some of the lower grade officials. From these circumstances originated the stratagem by Mr. Yuen.

Mr. Yuen became the object of universal ridicule, while the four officials who were imprisoned at his instance attended Court on the morning of the 16th, with the exception of Kin-kak-u, who had fled. Having thus failed to restore Mr. Min to power, Mr. Yuen again told the King on the same evening that, although the invasion by the seventy-two companies of troops was not true, it was certain that either Admiral Ting or Wu Ta-chen would come to Seoul to remonstrate with the Korean Government in regard to the secret treaty between Russia and Korea. The palace was again the scene of confusion, and that night the King ordered the arrest of the three traitors and condemned them to exile in remote places. Their punishment was published the next morning in the *Official Gazette*. But this time there being no fear of an invasion of an army, the popular consternation was not so great, though the King was all anxiety.

The offence charged to Mr. Kin-ka-chin is said to consist in his acting as a mediator between the King and Mr. Denny, when the latter undertook to assist the Russian Minister to obtain the King's leave for the occupation of land in Kankyo-do by Russia. But as a fact, Mr. Denny is in no favour with the King, while he is detested by Mr. Kin. It is further alleged that Mr. Kin-ka-chin prevailed upon the King to prohibit Mr. Kin Ju-shok's entering the capital, as his presence there was deemed prejudicial to the success of Mr. Denny's plan. But these charges, it seems, have no foundation to rest upon.

The two following days, 17th and 18th, witnessed no new occurrence, but there was a certain air of bustle, owing to affairs settling down in their

ordinary channel. Who will assume the reins of political power here in future, will be explained in another letter. For the present, it may be safely asserted that the three men, Min-ik, Kan-kei-ka, and Tei-hei-ka, will come to the front. Yuen Shi-kai has nothing to show but an injured reputation. I feel certain that, within a month, another drama will be played here.

August 22nd.

The late disturbance, which formed the subject of my last letter, was nothing more than a political intrigue by Mr. Yuen Shi-kai. Frightened by the threats of the Chinese Representative, the King laid the blame upon his favourite subjects and exiled Kin-ka-chin, Kin-kak-u, Zen Ryo-mok, and Chō Zon To, and thus all political power has, as originally planned by Mr. Yuen, fallen into the hands of Messrs. Min Yon-ik and Tei Hei-ka. In certain quarters the empty threats of Mr. Yuen are keenly resented, but the King and his courtiers seem inclined to believe that the expeditionary army has been recalled by China on account of the measures taken with regard to the punishment of the alleged traitors. The *coup d'état* of Kim Yo-kun was separated from the disturbance of the Tai-won-kun by an interval of twenty-nine months, and scarce twenty months have elapsed since the capital of Korea witnessed the former event. Since the succession of the present King to the throne, more than twenty years have gone by, but during that long interval scarcely any three years have passed without witnessing some scene of political disturbance. Whether in the present instance we have already passed through the worst, or still greater troubles are in store for us, is a difficult problem to solve. At any rate, the timid and inconsiderate behaviour of the Korean Government in the present case cannot fail to make Russia and other foreign countries think that Korea can be at any time easily played upon. As to the banishment of the four favourites of the King, some people view the measure with joy, and even suggest that they ought to be beheaded.

Immediately upon being informed of the nature of the telegram received by Mr. Yuen on the 14th, I prepared a message in an European language, addressed to the *Fiji Shimpō*, and sent it to the Seoul Post Office. But they refused to wire it, so I put the message in Chinese; still they would not receive it. On the 16th it was generally known that the telegram received at the Chinese Legation was false, and I thought it now possible to have my communication wired, but I was again unsuccessful. However, I was not the only one put to inconvenience; I have since learnt that those in the service of the Japanese Government experienced the same difficulty. In case of an emergency, what are we to do? I must call the attention of the home authorities to the necessity of connecting Fusan with Seoul by a telegraph line.

The particulars of the late canard were given in my last letter, but here I may call your readers' attention to some samples of the character of the Chinese Representative. He had told the King, through the Tai-won-kun, that among the measures China was determined to take was the deposition of the King and his consort; but in a later interview, Mr. Yuen denied having said anything about the deposition and ascribed it to the imagination of the Tai-won-kun. The latter being the father of the King, there is no means of challenging him, and, moreover, the father and son having no good understanding with each other, the latter appears to suspect his father. Kin-kak-u has not yet been found, and various rumours are floated to make him and Kim Yo-kun the originators of the telegram of the 14th, by alleging that when the former went to Japan to buy the *Shima Maru* he had a secret understanding with the fugitive. The object of Min Yon Ik's journey to Tientsin is ostensibly to apologize for the supposed conclusion of a secret treaty with Russia, but really the object seems to be to attribute the withdrawal of the demonstration army to the success of his representations. Thus Mr. Yuen has skillfully thrown the greater portion of the threat on the shoulders of the Tai-won-kun, and to complete his success, he has now sent Mr. Min to China, thus to dupe the world into the belief that his Korean friend saved his country from destruction.

Mr. Kin In Shok, the Minister of the Foreign Department, and Mr. Gyo In Chu, the Minister of the Left, who lives outside the walk of the capital, had several times received royal orders to enter the city, but they refused to obey the command. Upon the occurrence of the late disturbance, they were again ordered by the King to attend the Court, and were told that in the event of refusal they would be held incompetent to occupy official position. But they still remain outside the capital.

A man named Li Kyo Gen starts for Japan, with a secret message to the Foreign Office in Tokyo from the Korean Foreign Department.

August 26th.

The four—Kin Ka Chin, Kin Kak U, Zen Ryo Mok, and Cho Zon To—who were punished by exile, were pardoned yesterday.

Since the late disturbance caused by the diplomacy of Mr. Yuen, the Russian Legation wishes to have a company of guards. In fact it is reported that Mr. Waerber has already asked his Government to provide him with troops.

Captain Umezu Mitsuo, an engineer officer, attached to the Japanese Legation, lately returned from travels in the interior. He went as far as Wi-ju. He states that everywhere throughout the country the people are suffering from extreme poverty.

The Government of the United States of America has made known to the Korean Government its intention of presenting to the latter a small war vessel. It is stated that, in the event of the acceptance of this ship, Mr. Falk, the late American *Chargé d'Affaires* at Seoul, will be engaged by the Korean Government to command it. His monthly salary will be 500 yen besides board.

After his return from China, Mr. Min Yon Ik assiduously advised his countrymen to wear European clothes, and at present there are many who have acceded to his wish. It has been decided to dress the guards in foreign costume, and as a first step, 1,000 soldiers of the Right Guard will be so clad during this winter. They are to cut their hair in foreign style and wear foreign shoes. Doubt is expressed as to the ability of the Government to defray the increased expenditure required by this reform of military uniform.

Of the students lately brought home from Japan by the *Shima Maru*, Bok Ei-hin and Li In-kotsu, were arrested on their way from Ninsen to Seoul. According to what I have heard, the latter youth will be executed shortly together with his parents, wife, and children. Beside these two, there are six other students, who had once studied in Japan, lying in prison. They are Kin Ko-zen, Sai Ko-ren, Jo Ko-tsu, Yu Kyo-ei, Kin Kan-ki, and Yu Kitsu-ei.

Mr. Hak Shun-bai, who had been detained in the police office, has been removed to the *Kinfu*, where those charged with capital offences are imprisoned. His offence is connected with the flight of Mr. Kim Kak-u.

After repeatedly refusing to comply with the royal wish, Messrs. Kin Ju-shok and Gyo Ju-chu at last entered the city on the 22nd instant. Mr. Kin Ju-shok staid at the house of Kin Ban-shok. But on the 24th, they again left the capital and went to the suburbs.

The 24th instant being the King's birth-day, an entertainment was given at the Foreign Office to the Foreign Representatives and foreigners in the service of the Korean Government, Messrs. Denny, Merrill, and Inouye Kakugoro. The Korean high officials were also present on the occasion.

Mr. Kin Ju-shok, the Minister of the Foreign Department, again received to-day the King's order to resume office, and he has accordingly entered the capital, after staying in the suburbs for nearly three months. He will this time assume his official position. Mr. Gyo Ju-chu has likewise entered the capital.

At Ninsen there are eight Chinese war-vessels, two of which have been lying there for a long time; four entered the port on the 24th, and the remaining two on the following day. A transport vessel also arrived, but has already left the port. There are three other war-vessels belonging respectively to Russia, America, and Japan. Besides, there lie at anchor two merchantmen, the *Tsuruga Maru* and *Higo Maru*. The former will leave to-morrow and the latter on the 29th instant.

The commander of the American war-vessel to-day entered the capital with twenty of his crew, leaving Ninsen yesterday evening. On their appearance the people of Seoul were again much alarmed.

Cho Ju-kei has returned from Japan. He will no doubt be put into prison.

## THE JAPANESE PRESS ON THE KOREAN COMPLICATIONS.

(Translated from the *Nichi Nichi Shimbun*.)

The movements of China in the Korean peninsula are now, as they have ever been, of a bewildering character. It is of little importance under the circumstances to discuss the question of her claim of sovereignty over Korea, for that is to be settled only by actual facts and not by written words. The cause of her present irritation is the alleged existence of a secret treaty between Korea and Russia. What evidence she has to justify her conduct is yet to be seen, but from our occasional correspondent's letter from Seoul, it appears that

the facts concerning the much-talked of treaty are enveloped in darkness. Should the autograph letter bear the signatures of the King and his Ministers, any explanation as to the unauthorised use of the seals will hardly be sufficient to satisfy Russia; while, on the other hand, should there be no positive proof of the existence of such a document, all such measures of intimidation as China has adopted, which have succeeded so far as Korea is concerned, will be totally insufficient to check the ambitious advance of the great Northern Power.

It will thus be seen that the conduct of Yuen and Min, daring as it may appear, has effected nothing beyond temporarily disturbing the politics of Korea, and leading to the transfer of power from one faction to another. The position of Mr. Yuen in Korea is a peculiar one. While nominally Representative of his Sovereign at Sôul, he really exercises supreme control over the national affairs of the Kingdom. No doubt he is acting under the directions of Li Chung-tang, who has, ever since the *émigré* of the Tai-wôn-kun, pursued a high-handed policy in the peninsula. On the part of the Korean statesmen, there exists a faction which looks for the assistance of the arrogant Chinese official in its contest for power with other rival parties, but it is an undisguised fact that there is also a party struggling for the deliverance of the country from the tightening grasp of China. Especially since the occupation of Port Hamilton by England last year, the desire to escape from the bonds of a faithless protector must have grown stronger and stronger in the bosom of many a Korean statesman, until at last it was decided to turn to Russia for protection. Korea's estrangement from China is, therefore, to be laid to the blame of none but the Chinese Government itself. As to the course of action which Mr. Yuen will take in future, it is useless to make a guess. So far as can be judged from his conduct since August 14th, it is plain that he has little claim to the possession of the qualities of true statesmanship. His heedless and fickle action is, we fear, rather an obstacle to the smooth working of the policy of his superior at Tientsin. More than that, his conduct is not always free from manifestations of a flagrant disregard of the usages of international law. What show of justice has he for the entry of 200 Chinese soldiers into Sôul in the disguise of merchants? Does he make it any the less a violation of the Tientsin treaty by declaring that they had no arms on their persons. Again, the entrance of seven men-of-war into the port of Ninsen is hardly reconcilable with the consideration China owes to other Powers. For the present, affairs in Korea have been settled, but the ambitious designs of Russia remain unshaken either by the empty threats of Mr. Yuen or the demonstration of the Chinese fleet; and should the time arrive, no opportunity will be lost in vigorously prosecuting her long cherished object. It rests with China to decide what policy she will take in case the safety of Korea is threatened from the north. As she has shown to the world what influence she exercises over the peninsular Kingdom, it is clearly her duty to hold herself responsible for every thing relating to Korea. We fear that China has barely time to make up her mind about the policy she ought to pursue in Korea, before she will be called upon to answer for her actions there.

(Translated from the *Fiji Shimpô*.)

It is now a well established fact that China has entered on a new career among the nations of the world. The current of civilization which is constantly flowing towards the East with irresistible force has at last compelled China to give way before it, and to adopt the various powerful instruments of modern civilization. As a first step of improvement she vigorously set herself to the task of reorganizing her army and navy. The use of her newly acquired war vessels in connection with the successive disturbances in Korea, and the experience of her land forces in Annam, gave China immense satisfaction, and made her feel her own strength and power. Remotely, we may regard the late fracas at Nagasaki as a consequence of the newly awakened sense of power in the minds of her statesmen. Still more remarkably illustrative of the changed attitude of China among the nations, are her daring movements in Korea relative to the reported friendly relations between the peninsular State and Russia. The naturally haughty and unreasonable Chinese having become still more so by the adoption of civilized weapons, their bearing in the future may well be imagined. Being commercially and politically related to her in a very close and direct way, we ought to take timely warning and adopt proper precautionary steps for future contingencies. At present the touch of Western

civilization with China is very limited and only external. The ruling spirit in China is still that of the old fashioned Confucianism, so that she is as yet nothing more than an old man in a new suit of clothes. But nothing would be so erroneous as to suppose that such an abnormal state of things will last for ever—that the contact of China with Western civilization will always remain only external. Experience of the material portion of Occidental civilization will inevitably lead to the awakening of the Chinese nation to the existence of a powerful spirit underlying all the external manifestations of progress in Europe and America. When once the spirit of civilization is imbued by the Chinese, the progress of political and social improvements will be as inevitable as it will be rapid and extraordinary. What Japan has accomplished, certainly China will accomplish sooner or later, and the relations between the two Empires will become infinitely more complicated and important. It is, then, high time for Japan to carefully consider the situation and be prepared for the future.

The *Nichi Shimbun's* occasional correspondent at Sôul, whose letters are now appearing in that journal, makes the following observations, after bringing his narrative up to August 16th:—"The reins of political power are now nominally in the hands of the three members of the Min family, Min Yon-ik, Min You-kan, and Min Yon-o, but really the first named statesman wields the sceptre. It is highly probable that it was Min Yon-ik who made China acquainted with the news of the existence of a secret treaty between Russia and Korea. I do not know in what light your regular correspondent has presented this reported existence of a secret treaty, but I fear that, allowing every thing for his shrewdness, he cannot have been able to know the truth. Of all the various and conflicting rumours circulating about this affair, the following seems to me to be the nearest to the truth. A certain number of Korean officials have always been jealous of the arbitrary influence of the Min family on the one hand, and of the despotic interference of China on the other. They have thought that to get their country rid of either of these two evils, the assistance of another Power will be necessary. Believing that Japan cannot be relied upon, they decided to arrange matters with Russia. This was probably in the latter part of last year; and early this year they set themselves to put their resolution into execution. The preliminary convention is said to have contained, among other stipulations, the following: that a new frontier line between Russia and Korea shall be drawn through the vicinity of the 豆們江; that Korea shall cede to Russia the northern portion of Kankyodo, and shall allow Russia to station troops in the ceded territory; that Russia shall arrest every Korean subject escaping into Russian territory and surrender him to Korean officials; that Korea shall open 永興 for trade with Russia; and that Russia shall have liberty to use Pok-chon as a naval port. As to the conclusion of this treaty, the facts are extremely vague, it being asserted in some quarters that it was concluded at Sôul under the pressure of the Russian Minister, while others say that it was negotiated through another medium. Besides the treaty, there is an autograph letter of the King, with his sign-manual and counter-signed by Chin Shun-tak, the Prime Minister, and Kin Ban-shok, the Minister of the Home Department. The letter promises to treat Russia on the footing of the most favoured nation just as she treats China; and it further says that, if Russia will aid Korea with arms in case of emergency, the latter country will place itself under the former's protection. The negotiations as to this secret treaty were conducted by Kin Ban-shok and Kin Kak-u, but neither the King nor the Prime Minister had anything to do with it. The Russian party drew the Queen into their scheme, and through her influence they succeeded in laying hold of the seals of both the King and the Prime Minister without their knowledge. Perhaps they intended to broach the matter to the King after its settlement. Your readers will find it difficult to conceive of such a possibility, but here in Korea such plots are sometimes resorted to. To the great astonishment of the King and still more of the Queen, the Chinese Minister expostulated with the former on August 16th in reference to this autograph letter, with a copy in his hand. Following the suggestion of Mr. Min, the King called Chin Shun-tak to his presence and asked him about the secret treaty, but the Prime Minister professed entire ignorance of the affair. The Queen had shut herself up in her room on the plea of sickness. This is what I have learned from rumour, and it is of course imprudent to put absolute trust in it. But it seems that facts are not entirely wanting to make

it highly probable that a number of the Korean officials, under the urgent pressure of Russia, negotiated to accede to the demands of Russia in consideration of the promise of protection in case of emergency.

## FINANCIAL ADMINISTRATION.

### A HISTORY OF THE CURRENCY.

The year 1886 will always be remembered in the financial history of this country as the year in which specie resumption took place. From a financial point of view, therefore, it will be very useful to glance back at the history of the changes which have occurred in Japanese Currency during the last 18 years, and to note down the most important points.

The principal features to be recorded are as follows:—

The history of our currency for the 18 years covered by the period from 1868 to 1885 inclusive is very complicated; it admits however of three broad divisions.

I.—Measures taken by the Government in regard to gold, silver, and copper currency, which comprise:—

- (a.) The coining and issuing of new gold, silver, and copper coins;
- (b.) The redemption and withdrawal from circulation of old gold and silver coins;
- (c.) The redemption and withdrawal from circulation of old copper coins.

II.—Measures taken by the Government in regard to Government paper money, which comprise:

- (1) Issue and redemption of:—
  - (a.) The Daijokwan issue of Kinsatsu;
  - (b.) Mimbusho<sup>1</sup> issue of Kinsatsu;
  - (c.) The Convertible Notes issued by the Finance Department;
  - (d.) The Convertible Notes issued by the Kaitakushi;
- (2) The redemption and withdrawal from circulation of the old paper money issued in the various *Han* and *Ken*, and in the territories of the *Hatamoto*;
- (3) The issue and redemption of new paper money.

III.—Measures taken by the Government in regard to paper money issued by Mercantile Firms<sup>2</sup> and Banks, which comprise:—

- (a.) The issue of gold and silver Notes payable on demand by Mercantile Firms, and the withdrawal from circulation of the same;
- (b.) The issue of Bank Notes (*yens*) and Dollar Notes by National Banks, and their redemption;
- (c.) The issue of Convertible Notes by the Bank of Japan.

In making the above mentioned classifications and noting down in detail the most important features, it is very necessary that we should examine thoroughly into the state of the currency used throughout Japan in the beginning of the period of Meiji.

The period in question was one of great changes, which were aggravated by civil war, and consequently it would naturally be unfair to judge those times in all respects by the standard of to-day; and therefore in matters relating to currency also we should assuredly make an error if we were to judge them by the level of our present position.

The money in use at the beginning of the Restoration, in the 1st year of Meiji (1868), may be divided into three broad divisions:—

I.—The gold and silver money coined by the Shogunate in the period between Ansei and Keiô (1854-1867).

II.—The copper, brass, and iron coins issued by the Shogunate in the period between Kwanyei and Keiô (1624-1867).

III.—Paper money.

The coins included under Class I. are as follows: GOLD COINS:—

- (a.) The *Oban* (used only on ceremonial occasions, and not in general use among the people);
- (b.) The *koban* of one *ryo* (10 of which were equivalent to 1 *oban*);
- (c.) The two *bu* piece (2 of which were equal to 1 *koban*);
- (d.) The two *shu* piece (8 of which were equal to 1 *koban*).

<sup>1</sup> The former Home Department.

<sup>2</sup> The Notes alluded to are those issued before the Restoration by leading mercantile firms of Osaka and Tokyo who, in the absence of Banks, which were then unknown, combined in many cases, the business of a banker and money lender with that of a merchant, and were empowered by the Government of the day to issue gold and silver Notes payable on demand to an amount proportioned to their capital.

Original from

## SILVER COINS:—

- (a.) The one *bu* piece (4 of which were equal to 1 *koban*);  
 (b.) The one *shu* piece (16 of which were equal to 1 *koban*);  
 (c.) *Chōgin*<sup>3</sup> (or silver bars) in weight 60 or 100 *momme*; equal to 1 *koban*.  
 (d.) *Mameitagin*<sup>4</sup> or balls of silver in the shape of a bean, in weight the same as the *chōgin*.

Copper, brass, and iron coins included under Class II. are as follows:—  
 "Yei" *sen*,<sup>5</sup> which only survived as a money token; to of which were reckoned as equivalent to 1 *koban*; there was no actual coin of a particular shape.

*Ichimon-sen*, copper coins bearing the inscription of *Kanyei Tsūhō*, or current coins made in the period of *Kanyei* (1624-1644), 6,000 or 8,000 of which = 1 *koban*.

*Shimon-sen*, brass coins bearing the inscription *Kanyei Tsūhō*, 1,500 or 2,000 of which = 1 *koban*.

*Tohiyaku-sen*, brass coins bearing the inscription *Tempō Tsūhō*, or current coins made in the period of *Tempō* (1830-1844), 60 or 80 of which = 1 *koban*.

*Shimon-sen*, copper coins bearing the inscription *Bunkyo Tsūhō*, or current coins made in the period of *Bunkyo* (1861-1864), 1,500 or 2,500 of which = 1 *koban*.

*Ichimon-sen*, iron coins bearing the inscription *Kanyei Tsūhō*, 7,000 or 10,000 of which = 1 *koban*.  
 III.—Paper Money. There were no less than 1,600 different kinds of paper money, which, broadly divided, admit of the following classification:—

Gold notes, Silver notes, Cash (*seni*) notes, and Rice notes.

The exact amount of money, thus classified, which was in circulation in 1868, it is impossible to ascertain, as the records of the late Government and the various clans have been all lost, but from a perusal of old records (records which were left by the late Government and examined by the Treasury in December, 1875) we find that the amounts of the old gold, silver, copper, brass, and iron coins in circulation at the beginning of the period of Meiji were as follows:—

**GOLD**—more than 64,000,000 *ryo*, which, calculated in the currency of the present day, amounts to over 87,000,000 *yen*.

**SILVER**—Over 30,000,000 *ryo*, equivalent to over 52,000,000 *yen*.

Thus the gold and silver coins together amounted to nearly 140,000,000 *yen*.

**COPPER, BRASS, IRON, &c.**—Over 60,000,000 *Kanmon*, equivalent to over 6,000,000 *yen* of the present money.

Again the total amount of paper money in circulation in the territories of the various Clans and of the *Hatamoto* was about 30,000,000 *ryo*. (About 30,000,000 *ryo*; that is to say, if converted into *ryo* according to the face values of silver and cash notes at that time; their actual value would not be this.)

The several amounts<sup>6</sup> of this paper issue, divided according to the various *Han*, *Ken*, and *Hatamoto* territories are as follows:—

TABLE SHOWING THE AMOUNTS IN ROUND NUMBERS OF *Han* PAPER MONEY IN CIRCULATION IN 1870.

(The values of the paper money of the old *Han* were stated variously, in silver *monme*, in *sen*, in denominations of 1,000, 100 and 10 cash, or again in so many *koku*, to and *shō* of rice, or finally in *ryo*, *bu* and *shū*.)

The confusion which resulted from these numberless differences was very great. For convenience of reference therefore the various amounts have been converted into the present new currency by taking the rates of exchange given in the Table of Comparative Values compiled by the Government.)

TOTAL AMOUNT IN CIRCULATION IN AUGUST 1871.			
NOS.	NAME OF CLAN.	KIND OF PAPER MONEY IN CIRCULATION.	YEN.
1.	Idzumi	gold, silver and sen notes	58,677,368
2.	Do. (outlying districts included in jurisdiction of above...)	silver notes	77,594,228
3.	Iwakura	sen notes	227,619,627
4.	Imabara	silver notes	62,159,913
5.	Iwatsubo	cash notes	not known
6.	Idzumi	silver and sen notes	84,280,000
7.	Iwamatsu	temporary notes	not known
8.	Imao	(credit notes for money)	not known
9.	Iwama	sen notes	not known
10.	Ito	silver and sen notes	401,081

<sup>3</sup> Circulation stopped in the 5th month of the 1st year of Meiji.

<sup>4</sup> March, 1868.

<sup>5</sup> Equal to from 25 to 250 *grains* Troy.

<sup>6</sup> 1 *ryō* = 1,000 ordinary cash; 10 *koban* = 10,000 ordinary cash, or 1 *ryo*.

<sup>7</sup> These amounts are founded on official investigation made in 1870, and their comparative values in the money of the present time have been calculated by taking the average of the market values of *Han* Paper all over the country in 1874.

<sup>8</sup> Issued for a short time only, and to be redeemed at the end of the period of issue.

<sup>10</sup> Credit notes for money deposited.

<sup>11</sup> Afterwards called Yōshimi.

(Besides the districts mentioned in these tables, two or three hundred thousand *yen* worth of silver and cash notes, &c., were issued in each of the provinces of the six Hatamoto, Nozaki, Fukutomi, &c., and in the *Ken* of Hyōgo, Nagasaki, Sakai, Hida, Kumihama, Takayama, Ina, Sakada, and Iwata, but as they had all disappeared from circulation before 1871, we have omitted mention of them in the above tables.)

The foregoing is a brief *resumé* of the state of the currency in the first years of the period of Meiji; but if we desire to ascertain the various causes which led up to that condition, a general idea of various financial changes that took place under the late *régime* is necessary. For this purpose we have selected the principal features of the changes in financial administration which occurred between the years 1596 and 1868. These are as follows:—

#### RESUMÉ OF THE CHANGES IN REGARD TO CURRENCY WHICH TOOK PLACE UNDER THE LATE GOVERNMENT DURING THE PERIOD OF 274 YEARS INCLUSIVE BETWEEN 1596 AND 1868.

The Monetary Regulations in force in this country before the Tokugawa period are not worth consideration. The real foundation of our present monetary system was in the year 1601 when the Government established a mint, and the coining of gold and silver money was conducted on an uniform system.

Prior to this, during the middle ages, the administration having fallen into decay, the country was in a chronic state of disorder, legislative institutions and literature were neglected and swept away, and, as a consequence, monetary regulations almost entirely disappeared. In the periods of Genko (A.D. 1570-72) and Tensho (A.D. 1573-91) certain of the chieftains who had taken forcible possession of certain districts in the Empire (such for example as Takeda of Koshiu and Uesugi of Echigo) were in the habit of coining *kobans* and other coins for circulation in their own territories, but the coins thus issued were of course, insufficient for the requirements of the whole country. Again, although there were gold dust, gold bars, &c., and foreign coins (the coins of all foreign countries, and cash from China), yet these were all inconvenient as money, and did not suffice for the requirements of warfare. During the period of Tensho (1573-91), when the Government of the country was in the hands of Hideyoshi, it is said that gold *obans*, 5 *ryo* pieces, *kobans*, 1 *ryo* piece and 2 *bu* pieces, and silver 5 *ryo* pieces and silver bars were first coined, but at that time the means for coining them were very inadequate. (See Dai Nihon Kaishi, or (History of Japanese Currency, Vol. 4.)

When Tokugawa Iyeyasu succeeded in the administration he developed still further the work begun by his predecessor, and in the 6th year of Keichō (1601) he founded a Government Mint. He introduced great improvements into the method of coining gold and silver money, and made and circulated over the whole of the Empire gold *obans*, gold *kobans*, one *bu* gold pieces, and silver bars (*chogin*) and slugs (*mametugin*). This was the first occasion on which an uniform coinage was seen in general circulation throughout the Empire, and subsequent generations have always denominated this money the coinage of Keichō.

(It is said that during the periods of Tensho and Bunroku (A.D. 1573-96) Tokugawa Iyeyasu ascertained and fixed at Yedo the weight of gold *kobans*, and had them coined accordingly.)

This Keichō Coinage was first minted and put into circulation in 1601, at Fushimi, Yedo, Sumpu, &c. Afterwards year by year the coinage and issue of money increased gradually; and in the period of about 90 years between 1601 and 1690 the total amount coined was:—

GOLD.—*Kobans* and 1 *bu* pieces, 14,727,053 *ryo* (equivalent to a little over 151,025,710 *yen*).

SILVER.—Bars (*chogin*) and slugs (*mametugin*), over 1,200,000 *kwanme*.<sup>11</sup>

It is a well-known fact that the monetary system of every country improves in proportion to the growth of national power, and consequently that the amount of gold and silver money becomes larger. During the periods of Keichō (1596-1614) and Genwa (1615-23) when our power was at its height, large numbers of Portuguese, Spanish, Dutch, and English merchant vessels visited and traded on our coasts. All the foreign merchants who thus came to Japan respectfully obeyed the decrees of our Government, and observed the treaty stipulations which were imposed upon them. Moreover, our own merchants and the Daimios of Kiushiu too, engaged in foreign trade, kept up a continuous and direct intercourse with Ningpo in

the north of China, and with Canton, Annam, Siam, Luzon, and Singapore, &c.

Consequently, while on the one hand the amount of gold and silver produced in Japan—from the Sado Mines for example, increased considerably every year, on the other hand the amount of gold and silver bullion that was imported from China and other countries into Japan was also very large. There can be no doubt that it was owing to these circumstances that the quality of the gold and silver money coined in the period of Keichō was of a fineness that had never been equalled before in the coinage of our country.

There was one defect, however, which is much to be regretted. The fixed exchangeable value at that time, of gold and silver on the one hand, and of copper on the other was disproportionate, and a comparison of our monetary system of those days with those of Western countries shows that the value of copper in its relation to gold and silver as fixed in our standard of values was unreasonably high. Thus, according to the monetary system of the period of Keichō (1596-1614) 4 *kwanme* in copper *sen* (or 4,000<sup>12</sup> cash) were exchangeable for 1 gold *Koban*,<sup>13</sup> while 1 gold *ryo* was exchangeable for 50 or 60 *momme* of silver (from 292 to 350 grains Troy). The effect of this extraordinarily cheap price of gold and silver as compared with copper was to cause a rapid outflow of our gold and silver to foreign countries.

The reason of this abnormally high rate of copper in the period of Keichō (1596-1614) was not only that at that time the principles of exchange were not, as at the present time, clearly understood, but also because the amount of copper obtained from our copper mines was exceedingly small, and consequently there was a deficiency in the amount of copper cash needed for the daily requirements of the country. On this account, at that time and up to the 13th year of Keichō (1608) the Chinese *Yeiaku Tshū* copper coins were in general use; and although in the latter year the circulation of these cash was nominally stopped by a decree of the Government, yet for more than 50 years afterwards the *Yeiaku* cash continued to circulate as before among the people.

Subsequently in the 13th year of the period of Kanyei (1636) the copper cash called *Kanyei Tshū* were first coined and issued. These were current together with the copper coins imported from abroad. At that time 1,000 of these *Yeiaku* cash were equivalent to one gold *Koban*, while 4,000 of the new *Kanyei Tshū* cash were equivalent to 1,000 of the *Yeiaku* cash. (Kaheishi Vols. 5 and 6.)

Subsequently, as the coining and issuing of the *Kanyei* cash increased, the value of the *Yeiaku* cash gradually depreciated, until at last the value of both issues became, it is said, about the same.

Although it is stated that the circulation of the *Yeiaku* cash was at one time stopped in the 13th year of Keichō (A.D. 1608), yet, as a matter of fact, they did not cease to circulate, and their circulation was again sanctioned in the 13th year of Kanyei (A.D. 1636). It must be noted, however, that, although, as stated above, the market value of *Yeiaku* cash depreciated until it became the same as that of the *Kanyei* cash, still the nominal value of 1,000 *Yeiaku* cash as the equivalent of one *ryo* in gold survived, as before, in all the public documents of the Government, and they continued to be so regarded until after the Restoration, and up to the date of the issue of the new coinage.

The large amounts of gold coins which, as above stated, were coined and issued between the periods of Keichō and Genroku (A.D. 1596-1688) were, owing to defects in our monetary system (namely, the disproportionately low value of gold and silver coins, more especially the *Koban* and 1 *bu* pieces, as compared with copper money), gradually driven out of the market, and were either exported abroad or were hidden away in the godowns of wealthy people. Consequently when the period of Genroku arrived there was a scarcity of money.

Prior to this, in the 18th year of Kanyei (A.D. 1642), with the exception of a large number of ships belonging to China and Holland, the visits and trading of all foreign ships had been prohibited, and, moreover, the building of large ships in our country and trading voyages to foreign countries had also been stopped. It would seem as if these measures ought to have had the natural result of checking the outflow of gold and silver to foreign countries, yet, when we come to look into the matter, we find that this outflow continued unchanged even after the 18th year of Kanyei (A.D. 1642). The reasons for this are as follows:—

The country was, at this date, for the first time enjoying a long continued period of tranquillity,

<sup>11</sup> The weight of these in pure copper was 4 *kwanme* or about 41 lbs. 12 oz. equivalent in the new coinage of the present period of Meiji to about 4 *yen*.

<sup>12</sup> The weight, fineness, and value of this coin are given below.

and, as a result, habits of luxury increased every year, and as every one, from the Shogun and Clan Daimios down to the Hatamoto and Samurai, as well as the merchants of all the chief towns, vied with one another in the consumption of imported "Chinese" goods, each year witnessed an increasing importation. There is no doubt that it was owing to these reasons that the deficiency of coin was so keenly felt between the years A.D. 1621 and A.D. 1688. It was on account of this deficiency that in the 8th year of Genroku (A.D. 1695), some 190 years ago, a decree was issued for the recoinage of gold and silver coins, and that the monetary system of the period of Keichō was greatly improved.

This was the first of the important reforms in the Monetary system made by the Shogunate.

The new coinage of the period of Genroku, although the same in weight as that of Keichō, was very inferior to it in fineness, and the people, therefore, regarded it with disfavour. The Shogunate, however, stopped the circulation of the Keichō gold currency, and, issuing a tyrannical law, compelled those who were in possession of Keichō gold coins to give them up in exchange for the new gold coinage. But, although, apparently the people submitted to this harsh decree, yet, as a matter of fact, they did not really obey it, and those who did apply for an exchange of coins were not numerous. In the space of 16 years, from A.D. 1695 to A.D. 1710, the amount of Keichō gold that was recoined into the coinage of Genroku was about 10,527,055 *ryo*, while the amount of the new Genroku gold coinage was 8,409,167 *ryo*; the two together making a total of 18,936,222 *ryo*. Besides these 31,795 gold *oban* were coined, while the quantity of silver bars (*chogin*) and silver slugs (*mametugin*) recoined in the period of Genroku amounted to about 405,850 *kwanme*.<sup>14</sup> From some old records of mercantile houses in Osaka it appears that, although the Government at that time published year after year strict orders for the exchange of the old for the new money, yet the townspeople looked with little favour on the gold and silver of the period of Genroku, while they put a high value on the gold and silver of the period of Keichō; and, as they all vied with one another in storing the latter in concealment, Keichō gold and silver coins became very scarce, and only copper money increased. We are able to perceive how, owing to this defective character of the monetary system, the inferior money drove out the good money so that no trace of it was left.

On account of this drawback to the circulation of the Genroku currency, the Government in the 2nd year of Hōei (A.D. 1705), being distressed that so few persons would exchange the old for the new coins, permitted the circulation side by side of both coinages.

The year after, they again altered the monetary system and began the coining of entirely new silver money, and, paying the excess in value on the old silver, they caused the latter to be exchanged for the new coinage.

This was the second important reform made in the monetary system by the Shogunate.

The standard of this new coinage was even lower than that of the silver of Genroku and the people disliked it more and more.

In the 5th year of Hōei (A.D. 1708) *Hōei Tshū* cash<sup>15</sup> of 16 *sen* each were coined and issued, but after only a year they were withdrawn on account of the general dislike shown to these large cash.

In the 7th year of the same period (A.D. 1710) the monetary system was again altered, and new gold and silver money was coined.

Between the 3rd and 7th years of Hōei various kinds of coins were struck. In silver there were:—

(1) *Hōji-gin*, (2) *Yei-gin*, (3) *Mitsu-hō-gin*, (4) *Yotsu-hō-gin*.

In gold there was *Kenji-kin*; and we find that the respective amounts of silver thus coined were as follows:—

(1) *Hōji-gin*, about 278,130 *kwanme*;  
(2) *Yei-gin* (coined in the 7th year of Hōei, or A.D. 1710), about 5,836 *kwanme*;

(3) *Mitsu-hō-gin* and (4) *Yotsu-hō-gin* (re-coined in the three years between the 7th year of Hōei (1710) and the 2nd year of Shōtoku (1712), about 771,727 *kwanme*.<sup>16</sup>

The amount of gold recoined in the four years between Hōei 7th year (1710) and Shōtoku 3rd year (1713) was about 11,515,500 *ryō*. This was the so-called *Kenji-kin*.

This was the third change in the monetary system which was made by the Shogunate.

<sup>14</sup> The goods produced in foreign countries, which the Chinese and Dutch merchants imported every year, besides those imported into Nagasaki and afterwards distributed in the chief towns, such as Osaka and Yedo, &c., were, at that time, all known by the general term of "Chinese" goods.

<sup>15</sup> Equivalent to about 4,200,000 lbs. Troy.

<sup>16</sup> One of these coins was equivalent to 10 *mon* of the Kanyei

issue. See also the "Table of Old Coins."

<sup>11</sup> These amounts are taken from an old table of coin and correspond with the numbers of gold and silver coins given below.

<sup>12</sup> 13,153,081 lbs. 9 oz. Troy

The intrinsic value of the various silver coins minted in Hōyei was plainly inferior to that of the silver coinage of the period of Genroku. Moreover, a comparison of the gold coinage known as the *Kenji-Kin* with the Genroku gold coinage shows that, although, as regards the actual proportions of pure metal, the former was a little superior to the latter, in appearance and weight it was manifestly inferior.

A comparison of the weight and actual value of the new gold *Koban* of the period of Hōyei with those of the old gold coins that were made previously gives the following results:—

WEIGHT.	FINESS; (PROPORTION OF PURE METAL AND ALLOY).	THE ACTUAL VALUE OR PRICE OF ONE <i>Koban</i> CALICULATED IN THE NEW CURRENCY OF MEIL.
Keichō Koban 4 momme 7 fun 6 rin	Gold ..... 856.9 Silver ..... 142.5 Other alloy 0.6	yen 10.0642
Genroku Koban Do.	Gold ..... 854.1 Silver ..... 431.9 Other alloy 4.0	yen 6.8657
Hōyei Koban 3 momme 5 fun	Gold ..... 834.0 Silver ..... 195.5 Other alloy 0.5	yen 5.1565

On looking at the above Table we cannot but notice the inferiority of the new gold coinage of Hōyei.

The date of the commencement of the Tokugawa Shogunate was the 4th year of Keichō (A.D. 1600). The first establishment of a monetary system took place in the 6th year of Keichō (A.D. 1602), and a little over ninety years afterwards there occurred the changes in that system, introduced in the period of Genroku, which were the first step towards throwing into confusion our monetary system. Twelve years later came the changes made in the period of Hōyei, which simply increased the existing confusion.

The true cause of the decay of our monetary system in the very short space of a little over 100 years may fairly be traced to the financial difficulties in which the Shogunate was involved.

The following is a brief summary of what has been written on the state of finance at that time by Arai Kumbi, who had a personal knowledge of financial matters during the periods of Genroku, Hōyei, and Shōtoku, and who was in the confidence of the Government during the period of Shōtoku:—

"It is unnecessary to mention the heavy expenditure of the Government in the building of the inner keep of the Castle, the erection of numerous palaces in different places, the construction of shrines and temples, the dredging of the Honjo river, and in such undertakings as the making of dog-kennels, &c., at Nakano; and the amounts contributed towards these various undertakings by the *daimios* exceed all computation. It was owing to this lavish expenditure on the part of the Government that the people everywhere fell into a condition of distress." \* \* \*

"Again, the funds of the Government being insufficient to meet its wants, changes were made in the fineness of gold and silver, and many new laws were established." \* \* \*

"Heavy expenses were incurred by the Government on account of the great earthquake, the numerous fires in Yedo, the new buildings at Hakone, Arai, and Nagasaki, but particularly on account of the enormous damage caused by the recent great earthquake. The cost of the forced labour furnished to the Government by the *daimies* was also very great, and both public and private expenditure of that time exceeds computation." \* \* \*

"The land in the Eastern districts was rendered waste by the rain of dust; and, in addition to this, the Government exacted large loans of money from the various *Daimies*."

The same writer mentions elsewhere in his writings that, for some thirty or forty years past, the extravagance of the *samurai* and of the other classes of the people had been increased to an extraordinary extent and that this growing extravagance in the habits of the lower classes was communicated to them by the governing classes. Thus, while on the one hand the finances of the country were in an exhausted condition, on the other hand there was unbridled extravagance, and we cannot, therefore, wonder at the distress becoming greater year by year.

In order to meet this crisis the Government had the choice of one of three alternatives,—either to recoin the money, to issue paper money, or to raise a loan. They adopted the first plan and recoined the currency.

In our opinion the extravagance of the Government was the direct cause of the confusion which took place in the financial administration. To conceal their financial embarrassment, they altered the monetary system and resorted to the last expedient of issuing an inferior coinage. As a result, all the *daimies*, without exception, followed suit

and, imitating the policy of the Central Government, view with one another in the luxury of their dwellings, their ornaments, their clothing, and their food; and, as they had not the power to coin gold and silver money, they made silver notes<sup>19</sup> and used them in their respective territories. These notes were the so-called "Clan paper money."

In the period of Kuambun (A.D. 1661-1672), Matsudaira Tadamasu, the *daimio* of Fukui in Echizen, owing to the distress caused in his territory by the insufficient amount of current money, specially petitioned the Central Government and, with its permission, issued paper notes. This was the first occasion on which "Clan-paper" was issued. Afterwards, in the period of Genroku (A.D. 1688-1703), the *daimies* in the south-west provinces issued silver notes, and the numbers gradually increased.

In the "*Sannogaki*" or "Unofficial History of three Kings" (in the part relating to the 4th year of the period of Hōyei, or A.D. 1707), the following statement occurs:—

"From the period of Genroku (A.D. 1688-1703), owing to the extravagance of the *daimies* and the inadequate amount of currency in circulation, paper notes were issued in the place of silver, but, as the people did not regard them favourably, the King (the Shogun Tsunayoshi is referred to) published an edict prohibiting their issue."

It was, however, found practically impossible to enforce this edict, and consequently the Government afterwards, in the period of Kiōhō (A.D. 1716-1735), permitted the various *daimies* to issue clan paper.

Looking at the above facts we find that the monetary system of the Shogunate, in the course of little more than 110 years from the date of its first establishment, underwent three successive changes, and was consequently thrown into confusion; and that the evil caused by the issue of clan paper by each *daimio* in his own territory dates from the period between A.D. 1688 and A.D. 1710.

Towards the end of the period of Hōyei (1704-1710) there was a change in the head of the Government, the direction of affairs being assumed by Arai Kumbi and issued an edict relating to monetary reform. (This was in the 2nd year of the period of Shōtoku, or 170 years ago.)

Two years after the promulgation of this edict, in the 4th year of Shōtoku (September 1714), the recoinage of gold and silver coins was commenced. These new gold and silver coins, both as to fineness and weight, were made similar to those of the period of Keichō. The gold coins thus minted amounted in value to about 213,500 *ryo*, and were called *Musashi koban* and *ichibu*.

This was the fourth change made by the Shogunate in the currency.<sup>20</sup>

Unfortunately Iyenobu Shogun died in the 3rd year of Shōtoku (A.D. 1713). His successor Iyetsugu Shogun also met his death in the 5th year of Shōtoku (1715). When Yoshimune Shogun assumed the direction of affairs his first step was to reform the administration. He placed political economy on a better footing, he extended the good reforms in financial administration which had been instituted in the period of Shōtoku, and he introduced a fresh coinage of gold and silver. The standard of fineness of these gold coins was higher than that of the issue of the period of Keichō, while the standard of the silver coins was the same as that of the Keichō silver. These new coins were what are known as the "Kiōhō gold and silver coinage."

This was the fifth change made in the monetary system by the Shogunate.

The amount of this Kiōhō gold coined in the space of 21 years, between the 1st year of the period of Kiōhō (1716) and the 1st year of the period of Gembun (1736), and consisting of one *ryo kobans* and one *bu* pieces, was about 8,250,000 *ryo*, while the amount of Kiōhō silver coined between the 4th year of the period of Shōtoku (1714) and the 1st year of the period of Gembun (1736), a period of 23 years, was about 331,420 *kuwame* (=3,314,200 lbs. Troy).

The two reforms in the gold and silver currency which took place in the periods of Shōtoku and Kiōhō were undoubtedly splendid features in the history of the coinage of the Shogunate. But it was impossible to keep up for any very lengthen-

ed period this policy of reform, and in the short space of 20 years after the 1st<sup>21</sup> year of Kiōhō (1716) there was again a great change in our monetary system; the superior gold and silver coins of the periods of Shōtoku and Kiōhō were recoined into very inferior and much smaller gold coins and into very inferior silver coins. These are the so-called "Gembun gold" and "Monji silver."

This was the sixth change made in our monetary system by the Shogunate.

If we enquire into the reasons why the policy of reform instituted in the periods of Shōtoku and Kiōhō was not maintained, we find that they were as follows:—

(1) The high standard of the gold *kobans* was not suited to the low scale of living of the people, and they were consequently inconvenient as a circulating medium. They accordingly came to be, as it were, an article of merchandise, and for the most part the large mercantile firms stored them away in their godowns.

(2) The quantity of gold and silver that came from the mines at Sado and elsewhere decreased year by year and, as it was especially the output of gold that diminished so greatly, the Government of that time had great difficulty in obtaining bullion for the coining of a new currency.

(3) Owing to the extraordinarily low price at which gold and silver, and especially the gold *kobans* and the *bu* pieces, were rated as compared with copper, the result was that people carelessly hoarded them, and waited for a more favorable price. This tendency increased, and, on this account, the gold *koban* and *bu* piece became exactly, as it were, articles of merchandise and ceased to circulate at all in the market.

(4) The price of gold was not only low as compared with that of copper, but was very low also in proportion to that of silver, and for this reason, too, there was a tendency towards keeping it out of the market.

(To be continued.)

## KOREA.

(FROM AN OCCASIONAL CORRESPONDENT.)

Sōul, August 26th.

For some two years England has been occupying Port Hamilton on the Southern coast of Korea notwithstanding the remonstrances of the Koreans. As China claims Korea as a dependency, and also promises to protect the kingdom, the Koreans naturally turned to her, for protection in this case, and as England and China are such fast friends it seemed an easy matter to do. Nothing was done, and weary of trusting in a protector that made no attempt at protection, some Koreans began to wonder if it would not be better after all for Russia to assume the protection, as she would surely guard against the encroachments of both China and England. There can be no doubt that China is right in guarding Korea. She can no more allow foreign aggression in this peninsula, than the United States can in Mexico. Yet she has selected a man as representative who is in danger of accomplishing just what his country wished to avoid. Apparently without the consent of his government, he styles himself "President" in the same way that the English representative in India is President. In this assuming capacity he takes it upon himself to dictate to the King, and by means of intimidation he succeeded, hence the cause of the great excitement of the past week.

The rumours of a Russian protectorate being desired having come to the ears of the Chinese representative, he telegraphed to China that the King of Korea had already applied to the Russian Minister for the establishment of a protectorate, and that the latter had signified his willingness to take up the matter if it was put on paper. This report was denied by authority respected in China, and, to support his statement, the Chinese Minister next appeared with a document over the King's seal requesting in writing the establishment of a Russian protectorate.

His Majesty denied having any knowledge of this document, whereupon four of his most trusted and useful officers were selected for execution. No one was at the time, nor since, able to settle any charge upon them other than that they were friends of certain influential Americans. The King at last gave a reluctant consent not to execute these men, but ordered their banishment. He was aided in this by the report by telegraph that seventy-two battalions of Chinese troops were embarking from Port Arthur for Sōul. He, however, countermanded the order the same day. Whereupon he was again visited by the self-appointed adviser, and the result was that on the following day the "Royal clemency" was recalled, and the four men went into banishment. Not knowing but

<sup>19</sup> *Ginsaku*, or paper notes which took the place of silver and were current only within the territory of a particular clan.

<sup>20</sup> This new gold and silver coinage of the period of Shōtoku was always, when referred to in the old records of the Tokugawa Government, included with the gold and silver coinage of Kiōhō (1716-1735), and in circulation both were called "Kiōhō gold and silver." The amount coined in the period of Shōtoku is included with the Kiōhō gold and silver mentioned later. There are no means of separating them.

<sup>21</sup> The 1st year of the administration of Yoshimune Shogun, 40 years ago.

that the report concerning the entering of Chinese troops was true, the Americans wished protection. There are in Seoul eight American ladies, six children, and twelve men. For the first time in about two years they were without protection. The men-of-war had been so troubled with cholera in Japan that upon its outbreak here they were allowed to go to China on the supposition that the cholera would be enough to absorb the attention of the Koreans. So it would if they were left alone, but the time seemed too favorably chosen to be the result of accident. For the trouble occurred at a time when no one in danger could get news to the outside world in less than two weeks, except by telegraph and that was under Chinese control. It was not surprising then that the telegrams were all returned from that office with the assurances that the circuit was interrupted, but would be repaired in time. All this time there was sufficient proof that the Chinese were receiving and sending telegrams daily. The troops, however, failed to come, and the danger from outside has now passed away.

The matter has given Judge Denny a deal of trouble. The King has repeatedly stated that he could not advise with the Judge as freely as he wished because of the threats of the Chinese Representative. While the Judge has the highest regard of Li Hung-chang, his official here looks upon him with envious eyes and does all he can to obstruct his measures and usefulness. He has played his hand so carelessly this time, however, that he has completely exposed himself, and it will be strange of Judge Denny does not lay the case before high Chinese authorities and cause the removal of this arrogant fellow. This accomplished and Port Hamilton restored from the English, the Korean people will again become fairly well settled on the subject of their dependent relations with China. But if this cannot be done, then we may confidently expect Korea to look to some other Power to free her from the tyranny and high handed conduct of the resident Chinese representative, and for the protection of her sovereign rights which China thus far has failed to do.

#### IN THE U. S. MINISTERIAL COURT FOR JAPAN.

Before HIS EXCELLENCY THE MINISTER.  
MONDAY, September 6th, 1886.

#### APPEAL—PETER C. FULLERT AGAINST THE UNITED STATES.

The appeal by Peter C. Fullert against the judgment of Mr. Warren Green, late United States Consul-General at Yokohama, on a motion for a new trial, came up to-day.

The order for the holding of the Court having been read,

Mr. Lowder said he appeared on behalf of the appellant.

Mr. G. H. Seidmore said he was instructed by the Consul-General to state that Mr. Kirkwood, who appeared for the respondents, was unavoidably detained by reason of professional engagements at Nagasaki, and it was therefore impossible for him to be present.

The Minister said he would proceed with the case. Fortunately for the Court, he observed from a very careful reading of the transcript of the record that pretty full briefs for the respondents as well as for the appellant appeared in the body of the record, and the Court was under no moral or legal obligation to postpone the case for the submission of any brief in the case other than appeared before the Court in the body of the transcript. If a statement had been made to the Court that counsel had been unavoidably detained by illness from being present in the Court, or that the Consul-General had failed or that it was impossible for him to assign counsel, then he might consider the question. But, no such statement appearing officially before the Court he would proceed with the case, and was now ready to hear counsel for the appellants. He suggested to Mr. Lowder that, following the usages of other Supreme Courts in appeals from District Courts all cases of appeal were tried exclusively on the transcript of the record and on written briefs, and he would be glad to receive such brief as counsel for the appellant might choose to present. This case, he stated for the benefit of counsel, was an appeal from an order of the lower Court refusing a motion for a new trial in the case of the United States against P. C. Fullert. Of course the argument the Court was desirous of hearing would be confined simply to the appeal against the motion for a new trial. Counsel could submit his argument orally or with a brief, or both together as he saw proper. He would also state that as Mr.

Kirkwood did not feel authorized to represent Mr. Seidmore, the Court would consider the briefs of the counsel for the United States, already submitted to the Court below.

Mr. Lowder then addressed the Court in support of the appeal, adducing for the most part the arguments submitted to the Consul-General, Court in support of the motion for a new trial and fully reported in these columns at the time. At the outset he said the new trial was applied for on a statement and an affidavit, both prepared in accordance with the rules of the Court; and in arguing this case it would be necessary for him to read these, and to confine himself as closely as possible to the objections there raised.

The statement was:—

(1.) The evidence for the prosecution was insufficient to justify the judgment. The prisoner will refer to the whole evidence, for the prosecution and to the evidence for the defence, for the purpose of showing, first that the evidence for the prosecution was insufficient to support the onus of the proof; secondly, that it was insufficient to rebut the presumption of innocence; thirdly, it should have left so strong a doubt on the minds of the Court that the prisoner was improperly convicted; fourthly, that the damages would therefore appear to have been given under the influence of prejudice.

(2.) Error in law occurring at the trial and excepted to at the time.

The following errors will be relied upon:—

(1.) That P. C. Fullert was improperly put upon his trial, he having been already "in jeopardy" for the same offence. The evidence to be relied upon in support hereof will be the judgment of the Court, dated 17th May, 1886, together with the original charge against Fullert on which trial judgment was based.

(2.) The P. C. Fullert, being a German, was not subject to the jurisdiction of the Court. The evidence to be relied on in support hereof will be that part of the decision of the judge of the Court in motion made in Court on the 17th May for the discharge of the accused, which states:—"Had the accused taken refuge in his own Consulate, had he tried to take refuge in his own Consulate gave questions of international law would have arisen." Also the evidence of Fullert himself, where he alleges himself to be a German, and the statement of the Judge of the Court that he had communicated with the German Consulate asking for evidence of the nationality of the accused, &c.

(3.) That a certain advertisement contained in a number of the *Japan Herald* was improperly admitted as evidence. Mr. Penn's evidence will be relied on; also that of Mr. Weiler, and reference will be made to the arguments of Counsel and the decision of the Court thereon.

(4.) That P. C. Fullert was charged as a seaman of the United States, whereas there was not sufficient evidence in law to show that he was so at the time of committing the alleged offence. The evidence of Mr. Seidmore will be relied upon, as also exhibits Nos. 3 and 4.

(5.) That P. C. Fullert was charged with aiding and assisting Watkins "in deserting" from the U.S.S. *Ossipee* on the 23rd day of April, 1886. Reference will be made to the evidence of Commander McGlensy and of Lieutenant Sewell, also to that of the boatmen, and of the accused, and it will be contended that it was an error in law to convict the accused of aiding and assisting Watkins to desert on the 23rd April in view of the evidence which showed Watkins to have already deserted on the 22nd April.

(6.) That the judgment of the Court does not specifically find the facts necessary to support the charge.

F. LOWDER,  
Counsel for P. C. Fullert.

The affidavit was follows:—

In the matter of the trial of the action criminal No. 27 intitled "The People of the United States against P. C. Fullert," which took place on the 18th day of May last, and following days in the United States Consular General Court at Yokohama.

I, John Frederick Lowder, a British subject, having my Chambers at No. 28, Yokohama, barrister-at-law, make oath and say as follow:—

(1.) I acted as counsel for P. C. Fullert at the trial aforesaid.

(2.) Warren Green, Esquire, Consul-General of the United States, presided at the said trial.

(3.) Since then, and since giving notice of my intention to move for a new trial, I have been informed by the said P. C. Fullert, and verily believe that prior to the said trial, and while Fullert was under arrest and detention in the United States Consular gaol on the charge on which he was tried at the said trial, the said Warren Green held a conversation with Fullert, in the course of which he, the said Warren Green, expressed a decided conviction that Fullert was guilty of the offence charged and that if he would not give up the name or names of the person or persons who were the principals in aiding Watkins to desert it would be the worse for him, the said Fullert and he would have to suffer for them.

(4.) I further declare upon oath and say that since the trial aforesaid I have discovered evidence material for the said P. C. Fullert, and which he could not with reasonable diligence have discovered and produced at

the trial, to wit that on the evening of the 22nd day of April last Paymaster Watkins did not come ashore and did not take a boat from the shore as alleged by the witness Kojima Tokijiro; and further that the said Paymaster Watkins is now undergoing trial by Court-martial on a charge for that he did on or about the 22nd day of April, 1886, desert from the *Ossipee* and from the United States naval service, and did remain absent as a deserter therefrom till the 5th day of May, 1886.

(5.) The trial took place without a jury.

Sworn at Kanagawa this 15th day of June before me  
WARREN GREEN,  
U.S. Consul-General.

Since the date of this affidavit Paymaster Watkins, Mr. Lowder remarked, was convicted of deserting from his ship the 22nd of April, but that of course was a piece of evidence that he could not then bring forward. These, as shortly as possible, were the grounds on which the Court below was asked to grant a new trial, and they were the points on which he would argue with the object of inducing the Court to reverse the decision of the other Court and to order that a new trial might be had in the premises. He would first proceed to discuss the evidence and would ask the Court to come to the conclusion that the evidence adduced for the prosecution did not justify the judgment in the original trial. It would be found on the record that Watkins deserted his ship the *Ossipee* the evening of the 22nd April; that on that evening he, in company with one Crocker, pulled down the bay in a Japanese boat until they arrived at Kaneda Bay; that they arrived there not on the evening of the 22nd, but on the morning of the 23rd April; that Paymaster Watkins went on board the *Arctic* and was taken to Shikotan Island, where he was eventually discovered by the *Ossipee*. These were shortly the facts of the case, which were pretty well within the knowledge of everybody in Yokohama at the time of the occurrence. Immediately or very soon after the desertion, a warrant was issued by Mr. Warren Green, Consul-General at Yokohama, addressed to the commander of the *Ossipee*, appointing him *pro hac vice* marshal of the Court and authorising him "to apprehend, to arrest, and to bring to Yokohama—" and there was a blank. The first irregularity that took place in this case, then, was the issuing of the blank warrant with directions to the marshal to fill in the name of whomsoever he chose. Now, his theory was that, this grave mistake and irregularity having been brought to the knowledge of the person who—in pure ignorance he was willing to admit—issued the warrant, he was prejudiced from the very commencement in his own favour—biased in his own favour, because he knew very well that unless he were consistent throughout he would get himself into very grave difficulty by not convicting the prisoner, who might have brought an action against him or those acting under his instructions, or perhaps all of them, for using this illegal warrant. He said this because if the evidence were carefully read he thought it would be impossible for any impartial and unbiassed man of ordinary intellect to come to the conclusion that Peter Fullert was guilty of the offence laid to his charge. Mr. Lowder then went on to discuss that part of the evidence for the prosecution as to Fullert's marriage, pointing out that the prisoner completely explained away the presumption which would otherwise have been raised by that evidence; he also dealt with the point raised that Fullert might have waited in Yokohama a few days longer, recalling that the prisoner's instructions from his managing owner, Miner, were to start at once for the hunting grounds. As to the fact that the vessel waited in Kaneda Bay instead of going off with a fair wind, he repeated his previous arguments on this point, contending that it had been proved by the best of evidence that it was customary for these ships to wait outside for twenty-four hours to put everything ship-shape and allow the crew time to sober up; and in addition Fullert had been told by Miner that in all probability he would have a passenger, and had replied that he would wait in Tateyama Bay for 24 hours, and if the passenger were coming he must be there before the morning of the 23rd. All these matters were clearly explained by Fullert, who gave the impression that he was endeavouring to afford every possible explanation in his power. Dealing with the question of the signals said to have been exchanged between the boat and the schooner, he pointed out that Fullert was below at the time and held that it was only natural for Crocker—in view of the probably large reward he obtained for assisting the paymaster to get off—to fire his pistol and wave his hat in exhilaration on approaching the schooner, and just as natural for those who saw him to wave their hats in return. And even supposing this was a signal could there be deduced from that the conclusion that Fullert had guilty knowledge of the fact that it was Pay-

master Watkins who was coming, and that he was a deserter from the *Ossipee*? It might simply be a signal to mean, "I have brought your passenger," and did not bring home to Fullert guilty knowledge that that passenger was a deserter from the *Ossipee*—particularly as he had left Yokohama some time before and had never seen and did not know Watkins. There was nothing about the passenger—who gave the name of Gordon—to excite suspicion as to his being a naval officer. Mr. Lowder referred to the question put by counsel to Fullert as to whether he asked his passenger whether he had brought a sponge and toothbrush, and said it was ridiculous to suppose that to be the duty of a Captain. He submitted if that were so then the master of every vessel that left the ports of Yokohama or San Francisco could be found by the Court to have guilty knowledge of every person who came on board his ship. If that were so the forger Pratt would never have left San Francisco, it being the duty of the master to make strict enquiries about him, and if there were any suspicious circumstances he would not have come here, and there would not have been so much trouble in getting him sent back. So with the Chinese murderer who left San Francisco—had the master of the vessel done his duty in the way the Court below thought he should have done it, the Chinaman would never have left San Francisco. After quoting from Lawson on Presumptive Evidence, page 438, and referring to the principle laid down by Rufus Choate, that the presumption of innocence is a second witness in favour of the prisoner, and reading also an extract from Bishop on Criminal Procedure, vol. 1, 3rd edition, section 1073 *et seq.*, Mr. Lowder asked that the Court would on the first ground order a new trial. The next point was the error in law occurring at the trial and excepted to at the time—that Fullert was improperly put on his trial, having been already in jeopardy for the same offence. On this he contended that associates having been sworn, and the Court having been established as a Court the prisoner had been in jeopardy and could not be arraigned again on the same charge. The whole subject of jeopardy was discussed at full length in the 7th edition of Bishop on Criminal Law, chapter 53, and was summed up in sections 1,042 and 1,048. In this connection he pointed out that the procedure now before this Court was the one that he must take by law, and that he could not possibly have brought the matter before the Ministerial Court in any other way, as he was forbidden by the rules from appealing directly against the judgment of the Court below, but was allowed by the rules to ask for a new trial, and further if that were not granted in the Court below to appeal to this Court against that decision.

The Minister said Mr. Lowder remarked that this was his only recourse to reach the Ministerial Court. Of course he referred to the section of the Revised Statutes wherein it was held that where the associates agreed in the judgment with the Consul acting judicially in a case such as this, the judgment was final.

Mr. Lowder said he referred to that. He was told by the Court below that he had no appeal.

The Minister asked Mr. Lowder to address himself to that point: if the judgment of the lower Court be final when there is no disagreement upon what authority or law or reason for the law could the same object be reached by a motion for a new trial or any similar motion. In other words, if there be no direct appeal and the judgment be final, how could that judgment be disturbed by a motion for a new trial. Upon what statutes of the United States did Mr. Lowder rely in making the motion for a new trial.

Mr. Lowder was obliged to the Minister for pointing out this difficulty. Immediately after the trial of this case he asked the Court below whether there was any appeal from this decision, and he was referred then to the paragraph in the Revised Statutes to which his Excellency had adverted.

The Minister said the question was, how far that statute qualified the general statute, which stated that the judgment was final. Unless it were qualified, of course it must remain the law.

Mr. Lowder read sections 4,089 and 4,091, on the suggestion of the Minister, who asked him to reconcile them with the statute which provided that when there was agreement of the Consul and the associates the judgment was final.

Mr. Lowder read the section providing that in the case of agreement of the Consul with his associates the decision shall be final. He submitted, however, that that section, 4,109, could not be read to exclude section 4,091; that they must both be read together; and that a construction must be placed upon them which would have the effect not of withholding justice, but of doing justice to the parties. If there be an appeal to the Minister, as a matter of right in small matters, such as those referred to in

that section where an appeal is allowed, namely 4,089, *a fortiori*, he thought, it must be allowed that an appeal will also lie, in matters of law at all events, from judgment in a case he should say of the great magnitude of murder. It would follow, if the construction which his Excellency had suggested for discussion were correct that a Consul sitting in Yokohama or Kobe with four associates might condemn a man to death. And none of the safeguards which the Constitution and the common law have placed around that criminal could be availed of in that Court below, which could thus inflict the greatest punishment known to the law.

The Minister pointed out that capital cases were specially excepted.

Mr. Lowder said then he would take a case of imprisonment for life. If the statute would admit of a different construction—a construction which would give a prisoner a right which he possessed by the Constitution and the common law, then that construction must be placed upon the statute, and section 4,106 should not be held to override section 4,091, which said that the Minister might prescribe rules upon which new trials might be granted "if asked for upon sufficient grounds." There could not be an appeal under section 4,106 unless there were good grounds for a new trial, but if there were then he suggested that in accordance with section 4,091 a new trial might be asked for on sufficient grounds, and so the judgment of the Court below might come before the Minister for review. That this was the construction placed upon it by Mr. De Long.

The Minister said he was familiar with the fact that the regulations of his predecessors, with the exception of his immediate predecessor, permitted of appeals for new trials being made to this Court.

Mr. Lowder said section 4,091 certainly gave power to the Minister to prescribe rules upon which new trials might be granted; and he thought a section coming long after section 4,091 should not be construed to override that section if it took away a right conferred by the Constitution and the common law. In conclusion on that point he would say that it never could have been the intention of Congress to place such enormous power in the hands of a Consul, who was frequently a man without any legal education whatever, and of such associates as he might join with him on legal points. He did not think Congress could have had any such intention, and if any different intention could be gathered, he contended that the construction that was in favour of liberty should be adopted. He would now proceed with the next point, which was that P. C. Fullert, being a German, was not subject to the jurisdiction of the Court. It would not be for a moment contradicted that Fullert, as shown by the evidence in the Court below, was a German, and Counsel would contend that *prima facie*, being a German, he was not and could not be subject to the United States Consular Court. The United States Courts in Japan derive their existence from the treaty. By the treaty the authorities of the United States are given jurisdiction over the citizens of the United States in Japan. Congress legislating with reference to the treaty has also created United States Courts in Japan and has also conferred on these Courts the jurisdiction which has been acquired by treaty from Japan. He submitted that Congress had not attempted to confer on the Courts of the United States in Japan any further jurisdiction than that they had themselves acquired as a nation from Japan itself. This argument, if argument were necessary on the point, was borne out by those sections of the Revised Statutes under title 47 "Foreign Relations" creating those Courts. Mr. Lowder read sections 4,083-4,086 and said these were the three sections he believed giving Consuls jurisdiction in this country, and it would be observed that *prima facie* the jurisdiction was confined to citizens of the United States until section 4,086 was reached, which said that the laws were extended over all citizens of the United States in these countries and "over all others to that extent that the terms of the treaties respectively justify or require." He presumed that if the United States were represented in Court to day those few words "and over all others" would be held to convey a meaning contrary to the construction he put upon it. Mr. Lowder quoted from Mr. Scidmore's Digest of the opinions of the Attorney-General, vol. II, page 474, in which reference was given to the case United States against Ross, Kanagawa, May, 1880, and went to say, they had this first of all the opinion of the Attorney-General that a Consular Court cannot under the treaty with Japan render a judgment against a person of foreign birth not a citizen of the United States, and there was the accompanying dictum in the case of Ross, and then they had a circular from the Department of State dated June 1st, 1881, providing that that jurisdiction may extend over certain other

persons. He presumed the circular must be construed with reference to the section. Now, this being a penal case, the law whether contained in the statutes or in an instruction from the Secretary of State must be strictly read, and be construed so strictly that its sense may not be wrested in order to confer jurisdiction if jurisdiction is not conferred. Now, the circular placed a construction on the section which had not been followed in the case now being argued. (He was setting aside for the moment the opinion of the Attorney-General as not binding on this Court, although he supposed the opinions of the Attorney-General were as binding as a circular from the Department of State). The circular stated that a person though of foreign birth, "duly shipped and enrolled upon the articles of any merchant vessel of the United States," should be amenable to the jurisdiction of the Courts. His Excellency would perceive that the gentleman who drew the indictment thought it necessary—and Counsel quite agreed with him—to state that the person against whom the charge was made was a seaman of the United States, and that the crime was committed within the jurisdiction of the Court. The evidence before the Court showed that the offence was committed on board a schooner called the *Arctic*, and although the judgment did not find as a fact that she was an American vessel, still they knew from the evidence before the Court that the *Arctic* was allowed to fly the American flag. They also knew that she was not an American vessel, and he deduced from that that the *Arctic* not being an American vessel it was impossible to find that Fullert was an American seaman, and if not then he thought his Excellency would agree with him that the Court had no jurisdiction to try him. The first question was: what was a vessel of the United States. On this point Mr. Lowder quoted section 4,131 and pointed out that there were two classes of vessels of the United States—vessels registered as merchant vessels and vessels duly qualified according to law to carry on the coasting and fishing trades, and all others were excluded. They found that the *Arctic* belonged to Miner, and was to be employed in the otter-hunting, and that he engaged a master and crew for the vessel before the United States Consulate. If this had been a vessel of the United States he need not cite authority to show that the master must have taken an oath, before he could be appointed, that he was a citizen of the United States. He was not called upon to do anything of the kind, and therefore it must have been known in the Consulate that she was not such a vessel, and that the master was not shipping his men by any authority whatever. The vessel was a piece of floating property, and was—he believed he was right in saying all these vessels were—built in Japan, and being built in Japan could not acquire an American nationality. But being American property they were entitled to the protection of the American authorities. That was the position he gave to these otter-hunting schooners. He said an Arctic schooner, although owned by an American and allowed—whether rightly or wrongly allowed he did not know and would not pretend to say,—without opposition to fly the American flag, did not become an American vessel, and no person on board that vessel became a seaman of the United States. There are in Yokohama Bay plying a number of steam launches, some large and some small. One he knew of a very large tonnage, sufficiently large to go out of the bay, for he had himself been out frequently in her; and he supposed though not perhaps at this season of the year, she might very well steam from Yokohama to Kobe and down through the Inland Sea to Nagasaki. She was not registered as an American vessel, but she happened to be owned by an American; she was owned indeed by the Pacific Mail Steamship Company. Supposing that Fullert, instead of being on board the *Arctic*, had been in command of this steam launch, belonging to the P. M. S. S. Company, could he, simply because he was engaged to sail that boat, be found on the evidence now before this Court, to be—as it was necessary to prove him to be within the meaning of the circular—a seaman of the United States. He submitted Fullert could not. Take first of all this supposition: that being in command of that boat he had committed an act of smuggling. Now, the act of smuggling was an offence against the law of Japan. Suppose that the Customs authorities had made complaint to the American Consul-General that the master of this American-owned steam launch had been guilty of smuggling, would the Consul-General for one instant have assumed jurisdiction when it came to his knowledge that the man was a German subject? He would say: "True, that piece of property is American property, but the person who committed the offence against your law is a German, and if you want to punish him you must take him to the

Original from

German Court. I have no jurisdiction." In this case the offence was against the law of America instead of Japan, but as a professional man he said there was no difference whatever. If in one case the Court below had no jurisdiction, it followed that in the other case it had no jurisdiction. There was the German Court open and Fuller might have been pursued there. He asked what gave the Court below jurisdiction over Fullert? The answer was that he was a seaman of the United States. But the evidence showed that he was no more a seaman of the United States than a person on shore driving a carriage belonging to an American would be a citizen of the United States. That illustration he borrowed from a letter that appeared in the papers by a gentleman well known and looked up to by the whole community. In connection with the subject of jurisdiction, he might mention the next point that Fullert was charged as a seaman of the United States. He recalled that in the Court below he drew a distinction between master and seaman, based upon section 4,612 of the Revised Statutes, and pointed out that while Fullert was charged as a master the judgment of the 21st May found, not that he was a seaman, but that he was a master; therefore he said Fullert was improperly convicted. The judgment found him to be a master, and it was shown that "master" and "seaman" were not convertible terms. Therefore his client, even assuming that he was a seaman, had been improperly found guilty of this charge, because he was found to be not a seaman but the master of a vessel. Another point with reference to jurisdiction was this, that Fullert was charged with having committed this offence within the jurisdiction of the Court. Now, from the section of the Revised Statutes that he had read not long before, it would be apparent that the United States Courts in Japan had jurisdiction in Japanese territory. It was charged that this offence took place at Kaneda Bay and he had the right to contend, and did contend, that it should have been shown by the prosecution that Kaneda Bay was within the jurisdiction of the Court, that was to say within Japanese territory, and if they failed in that then the charge was not justified by the evidence brought before the Court. Great Britain, as his Excellency knew, had also treaties with Japan, and in order to give jurisdiction to her Courts she issued what was called an Order in Council, and by that Order in Council the Courts exercising jurisdiction are created and governed and ruled. The British legislature found that difficulty, and they had expressly provided that their Courts should have jurisdiction over all offences committed at sea within 100 miles of the coast of Japan, China, and Korea respectively. The difficulty had not apparently been brought to the notice of Congress, and therefore no provision had been made for the exercise of jurisdiction over offences committed at sea, and the Court would be aware that it had been decided either by circular of the Department of State or by the Attorney-General that these Courts had no power over crimes committed at sea. The offender had to be brought before the Consul and sent to the United States for trial. Now, if it should turn out that this crime had been committed by Fullert at sea clearly the Court below had no right to try it. Even supposing it were committed in Japanese waters; Japanese waters were not necessarily Japanese territory. The meaning of the word at sea meant the high seas. Then as to the question, what are the high seas, everybody knew that the high seas were those seas which were in some cases beyond low water mark, and in some other cases beyond a marine league. Let the limit be taken at the outside and call it a marine league. It was not proved that this vessel, when the offence was committed was within a marine league of the coast of Japan. The prosecuting Counsel felt all these difficulties when he drew the indictment. The Courts in Japan were not like the Courts in America. The latter had unlimited jurisdiction. Every man going to the States was subject to the laws and the jurisdiction of the Courts there. But directly they found a Court with limited jurisdiction, then both in civil and criminal cases he contended it was the duty of the person endeavouring to bring anyone before that Court to prove to the Court its jurisdiction over the accused and over the offence charged against him.

The Minister.—The objection was raised in the Court below as to whether Kaneda Bay was within the jurisdiction of this Court?

Mr. Lowder.—All these matters that I am referring to came before the Court. Yes, clearly it was raised.

Mr. Seidmore said the point came up on the motion for a new trial and was not on the record.

The Minister said he could only consider the record. If it was contended on the part of the defendant that the United States had failed to prove the jurisdiction of the Court, to show that

Kaneda Bay was within the jurisdiction, that should have been embodied on the record. It was the fault of the Court below in making that transcript that the fact came up in the trial and did not appear.

Mr. Lowder said it was merely an argument adduced from the evidence.

The Minister said it did not occur to him that it was mentioned in the record.

Mr. Lowder said it was not a matter of evidence further than this that in argument he attempted to convince the Court below that it was the duty of the prosecuting Counsel to show the Court that Kaneda Bay was in the jurisdiction, and that it was the duty of the Court to find that Kaneda Bay was within the jurisdiction. The next objection was that a certain advertisement contained in an number of the *Japan Herald*, was improperly admitted as evidence. The prosecuting Counsel produced the evidence of a man of the name of Pinn, sub-manager of the *Japan Herald*, and the advertisement was admitted, improperly as he contended, because no connection with his client was shown. The admission of that evidence, whether it had anything to do with the verdict or not, and when it was objected to at the time, was sufficient to entitle his client to a new trial. The next point in the statement he had already dealt with. The next was that Fullert was charged with aiding and assisting Watkins "in deserting" from the *Ossipee* on the 23rd of April. He had argued that point at very great length in the Court below, and he considered it to be so good that that he thought it was upon the overruling of that objection that he came distinctly in his own mind to the impression that the Court was, unconsciously perhaps, prejudiced and biased. The argument was so strong that it could not be got over by the other side, and even when the judge of the Court below alluded to the point he spoke in such a way as to show everybody that heard him that he did not exactly understand the point counsel was discussing and he was pretending to decide. A criminal charge must be supported in every detail. The question on this point came to be: how should the word "desert" be construed? It was a question which he admitted had puzzled the Courts both in Great Britain and in the United States; and both in Great Britain and in the United States a construction had been placed on it which was now commonly known to every man within the first year of his studies in law. The difference was well seen on referring to section 1,563 of the Revised Statutes, which prescribed the punishment:—"Any person who shall entice or procure, or attempt to entice or procure, any seaman or other person in the naval service of the United States, or who has been recruited for such service, to desert therefrom, or who shall in any wise aid or assist any such seaman or other person in deserting, or in attempting to desert from such service, or who shall harbour, conceal, protect, or in any wise assist any such seaman or other person who may have deserted from such service, knowing him to have deserted therefrom, or who shall refuse to give up and deliver such person on the demand of an officer authorized to receive him, shall be punished by imprisonment for not less than six months nor more than three years, and by fine of not more than two thousand dollars, to be enforced in any Court of the United States having jurisdiction." The difficulty was very well understood by the draughtsman of this section of the Act because it divided the crime into four parts, first, procuring or attempting to procure desertion; second, assisting in desertion; third, harbouring or protecting after deserting; and fourth, refusing to deliver up a deserter. The particular charge in this case was that Fullert aided and assisted Watkins in deserting, that was to say, in the act of deserting. The other charge was that of harbouring and concealing after desertion. He had argued, and would now argue, that although it was possible perhaps to conclude from the evidence in the Court below that Watkins was harboured or concealed after he had deserted, certainly upon the evidence it could not be logically or legally maintained that he had knowingly assisted—it could not be said legally that he had assisted Watkins in the act of desertion. Desertion had been defined by every book everywhere as the leaving of a post of duty or a ship, *animus non revertendi*. The test of whether a man deserted or not was:—Had he any intention of returning? He could not see how a man, even if he had known that Watkins was about to desert from the vessel—he could not see how the fact of his remaining in Kaneda Bay waiting for him and taking him away could be construed into aiding and assisting him in the act of desertion. It was impossible for a man twenty three miles away from another to aid that other in desertion. Counsel's intellect might be limited but he had given his best thought to the matter and no answer he had

received from any body had been sufficient to enable him to get over that, and he supposed he would carry his inability to the grave with him. Every human act must have a beginning and an end, unlike the acts of nature, which were continuous. Human acts were not continuous. Mr. Lowder here repeated his former illustrations on this point, holding that the acts of rising from a chair or assisting any one to rise, or leaving a house were not continuous. Similarly he held the act of desertion was completed the moment Watkins went over the side of the *Ossipee*. If his commander saw a boat alongside under those circumstances he would be justified in coming to the conclusion that Watkins was a deserter. The person who brought the boat alongside, waited to assist him over the side, and came and told him the boat was there—if such a thing were done—was the person who aided and assisted him to desert. That act being then complete, the crime committed by Fullert afterwards, if everything was to be believed against him, was that of harbouring and concealing the man after he had deserted. Mr. Lowder referred to the evidence of Lieutenant Sewell and of Commander McGlensy to show that Fullert had made no attempt to conceal anything at Shikotan, and had after a little natural hesitation pointed out the photograph of his passenger, and concluded on this point by submitting that Fullert could not be logically convicted of aiding and assisting in desertion on the 23rd when the desertion was already complete on the 22nd. The next point had also been adverted to in previous argument, his contention on that being that it was necessary for the Court to find all the facts that were stated in the charge, necessary either to give the Court jurisdiction over the person or over the offence. Unless these were found in the judgment then it could not be upheld. That finished the statement, and then came the affidavit. It was undesirable, the gentleman who was to be judge having made up his mind, that that gentleman should have presided over the Court, the rules and regulations permitting of such a case being tried in this Court. He was willing to admit, as he said in the Court below, that a Consul had duties such as were incompatible with that unbiased freedom from prejudice that ought to exist in a judge. Human nature being what it is, it is very difficult to dissociate previous impressions from the evidence brought before one. He held that the whole of the evidence showed, and the way in which the case was disposed of showed, that the Court below was prejudiced. The allegations in the affidavit were not contradicted and further the Consul General said he had made up his mind very distinctly and was of opinion that Fullert was guilty at the time he had issued this blank warrant. What had led him to believe in the guilt of Fullert he did not say, but that he had made up his mind and that he was therefore prejudiced was evident. Counsel thought the Court would agree with him that the evidence was in favour of the prisoner, but that he was convicted by the bias existing in the mind of the Consul-General. He quoted from the Revised Statutes, page 738, to show that there must be a charge, and that without a written charge the warrant should not have issued at all. Further, in the affidavit it was shown that not only was the Consul-General convinced of the guilt of accused, but that he actually held out a threat to him. That was not contradicted in any way, and he submitted to the Court with great confidence that a judge who could threaten a man that he should suffer for his principals unless he gave up their names, was not a fit and proper person to sit in judgment on the man he had so threatened. Mr. Lowder then referred to the evidence, which as mentioned in the affidavit, he had discovered and wished to bring forward in order to show that the sendees were mistaken in stating that they took the paymaster from the *Hatoba*, and submitted that on this point he was entitled to have a new trial. In addition to this, Paymaster Watkins had since undergone his trial and been convicted of deserting on 22nd April, evidence of which conviction he could not have brought at the time he prepared the affidavit, as it had not then taken place. On the last point, that the trial took place without a jury, he considered that his client was entitled to a new trial. The Constitution of the United States provided that the trial of all crimes except cases of impeachment should be by a jury, and the 5th amendment of the Constitution stated "nor shall any person be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty or property without due process of law." He was quoting from the *Japan Mail* of June 30th, but he knew that these were verbatim the words of the Constitution. His argument was that P. C. Fullert had been deprived of his liberty and might be deprived of his property without due process of law, inasmuch as he had been tried and convicted by a

Court not assisted by a jury. If that were so, he submitted with great deference that his client was certainly entitled to a new trial in order that he might be tried before a jury in accordance with the constitution of the United States. It would be difficult to shake the opinion that had been held, he supposed, ever since the treaty with Japan was entered into—at all events ever since United States Courts had been in session in this country. The opinion had been gradually formed that a Court of the United States in Japan was properly constituted for the trial of a crime if it was presided over by the Consul acting judicially and assisted by two or more associates. That had been the opinion formed years ago, and perhaps, until this case, never before argued in Court. That opinion was based upon section 4,106 of the Revised Statutes. He did not think it followed that, because a Consul was empowered by that section, when he considered assistance would be useful to him on points of law, to call to his assistance two or more associates, the framers of the section intended thereby to deprive a citizen of his right to be tried by a jury. He maintained that that privilege which was conferred upon a citizen by the Constitution could not be taken away from him except by express words. If it was meant to deprive a citizen of that right by Congress then Congress would have used apt and express words. Having done so, that Act of Congress would of course be authority just so long as it lasted without being appealed to the Supreme Court and no longer, because the Supreme Court, directly it saw that, would declare it unconstitutional, and after that time the statute would certainly *ipso facto* be void and of no effect. The question was whether or not Congress, in creating these Courts and giving them that jurisdiction the treaties required they should have, could be construed to have intended that a citizen of the United States should be deprived of his constitutional rights. Notwithstanding the fact that that interpretation had been placed upon the statute all this time, he thought he had a right to raise the point and to convince his Excellency that he also had a right to say that a wrong construction had hitherto been placed on that statute. And on this principle—that the proper construction to place on the statute was one that should be in harmony with the Constitution. The section, if read in the way it had hitherto been read, deprived a man of a right he had by the Constitution. The Court would see that evidently the meaning of that section was this. A Consul was sent here, very often a man ignorant of law, to adjudicate on civil cases and to award punishment for crimes committed within his jurisdiction. Such a Consul might need people to explain to him difficulties as to law. It was well known that juries had not to do with law, but with facts alone; and it was held over and over again in this case that the associates were not juries; that they were judges of law as well as of fact. If their judgment differed from that of the President of the Court, either upon law or fact, then there was an appeal to this Court. Therefore, they were as much judges of the Court below as was the Consul acting judicially; and the construction Counsel placed upon the section was that Congress had provided that in the Courts in Japan, when a Consul finds that he is not competent perhaps to act as a judge in a case himself, he shall take to himself several associate judges, people whom he shall associate with him as judges in matters of law. Therefore, the Court was constituted of the Consul acting as judge and two or more associates also acting as judges. But it did not say, nor could it be inferred from this section, that it was the intention of Congress to deprive a citizen charged with crime of that privilege given him by the Constitution to have twelve men to judge the facts.

Mr. Scidmore asked permission, *as amicus curiæ*, to call the attention of the Court to one or two quotations.

The Minister said if Mr. Scidmore presented himself as Consul he would be heard, but not as *amicus curiæ*. Eventually, however, his Excellency consented to hear Mr. Scidmore.

Mr. Scidmore said he wished to read a decision not noticed in Mr. Lowder's remarks, rendered by General Van Buren in the case of John Martin Ross:—"The only appeals in criminal cases tried in the United States Criminal Courts are provided for in section 4,089 of the Revised Statutes, which confines such appeals to cases where the Consul has acted alone, without associates, in trying charges punishable by fine not exceeding \$500, or imprisonment not exceeding 60 days, and in such only when the fine imposed exceeds \$100 or the term of imprisonment exceeds 60 days." The next was a portion of the judgment rendered by his Excellency's predecessor in the case of Proceedings *ex parte* James O'Neil, writ of Habeas Corpus, March 17th, 1882:—"A reference to the

original Act of 1860 (sections 8, 9 and 10, 12th United States Statutes at Large, page 74) will leave no room to doubt that, save where the offence is found by the Consul and his associates to be capital, or where the judgment is within the limits provided by section 9 (12th Statutes at Large; 4,089 United States Revised Statutes) the judgment shall be final. As the petition and the certified record of the trial before Consul Stahel remaining in this Legation also show that the offence whereof the said James O'Neil was convicted was not a capital offence, but was manslaughter only, and that the Consul and all of his four associates concurred in opinion therein, the judgment of the Consul is of necessity final, and not within the appellate jurisdiction of the United States Minister in Japan. Inasmuch as the United States Minister in Japan has not upon the *ex parte* application of said James O'Neil given any final judgment in the exercise of his original or appellate criminal jurisdiction, it follows that no appeal lies from his ruling in the premises to the United States Circuit Court for the district of California." He next read Rule 10 of the Ministerial and Consular Court Regulations, as to criminal proceedings, as follows:—"In cases when an appeal is allowed by law the mode of proceeding to perfect the appeal shall be the same in criminal as in civil cases," and also No. 137 of the Rules for Appeals:—"To render an appeal effectual for any purposes in any case a written undertaking shall be executed on the part of the appellant by at least two sureties to the effect that the appellant will pay all damages and costs which may be awarded against him on the appeal not exceeding \$300; or that sum shall be deposited with the Court where the judgment or order was entered, to abide the event of the appeal. Such undertaking shall be filed or such deposit made within five days after the notice of appeal is filed." In this case, Mr. Scidmore added, no such undertaking had been executed.

The Minister thanked Mr. Scidmore for bringing forward these quotations, with all of which, however, he said he was familiar. He would feel obliged if Mr. Scidmore would give his opinion as to whether the provision as to judgment being final in the case of agreement was limited by the section already quoted.

Mr. Scidmore said he would rather be excused from expressing an opinion.

The Minister directed Mr. Scidmore's attention to the regulations already adopted by the Ministerial Court, No. 126, page 11, and said the point was whether the provision that Ministers may make rules to govern new trials qualified the section providing that where the Consul and associates agreed the judgment should be final.

Mr. Scidmore said there seemed to be a great deal of contradiction about the two provisions of the statute. The almost unbroken line of decisions on the subject—the two especially that he had quoted—went to show that there was no appeal in criminal cases.

The Minister said there was no doubt about the fact that there was no appeal in a criminal case, but was that qualified by the provision he had mentioned?

Mr. Scidmore said that, apart from what he had quoted as to jurisdiction, the appellant had not perfected his appeal.

The Minister made an order recording the appearance of Mr. Scidmore as *amicus curiæ* on behalf of the Government as well as the Court. His Excellency then intimated that, as he did not feel justified in postponing the case, if any of the parties would before Friday morning submit a brief he would consider it. Otherwise he would give judgment on Friday morning at eleven o'clock.

The Court then rose.

#### FAREWELL TO JAPAN.

Adieu, fair Japan; farewell, thou beautiful spot of this world; farewell you good, graceful people; farewell to you, you most Western of Eastern nations; farewell you people so lavishly endowed by mother nature with artistic feeling. These deeply and truthfully felt words would cover the whole ground of my feelings, and I could stop at once, and sign my name, but as I said once in one of my *aphorisms*:—"A little too much is much too much; a wee-bit too little is not sufficient." These farewell words to Japan render well enough my sentiments, but it is not enough; therefore I will continue.

Before all, I must say that it is my honest intention (I hope I will stick to it) to write a small book on Japan, wherein I wish to record honestly my artistic opinion about artistic Japan; but until then, I will write a few stray ideas about my appreciation, concerning art matters of

Nippon—your paper, I hope will give space to those articles—until, *faute de mieux*, my book may appear. For the present let me state in a few sentences what I think of Japan. It would be arrogance on my part to give a decided opinion, and, of course, I could not do so after such a brief stay in that fairy-land—but you must know that before reaching Japan, I had read up that country for 25 years, so you see, I was not entirely a new comer, and I knew well enough what I had to expect. Still, I must say at once and without the least hesitation, that I was agreeably surprised beyond my wildest expectations, and I had, I assure you, a good load of them in my heart.

And now let me state at once, that I consider Japan for the present the only really artistic country in the whole world. Let me explain this *very big sentence, and courageous statement*. I have travelled all over the world; have been during all my life an observer; have studied everywhere, looked at everything, and examined everything, country, climate, vegetation, architecture, glyptic arts, and art in all its branches, ethnology, archeology, science, literature, religion, social habits—in one word everything I could get hold of, and certainly there are many countries much more advanced in (what we very often erroneously call) civilization—much more advanced (for the present) in art-matters—but, in all those countries, I found the bulk of the people—in fact the great masses—absolutely void and deficient in artistic matters. These matters are and were the things, the doings, and feelings of the few chosen ones—not even felt by the so-called upper ten thousand. The people, the bulk of the people, did not and do not feel with their artists. The only country in the world where grace, and originality and inborn artistic feeling and touch—I might say, *unhappily*, does exist in the masses, and not sporadically, is Japan. I know it pertinently, that what I am saying is more than courageous, but I can prove it, and will try to prove it, I might say, mathematically, in my articles and book, which I intend to write, on this to me so interesting and fascinating subject. In the mean time, I feel even in these few lines how great the temptation is to linger long on this subject. But I must not do so, as my intention is to write only a few well-felt sentences of thanks for the kindness and broad hospitality I encountered during my brief stay on all hands, from Japanese as well as from my Eastern country-men. Therefore let me say once more, farewell, fair Japan, lovely country—farewell Japanese people, and before finishing, let me publicly and humbly thank His Majesty and his fair august spouse for the condescension they so gracefully have shown to me, and let me finish with a word of thanks to Count Ito, Japan's great statesman, for his never-to-be-forgotten kindness, and also to Count Zaluski, Austro-Hungarian Representative at the Court of the Mikado, for his friendly offices. Adieu, Japan, and I hope I may possibly be able to say some day "Au revoir."

EDOUARD REMENYI.

Written on the *Hiroshima Maru*, the 17th of August, 1886.

Mr. Tsuda Mamichi, Senator, is investigating the system of marriage and divorce adopted in Japan from ancient times. It is said that his report will be sent to the Government for consideration in compiling the Marriage Regulations.

The Japanese Minister to Russia, accompanied by his wife, visited the Russian Legation the 9th instant.

Viscount Arima Yoriyuki will entertain his relatives at a farewell dinner at Seiyoken, Ueno, previous to his departure for Europe.

A telegram from Hongkong received at the Russian Legation in Tokyo states that the newly appointed Minister, who was expected to arrive at Yokohama the 9th instant, will not land till the 13th.

The Tokyo City Government decided the 9th instant to abolish official inspection of districts in reference to the condition of cholera.—*Hochi Shimbun*.

The *Bussan Kumi* at Nanamagacho, Nagoya, have commenced to weave *nanako-ori*, with the object of selling the material for use in foreign clothing.

During last month, 1,317,530 *kin* of tea arrived at Kobe from the interior, and the total amount of tea sold to foreign firms in that place was 1,487,300 *kin*. Tea in stock the 1st instant was 1,020,610 *kin*.

A meeting of representatives from the eleven districts and one urban division in Fukuoka was held the 4th instant to discuss the question of increasing cotton export.—*Bukka Shimpō*.

## REPORTS.

The British steamer *Teheran*, Captain Seymour, from Hongkong, reports having experienced light to moderate East to S.E. winds for first three days and north-easterly winds and overcast weather to Nagasaki; thence to Kobe moderate to fresh S.E. winds, fine weather, and passing clouds; moderate N.E. winds and fine weather to Oshima, when barometer fell rapidly to 29.41, and wind shifted to N.W., with a heavy confused sea and had squalls with thick rain. At 10 a.m. wind again shifted and blew a fresh gale from S.E. with high sea barometer rose slowly. The gale moderated at 8 p.m. still blowing a strong breeze to Yokohama and confused sea.

The Japanese steamer *Yokohama Maru*, Captain Haswell, reports:—Left Shanghai August 31st, at 11.50 a.m. and experienced moderate N.E. wind and cloudy weather to Nagasaki, arrived September 2nd, at 7.50 a.m. Left Nagasaki at 2 p.m. on the 2nd, from thence to Kobe variable winds and overcast; arrived at Kobe at 5.30 a.m., 3rd. Left at 6.17 p.m. with a strong N.W. wind and overcast; on the 4th wind shifted to S.S.W. and blew a strong breeze with heavy rain. Squalls and high southerly sea to Rock Island, from thence to port light southerly wind and fine weather; arrived at Yokohama 4.50 a.m. on the 6th.

The Japanese steamer *Nagato Maru*, Captain Young, reports:—Left Hakodate the 4th September, at 8 a.m. and experienced strong south wind and cloudy sky to Oginohama. Arrived at the latter port the 5th, at 9.20 a.m. and left the same day, at 3 p.m. Experienced strong south wind until 10 p.m. and high sea; at 10 p.m. wind moderated and continued so with fine clear weather to port. Arrived at Yokohama the 5th August, at 5.20 p.m.

The Japanese steamer *Niigata Maru*, Captain Drummond, reports:—Left Kobe the 6th September, at 10 a.m. and experienced light easterly winds and fine weather with cloudy, passing rain showers, and smooth sea. Arrived at Yokohama the 7th September, at 5.30 p.m.

The British steamer *Anjer Head*, Captain Macey, reports:—Left Hongkong the 31st August, at 5 a.m. and experienced calm weather until the 2nd September, and light easterly winds and fine weather throughout the passage. Arrived at Yokohama the 8th September, at 12 m.

The American steamer *City of New York*, Captain R. R. Searle, reports:—Left Hongkong the 2nd September, at 3.30 p.m. experienced light winds from S.E. and N.E. with smooth sea, and fine weather throughout the passage. Arrived at Yokohama, at 8.11 p.m. the 8th inst.

The British steamer *Port Adelaide*, Captain West, reports:—Left Nagasaki the 6th September, at 1 p.m. and experienced light easterly winds and fine weather throughout the passage. Arrived at Yokohama the 9th September, at 10 a.m.

The Japanese steamer *Yamashiro Maru*, Captain Mahmann, reports:—Left Kobe the 5th September, at 10.30 a.m. and experienced light easterly winds with southerly swell and fine weather throughout the passage. Arrived at Yokohama the 9th September, at 5.20 p.m.

The Japanese steamer *Totomi Maru*, Captain Steadman, reports:—Left Otaru the 7th September, at 5 a.m. with a strong breeze from S.E. and cloudy sky, which continued until the 8th; thence a heavy swell. At 4 p.m. the 9th, wind increased to a strong gale, veering from S.E. to N. and attended with heavy squalls of rain and a heavy cross sea. At 2 a.m. moderated. Arrived at Yokohama the 10th September, at 8.50 a.m.

The American corvette *Ossipee*, Captain F. J. MacGlensy, from Taiwanfoo, reports fine weather with fresh winds from S.S.W., veering to N.E. throughout the passage.

## LATEST COMMERCIAL.

## IMPORTS.

Not much actual change has yet taken place in this Market, but there are slight symptoms of trade in the country Markets reviving and in Tokyo dealers report a more cheerful tone prevailing. Prices for the most part are very steady, but nominal to some extent, and slightly easier as regards Yarns.

YARNS.—Sales for the week amount to 225 bales English Spinnings and 200 bales Bombays.

COTTON PIECE GOODS.—Sales are reported of 13,000 pieces 9 lbs. Shirtings and 250 pieces 10 lbs., 900 pieces T. Cloths 7 lbs., 350 pieces Velvet, 250 pieces Cotton Italians, and 100 pieces White Shirtings.

WOOLLENS.—1,500 pieces Mousseline de Laine, 700 pieces Italian Cloth, 130 pieces Silk Satins, and 4,300 pairs Blankets have been reported in the sales.

Blankets—Scarlet and Green, 6 to 4th, per lb	0.35 to 0.45

## METALS.

Rather more inclination for business at prices slightly under last week's rates.

IRON.—Some transactions done both "spot" and "future," but the trade is by no means general as yet. Cooler weather should bring about a more active state of affairs.

WIRE NAILS.—Ordinary assortments are the turn lower—for the bulk of stock consists of these. Anything special, in either quality or size will still command a preference at full rates.

	PER HULL.
Flat Bars, 1 inch	\$2.70 to 2.75
Flat Bars, 1 1/2 inch	2.80 to 2.90
Round and square up to 1 1/2 inch	2.60 to 2.80
Nailrod, assorted	2.40 to 2.50
Nailrod, small size	2.60 to 2.70
Wire Nails, assorted	4.50 to 5.50
Tin Plates, per box	5.60 to 6.00
Pig Iron, No. 3	1.20 to 1.25

## KEROSENE.

No change to report in this Market; buyers and sellers are still far from meeting. No business done beyond the sale of a few thousand sea damaged cases. Buyers are running short of cargo, but do not despair of making an impression on holders yet; Stocks are large (being now quite 550,000 cases), and a rising exchange will enable sellers to be a little more current. We leave quotations as they were, although sea-damaged *Devos* is reported to have been sold in the neighbourhood of \$1.66 per case. Rumour says that many thousand cases ex recent arrivals will turn out to be sea-damaged.

	PER CASE.
Devos	Nom. \$1.70 to 1.72
Comet	Nom. 1.65 to 1.67
Original from	Nom. 1.60 to 1.62

SUGAR.  
Nothing to report in Sugar.

	PER PICUL.
White, No. 1	\$7.25 to 7.30
White, No. 2	5.90 to 5.95
White, No. 3	5.50 to 5.75
White, No. 4	4.90 to 5.00
White, No. 5	4.10 to 4.15
Brown Fonlusa	4.50 to 4.60

EXPORTS.  
RAW SILK.

Our last issue was of the 3rd instant, since which date we have had much more trade. Settlements for the interval reach 600 piculs, divided thus:—Hanks 290 piculs, Filatures and Re-reels 400 piculs. In addition to these figures the native Kaisha have taken about 60 piculs for direct Export to Europe and will probably ship a further quantity per City of New York leaving to-morrow.

The demand has been chiefly for Europe, buyers for the States holding off. Prices in New York are reported to show a margin on the wrong side, and with a rapidly rising exchange, business is very difficult. Quotations here may be reduced a little, some dealers professing their readiness to make some allowance for the rising foreign exchange. But other holders are strong, and the country people fail to recognise the fact that prices in Yokohama must recede before much trade can be done.

Arrivals come in daily from all provinces, and in spite of a good week's business the Stock-list shows an increase. Available supplies to date are twenty per cent. more than last season, and with the present high range of values, both reelers and dealers must be making large profits. We believe they can afford to reduce quotations considerably without incurring any loss.

There has been only one shipping opportunity during the interval—the French mail of 5th instant. That steamer the *Volga*, carried 246 bales for Marseilles, Lyons, and London; one fourth the quantity being shipped direct by the Boyeki-Kwaisha. Total export to date is now 2,695 piculs, against 2,758 last year and 4,025 at same date in 1884.

**Hanks.**—The medium and common grades have been in good request for Europe at full values. Settlements amount to 290 piculs and the following sales appear in the daily list. *Chichibu* \$235, *Takasaki* \$225 to \$265, *Omama* \$225, *Hachioji* \$250 to \$260.

**Filatures.**—Considerable business partly for the United States and partly for Europe: but buying is far from general. Among the purchases we notice *Rokkusha* \$790, *Hakubaru* \$755, *Toyesha* \$740, *Tokusha* \$740, with several parcels *Mino* and *Bishu* at from \$700 to \$800. Holders manifest some anxiety to be moving, but will not come down to buyer's ideas just yet.

**Re-reels.**—Good enquiry at about \$10 reduction on last week's rates: one buyer taking 100 piculs at one time. The following prices have been entered in the list, but whether there will be a "cut" at the scales or no we cannot tell. *Tengusha* and *Kurosha* \$710, *Buyosha* and *Hirose* at \$700, *Ogawa* \$690, "Muna" \$687, *Kodama* \$685, *Omama* \$685, with ordinary *Josha* and *Takasaki* kinds at \$665. Holders of the crink chops offer to make some reduction on late rates but not sufficient to compensate for the rise in foreign exchanges.

In other kinds there has been no business at all. *Kakedas* are said to be very dear up country, and the crop in other *Oshu* districts is reported short. This statement, however, does not seem to affect things here, and the 600 piculs old *Sendai* or *Hamatsuki* which we have in stock show no signs of moving at present.

## QUOTATIONS.—(NEW SILK.)

## Export Tables, Raw Silk, to 10th Sept., 1886.—

	SEASON 1886-87.	1885-86.	1884-85.
Europe	880	799	2,129
America	1,813	2,072	2,247
Total	2,693	2,871	4,376
Settlements and Direct	2,695	2,758	4,025
Export from 1st July	3,500	3,000	5,420
Stock, 10th Sept.	6,600	5,400	4,980
Available supplies to date	10,100	8,400	10,400

## WASTE SILK.

A large business in this branch of the trade, and Settlements for the week amount to 1,100 piculs, divided thus:—*Pierced Cocoons* 550 piculs, *Noshi-ito* 235 piculs, *Kibiso* 165 piculs, *Mawata* 110 piculs, *Sundries* 40 piculs.

All kinds have participated in the operations of the week, *Pierced Cocoons* receiving the most attention. Values are unaltered, but at closing there is much less doing for the smart rise in exchange makes the limits which buyers have in hand quite useless. Sellers have apparently nailed their colours to the mast, and it is very difficult to obtain any concessions in price. Supplies are ample, and the quantity in stock fully equals that of a week ago in spite of the heavy sales.

The M.M. steamship *Volga* (5th instant) had on board 160 bales (*Cocoons* 45 bales, *Doppioni* 17 bales, *Noshi* 50 bales, *Kibiso* 48 bales) nearly all being for France and Switzerland. The steamer *Lennox* (8th instant) had 19 bales for New York. Export to all parts is now 2,228 piculs, against 765 piculs last year and 2,337 piculs at same date in 1884.

**Pierced Cocoons.**—As noted above, fully one half the settlements have been in this description, the regular buyers for Europe and America steadily filling their requirements. Prices realised range from \$135 to \$146, according to yield.

**Noshi-ito.**—Buying has been on a free scale in the better kinds. Nothing done in Joshi. Among the prices made are the following: *Hachioji* \$155 to \$162, *Mino* \$157 to \$160, *Shinshu* \$157, all these being taken in large parcels.

**Kibiso.**—A fair amount of trade at quotations *Filatures* \$157 to \$159, *Mino* ordinary at \$80, *Josha* middling at \$70.

**Mawata.**—About 110 piculs taken by one Hong at \$255 to \$260 for good *Oshu* quality.

**Doppioni.**—Buyers are still going on, and \$270 was the last price paid.

**Sundries.**—*Kumito* at \$80, and *Neri* at \$25 (uncleaned) complete the list.

## QUOTATIONS.—(NEW WASTE)

Pierced Cocoons—Good to Best	\$130 to 150
Noshi-ito—Filature, Best	180 to 190
Noshi-ito—Filature, Good	160 to 170

Mawata—Good to Best	250 to 260

## Export Table, Waste Silk, to 10th Sept., 1886.—

	SEASON 1886-87.	1885-86.	1884-85.
Waste Silk	1,724	765	1,815
Pierced Cocoons	504	—	522
Total	2,228	765	2,337
Settlements and Direct	2,228	765	2,337
Export from 1st July	4,400	540	5,300
Stock, 10th Sept.	7,100	6,700	5,900
Available supplies to date	11,500	7,740	10,300

**Exchange.**—Foreign has advanced rapidly (in sympathy with higher quotations from home); and is now strong at the following rates:—LONDON, 4 m/s., Credits, 3/3; Documents, 3/4; 6 m/s., Credits, 3/3; Documents, 3/3; NEW YORK, 30 d/s., 78; 4 m/s., 79; PARIS, 4 m/s., fcs. 4.09; 6 m/s., fcs. 4.12. Domestic unchanged, Kinsatsu being quoted at par with silver.

## Estimated Silk Stock, 10th Sept., 1886.—

	RAW.	PIEULS.	WASTE.	PIEULS.
Hanks	1,275	—	Pierced Cocoons	540
Filature & Re-reels	3,700	—	Noshi-ito	3,020
Kibiso	770	—	Kibiso	2,930
Sendai & Hamatsuki	615	—	Mawata	70
Taysanai Kinds	220	—	Sundries	140
Total piculs	6,600	—	Total piculs	7,100

## TEA.

During the interval, there has been a spasmodic demand, aggregating 5,460 piculs, consisting of all descriptions, but mainly Common to Good Common. The Market was easy early in the week, but has now recovered. Common and Good Common have advanced one dollar per picul, and are now higher than at any time during the past month. Daily receipts are less than the demand, and the stock amounts to about 7,000 piculs. The Suez Canal steamer *Port Jackson* took 113,982 lbs. for New York, and 160,095 lbs. for Canada, total 274,077 lbs. from Kobe on the 4th instant. From Yokohama Tea shipments are as follows:—Steamship *Galley of Lorne* which sailed on August 30th, took 17,706 lbs. for New York, and 71,073 lbs. for Canada, total 88,779 lbs. The O. & O. steamer *Gaelic* took 13,255 lbs. for New York, 39,059 lbs. for Chicago, 11,258 lbs. for Saint Joseph, 202,952 lbs. for San Francisco, and 64,524 lbs. for Canada, aggregating 331,048 lbs. The bark *Carrie Delap* has cleared the port, but has not yet sailed. She has on board 149,650 lbs. for New York, 132,372 lbs. for Chicago, 2,795 lbs. for Saint Paul, 8,870 lbs. for Saint Joseph, and 419,103 lbs. for Canada, total 712,790 lbs. The Suez Canal steamer *Lennox* took on the 8th instant, 112,796 lbs. for New York, and 41,524 lbs. for Canada, total 154,320 lbs.

Common	\$13 & under
Good Common	14 to 15
Medium	16 to 17
Good Medium	18 to 20
Fine	22 to 24
Finest	26 & up'ds

## EXCHANGE.

## THE GREATEST WONDER OF MODERN TIMES.

### HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I sewed out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

### HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 18TH, 1886.

### BIRTH.

At No. 72-C, Bluff, on the 18th instant, the wife of W. G. CAMERON, of a Son.

### DEATH.

At No. 163, Yokohama, at 8.30 p.m. on the 15th instant, Mrs. JOHANNAH STIEGLT, from injuries received by burning, on the 4th instant. Home papers please copy.

### SUMMARY OF NEWS.

PRINCE NAPOLEON returned to Tôkyô the 14th instant.

ADMIRAL ENOMOTO arrived at Niigata the 14th instant.

THE usual meetings of the Genro-in have been resumed.

CHIARINI'S CIRCUS continues to draw large houses in Tôkyô.

MR. KITAGAKI, Governor of Kyôto City, has arrived in the capital.

THE *Tsukushi Kan* has been ordered as a guardship to Naga, Riukiu.

THE crop of grapes in Harima has been large, and wine-making is now in progress.

MR. OTAMA, Secretary of the Japanese Legation in London, arrived in Tôkyô, the 14th instant.

THE construction of the *Amaki Kan* at the Onohama Dockyard was begun the 7th instant.

VISCOUNT MATSUDAIRA RAISAKU, 4th class of second grade, died the 10th instant after a long illness.

COUNT YAMAGATA was present at a sham fight of the troops of the Sendai Garrison, the 14th

instant, at Dainohara, and afterwards visited the various official buildings in the Prefecture.

THE Colonial Staff Office will be removed to new buildings at Wanishimura, Iburi, Hokkaido, the 30th instant.

NEW uniforms will be served out to the cavalry and other branches of the service before the end of September.

THE residents of Takamatsu, Sanuki, have petitioned the Government to establish a branch prefectural office there.

OVER a hundred applications for admission to the Doshisha school at Kyôto have been received for the autumn term.

LEADING merchants in Tsuruga have subscribed *yen* 3,000 for the establishment of a Chamber of Commerce.

MR. SAGA SANECHIKA, an *attaché* to H. I. H. Prince Iharu, was released from his post at his own request the 13th instant.

MR. N. R. O'CONNOR, C.B., C.M.G., left the capital the 12th instant for Nikkô and Ikao, and is now on a visit to Miyanoshta.

THE trade in silk fabrics produced at Nishijin, Kyôto, which has been very dull for some time, now displays renewed activity.

THE total quantity of tea brought to Tôkyô from Kobe by the Nippon Yusen Kaisha's steamers during August last was 2,480 packages.

AN application has been made to Government pointing out the advisability of laying a telegraph line between Idzu and the island of Oki.

COMMANDANTS of garrisons throughout the Empire will, it is said, arrive in Tôkyô about the middle of November next to hold a meeting.

A PAIR of flower vases of very high merit, manufactured at the Tôkyô School of Manufactures, were presented to the Government the 12th instant.

ANOTHER sailing match took place the 11th instant at Yokohama, but for various reasons it was decided that the race should be re-sailed to-day.

IN consequence of alterations ordered by the local Sanitary Committee, carpenters and other tradesmen in Osaka are said to be very busy at present.

MESSRS. LI GEN-KYONG and B. KU KI-SO, the Korean delegates, visited the Foreign Office the 13th instant, and had a conference with Mr. Aoki, Vice-Minister.

MR. PARKER, the United States Minister to Korea, who has been recalled by his Government, has arrived at Yokohama in the U. S. corvette *Osprey*.

IT is stated that the London Chamber of Commerce, having received an enquiry from the British Government relating to trade in Oriental

countries, has applied to the Tôkyô Merchants' and Manufacturers' Association for information as to tariffs.

DR. ITO, a physician of the Imperial Household, has purchased, at a cost of *sen* 60 per *tsubo*, several *tsubo* of land at Shiohara on which to erect a hospital.

MR. KIMAMURA TAI-ICHI, an adviser to the Tôkyô Court of Appeal, was appointed to the office of chief of the First Criminal Bureau the 14th instant.

MR. HANABUSA, late Japanese Minister to Russia, who recently returned to Japan, entertained a distinguished company to dinner at his residence the 12th instant.

THE first of the season's grapes, brought to Tôkyô the 5th instant, were sold at *sen* 75 per basket, but the quotation has now declined by about 15 per cent.

MR. MITSUHASHI NOBUKATA, secretary of the Kanagawa Prefectural Government Office, was promoted to the office of chief accountant in charge, the 14th instant.

THE Nagasaki negotiations still drag on slowly, and much impatience is beginning to be felt in Japan on account of the obstructions thrown in the way of a settlement.

THE total number of soldiers to be enlisted this year in the various garrisons throughout the empire is 16,958, of whom 525 are required for the Imperial body guards.

THE War Department has decided to purchase about 30,000 *tsubo* of land near Minami, Kitamachi, Misujimachi, Aoyama, for use in place of the Hibiya parade ground.

THE recently reported complications in Korea have ceased to disturb the public, but the question of the peninsula's future is again anxiously discussed by the Japanese press.

DURING the 4th and 5th instant an extraordinarily heavy fall of rain was experienced in Sorakugori, Yamashiro. The Kizugawa rose over six feet above the usual level.

PRINCE SHOTEN, the late ruler of the Riukiu Islands, who has been staying in Okinawa Prefecture, has asked the Government to extend his leave of absence for eighteen months.

A MAN and woman have been apprehended by the Kanagawa police on a charge of selling Japanese children between the ages of 5 and 8 years to Chinese in the settlement at Yokohama.

DURING August last thirty boxes of spurious teas were detected at the Kobe Tea-inspecting Office, each containing 60 *kin*, of which twenty-three were without trade-marks and 7 contained tea dust.

IT is stated that the following are the demands made by the Japanese Government with regard to the Nagasaki disturbance:—(1) a letter of apology from Admiral Ting; (2) punishment

of the Chinese sailors; (3) an indemnity, to be disbursed in funeral and other expenses of constables and private individuals, and as compensation to their families.

THE cavalry and infantry of the Tôkyô Garrison will turn out for field exercise in Kanagawa Prefecture about the middle of next month. Lieut.-General Viscount Miyoshi will be present to direct the manœuvres.

THE manufacture in Osaka of matches for the China trade appears to have received an access of activity, the average monthly export of the commodity being now 3,316 gross of boxes, valued at over *yen* 800.

MR. HO, of the Chinese Legation, Tôkyô, bearing an official document from the Minister, has gone to Nagasaki. It is stated that the document contains instructions embodying the Minister's views on the late affair.

THE Government is said to have expressed an intention of taking in hand the construction of a railway between Nagasaki and Saseo. The work will be carried out in two sections, connected at Omura by a ferry.

THE *Wakanoura Maru*, which made a trip recently to Okinawa, will be placed on a regular line to the islands, calling at Kobe, Kagoshima, and other ports. Hitherto the *Izumo Maru* has been the only boat plying to the islands.

THE 24th ult. being the birthday of the King of Korea, Mr. Takahira, Japanese *Chargé d'Affaires* in Seoul, accompanied by his secretary, visited the palace and had the honour of an audience with His Majesty and the Heir-apparent.

MR. LI GEN-KYO, Korean Ambassador and suite, arrived in Tôkyô the 9th inst. The object of his mission is stated to relate to the establishment of a Korean Legation in the capital, and as soon as the business is completed he will return to Korea.

THE plans of the proposed harbour improvements at Osaka have been completed. The first part of the work will be the construction of an embankment to connect Shejima and Kensisaki. A prefectural loan will be floated to defray the cost of the operations.

H.E. the United States Minister has dismissed the appeal by P. C. Fullert against the decision of Mr. Warren Green refusing a new trial. A petition to the President of the United States on behalf of Fullert has been prepared and will probably be transmitted with the Minister's endorsement.

CHOLERA shows an appreciable abatement in Osaka and Tôkyô, and a still more marked decrease in Kyoto; indeed it seems as if the disease has almost entirely lost its most malignant feature in the three cities, as well as in Hyogo. No new cases have been reported from Shiga Prefecture for more than a week.

FOREIGNERS are believed to have bought in the Kobe market, from the first arrival of new season's tea on 27th April to 31st ultimo, about 10,706,900 catties, almost equal to last season's total crop. Stocks at present are over 1,000,000 catties, and about 4,000,000 catties are expected yet from the producing districts.

It is rumoured that Mr. Nishi Tokujiro, an unattached Envoy Extraordinary and Minister

Plenipotentiary, will be despatched to Russia to succeed Mr. Hanabusa, and that Marquis Saionji, Japanese Minister to Austro-Hungary, who returned to Japan the other day, will shortly leave for Vienna to resume his duties there.

THE Foreign Office reports that during July last, the total number of foreigners in Hyogo Prefecture who applied for passports to visit Kyoto and neighbourhood, either for health or other purposes, was 63, of whom 37 were Englishmen, 11 Americans, 9 Frenchmen, 2 Germans, 2 Dutch, and 2 Austro-Hungarians.

It is regarded as probable that private enterprise will be permitted by the Government to take in hand the construction of the proposed railways in Kiushiu. One line, it is believed, will run from Kadoshi, Buzen, through Chikuzen to Kumamoto and Yatsushiro. The other will be laid from Kadoshi along the coasts of Bungo and Buzen.

THE Import trade still remains quiet, and sales are few. Prices are mostly steady, though a decline, which has not been followed by any considerable business, has taken place in English Yarns. In metals little has been done, and, as large stocks have come to hand from Europe and China, buyers expect quotations to tend in their favour. Buyers in Kerosene are being supplied meantime from auction sales of damaged cargo, 11,000 cases of which have already been sold. The Sugar market has been quiet and a slight fall has taken place in the quotation for Brown Formosa. There has been a falling off in the amount of business done in Raw Silk, the trade having received a sudden check by the rise in foreign exchange. Holders are stubborn, and as arrivals continue on a large scale, the stock list shows an increase of 1,200 piculs on the week. The trade in Waste Silk has been fairly large although this market has also been influenced by the movement in exchange. There has been considerable business in Tea, transactions reaching the total of 2,600 piculs. Prices for lower sorts are steady but the better kinds of leaf are scarce and dear. Foreign exchange has fallen a little, domestic remaining unaltered.

#### NOTES.

WE observe with satisfaction that the attitude attributed by a portion of the vernacular press to H.B.M.'s Consul at Nagasaki, in respect of the recent disturbance at that port, is very distinctly contradicted in the same columns. Correspondents of the *Fiji Shimpō* and the *Hôchi Shimbun* both concur in denying that Mr. Ensle expressed any opinion unfavourable to the conduct of the Japanese. The correspondent of the former journal, who sign himself "Rokô-sei," says that he called on Mr. Ensle, the 30th ultimo, and that, in the course of a long conversation, the British Consul, while avowing reluctance to express any hasty or decided opinion about the question of culpability, nevertheless disapproved the conduct of the Chinese naval authorities in neglecting to adopt proper precautions against disturbances which were likely to arise out of the affair of the 13th ultimo, and at the same time bore emphatic testimony to the forbearance and high sense of duty manifested by the Japanese police. As to the part taken by the Japanese residents, Mr.

Ensle is reported to have said that, in view of the small number of constables available at the crisis, the assistance of the people was very fortunate, since without it the damage to life and property would doubtless have been much greater. In point of fact, Mr. Ensle's action throughout, and, we may add, the action of all the British officials in Japan, has been most friendly to this empire. It is impossible, as it would be unbecoming, to determine how far a peaceful settlement has been promoted by their efforts, but we do not hesitate to say that the rumours originally circulated by the *Fiji Shimpō* with regard to this feature of the affair, were diametrically opposed to the truth.

\* \* \*

The same correspondent of the *Fiji Shimpō* adds that there are indications of an attempt on the part of the Chinese to suborn Japanese witnesses. The story does not seem to be worth repeating except as an evidence of the bad blood that is sure to be caused by unduly protracting the enquiry at Nagasaki. Probably to the same class belongs the rumour circulated by the *Hupao* that Mr. Drummond has advised his clients, the Chinese, to demand not only an indemnity but also the removal of Prefect Kusaka. It is precisely to the sound judgment and excellent temper of Prefect Kusaka that the public looks for a reasonable settlement of this wretched affair. Mr. Drummond is not credited with a very prudent attitude in his advocacy of the Chinese side, but we cannot believe that he has so far stultified himself and his cause as to attribute any blame to Mr. Kusaka. The Chinese contention is understood to be that, after the disturbance began, some of their countrymen who were sitting quietly in grog-shops or other places of amusement, became the object of unprovoked attack on the part of Japanese citizens. *Prima facie* we should be disposed to think that something of the sort may have happened. The evidence of independent foreign witnesses goes to show that the behaviour of the Chinese sailors had been, for several days, gross enough to provoke a feeling which, among a people less good-humoured and long-suffering than the Japanese, must have found vent in speedy and violent retaliation. When therefore, it became known, on the night of the 15th of August, that a large force of these sailors was engaged in a murderous assault upon the police, and that many civilians were involved in the fracas, it would not have been in the least surprising had the whole town risen *en masse* and "gone for" every Chinese liberty-man on shore. That is what would probably have happened in Europe or America. The Chinese commenced a disgraceful riot, having preceded it by behaviour of the grossest character, and they must not complain because they suffered a little indiscriminately—if indeed, they did so suffer—in the tumult which they had themselves caused. The demands attributed to them are quite ludicrous, and their disposition to magnify a street brawl into an international question is a blunder of statesmanship which we find great difficulty in connecting, however remotely, with the name of the Viceroy Li.

\* \* \*

We read in the *Nichi Nichi Shimbun*, on the authority of a Nagasaki correspondent, that Captain Lang has forfeited, in connection with the Nagasaki affair, both the confidence of the Chinese authorities and the popularity he pre-

viously enjoyed among those with whom he was serving. The precise reasons for this are not mentioned, but the writer goes on to say that, since Captain Lang's engagement has still three years to run, he will remain in the Chinese Navy, but will not retain his present high position in the *Ting Yuen*. From information which had previously reached ourselves, we are disposed to think that there is some truth in this story. Captain Lang's attitude in connection with the Nagasaki investigations is said to have been too impartial and conciliatory to satisfy the Chinese, and it is further asserted that the responsibility of allowing the men to land on the day of the disturbance is laid upon his shoulders. Admiral Ting—so the story runs—was for stopping all leave, but Captain Lang pointed out that to confine the men to their ships in such hot weather must be injurious. It is scarcely credible that either or both of these reasons should possess weight with the Chinese, but truly their general conduct in connection with the Nagasaki affair has been of such a nature that one hesitates to pronounce anything too irrational.

The *Chinsei Nippo* says that the fee paid by the Chinese Government to Mr. Drummond for his services at Nagasaki is 100 taels, or 135 yen, daily. At that rate his stipend from the 24th ultimo, when he left Shanghai, until the 9th instant—the date of the *Chinsei*'s information—would be 2,285 yen. Unless rumour is much mistaken, this money is not likely to bring China any valuable return. The attitude assumed by Mr. Drummond is said to be in the last degree calculated to complicate the negotiations and to render an amicable settlement impossible. It is to be hoped that the common-sense of the Chinese will teach them, while there is yet time, that sound statesmanship does not entrust the unravelling of international entanglements to the narrow-minded and stubborn management of legal partisans.

Japanese papers publish the following telegrams:—

(*Mainichi Shimbun*.)

Nagasaki, September 9th, 7 p.m.

The Japanese representatives here have applied to the Government pointing out the necessity of having at least one interpreter to assist them.

(*Fiji Shimpō*.)

Shanghai, September 9th (Afternoon).

The *Hupao* states that Mr. Drummond has submitted a demand for an indemnity, an apology, and the dismissal of Governor Kusaka, for the approval of the Chinese Minister in Tōkyō.

[The above telegram, having been sent in cypher, is not quite intelligible.—*Ed. Fiji Shimpō*.]

Nagasaki, September 9th (Afternoon).

To-day's enquiry refers to the disturbance of the 13th ult. Mr. Kurokawa Koshiro, constable, who was wounded by Ohatsu and others during the disturbance, and two representatives from among the Japanese residents appeared yesterday. Two representatives have also appeared to-day. They will be used as witnesses.

(*Nichi Nichi Shimbun*.)

Nagasaki, Sept. 10th, 4 p.m.

Mr. Drummond states that he has not been able to procure certain evidence and therefore several months will be occupied by the present enquiry.

Nagasaki, Sept. 10th, 6 p.m.

To-day the fourth sitting of the enquiry took place. Japanese witnesses are being examined. The affair of the 13th ultimo is not yet finished with. It is proposed to examine the Chinese witnesses next.

(*Mainichi Shimbun*.)

Nagasaki, Sept. 10th, 1.10 p.m.

It is stated that the Chinese representatives are seeking witnesses in the Chinese interest among Japanese, the suggestion being made that they resort to bribery.

Nagasaki, Sept. 10th, 5.20 p.m.

With regard to the affair of the 13th, the Japanese witnesses are now being examined.

Nagasaki, Sept. 10th (Evening).

The official business of Mr. Hashiguchi is to write out the evidence of the witnesses and to receive the statements of those who have sustained damage.

Nagasaki, September 10th (Delayed).

Li Hung-chang enjoins a peaceful attitude on the Chinese representatives at the enquiry, and the Chinese Minister in Tōkyō has given similar instructions. The Chinese Consul, however, is still endeavouring to discover evidence to defeat the Japanese, and the Consul seems to wish to postpone the enquiry, in the face of his previous statements.

At the third enquiry it was decided to affix to the minutes the seals of all those present.

Nagasaki, September 14th, 4.50 p.m.

The fifth enquiry was held to-day. Japanese witnesses were again called and examined.

Nagasaki, September 14th, (Forenoon.)

Mr. Drummond has been allowed to examine the minutes of the first and second sittings of the enquiry, held by Governor Kusaka and Consul Tsai.

Nagasaki, September 15th, 1.30 p.m.

Mr. Kawazu left for the capital to-day.

Nagasaki, September 15th, 1.20 p.m.

A sum of *yen* 200, contributed by residents of Kumamoto Prefecture, has been handed to the constables injured in the late disturbance.

Nagasaki, September 15th, 8 p.m.

Consul Tsai has intimated to the Japanese representatives that he desires to call witnesses other than Japanese or Chinese.

Nagasaki, September 14th, 1.15 p.m.

At the enquiry to-day it was decided that a sketch of the scene of the affray should be prepared. Mr. Drummond did not attend the sitting. The sixth sitting is fixed for the 17th instant.

(*Fiji Shimpō*.)

Nagasaki, September 15th, (Afternoon).

Vladivostok is quiet.

[This may be a report brought by a steamer which has arrived at Nagasaki from that port.—*Ed. Fiji Shimpō*.]

At yesterday's enquiry several women of ill-fame were called and examined.

(*Hochi Shimbun*.)

Nagasaki, September 14th, 9.05 a.m.

The fifth sitting of the enquiry was held yesterday. The progress made is not known, but it is stated that the enquiry will occupy two months yet.

(*Nichi Nichi Shimbun*.)

Nagasaki, September 16th, 6 p.m.

The sittings of the enquiry are not held on Sundays or Thursdays.

Nagasaki, September 15th, 5.50 p.m.

(Delayed.)

The sittings of the enquiry have reached the seventh. The enquiry still deals with the disturbance of the 13th, and Mr. Drummond proposes to cross-examine the Japanese witnesses.

(*Mainichi Shimbun*.)

Nagasaki, September 16th, 1 p.m.

Mr. Ting, a student secretary of the Japanese Consulate in Tientsin, has been ordered to Nagasaki to act as interpreter.

THE Korean correspondents of the *Nichi Nichi Shimbun*, *Hochi Shimbun*, and *Fiji Shimpō* describe the recent complications in the peninsula in terms which are nearly identical. The unanimity of their testimony would be convincing were not better information forthcoming. The *Hochi Shimbun* is particularly outspoken. It emphatically refers the origin of the complications, in the first instance, to Russia's ambitious designs, and in the second to Korea's conviction that since she cannot count on the protection of either China or Japan, the great northern Power is her best guardian. The intrigues brought about by this concurrence of ambition and reliance are said to have been discovered by the Chinese Representative, Mr. Yuen Shi-kai, who, taking Min Yon-ik and other prominent Koreans into his confidence, proceeded to intimidate the King and accomplish the downfall of the Russo-phile Ministers. The *Hochi's* Ninsen correspondent alludes to a

secret treaty between Korea and Russia as though it were an unquestionable fact, and further states that a steamer called the *Kaitan*, owned by the C.M.S.N. Company, arrived at Ninsen, the 24th ultimo, carrying 250 Chinese braves who subsequently entered Sōul in disguise.

\* \* \*

The *Chōya Shimbun's* account differs in some interesting respects from that of its contemporaries. It says that Mr. Yuen Shi-kai acted in accordance with instructions telegraphically conveyed to him, August 13th, from Li Chung-tang, who, having learned that a secret treaty had been concluded with Russia, ordered the arrest and despatch to China of the Korean Ministers concerned in the affair. With regard to the origin of the secret treaty, the *Chōya* explains that there is in Sōul a party strongly in favour of Western civilization and bitterly opposed to China's suzerainty. The leaders of this party, chief among whom is Kin Ban-shok, Minister for Home Affairs, negotiated the Russian treaty, seeing no other way of launching their country in the path of progress. The Queen is credited with having countenanced their design. The *Chōya's* correspondent adds that the King of Korea, probably anticipating and desiring to avert China's anger, ordered the degradation and exile of the four progressionist leaders August 8th, that is to say, four days before the supposed receipt of Li Chung-tang's instructions to Mr. Yuen Shi-kai.

\* \* \*

It may be asserted with tolerable confidence that all these stories are wide of the mark so far as the supposed Russian treaty is concerned. The latest account of the *Nichi Nichi Shimbun's* correspondent probably comes nearest to the truth. That writer refers the whole trouble to the jealousy of Min Yon-ik, who, seeking to displace the leaders of the rival Kim faction, accused them of intriguing with Russia, and persuaded not only the Chinese Representative in Sōul, but even the Viceroy Li, to credit the charge. Probably something is also to be placed to the account of the disfavour into which the whole Kim faction fell with China in consequence of Kim-Yo-Kun's escapade. To us it seems that the complication is another testimony to the foresight of the Japanese Minister of State for Foreign Affairs, who long ago predicted that in the feuds of rival political parties in Korea lay the principal source of danger to the peace of the East.

\* \* \*

The *Fiji Shimpō* proposes to see in the present turn of affairs in Korea matter of the gravest interest to Japan. The native journal says:—We are astounded on the one hand by the daring want of principle evinced by Yuen, Min, and some of their friends, and on the other by the ignorance and stupidity of the King of Korea and his state officers. These latter have shown their utter incompetence to guide the affairs of a nation. If Korea were a country remote and distant from our borders, we might be justified in viewing with equanimity what has taken place there; but the nature of the relations between Japan and Korea emphatically forbids the adoption of any such position. The recurrence of such trouble as we are now informed of in Korea must lead to the most serious consequences, in which we will unavoidably be involved. What are we to do? Pursue a vigorous and resolute policy and endeavour to free Korea from the evils which at present surround her, while at the same time

guarding ourselves from danger. We believe it to be useless to follow a moderate and mild course, merely for the sake of peace and quietness, for before we can have sufficient time to regret the consequences of such folly, events will already have brought on us dangers from which we will not be able to escape.

\* \* \*

The *Nichi Nichi Shimbun* continues its references to the Korean troubles in the following strain:—In the absence of direct telegraphic information from Seoul, we are left in darkness as to the circumstances relating to the cause of offence Korea has given to China. But enough is known to show that China has been very prompt and energetic in this instance; the remonstrance to the Korean Government, the banishment of the Korean Ministers, and the sending of Min to Tientsin—all these measures were executed in two, or at most, three days. Telegrams intimate that these steps have restored order for the present, but it is to be apprehended that the events may prove the forerunners of a still more grave series of complications. Some persons suppose that the secret treaty with Russia was planned by the Ministers of the Right and the Left, and put into execution by the influence of the Queen. It is a notorious fact that among high Korean dignitaries there are a considerable number who desire to oust the Min family from power by allying themselves with Russia; but the story of the Queen lending her influence to further this plan is incredible, as she is herself one of the hated family. Others say that Min-yon-ik, seizing a certain rumour as to the desire of the two Ministers to conclude a treaty of alliance with Russia, used it as a means of wresting political power from them. Neither of these two suppositions can be entirely accepted, but the fact of Korea's reliance upon Russia seems to be true; for, however precipitate and ruthless China may be when she discovers weakness in the force against which she contends, she would not in all probability have adopted such a decisive step in the present case had there not been some tangible facts to prove the existence of such relations between Korea and Russia. As to Mr. Yuen Shi-kai, he is no mere representative of China in Korea; his arbitrary conduct in packing off Min to Tientsin and prohibiting the use of the telegraph line except by his own Government, force us to presume that he has the supreme control of Korean affairs. It is now evident that the policy of China is to establish over Korea a *de facto* claim of sovereignty, and thus compel other Powers to acknowledge Korea's dependent position towards her. Finally, as to the cause of Korea's recent inclination towards Russia: the most potent factor is the inborn tendency of the Korean people to depend upon a foreign Power which seems to have a warm interest in their country. But more potent still is the family feuds among the Korean statesmen, whose first care is to promote their own personal interest even at the expense of their country. It matters little to them whether they depend upon China or Russia, so long as their private interest is served.

\* \* \*

The *Hochi Shimbun's* safeguard against the dangers to which the present state of Korean affairs gives rise, is an agreement by the chief Powers concerned to place the peninsula in a

position similar to that occupied by Belgium. Korea the *Hochi* regards as an Oriental Turkey: both are equally fertile in political intrigues, though those of the latter are the more widely reaching. Unless steps are taken now to clearly establish, and define Korea's position and status she will undoubtedly constitute in the near future the material from which a spark will spring that may set a great part of the civilized world in a tremendous conflagration. Japan and China are deeply concerned in the future of the peninsula, for the loss of Korean independence must plunge both Powers into a maze of complications and trouble. Though China has spent a great deal of money on, and given much attention to her neighbour, no result profitable to either side has been attained. On the contrary, we now find that Korea is disposed to rely on Russia, and it is easy to perceive that if the latter is successful in her plans and acquires a port open during all the winter, the event will be a distinct shock both to China and Japan. In the immediate future China will certainly not stand still, and whether she advances or retires her condition must cause anxiety to Japan. It is the duty of Japanese statesmen to stand out against any unlawful action that China may take in reference to the East, especially if any attempt is made by the Chinese to take possession of Korea. They must be compelled to give up any such design, and probably the best deterrent will be the placing of Korea in a position of firm independence. In order to define the conditions under which that object may be attained, China, Japan, England, and Russia ought to send delegates to discuss the subject. China should be required to desist from interference in the affairs of the peninsula, and to abandon her nominal claims of sovereignty, England ought to give up Port Hamilton, and the four Powers should pledge themselves to abstain from schemes of aggression in reference to Korea and to compel all others to preserve a similar attitude.

\* \* \*

The *Times* has certainly made a singular fiasco over the Port Hamilton affair. It commenced by locating the little group of islands in Quelpart, and ever since that curious blunder it has remained in a persistently dense fog about the whole business. Of course the big journal is not infallible. Like its humble contemporaries, it is liable to error. But at this time of day there is just cause to complain of its mistakes, especially when they place England in a ridiculous light. "Port Hamilton," *The Times* now tells us, "was obtained by this country in a regular and peaceful manner, by bargain and agreement with those in whom the nominal right of possession was vested. Consequently there is no analogy whatever, either in point of intrinsic importance or of method of acquisition, between our annexation of Port Hamilton and the reported Russian demonstration against Port Lazareff." Elsewhere the London journal asserts that the annexation of Port Hamilton—observe that it is now termed "annexation" though it was originally declared to be "temporary occupation"—was the result of negotiations between Sir Harry Parkes and Li Hung-chang. Now, so far as this information is concerned, it is grotesquely false. The simple fact is that the first intimation which Li Chung-tang received of the affair was a telegram from the Chinese representative in London announcing that the occupation had been

accomplished. China and Korea were alike taken by surprise, and there commenced then and there a series of remonstrances of which it is scarcely possible to suppose *The Times* ignorant. Indeed, so far from having obtained possession of the islands peacefully "by bargain and agreement," the British occupation was quite recently made the subject of a renewed remonstrance on Korea's part. *The Times* is the victim of a deliberate hoax, and when it makes a parade of British virtue, as exhibited at Port Hamilton, contrasting it with Russian aggression as suspected at Port Lazareff, it acts the Pharisee in a grotesquely palpable fashion. The Russians must laugh heartily over this Tartuffian display, and the world will set it down as another startling example of British hypocrisy.

We have been requested to publish the following outline of a project which, we trust, will receive hearty support:—"A few of the residents in Tsukiji, being anxious to form a local Boating and Gymnastic Club, have formed themselves into a temporary committee for that purpose. They have rented a piece of ground at Kawasaki's ship-building yard, immediately below the Concession, purchased a Boat-house and a four-oar racing boat, and arranged to compete at the forthcoming Yokohama Regatta in some of the events. The same gentlemen have inaugurated a Bathing Club in connection with the above arrangements. A boat leaves Akashi Bashi every evening, except Sundays, at 5.30; and salt water bathing is enjoyed at a very short distance from Tsukiji, the spot being favorable for swimmers and non-swimmers at nearly all conditions of the tide. The committee propose to hold a meeting of those interested in the present undertaking, and will be glad of the support of all who are willing to assist. The proposals to be laid before such a preliminary general meeting are:—(1) That proper apparatus for fitting out a Boating Club be secured. (2) That a house-boat for bathing purposes be built. (3) That a gymnasium be constructed and the necessary appurtenances obtained. (4) That energetic steps be taken to secure the use of ground for tennis, baseball, football, and cricket,—and the various implements for such games either bought or imported. A subscription of \$10 or \$12 per annum will probably suffice for all purposes. The meeting was held at 4 p.m. on Saturday the 11th instant, at Kawasaki's yard.

LORD GRANVILLE'S retirement from the political stage is naturally made the occasion for some neatly turned panegyrics by his admirers. The praise is certainly deserved, for the Earl has many fine qualities, not the least admirable of which were displayed in his long performance of the difficult task of leading a minority in the Upper House. As Foreign Secretary, however, we cannot think that his country owes him a very heavy debt of gratitude. In that office too many opportunities presented themselves for the exercise of his unhappy faculty of indecision. It has been most fortunate for the continuity of British foreign policy that there was found in the Liberal ranks a statesman so true to the traditions which Lord Salisbury represents as Lord Rosebery. Could the direction of the country's foreign affairs remain in the hands of these two noblemen for the next ten or fifteen years, it would be a happy thing for British interests.

CHIARINI'S Circus is reaping the fruits of its proprietor's enterprise in coming to Tōkyō. At first the Japanese were a little puzzled about it, and being at the same time deterred by the prohibition which rests upon all places of public entertainment during the cholera epidemic, their inclination was to stay away rather than to go. But since the accounts of the more adventurous spirits have been circulated abroad, people flock with greater and greater avidity to see the novelties, until the big tent nightly accommodates from two to four thousand spectators. Elephants, tigers, and lions are in themselves powerful attractions to the Japanese, and when the remarkable performances of wonderfully trained horses are added, an enthusiastic audience may be safely counted on. But if Mr. Chiarini wishes to preserve the popularity he has begun to earn, we strongly recommend him to diminish the "gagging" features of the entertainment. A circus clown is very well in his way, but to be at all amusing it is essential that he should be intelligible, and since he cannot be that in Japan, his rôle had better be curtailed as much as possible. Even to an audience of children it would be wearisome to see a man manœuvring a hobby horse round and round a ring, putting it through paces and passages and tumbling it over hurdles with most inartistic reiteration. The Japanese have a keen appreciation of fun and humour, but they will very soon abstain from visiting the circus if they suspect that the entertainment offered to them includes features purposely adapted to a low order of intelligence. If Mr. Chiarini is well advised—and we speak with the confidence of long experience—he will eliminate from his performance everything in the nature of extravagant gestures, pidgin Japanese, and tiresome tomfoolery, and will apply himself to seriously exhibiting the skill of his troupe and the wonders of his stable and menagerie. We observe, by the way, that he advertizes the name of the place of entertainment as "Akiwa-no-hara," whereas the name is really pronounced Akiba-no-hara.

An officer of a steamer which recently visited the Riukiu Islands sends us a letter in which he gives a short account of his observations at that place:—"The principal object of our voyage to Riukiu was to convey thither the new Governor, Mr. Oseko Sadakio, and a body of police—the relief for those who had put in their time in the prefecture. After a detention at Osima Anchorage, during very bad weather, we arrived at the islands on the 24th ultimo, and anchored outside the mouth of the river at Nawa. There is a capital anchorage, however, inside for vessels drawing not more than 14 feet. We remained until the 1st instant, when, having embarked the time-expired police, we sailed for your port. The climate may be described as salubrious and the temperature equable, our instruments never indicating more than 92° or less than 83° Fahr. in the shade, and the nights are sufficiently cool to make a blanket a necessity. A few mosquitoes came off to us, but they were not of a ferocious kind, their bites being scarcely perceptible. In appearance the inhabitants much resemble the Japanese, and are an easy-going people, who give no trouble to the Government. The authorities consequently have complete control, and the office of policeman is pretty much of a sinecure. They are widely different, however, from the Japanese in one particular—that of cleanliness—

the lower orders especially. Their wants are few and modest, and although Japanese merchants have established stores for the sale of products from Japan and foreign countries, they do not appear to be doing a roaring trade. I suppose that there is no article in the world which has penetrated into so many obscure and remote corners of the earth as "Bass's Bottled Beer." We found it in Riukiu, in perfect condition, at the moderate price of 30 *sen* per quart bottle. The women are modest, and have a remarkably fine carriage, the result, doubtless,—as I have observed in other parts of the world—of carrying burdens upon the head, which is the common practice. Ponies are plentiful, and those I handled appeared to have been properly broken to the saddle. Although seldom over 12 hands, they are of a much better breed than the Japanese animal, possess better points, and are stronger. Those I rode had good mouths and manners, and a gait that never slackened. With a party from the ship I rode up to the Castle, a steep incline, and the animals required no urging whatever, being just as fresh at the finish as at the start. The roads, which are excellent, even by comparison with those in the neighbourhood of Yokohama, were made by the authorities, who are instituting improvements in all directions. In the Castle, we found troops (about 250), a detachment from the Kumamoto Garrison, whose term of service in Riukiu is one year, and who will be relieved next April."

THESE are trying times for the politicians who call themselves Irish patriots. On the side of their opponents there is such an indiscriminating resolve to discredit them, that, do what they will, they find themselves in the wrong. Accusations of association with Fenians and Moonlighters are freely uttered against them. If they keep silence, then they are regarded as admitting the charge. If they deny it, then they have added falsehood to their other iniquities. It has fared so with Mr. Parnell. He publicly declared that he and his party had no manner of connection with the Fenians. *The Times* retorted:—"Mr. Parnell has quite recently been convicted, upon evidence from which there is neither escape nor appeal, of having deliberately and repeatedly affirmed that which he knows to be false." In such a dilemma men are apt to become unreasonable. Seeing that speech is useless, their inclination is to resort to blows. But if blows are delivered, at this juncture, on the Irish side, then the policy of the Conservatives is justified and Coercion occupies the platform. Will the "patriots" find in Parliamentary obstruction a sufficient vent for their wrath? Parliamentary obstruction is the resource plainly indicated even by Englishmen. Viscount Hampden, writing in the July number of the *Contemporary Review*, says:—"I would rather not predict what would happen in the event of the prayer of Ireland being again and again refused, lest it should be said that I had the bad taste to use threats instead of arguments. But having had some experience, as Speaker of the House of Commons, of the severe strain upon parliamentary government consequent upon the attitude of members from Ireland disaffected to the British connection, I deem it my duty to warn all those interested in Parliament (and who is not?) of the dangers ahead." Lord Hampden, or Mr. Brand as he was lately called, will doubtless be accused of

encouraging parliamentary obstruction, just as Mr. Gladstone has been accused of putting a premium on violence and bloodshed. But if the arguments of the "patriots" are to be answered as *The Times* has answered Mr. Parnell; and if their hands must be held under the Damoclean sword of coercion, we do not see what remains to them but an accentuated renewal of their old tactics in the House.

A CORRESPONDENT of the *St. James's Budget* sends the following story to that journal:—

We all know the opera of the "Gazza Ladra." Here is a true story of what happened to a friend of mine, now one of the highest dignitaries of our Church.

It was a spring morning, bright and fragrant; the wide window of the inner sitting-room, which looked out upon the little strip of garden common to most town houses, was open. This garden was divided in the middle; the first half nearest to the house scarcely deserved the name of garden, being closely flagged and with no flowers visible except a few which grew in large tubs placed upon the pavement; the second half was a glowing mass of flowers.

Close by the open window stood a writing-table, and beside it sat a young man busily copying out a poetical effusion, the composition of which had served to while away the long hours of a sleepless night. He was about to finish the last verse of his poem when he heard a voice at the window, and, looking up, he saw a large, black, and somewhat pert-looking bird standing on the ledge of the window and looking in at the room very curiously, while every now and then it uttered some unintelligible word. The writer at the table remaining motionless, the bird hopped into the room. Alighting on the writing-table, it proceeded to walk up and down, peered long into the ink-bottle, and, lifting up a pen in its beak, it pattered along over the founts; only now and then dropping the pen to utter a word which sounded like "Packer" or "Parker." By-and-by the jackdaw forsook the table, and, after hopping from chair to chair, made its way out by an open door to the stairs. These he mounted till he arrived at the nursery, where he seemed quite at home.

The family expected that the bird would disappear in the same mysterious way as it had arrived. But no: it attached itself keenly to its new friends, feeding from their table and learning some of their names. But in a few days the butler was in trouble: several spoons were missing. Every corner of the house was searched, but they were nowhere to be found. Now one thought of doubting the butler's integrity, but he became a miserable man. By-and-by more spoons were missing, and, worse still, money! One of the children of the house had lost its birthday gift of a bright haircrown as well as a bonnet. Now the old nurse was up in arms: the money had been lost in her dominions. Black looks were cast upon the nursery-maid, and suspicions grew into almost certainty when a sovereign belonging to the nurse herself had vanished from the shelf where she had hidden it. The nursery-maid wept in secret, and walked heavy-hearted from room to room. And all this while bright-eyed Parker hopped up and down the stairs—a delight equally to the children and the elders of the house.

The spring had deepened into early summer when, one day, the dining-room window lay open, where the family were gathered round the luncheon table. Parker, who was not admitted to the room during meal-time, was standing disconsolately on the flagged half of the garden. A drumstick was selected for his tit-bit; and, luncheon being over, it was flung to him and greedily seized. Parker, however, did not proceed, as usual, to pick his bone; but gathering it up with a well-balanced care, began a series of sidelong hops along the stone flags until he reached the garden, then up one of the sidewalks and in between a bed of forget-me-nots and tulips, where, when nearly out of sight, he began to cover the bone up with earth. Observing this, the young poet suddenly saw again in his mind's eye the statue of Justice in the Piazza at Florence, erected to the memory of the poor servant-girl who had paid the penalty of death for stealing her mistress's diamonds, which were afterwards discovered in a jackdaw's nest. He went out the garden, and there, amongst the forget-me-nots, under a thin coating of mould, lay all the missing goods and some that had not been missed.

Next morning the body of the unfortunate Parker was found in a rain-water barrel just beneath the window of the butler's bed-room. No one knew how Parker had come by his death: the butler being apparently the most ignorant of all.

FROM the "Report of the Commissioner of the Imperial Mint" for the year ended March 31st, 1886—the receipt of which we acknowledge—it appears that, during the period of nine months covered by the Report, the quantities of gold, silver and copper coined at the Mint were 35,403.13 oz., 5,159,483.90 oz. and 5,293,165 oz. respectively; and the coins struck were 5-*yen* gold pieces to the value of \$650,420; silver 1-*yen* pieces and auxiliary coins to the value of \$4,100,372.40, and copper 1-*sen* and ½-*sen* pieces to the value of \$312,330.27. The copper coins were struck entirely from old *tempo-sen*, which were recalled by proclamation. Of the silver coins no less than 14,386,163 in number, were auxiliary—chiefly of ten and twenty *sen* denominations. With the additions shown in this Report, the amounts of gold, silver and copper

coins struck at the Mint from its commencement to the 31st of March last, were \$56,741,808, \$58,828,214.40 and \$11,326,288.37 respectively, making a grand total of \$126,896,310.77. The Mint, in the same time, realized a net profit of \$7,492,811.

Our readers may remember that a Decree issued last December, with reference to a change in the "remedy of fineness"—that is to say, a change in the limits of fineness—of subsidiary silver coins, was wrongly interpreted by some critics in the sense of a debasement of the coinage. The Commissioner of the Mint explains as follows:—"By the Imperial Decree issued December last, the Remedy of Fineness of Subsidiary Silver Coins has been extended from 2 to 3 per mil. The former Remedy of Fineness, 2.0 per mil for coins taken both singly and collectively, was found to be too narrow for a coin of such a low standard as our Subsidiary Silver—viz: silver 800, copper 200—especially if large coinages had to be undertaken and each single coin kept within the limits of Fineness. Now that our financial condition has improved so that silver coins and paper money pass at par, a large amount of subsidiary silver coin is required for circulation, and the extension of the Remedy will facilitate the coinage of these large quantities without causing any change in the average composition of the coins, which will as usual closely approximate to 800 fineness."

We observe with great pleasure that the Commissioner pays the following high tribute to the abilities and services of Mr. W. Gowland and Mr. R. MacLagan:—"The appointment of W. Gowland, F.C.S., Associate of the Royal School of Mines, as the Technical Adviser to the Commissioner, Chemist and Assayer of the Mint, and also that of R. MacLagan, M.I.M.E., as the Engineer of the Mint, terminated on the 31st day of January last, and the prolongation of both for the further period of three years has been authorized. Since the first appointment of these gentlemen in the Mint thirteen years have passed; during that time their duties have been ably and diligently performed and the Mint has benefitted not a little from their services. During the last few years the work of the Mint gradually increased, until last year the coinage exceeded that of any preceding year, and in the present year a large quantity of Subsidiary coins had to be rapidly struck; there has been, however, no delay in any of the operations, and the fineness of the coins has been accurately maintained, owing to the careful attention of Mr. Gowland, who in his important post has also introduced various processes which much facilitate the work, especially of the Assay and of the Metallurgical Departments. In the Mint machinery there was no breakdown, owing to the able superintendence of Mr. MacLagan, to whom also we are indebted for the designs and arrangement of the new Engineering Works of the Mint, which enable us now to be independent of external engineering help and to make any additional machine we may require in any of the departments."

An immense improvement has been effected in the condition of Tokyo this year by the abundant use of watering carts. Dust used to be the plague of the city. It afflicted Tokyo as much as smuts torment London. Every breeze carried volumes of gritty particles into the

houses and lungs of the inhabitants, one long-recognized consequence of this nuisance being an exceptionally high rate of mortality among children. No method of architecture could be better calculated than that of Japan to enhance the inconveniences of a dust storm. Houses with their floors raised about 18 inches from the ground and their fronts completely open to the streets, offer no sort of obstacle to the free ingress of everything which the wind is capable of carrying. To protect themselves, in some sort, against this torment, the citizens used to spend a good deal of time and labour lading water over the spaces before their houses; but as the fluid they used was generally taken from the sewers, and as the operation was partial and fitful, it is a moot question whether they did not make the trouble worse. This year, however, the Municipality has taken the matter vigorously in hand. Watering carts have been constructed in large numbers. How many of them there are we should be afraid to say, but we have seen one marked "537." They are just large enough to be drawn by one man, and the work of manning and using them has been contracted for by a well known merchant of Tokyo—Mr. Iwaya Matsuhei—who is renowned for his advertising enterprise, and who is supposed to have undertaken this job with the view of still further familiarizing the city with his name, rather than of deriving any direct profit. At all events the Municipality and Mr. Iwaya between them have rendered Tokyo considerably more habitable than it used to be.

It appears that after all these years Macao is at length to be recognised as a Portuguese Colony. The Portuguese had been for more than 40 years engaged in virtually unsuccessful efforts—unsuccessful, according to Medhurst, chiefly because of their own violence—to open a trade with China when, in 1557, they received permission to land and erect store-houses on an island near the mouth of the Canton River. To this island they gave the name of Macao. It was a desert place. According to some accounts, the permission granted by China—or, to speak more correctly, by Chinese provincial Mandarins—was in consequence of assistance rendered by certain Portuguese adventurers to the Canton authorities in hunting down a pirate chief. Upon this permission the Portuguese founded a claim to the island, and despite the obviously slender nature of the title, have continued ever since to govern the place as though it were a Portuguese possession. The Chinese, meanwhile, though with their usual temporizing policy they refrained from any active attempt to control the settlement, resisted on several occasions the Portuguese assertion of territorial rights. In 1749, a convention was signed providing for a joint Portuguese and Chinese Government of the place, and this arrangement continued for nearly a century. In 1849, the celebrated Governor Amaral forcibly abolished the Chinese custom house at Macao and took steps to establish the undivided sway of Portugal over the island. He was assassinated by the Chinese, the result being that the resident Chinese Mandarin was expelled from Macao and the island was thenceforth exclusively governed by the Portuguese. Various attempts were subsequently made to obtain China's recognition of Portuguese sovereignty, but they were all unsuccessful. Now, however, it is asserted that Sir Robert Hart

has arranged the basis of a treaty by which China withdraws all opposition to Portugal's claim, in return for concessions to be made by the latter Power with a view to the better protection of the Chinese revenue. Sir Robert recently paid a visit to Hongkong with the object of devising some means to put an end to the smuggling of which that place is supposed to be the headquarters. Macao had to be brought into the arrangement, and hence the surrender of the island to the Power which has ruled it so long. It is not yet known exactly what scheme Sir Robert has elaborated with regard to smuggling, but rumour says, among other things, that the Hoppshop of Canton is to be abolished and that the customs at that place are to be brought under the control of the service over which Sir Robert Hart presides.

Mr. FROUDE has been lately dubbed a "romantic historian" and a "small literary Ananias" by Robert Buchanan in the *Pall Mall Gazette*, but the animus which inspired the diatribe was so palpably the effect of Mr. Froude's scathing reference in "Oceana" to the latter's "New Abelard" as the worst book he ever read, that most people familiar with the novelist's flights in speculative philosophy can only have been amused by his display of spleen. It is, nevertheless, true that Mr. Froude is not the most accurate of historians. Some sort of latitude may be given to one writing of Japan and the Japanese, twenty or twenty-five years ago, but there is little excuse for a writer allowing the errors of those days to be perpetuated now. In a comparatively recent edition of Froude's "Short Studies on Great Subjects" the following paragraph re-appears, in his article on "England's Forgotten Worthies," the article itself, it must be remembered, being a review of papers published by the Hakluyt Society:—"In taking out Sir Edward Michellthorne to India, in 1604, he (John Davis) fell in with a crew of Japanese, whose ship had been burnt, drifting at sea, without provisions, in a leaky junk. He supposed them to be pirates, but he did not choose to leave them on board; and, in a few hours, watching their opportunity, they murdered him." It seems almost incredible that any reflective writer could, at this day, reproduce, without comment, a statement of this kind, and it is, of course, unnecessary to point out its manifest absurdity here. But the subject is one that has had and always will have an irresistible attraction for English youth, and it is, therefore, a pity that an act of perfidy like that described should be laid to the charge of a people thousands of miles removed from the possible scene of action and inherently incapable of such a crime.

Mr. SATOW appears to be enjoying at Bangkok all the unpopularity which attaches to the levying of a poll-tax. There is something peculiarly irritating about this species of impost. It is as though one were required to pay to prove one's identity as a British subject, and to establish one's title to protection which every Englishman holds that he has an inherent right to expect. Many a bellious voice has been raised against it in Japan. But, so far as we know, no one here has ever been so hot-headed and silly as to make the Consuls the object of his indignation. It is merely their unpleasant duty to collect the tax. They have nothing to do with its imposition, nor any power to remit it. The British

residents of Bangkok, however—if we may judge from what the correspondent of the *China Mail* writes—are not sufficiently clear-sighted to detect the difference between a controlling authority and a mere agent. The poll-tax has been raised 100 per cent. during Mr. Satow's régime, and so, very logically, they are irate against Mr. Satow. Moreover, that gentleman has been guilty of another unpardonable offence. He has caused the legend "No public thoroughfare" to be inscribed over the gate of the Consulate. This is a most heinous proceeding.

THE *Shanghai Mercury* says that Judge Denny has asked the Hongkong Government to take over from Korea the mint lately erected in Seoul. Two reasons for this proposal are given; namely, that the Koreans find it cheaper to get their coining done abroad, and that they fear to see their coins flow into the hands of foreigners. The authorities at Hongkong are said to have agreed not only to take over the mint but also to do all Korea's coinage. The second of these reasons on Korea's side is obviously absurd, for though ignorant Koreans might be disturbed by such a fear, they could not be so foolish as to suppose that coins struck in Hongkong would be more likely to become domesticated in the peninsula than coins struck in Seoul. With regard to the first reason, it is to be observed that the work of coining has not yet been commenced in Seoul, so that the Koreans can scarcely have formed any very definite idea of the profit or loss likely to accrue from minting operations. The machinery for the Seoul mint was imported in Mr. Möllendorff's time, and since then the Koreans appear to have been endeavouring to obtain from Japan such information and practical instruction as would enable them to commence work. The last thing we heard was that they had ordered a set of dies in Osaka. Nothing is less conceivable than that the Hongkong authorities should take over minting machinery, especially incomplete machinery as we believe that in Seoul to be. The chief business of a mint in Hongkong would be the coinage of a standard dollar, and all experts know that that is a losing operation. The seignorage charged by the Osaka mint for coining the standard dollar is one per cent.—a sum which does not even cover expenses. The Hongkong folks know this by experience, and they know also that it would be extremely costly, if indeed it were at all possible for the colony, to furnish the strong room of a mint with such a sum as is necessary to guarantee public convenience in coinage operations.

One fact emerges very clearly from the priestly controversy which lately appeared in the columns of the local press; namely, that the discussion ought never to have taken place in public. The position assumed by the chaplain of Christ Church may be quite legal. The members, officers and ministers of that church, being without the scope of ecclesiastical authority, do not stand in any official relation towards a bishop consecrated by the Primate of England. To us, however, as plain-minded folk, the reflection occurs somewhat importunately that, after all, the church in Yokohama is Episcopalian, not Dissenting, and that government by bishops ought therefore to constitute a vital condition of its existence. Yet even here we are met by the difficulty that several nationalities are included among its members, and that to impose upon

all alike the authority of an English Bishop would be evidently anomalous—if, indeed, Bishop Bickersteth claimed any such authority, which he does not. But without discussing this delicate question, what we have to remark is that there surely was no occasion to ventilate the matter from the outset in the columns of the press. Such a hasty recourse to publicity almost compelled the inference that some curious anxiety existed to shake off the Bishop's authority, and to proclaim the independence of Christ Church as openly and speedily as possible. We do not say that any desire of the kind was really operative. We only speak of the impression conveyed by the Rev. Mr. Irwine's precipitate employment of a medium which certainly did not suit the occasion. Under the evident influence of that impression, the chaplain of H.B.M.'s Legation published a letter which, in its turn, was equally calculated to convey a false idea. For, unquestionably, Mr. Shaw's remonstrance seemed to imply, among other things, that the inconvenient supervision exercised by a Bishop over his subordinates had something to do with Mr. Irwine's readiness to disavow episcopal authority. Mr. Shaw, we are persuaded, never intended to suggest anything of the kind. But his words did surely suggest it, and Mr. Irwine's naturally warm rejoinder carried the controversy beyond strictly amiable limits. The original question remains just where it was, and there results only a regret that two highly estimable gentlemen should have been publicly betrayed into an error of tact.

THE *Nichi Nichi Shimbun* strongly advocates the laying of a telegraph line to connect the Riukiu Islands with the rest of the empire. The popular rumour, says the *Nichi Nichi*, that Okinawa is the destination of the two vessels detached from Admiral Ting's squadron on the way south from Vladivostok, and also of the two that left Nagasaki on the morning of the 23rd ultimo, is not based on fact. If we can at all credit the language attributed by our Nagasaki correspondent to the Chinese Admiral, describing the objects of his visit to Nagasaki, it is hardly possible to conceive that these vessels have gone to Okinawa. Besides, the *Wakanoura Maru*, which sailed direct for the islands with the Governor of the Prefecture on board, must have reached her destination some time ago and we may be certain that if any Chinese vessels had been observed in the vicinity of the group, the information would at once have been carried to the nearest point at which telegraphic facilities could be utilised. The facts that no such step has been taken, and that a steamer which has arrived at Kagoshima from Okinawa via Oshima brings a report that up to the 18th instant all was quiet on the islands, justify us in concluding that the four ships detached from the squadron, as above indicated, were bound home with despatches. The Riukiu question, it is true, still remains unsettled, but as that is a matter which properly falls within the province of diplomacy, it is extremely unlikely, so long as China desires to maintain peaceful relations with this country, that she will adopt the course of sending a fleet to Okinawa by way of demonstration, nor does it at all follow that such an act should have an intimidating effect upon Japan. While it is plain that the immediate object of the visit of the Chinese squadron was not the making of a demonstration, it is permissible to suppose that

the Chinese were influenced by a desire to afford us tangible evidence of their naval power. Following out the train of thought which this conjecture suggests, we have some hesitation in accepting the proposition that China will not make a naval demonstration at Okinawa with the object of influencing a settlement of the Riukiu question, which at present lies dormant. If an occasion arises requiring that Japan should depart from the peaceful and concessive policy which has hitherto directed her actions, she will not be slow to move on the new lines which she may adopt. And in any case the work of laying a telegraph line to Okinawa, by way of the islands under the control of the Kagoshima local government, is a matter of the most urgent necessity—in the disposal of which not a moment should be lost.

THE great tragedy, in which King Louis of Bavaria was the chief actor, has closed. The curtain has fallen upon the scenes that stirred the hearts of the Bavarians to their inmost depth. The insanity of the sovereign, his deposition from power, and the outward calmness with which the announcement was received by the King; the appointment of a regency, the subsequent suicide of the King, the revolutionary spirit of the Alpine peasants, the funeral at Munich, the tears and the deep emotion of the people, the parliamentary investigation, the resignation of the Ministry and their retention by the Regent, the letters exchanged between the Emperor and the regent and the recent close of the Bavarian Parliament, all this, taking place within a few days constituted a tragedy that filled the people with awe and held the nation breathless. Never, perhaps, in the history of Germany was the value of parliamentary institutions more strikingly illustrated in quieting popular excitement and in producing the conviction that neither King nor people had been wronged. All the documents in the case were submitted by the Liberal Ministry to a select committee of Parliament, and the result of the investigation was the conviction that the Ministry had been rather too slow than too rash in the appointment of the regency. Had the Opposition at first taunted the ministers with undue haste in their proceedings against the King, so was this course then suddenly, but to no advantage, changed after the investigation, by accusing the ministers of usurpation and of having reigned themselves in the name of a King who had ceased to be responsible for his acts. This change in Bavaria, however, did not affect in the least the country's relation to the Empire. Not a single change in the Cabinet occurred, and Regent Luitpold has in his proclamations assured his subjects of his unwavering fidelity to his duty as a Bavarian and German Prince, and has expressed his belief that there are, under his Regency and by the help of God, reserved to the Bavarian people in their firm union with the German Empire times of great prosperity and bliss. The peculiarity of the present situation is that Louis' brother, Otho, admittedly insane for many years, has to be considered King, and that, unless the Bavarian constitution be amended, the present Regent can become King only after Otho's death. An examination of other German constitutions has shown the remarkable fact that no German State is exempt from the same fate under like conditions, and it is well yet remembered that

after Frederick William of Prussia had become hopelessly insane, his brother, the present Emperor of Germany, could not assume the royal dignity until after Frederick's decease. The present arrangement in Bavaria, inconvenient as it is, is not likely to shake the firm belief of the people into monarchical principles, although to be ruled by an insane King, nominally only though it be, would seriously affect the loyalty of the people in most countries of western Europe. Without a parliament, however, and a more or less responsible ministry, Bavaria would have found herself face to face with a very awkward and dangerous problem.

It is asserted by Mr. Charles Marvin and others who speak with not less confidence, that Russia's move with regard to Batoum is of a purely commercial character. The time had come when the Government of St. Petersburg was constrained to provide a permanent and safe Black Sea outlet for the large and constantly growing petroleum trade of Transcaucasia. "Ten years ago Baku and its petroleum were practically unknown in Europe. This year, from April until June, 400 shiploads of oil (some of the cargoes exceeding 1,000 tons) were sent from Baku to the river Volga." The wonderful expansion of Baku could not fail to be followed by a corresponding expansion on the Black Sea side. But there the only two available ports are Poti and Batoum. Either is far too small for the purpose. Batoum, however, possesses the advantage of protecting Poti, whereas Poti does not protect Batoum. To convert the latter into a naval station for the security of the former, and to convert the former into a commodious port, seem to be now Russia's purposes. The scheme will require a very large outlay at both places, and before spending her money Russia wishes to provide that Batoum shall not remain open to seizure. These, certainly, are explanations of her action, but they do not condone her cool disregard of treaty obligations. She seems bent upon justifying the often repeated charge that Russian engagements are not worth the paper on which they are written. If it be true, as well informed people assert, that England's commercial interest in Batoum lapsed in 1883, when the free transit of European goods across Transcaucasia to Persia was abolished, then this, though it may be a good argument against England resenting Russia's action, ought to have been a better argument against Russia accomplishing by a breach of faith what she could have achieved equally well by friendly diplomacy.

It is evident that Mr. Ernest Hart's collection of Japanese art objects is of a very varied and interesting character. It was lent for exhibition at the rooms of the Society of Arts, the immediate purpose being to illustrate three lectures delivered before that Society by Mr. Hart, last May. We are a little surprised to observe that the catalogue of the collection was prepared by "Mr. T. Hayashi, of Japan, the eminent expert, of 65, Rue de la Victoire, Paris." Of course there was no reason why Mr. Hart should not procure Mr. Hayashi's assistance in this matter; but since the collection, and in a secondary degree the catalogue, were intended to illustrate the lectures, Mr. Hart should at least have taken care that the Catalogue was not grotesquely incorrect. The catalogue describes 262 *netsuke* in wood and ivory; 30 combs in lac, &c.; 415 specimens of lacquer, including

*inro*, letter-boxes, *saki* cups, &c.; 439 specimens of metal work, and 180 pieces of porcelain and pottery. It is impossible to say how far the descriptions given of the *netsuke* and lacquered objects are correct, but when we find *Genji* explained as "the name of a collector of poems;" when we find a Japanese year period called "*Kario*," and when we find a lacquer box called *Taiko-makiye*, or "Taiko gold lacquer," and attributed to "the beginning of the 16th century"—that is to say, a box made of lacquer called after the Taiko when the Taiko was not yet born—we are driven to conclude that the compiler of the catalogue is not remarkable for historical knowledge, at all events. Turning to the section on Ceramics, we observe much that is entertaining. "An unique tea-bowl, in enamelled pottery, inscribed in bold black lettering, *Daibutsu Hokoji*, a bowl from the Temple Hokoji, of Kyôto, is called 'The Cup of Taikosama'—a description which can only be characterized as the veriest 'bunkum,' since enamelled pottery did not exist in the time of the Taiko in Japan, and the idea that a cup used by a great noble would have the name of a temple inscribed on it, is grotesque. So crass is the historical ignorance of 'the eminent expert,' Mr. Hayashi, that he speaks of the Taiko as 'the Shôgun Hideyoshi,' though every tyro knows that Hideyoshi never received that title. We read also of 'Imari ware decorated at Kyôto at the end of the 17th century,' a description which would make any expert stare. We are told that 'the Dutch pottery was imitated at the princely manufactory of Kishiu,' which is absolutely untrue. We are assured that the collection contains 'the only specimen of Shonzu's porcelain in Europe,' which at best is mere *blague*. We read of a maker of Takatori ware called 'Hide-moto,' who is said to have lived in the '16th century,' that is to say, fully a hundred years before the Takatori potters began to turn out anything like the specimen in question. We find a 'small bunch of chrysanthemums and lilies in white, blue, and brown porcelain,' called 'Hirato ware,' and ascribed to the 16th century; a period antecedent by a century and a half to the manufacture of any such ware at Hirado. We are told that a perfume-box of blue and white porcelain was made at Kameyama in the early part of the 18th century, though, in point of fact, the Kameyama factory did not exist before 1760. We find a porcelain *saki* cup described as Mino ware and placed back in the beginning of the 18th century, whereas porcelain was not manufactured in Mino before the beginning of the 19th century. But it is needless to go on cataloguing these flagrant errors. Mr. Ernest Hart may have a very beautiful collection and be himself a gentleman of highly artistic instincts, but his catalogue shows that what he has still to learn of Japanese art industry is very considerable.

We are glad to see the *Nichi Nichi Shimbun* taking up the question of sanitation in Tôkyô with special reference to cholera. Our contemporary justly observes that the hopes of stamping out this terrible disease, which were at first entertained in view of its imported character, have disappeared, and that it must now be regarded as endemic. Such being the case, it is of vital importance to consider and carry out the best means of prevention. In Tôkyô, both the municipal authorities and the

police did everything in their power, this season, to guard the capital against the advent of the plague. But despite all their precautions, upwards of three hundred victims are now attacked daily. The *Nichi Nichi Shimbun* attributes this failure to the defective supply of drinking water and to bad drainage. Before everything the aqueducts and the method of distributing the water should be improved, and the reform should be accompanied by the construction of a proper system of drains and sewers. Until these measures are thoroughly carried out, Tôkyô cannot hope to be free from cholera. "But," continues the *Nichi Nichi*, and this is what surprises us, "water-supply and drainage form a part of the plan for the remodelling of the capital, and some time must therefore elapse before they are undertaken." Pending the great work of remodelling, people are exhorted to adopt every sanitary precaution in their power; such as, dredging their ditches, flushing their drains, repairing their sewers, building cholera hospitals, and forth.

Why should the improvement of the water-works and the laying out of the drains wait for the "remodelling" of the city? That is what we cannot comprehend. The "remodelling" of the city is very much in the clouds—so much so that the "remodelled Tôkyô" is called by the Japanese, "*Yume no Tôkyô*." If rumour may be trusted, the scheme has not progressed beyond a sketch which has still to be elaborated in Berlin. Even then, the thing will exist only on paper, and the question of raising thirty million dollars to accomplish the work will next have to be tackled. We do not like to think that the citizens of the capital are to drink impure water and breathe the exhalations of bad drains until the cloudy palaces and fairy parks of "*Yume no Tôkyô*" spring into existence. Such a scheme seems hardly practical or rational. Possibly the *Nichi Nichi Shimbun* expects that the remodelling of the city will be commenced after a few months. We have never met a responsible citizen of Tôkyô who thinks so, and if there is any doubt about the matter, it would surely be well not to make the health of a million people wait upon the embellishment of their dwellings.

THERE is no burking the fact that Mr. Parnell holds the Irish constituencies in the hollow of his hand. *The Times*, in its electoral statistics, gives the following account of the polling in the truculent island:—"In the Irish counties, of the 85 seats, with an electorate of 631,649, 61 were surrendered without a contest to the Parnellites. In the other 24 seats the numbers polled were Unionists 74,366, Parnellites 79,078. The members now returned for the counties are 11 Conservatives, two Unionist Liberals, 72 Parnellites; or 13 Unionists against 72 Home Rulers. The total representation of Ireland is, therefore, 19 Unionists to 84 Home Rulers. In the last Parliament there were no Liberals from Ireland; in the present Parliament there will be two Liberals (in favour of the Union) who have wrested the county seats of South Londonderry and South Tyrone from the Parnellites."

We do not see that Mr. Hubbard had any resource but to decide against the appeal carried before him from the U.S. Consular Court in Yokohama, in the case of Mr. P. C. Fullert. That Fullert was the victim of flagrant injustice,

nobody doubts, we imagine. But unfortunately his judge, Consul-General Green, had the assistance of two associates at the trial, and the law is very explicit in withholding the right of appeal under these circumstances. It was argued with great force by Mr. J. F. Lowder, Counsel for the appellant, that the framers of the statutes in question can never have intended to deprive an American citizen of rights conferred on him under the Constitution of the United States. As matters now stand, the judicial authority vested in a Consul—of whose legal capacities the law requires no guarantee whatever—is out of all proportion to the authority vested in a duly qualified judge. Moreover, as Mr. Lowder contended, the associates who assist a Consul are in no sense a jury. A jury is empanelled to try matters of fact. That is its essential character. It receives the legal interpretation of the case from the Judge. Associates, on the contrary, are explicitly intended to assist the Consul "whenever he is of opinion that by reason of the legal questions which may arise, assistance will be useful to him." The framers of these regulations—we may observe *en passant*—could scarcely have conveyed a clearer notion of the esteem in which they held a Consul's legal capacity, than by directing him to procure the assistance of two ordinary citizens when he sees any reason to anticipate legal questions too intricate for his own unaided judgment. As a point of justice and common sense it is impossible to gainsay Mr. Lowder's position, but the letter of the regulations is against him, and of course Mr. Hubbard adhered to the letter. Fullert, it is pleasant to think, will not greatly suffer. A petition on his behalf has already been prepared by Mr. Lowder and forwarded to the President of the United States through Mr. Hubbard, who is understood to have endorsed it. In the meanwhile, successful application has been made, we believe, for a suspension of the unjust and illegal judgment pronounced in the Consul-General's Court at Yokohama.

It seems to us that the disinterested and humane action of Mr. J. F. Lowder in the Fullert case is beyond praise. The trial involved elaborate arguments, protracted investigations and an exceptional exercise of legal knowledge. For all this Mr. Lowder's reward will probably be the barren satisfaction of having championed the cause of justice. We think it, indeed, very probable that the sacrifices which he has imposed on himself, in endeavouring to vindicate the right, involve the expenditure of something more tangible than valuable time and labour. One is not accustomed to associate the practice of the law with such strong impulses of almost romantic benevolence, and it gives us great satisfaction to record them.

It cannot be said that during the recent trials at Toulon and on the northern coast of Corsica torpedoes scored much of a success. It does rather appear that, in a real engagement under similar conditions of sea and weather, not a single man-of-war would have been blown up. A large number of torpedoes were fired, but from such a distance that hitting was either impossible or in the highest degree improbable. A few boats approached the men-of-war near enough to fire effectively, but this was only owing to the unbusiness-like nonchalance with

which they continued to approach the enemy long after they had been discovered, and in spite of the unceasing fire kept up by the Hotchkiss guns, which, in a real engagement, would infallibly have sunk them before they could have had an opportunity to use their destructive weapons. Most of the attacks made took place at night time, and proved conclusively that torpedo warfare has found a formidable enemy in the electric light, by means of which, through strong and skillfully manipulated reflectors, the ocean can be illuminated for distances sufficiently great to allow of the timely discovery of an approaching torpedo boat and to destroy it before it can approach close enough to be dangerous. Another impediment to effective torpedo warfare was found in the fact that the suddenness of the electric rays falling upon the boat's crew, beside disconcerting them, affected their power to properly estimate distances, and thus it happened that some crews, believing themselves to be at 400 metres distance from the hostile man-of-war, received the signal to fire, while in reality the distance was one of 1,000 metres and precluded all possibility of success. These facts became also apparent during the sham attack of Admiral Brown's torpedo flotilla upon the men-of-war lying at anchor in the Gulf of Ajaccio under Admiral Lafont. The ability of torpedo boats to keep the high sea, a very important factor in all offensive naval operations, was also tested, but was not productive of very gratifying results. Of 18 torpedo boats, partly 28 and partly 35 metres in length, only the five boats of the latter type were able to follow the Admiral's ship, the *Fulminant*, from Bastia to Ajaccio, although the distance between these two places is not great, and although the sea, though not quiet, was far from stormy. The reported loss of a number of French torpedo boats on the high sea, together with the results of these recent experiments in the Mediterranean, has had a rather discouraging effect upon the friends and advocates of the torpedo, but many of these put the blame for such failures exclusively upon the faulty construction of the boats and upon the principles followed in French navy yards. Up to the present, at any rate, torpedo warfare has not been shown to be as formidable as it was once supposed to be, and the effects of the recent manœuvres in the Mediterranean evidently tend toward the disappearance among French sailors of that superstitious dread of the torpedo entertained by them before, and there is really danger of their going to the other extreme by holding in contempt an enemy which they had once overestimated. A correspondent of the *Temps* states that naval officers, while fully aware of the defects of torpedo tactics in their present state of development, are not therefore inclined to undervalue their importance and insist on a supply of better constructed and improved boats, while they deem the frequent repetition of naval manœuvres the best method of improving both the torpedo boats and the protective means at the command of heavy armoured ships.

The latest device in story-telling is to give the lie direct to the originator of a history and then to appropriate and repeat his tale. It is an ingenious method, if only for the air of authority and courage it confers on the person practising it. A recent example is the Korean correspondent of the *Shanghai Mercury*. A Japanese journal had ventilated a rumour that

the Korean Government were negotiating the purchase of the U. S. S. *Palos* through Judge Denny. This, the correspondent describes as "a mere yarn," and then proceeds to lay the truth before the public as follows:—Korea, having furnished herself with a merchant navy, wanted something to protect the ships. She accordingly commissioned Judge Denny to ask the United States Government to sell her the *Palos*. The United States Government declined to sell, but intimated that "very likely, ere long, they would present the vessel to Korea." The difference between the two accounts is simply that one accuses the United States Government of a very ruthless piece of benevolence, while the other attributes to them an ordinary disposition to do business. The *Shanghai Mercury's* correspondent says that to keep the *Palos* seaworthy has cost America the price of a *Duilio*, and would cost Korea as much more. Under these circumstances to sell her to Korea would be an act of mercy compared with making a present of her, since in the former case the Koreans need have no scruples about converting her into a hospital ship or powder hulk, whereas, in the latter, they would be bound to keep her going.

THE Revenue and Agricultural Department of India has issued a report which very plainly shows, among other things, how greatly the cost of the Indian wheat supply depends upon railway extension. The report says that much of the wheat-producing area lies beyond the reach of railways, and that the want of carriage is the only check to production over a great area of fertile soil. The document proceeds thus:—"It is interesting to note the effect of good traffic communications on the price of wheat. For this purpose four pairs of districts may be selected, each pair including a district remote from the line of rail and the district on, or comparatively near, the line of rail to which its produce is carted:—

	Average Price of Wheat in Rupees.	Difference per Cent.
Damoh (66 miles from the railway) ...	31'9 2	
Jabalpur (on the railway) ...	23'9 3	33
Sagar (85 miles from the railway) ...	29'1 2	
Narsinghpur (on the railway) ...	20'3 3	34
Seoni (89 miles from the railway) ...	26'5 3	
Nagpur (on the railway) ...	24'5 3	8
Bilaspur (112 miles from the railway) ...	51'4	
Raipur (42 miles from the railway) ...	35'2 3	46

Except in the case of Seoni, the differences in price show a very close agreement, and illustrate with great clearness the enormous advantages which result to agriculturists from the construction of a line of railway in their vicinity."

THE *Nichi Nichi Shimbun*, writing on social reforms, says:—"It is a matter for the highest congratulation that the nation has at length awakened to a sense of the urgent necessity of social reforms. In view of the consummation of the revision of treaties now in progress, and of the immense changes which will be wrought in our national life by that event, we cannot urge too strongly the importance of preparing ourselves for what is about to happen. In certain quarters an idea seems to be entertained that Japan will be entitled to the same position as European and American countries, when her political system and laws have been improved. No doubt that would be highly desirable, but it is a grave mistake to think that a political system and laws are the only things that are needed to bring Japan into the group of civilized states.

So long as our manners, customs, mode of life, &c., do not conform to those of Western nations, there will continue to exist a well-defined line of demarcation between us and Europeans and Americans. The inconvenience and disadvantage of having commercial communication with those people without mixing in their society, is amply proved by the experience of the past twenty years, as most of our readers are already aware. We all desire to attain close and more confidential relations with them. So far as political and legislative matters are concerned, a vast advance has been made in these ten years or thereabout. But we regret to say that even in the city of Tōkyō, social improvement has as yet been very partial and insignificant. Among the higher classes salutary changes are already visible, but the nation at large still holds to its former manners, customs, and mode of life. Unless improvement in these directions becomes general and thorough, it will be vain for us to hope for admission into the comity of Occidental nations.

PEOPLE who claim that the depreciation of the gold price of silver is due almost entirely to over-production and that it cannot be permanently arrested by the re-monetization of the metal, ought to study the Exchange quotations from month to month. Three weeks ago the sight rate for the dollar was 2s. 11½d. To-day it is 3s. 1½d. Here we have a fluctuation of about 4 per cent. between August 21st and September 8th. Is this the result of reduced production? Did the out-put of the mines suddenly show such a falling off that in the short interval of 18 days the gold-price of the white metal appreciated nearly 4 per cent.? In the face of such fluctuations, it is surely irrational to pretend that the influence of production will compare with the influences exercised by currency operations.

AMERICA goes on building railways at a prodigious rate. The mileage constructed during the first six months of the current year was 1,755, and, comparing this with previous records, the conclusion is reached that the total mileage constructed in 1886 will exceed 6,000 miles. This is by no means an unusually large figure. In 1882, the year of maximum railway extension in the United States, no less than 11,568 miles were added to the system. Nevertheless, only six times since 1866 has the figure of six thousand miles been reached or surpassed. Nothing has contributed so materially to the extraordinary development of the United States as this activity of railway enterprise. A nation that has provided itself with 92,214 miles of iron road in twenty years is phenomenal.

WE have on several occasions remarked upon the vain attempts which have been made to raise silk in any quantity in the United States, more especially upon the Pacific coast, and the reasons for the failure have been stated over and over again. That some persons, however, are still following this *ignis fatuus* is evident from the following paragraph, which we find in the July number of the *American Silk Journal*:

A San Francisco concern, known as the Visitation Manufacturing and Improvement Company, has secured control of the works of the Union Pacific Silk Company, in that city, and will begin the manufacture of all kinds of silk goods in August. The works were built about eight years ago near the Six-mile House, and contain room and power for about 150 looms. Over \$300,000 has been expended on them. Litigation between the original owners led to the failure of the enterprise. The new managers intend to make use of all the California silk they can obtain, it being as good,

if not better, than that obtained from France, China or Japan. Not enough raw silk is now produced in the State to supply the mills, but it is hoped that this supply will at last be forthcoming. The Company believes that the presence of a market for all the raw silk that can for a great many years be produced will raise the silk producing interests of the coast into a position of importance.

It is interesting to learn that "the new managers intend to make use of all the Californian silk they can obtain"; also that the microscopic samples of the noble article hitherto produced have proved to be "as good if not better than that obtained from France, China, or Japan." But, considering the constant recurrence of statements by persons who have had actual experience in raising cocoons, e.g. one that recently appeared in the *Chicago Inter-Ocean*, it is very doubtful if "the silk-producing interests of the coast" will ever be raised "into a position of importance":—

One woman sericulturist, whose experience in that pursuit has evidently been unprofitable and disappointing, writes as follows:—Had I a pen of fire and the sky for a scroll, and could I fly on the wings of the wind, I would at once start on my "mission of mercy," and soaring through space from our blue Susquehanna to the mighty Pacific, I would inscribe in my flight in burning letters across our land:—"Let silk culture most severely alone." I know whereof I speak. I tried it to perfection under the most auspicious and exceptionally favorable circumstances—with every means and appliance at hand for "clearing" \$200 in the six weeks required to attend to the "crop." Within thirty miles of a market for the cocoons, with every surrounding the most encouraging, my hopes were high—but it was all dead loss of time and money and work. It all ended in just forty-five cents worth of cocoons; I know how plausible it looks and reads. I know the inducements held out by silk culture associations: I know, too, that the whole thing is as empty as a last year's bird nest, and I, who have been so severely "burned," would fain caution others about going near the fire.

A QUESTION strongly illustrating the happy ignorance in which some people live and move has just been raised in Tōkyō; namely, whether it is safe to use artificial ice in beverages. Ice manufactured at Tsukiji—so the argument runs—is probably made from impure water, and may easily serve as a medium for conveying the deadly bacteria. We confess that the idea of the Comma Bacillus living imprisoned in a lump of ice is admirably original. Dr. Van der Heyden, in his recently published monograph on cholera, tells us that cold is as fatal as heat to the Bacillus, and that it will not survive in a temperature below 66° F. If this be so, its vitality in an ice-house must be rather low. No one need feel much reluctance, on this head, to partake of the artificial ice manufactured at Tsukiji or anywhere else.

THE cholera returns for Tōkyō during the past week were:—Friday, 10th instant, new cases, 142; deaths, 125. Saturday, new cases, 131; deaths, 102. Sunday, new cases, 128; deaths, 125. Monday, new cases, 139; deaths, 100. Tuesday, new cases, 99; deaths, 95. Wednesday, new cases, 113; deaths, 86. Thursday, new cases, 109; deaths, 104. Total cases, 861; deaths, 737.

THE cholera returns for Yokohama during the past week were:—Saturday, 11th instant, new cases, 9; deaths, 1. Sunday, new cases, 12; deaths, 6. Monday, new cases, 10; deaths, 8. Tuesday, new cases, 5; deaths, 5. Wednesday, new cases, 3; death, 1. Thursday, new cases, 5; deaths, 6. Friday, new cases, 4; deaths, 5. Total cases, 48; deaths, 32; against total cases last week, 116; deaths, 86.

NEWS reached Hongkong the 3rd instant confirming the fears that were entertained as to the safety of the British steamer *Ferntower*, which

left Saigon the 24th of last month with a cargo of rice for Hongkong. Two of the crew, who appear to be the only survivors, were picked up, the 1st instant, by the steamer *Vindobala*, from whose statements it seems that the *Ferntower* had foundered on the morning of the 30th ultimo, four days out from Saigon, going down so suddenly that there was no time to launch boats. It is believed that about fifty lives have been lost by the catastrophe. The *Ferntower* was a vessel of 700 tons, commanded by Captain Kelly.

THE *Hochi Shimbun* appeared on Thursday morning in a new form. The whole front page is occupied by a letter from Mr. Yano, (one of the staff of the *Hochi*) who returned to Japan the other day after a sojourn of considerable duration in Europe and the United States. Mr. Yano's communication chiefly relates to the condition of journalism in the countries that he visited, and points out by comparison the more conspicuous blemishes of the Japanese press. In accordance with his suggestions the *Hochi* will henceforward be reduced in size, and the price per copy will be cut down from 4 *sen* to 1 *sen* 5 *rin*, the subscription per month being 30 *sen*.

THE *Army and Navy Register*, in illustration of the gigantic nature of the steel forgings required for the latest warships, reproduces from a photograph the fighting tower of the Italian armour-clad *Leopanto*, and remarks:—

This forging is 10 ft. in outside diameter, 7 ft. 11 in. inside diameter, 12½ in. thick and 4 ft. 9 in. high, and is intended to protect the captain of the ship in battle. The weight of this huge block of steel is 30 tons, and the rough ingot from which it was forged was 65 tons. It was produced by the firm of Schneider & Cie, of Le Creusot, France, whose 100-ton hammer gives them unequalled facilities for large work of this nature. The ingot was worked to a diameter of about 64 ft., then bored and then worked by forging on a mandril to the dimensions given above. It is the first fighting tower that has ever been made in one single piece, and no other firm in the world could produce one of this size.

As an instance of an exceptionally bad shot by a newspaper reporter, the following is good:—"Paris, August 14th. Prince Napoleon is growing uneasy about his son Louis, who is on his way from Japan to San Francisco. The steamer on which he sailed is reported nine days overdue." Prince Louis was amusing himself somewhere in the neighbourhood of Kyōto at the time when his protracted voyage to San Francisco was supposed to be causing parental anxiety.

THE *Mainichi Shimbun* states that Madame Sugi, wife of the High Chamberlain of the Emperor Dowager's Household, was injured on the 12th instant by the overturning of the *jinrikisha* in which she was returning to the capital from Hakone. The accident occurred at Hodogaya, and is said to have been caused by the recklessness of a foreigner, who drove right over the *jinrikisha*. Medical assistance was obtained, and Madame Sugi was taken to the house of Mr. Okano at Hodogaya.

PRIVATE advices from Newchwang convey intelligence of extensive floods, which have destroyed at least one half of the standing crops throughout the province. Telegraph poles have been washed away in many places and it may be a month before the damage can be repaired, while shipping prospects during the next twelve months are very gloomy.

### SUMMARY OF JAPAN'S FOREIGN TRADE FOR 1885.

THE Summary of the Foreign Trade of Japan for the year 1885, being in effect a résumé of the Reports prepared by the various Consuls and already commented on in these columns, does not demand any lengthy notice. There is an improvement of £269,116 in the total value of the trade for the year under review, as compared with 1884; but as the imports show a decrease of £81,626, this result cannot be regarded with unqualified satisfaction. The Summary speaks of the trade in metals with some enthusiasm, on the ground that Japan, though more or less self-supplying in respect of fine steel and copper, has but a limited capacity for the supply of other metals. Speaking from the stand-point of the mining development which has hitherto taken place, this verdict is doubtless correct. But expert testimony is explicit with regard to Japan's iron. It is beyond question that ample quantities of that metal are easily procurable at Kamaishi, and might be profitably procured if intelligent steps were taken to overcome the difficulty about fuel for smelting.

Again in the Summary, as in the Reports from which it is compiled, we are unpleasantly reminded of the success achieved by German commercial competition. The value of the German flannels imported into Japan has risen from £3,000 in 1880 to nearly £44,000 in the year under review, while Great Britain's share in the staple is only £10,000. So, too, of Woollen and Mixed Cotton and Woollen cloths. While the whole import trade in these articles shows a decrease, not only has Germany's share increased, but she has managed to appropriate over thirty per cent. of a business which was formerly done by English merchants only.

The remarks contained in the Summary with regard to the export trade are very interesting. "With the exception of 1882," we are told, "the export trade of the past year is the largest that has yet been done by Japan, but it still only represents a value of about one pound sterling for each six persons of the population, a fact which speaks but poorly either for the productive powers of the country or the industrial capacity of the people. Once a free admission into the country and an opening to invest their capital in it are afforded to foreigners, there can be little doubt that a large impetus will be straightway given to the whole export trade. Tea will be prepared for export at the place of production at one half the cost at which it is now done at the open ports; the immense tracts of land, well suited for the growth of wheat, which exist in the country, and which, with abundance of cheap labour close at hand, now lie absolutely unused, may be brought into cultivation, and there is no reason why wheat grown in Japan should not find as

ready a market in England as that transported by sea from the Western States of America. With a large development of the Export trade a corresponding increase in the imports might be confidently expected. When the Japanese has money he may be relied upon to spend it; and give him the means, he will be quite ready to provide himself and his family with the host of articles that minister to his comfort and well-being, which can only be obtained from Europe or America. While, therefore, the people of the country would themselves probably be, in the first instance, by far the largest gainers by its general opening to foreigners, it is equally probable that in the end the countries at present interested in Japanese trade would derive a commensurate and permanent benefit from the increased demand they would find here for their own productions." This is exactly the opinion we have always expressed upon this subject. We cannot, indeed, profess any strong belief in Japan's capacity as a wheat growing country. Even supposing—a hypothesis not supported by facts or the judgment of experts—that Japanese soil compared favourably with that of America or India, there would remain the difficulty of climate. Probably on account of dampness, perhaps because of atmospheric conditions not yet explained, the flour made from Japanese wheat and the wheat itself do not easily bear export. But with regard to the great economy and general gain of preparing tea for export at the place of production instead of at the open ports; with regard to increased sericulture; the extension of agriculture in all its branches; the growth of fisheries; the exploiting of the empire's mineral resources, and above all, the development of industrial enterprises, for great success in which the Japanese are peculiarly qualified—with regard to all these, none but the veriest pessimists or those afflicted with the blindness of not wishing to see, can reasonably question the effect of removing all the restrictions upon foreign trade and residence. Looking at the matter from the broadest standpoint, it is impossible to gainsay the fact that foreigners have hitherto been precluded from taking any part in the producing or manufacturing enterprises of Japan. They have virtually been limited to the rôle of middleman. Yet even when thus restricted, their efforts have been instrumental in developing a trade of from sixty to seventy millions of dollars. Can it be pretended with any show of sense that their admission to the far wider sphere of industrial and producing enterprise will exercise no sensible influence on the prosperity of this country? Surely not. Those who profess to believe that Western experience and capital have already played their full part in the expansion of Japan's commerce, look at the question with the eye not of reason but of prejudice. Of course, as Her Majesty's

Representative says in this Summary, Japan would be the chief gainer by the change to unrestricted intercourse. That is inevitable. But so far from attaching any conservative importance to such an argument, we regard it as belonging emphatically to the catalogue of considerations that make for liberalism. Unless it be assumed that Westerns are not qualified in point of experience or moral endowments to hold their own in competition with Japanese, there is no way of defending the position that to increase the rôle of the former in the commerce and industry of the latter, would be to benefit Japanese at the expense of foreigners. Europeans and Americans are at present confined to one corner of the trade field. If they manage to find their account in that contracted sphere under conditions which virtually place them at the mercy of the Japanese, how can it be maintained that they will not be incomparably better off when those disabling conditions are entirely removed and the whole field is freely thrown open to them? But, indeed, it is like thrashing a dead horse to repeat these arguments. Happily the day has passed when timid and narrow-minded selfishness was the keynote of our intercourse with Japan. That miserable and unworthy mood has yielded to the broader and incomparably wiser policy outlined in this Trade Summary, and now, fortunately for Japan as well as for all the Treaty Powers, no longer a mere theoretical prospect but a practical programme.

### COAST DEFENCE.

WE cannot tell how much of the wisdom that resides in a multitude of counsellors has been brought to bear upon the subject of coast-defence in this empire. Indeed, the whole subject of Japanese coast-defence is wrapped in a cloud of mystery. We hear of considerable sums being allotted for the purpose, and the name of at least one European Engineer of great ability—Captain VAN SCHERMBECK—was for a time connected with the work. But what system has been adopted or what results have been attained, the public is absolutely ignorant. There are obvious reasons for secrecy in such matters, and if the Japanese succeed with their fortifications as well as they have succeeded in guarding their secret, they will be very fortunate. But the trouble of privacy is that it leaves the field open to rumour, and rumour has lately been whispering that cast-iron turrets are likely to obtain the suffrage of Japanese engineers. We deem this scarcely probable, but since it is not impossible, and since there are no means of verifying or contradicting the assertion, it may not be amiss to remind Japanese military men that inaccessibility and concealment have become the text of modern coast-defence, and that they can generally be secured by means of

Original from

earth-works at a cost incomparably below that of turrets. An expert who recently visited this country was so irreverent as to apply the term "cock-shies" to the recently erected forts at Kanonsaki, which he said, and said justly, would be silenced in a quarter of an hour. Under modern conditions coast-defence is becoming a special art. Its true spirit may not yet have been thoroughly grasped in practice, but is not to be misinterpreted in theory. A ten-inch breech-loader is as formidable a weapon at three thousand yards as at one thousand. High velocity and flat trajectory give to the engineer and to the artilleryman alike a degree of latitude never contemplated in former times. A shore battery properly constructed can be silenced only by a close and well sustained fire. These considerations indicate for coast-defence the same principle as that which distinguishes an ideal battle-field. The first care of the engineer will be to occupy important salient points with guns of medium calibre on disappearing carriages, and with a number of quick-firing pieces. His armour-piercing guns he will retire to commanding positions in rear, not exposed to the close-fire of ships, but so chosen as to be able to bring a plunging fire to bear upon an attacking squadron. In all this cast-iron turrets are wholly out of place. They may play a useful rôle in land defences where they are exposed only to the light artillery of siege trains. But in coast-defence they are as valueless as they are expensive. We cannot dismiss from our minds an uneasy feeling that the Japanese are approaching this most important subject of coast defence with dangerously light hearts. We should expect to hear of the appointment of a mixed committee of naval, artillery, and engineer officers, including western experts in the three branches, whose business it would be to select the particular points to be defended and the scheme of defence for each point. After these vital decisions had been made, the surveying and contouring of the ground and the drafting of designs which should include all the latest developments and improvements and be in accord with the spirit of the time's progress, would follow in natural sequence. Of course it is rather like groping in the dark to discuss this question with our exceedingly scanty knowledge of what is actually going forward in Japan, but the importance of the thing constitutes a sufficient excuse.

There is another point which seems worth notice in connection with this subject. We refer to the employment of convict labour. It is not uncommon to hear of superintendents of gaols who complain that they cannot find suitable work for the prisoners. Would it not be easy to convert some old vessels into convict hulks and workshops, and to station these at the points selected for the erection of defensive works, taking the latter in the

order of their importance? A beginning might be made with a couple of thousand prisoners, and the system might be gradually extended until all convicts under sentences exceeding three months were employed upon fortification works; making bricks, quarrying and dressing stone, excavating, and, in short, doing all the manual part of the construction. The cost to the public would be comparatively trifling, and the convicts would be carrying out a national work of great importance.

#### THE PROGRESS OF THE NAGASAKI NEGOTIATIONS.

THE natural impatience of the Japanese people at the protracted nature of the Nagasaki negotiations is made the subject of an article by the *Nichi Nichi Shimbun*. The Tōkyō journal says that no doubt remains in the mind of the Japanese as to the culpability of the Chinese sailors, and that the foreign residents endorse this opinion. On the other side, however, various pretexts are advanced to combat the Japanese position, and it is consequently necessary, according to the *Nichi Nichi*, that an enquiry should be made into the circumstances of the affair before opening proceedings in the Chinese Consular Court. Our Tōkyō contemporary further explains that, since neither the Chinese Government nor the Chinese officials had anything to say to the fracas, there is no reason why the friendly relations of the two empires should be disturbed. The Japanese authorities are actuated by an amicable spirit, and it is understood that the same may be said of the Chinese, so that the affair ought to be settled without much difficulty. As for the argument advanced by some impatient critics, that, China being a semi-barbarous country, to pursue all the prescribed forms of civilized intercourse in treating with her is only to expose oneself to evasion and contumely, the *Nichi Nichi Shimbun* properly replies that it is not for Japan to adopt methods against which, when applied to herself, she has so often and so vigorously protested.

There is no gainsaying the excellent spirit of the *Nichi Nichi Shimbun's* contention, but we are obliged to confess that we fail to follow our contemporary's reasoning. For we have never been able to understand what good purpose can possibly be served by the Commission of Enquiry now in session at Nagasaki. Were the Commissioners invested with plenipotentiary authority, so that their decision would only require the ratification of their respective Governments to be final, the proceeding would present a very different aspect. But whatever conclusion the Commission may arrive at, whatever evidence it may collect, neither that conclusion nor that evidence can properly possess any weight in the Courts with which the adjudication of the affair must ul-

timately rest. The only uses of the Enquiry, so far as we can see, are to procrastinate a judicial trial, in accelerating which the honour of Japan and the interests of justice are alike concerned, and to enable the Chinese to advance pretexts and urge considerations which would be immediately excluded by a Court of Law. If the public concludes that from the moment Japan consented to take a part in this Commission, she admitted, by implication, some doubt as to the strength of her position, it will be very difficult to show that the public is wrong. Diplomacy had never any proper place in the matter, but if its offices were invoked at all, the conduct of the whole business should have been entrusted to them. The Commission of Enquiry is neither fish, flesh, fowl nor good red herring. It is a mixture of law and diplomacy, equally incompetent from a legal as from a diplomatic standpoint. The spirit that actuated the Japanese Government in consenting to it can easily be understood, and deserves to be appreciated. Though entirely convinced of the justice of their cause, they were willing, before placing the Chinese publicly on their defence, to hear and consider whatever testimony and arguments the latter might have to advance. That was exceedingly amicable, no doubt, but we question whether it was not also a little romantic. China will be sure to take an ell for every inch conceded. After this enquiry has dragged out its weary length, shall we be any nearer a settlement? And in the meanwhile, the Japanese nation naturally chafes over a delay which appears neither useful nor explicable. From the first the affair was nothing more than a street brawl. It ought to have been disposed of and hidden away as quickly as possible. China's partially successful attempt to drag it from the comparative obscurity of the law courts into the strong light of international discussion, was a singularly gross blunder of statesmanship. But, on the other hand, Japan's too friendly complaisance may in the end condemn her to accept the partial responsibility of results which ought never to have grown out of such a bagatelle.

#### THIBET AND BURMAH.

MORE than three months ago we predicted the failure of Mr. COLMAN MACAULEY'S mission to Thibet. Mr. MACAULEY was very successful at the outset of his negotiations with China. He was received with open arms in Peking, and almost persuaded to believe that the Chinese had long been impatiently waiting for just such a man as himself to carry out just such a project. Shrewd people, however, who thoroughly understood the disposition of the Chinese, shook their heads over the prospects of the Thibet mission. There was such a lengthy chapter of possible, "accidents" which might easily be in-

voked to impede the envoy's progress, that, as we wrote at the time, "the secret assurance of Mr. MACAULEY'S ultimate failure probably helped in a great degree to prevent preliminary opposition in Peking." There is, however, a strong belief in quarters where the truth ought to be well known that Mr. MACAULEY has to thank himself for his failure. Had he preserved a discreet silence and made his preparations on an unostentatious scale, he might, it is asserted, have reached Lhasa long ago. But he appears to have wished for an audience, the larger the better; and what with natural communicativeness and literary diffusiveness, he took pretty much the whole world into his confidence. This error, supplemented by the organizing of an expedition on a startling scale, may be sufficient to explain the reluctance ultimately exhibited by China. At all events, it would seem that adroit advantage was taken of her mood by the British Chargé d'Affaires in Peking. Under the influence of her apprehensions with regard to the results of the Thibetan mission, she was induced to approach the question of Burmah in a more reasonable temper. At the same time, it is a mistake to suppose—as several journals conclude—that the project of opening trade with Thibet has been abandoned, or the results of Mr. MACAULEY'S first success allowed to lapse. Mr. O'CONOR is evidently too clever a diplomatist to sacrifice any gains. The Convention recently signed in Peking contains a clause by which China undertakes to bring her influence to bear upon the Thibetans with a view to the conclusion of a commercial treaty. Thus the object of Mr. MACAULEY'S mission will probably be secured in a safer and more legitimate manner. Taken all round, this Peking Convention does remarkable credit to its principal negotiator. China has virtually yielded everything. Referring to the subject some months ago, we explained that Marquis TSING was the author of the territorial demands which threatened to complicate the issue so seriously, and that there was some doubt whether his Government fully endorsed his policy. As a diplomatic triumph it might have been very satisfactory to push the Chinese frontier several scores of miles eastward and southward; but the operation would have involved, at the same time, inconvenient proximity to France's new provinces—a consideration which doubtless possessed some weight with the statesmen of the Middle Kingdom. The upshot of the matter is that China acknowledges British sovereignty in Burmah and waives her claim to even so much as a foot of territory. She sought, indeed, and was allowed, to preserve a shadowy remnant of her old suzerainty. This phase of the question must have required very delicate management. "Tribute" was the first proposal of the Chinese negotiators; a term which they cannot seriously have expected to

maintain. Subsequently they changed it to "offering," a scarcely less objectionable form of expression. In the end the difficulty was solved by avoiding a definition altogether. A decennial passage of local produce is to take place from Burmah to Peking. The Chinese are free to put their own construction upon this comedy. If the receipt of a few articles once in ten years at the hands of non-official bearers affords them any solid satisfaction, their readiness to be pleased throws a new and very charming light on their disposition. No doubt the truth is that they were persuaded to be content with any subterfuge which seemed to "save their face," while England, on her side, was too sensible to strain at a microscopic gnat. The termination is most happy. It presents a striking contrast to the protracted diplomatic blundering and international complications which attended the occupation of Tonquin. Mr. O'CONOR has well earned the unusually rapid distinctions conferred on him by the QUEEN.

#### HOME POLITICS.

THE news received by the last American mail indicates that there was a difference between the Gladstonians and the Parnellites as to the course to be pursued on the opening of Parliament. The tactics of the Irish party were to demand an early and definite statement of Lord SALISBURY'S position towards Ireland. To this Mr. GLADSTONE would not agree, being probably influenced by two considerations; first, that in the present state of public opinion the country could not be induced to endorse any measure likely to satisfy Ireland; and secondly, that his own health forbids the immediate re-opening of the campaign. The old statesman has been peremptorily warned by his physician to avoid excitement and late hours. A yachting tour is prescribed for him in the autumn, and until he has refreshed himself with rest and sea breezes, it is expected that his appearance on the front opposition benches will be of a nominal character. What happened at the opening of Parliament was chiefly significant of a resolve on the part of the Home Rule leaders to patiently await the course of events. Mr. PARNELL delivered an impassioned appeal against evictions, and in this was supported, though at a distance, by Mr. GLADSTONE; but the former spoke of "a year or so" as the time necessary to expose the hopelessness of the Conservative schemes, and the latter explicitly declined to challenge any contest with his opponents for the present. It is plain that Fabian tactics are to be pursued. In all probability, the only lever used to obstruct the Conservatives will be the non-payment of autumnal rents. The consequent distress of landlords, and the growth of agrarian outrages under the pressure of distraints, are doubtless expected to bring discredit upon the Conservative pro-

gramme. Meanwhile, it is noteworthy that Mr. PARNELL gives greater prominence than ever to the land question. It has often been said that this is the loadstone by which he attracts Irish allegiance, and the statement is strongly borne out by the fact that he discovers no better method of consoling the people's disappointment at the recent defeat of his political projects than an emphatic reversion to the land platform. That his immediate purpose is agitation, pure and simple, seems to us quite evident from his own words; for it is impossible to imagine that he can have been serious when he recommended a triennial revision of judicial rents. The Land Act of 1881 owed its failure, in great part, to a want of finality in its arrangements. It provided that rents should be revised every fifteen years, thus defying any calculation of the present value of land, and encouraging tenants to withhold payments. These evils would become intolerable were Mr. PARNELL'S suggestions adopted. No one knows better than he that a triennial revision would reduce the relations between landlord and tenant to a kaleidoscopic condition, and put a perpetual premium upon agitation. We take it, then, that his present scheme is to raise obstacles which, while they seem to be the outcome of genuine distress, will cover with odium any strong-handed attempt to deal with them. The Conservatives are determined to enforce the laws; the laws require payment of rents; evictions will follow; the inevitable consequence of evictions is outrage, and of this wretched routine England will grow weary, sooner or later. The only question is whether Mr. PARNELL'S followers may not get tired first. Already there have been two indications that faith in Conservative methods has enfeebled resistance. All the tenants on Colonel MANSFIELD'S estate have paid their overdue rents, together with expenses incurred by the employment of emergency men and police, and in Cork the labourers have agreed to work for the anti-land-league Union, declaring that, unless they are guaranteed employment elsewhere, they will not give up that of the Union. Perhaps a still more important feature in the outlook is the improbability that Mr. GLADSTONE will long be able to work with his new associates. Their exultation over the acquisition of such an ally is not unlikely to strain the ties of alliance as strongly as their generally intemperate methods. A branch of the National League has been started in London and christened after the ex-Premier, who is thus compelled to accept all the accessories of the cause he has espoused. He professes, indeed, to be delighted at finding himself either "a leader or a follower in any movement tending to make smooth the path of the people of Ireland, and encourage them to hope for a realization of their just rights." But so much dirty scum surges to the surface

whenever the Irish movement is arrested that one can scarcely fancy Mr. GLADSTONE floating contentedly with such a stream. His estrangement, even though partial, would be fatal, for, however he may be disposed to underrate his own personality, there is little doubt that the votes nominally cast for Home Rule at the recent elections were in reality cast for one of the greatest, if not the very greatest, popular leader who ever figured in the field of English politics.

#### SUMMARY OF THE FOREIGN TRADE OF JAPAN FOR THE YEAR 1885.

Tōkyō, July 16th, 1886.

MY LORD,—I have the honour to transmit herewith the Summary of the Foreign Trade of Japan for the year 1885.

It has been prepared in accordance with the principles laid down by the Marquis of Salisbury, and it therefore differs considerably in form from the Annual Summaries hitherto supplied by this Legation.

The necessity of presenting the figures in sterling, when added to the continuing fall in Exchange on Europe makes comparison with previous years more difficult than it was when values were all given in local currency.

During the past three months, there has been a considerable improvement in Imports, and I have therefore reason to hope that the Returns for 1886 will be more satisfactory than those which are herewith submitted to your Lordship.

I have the honour to be,  
with the highest respect, My Lord,  
Your Lordship's most obedient, humble Servant,  
(Signed) F. R. PLUNKETT.  
The Earl of ROSEBURY,  
&c., &c., &c.

#### MEMORANDUM.

##### FOREIGN TRADE AND SHIPPING OF JAPAN DURING THE YEAR 1885.

The Foreign Trade of Japan carried on and the shipping entered and cleared at the four ports, Yokohama, Hyōgo and Osaka, Nagasaki, and Hakodate during the year 1885 are shown in the three Tables which are appended to this Memorandum; viz.:

I.—Comparative Return of the Foreign Import Trade of Japan during the years 1885 and 1884.

II.—Comparative Return of the Foreign Export Trade of Japan during the years 1885 and 1884.

III.—Return of all shipping entered and cleared at the open ports of Japan during the year 1885.

These tables have been compiled almost exclusively from Returns furnished by Her Majesty's Consuls at the several ports.

The whole value of the Foreign Trade during the year 1885 amounted to:—

Imports	£ 5,918,179
Exports	£ 6,321,947
Total	£ 12,240,126

During the year 1884 it amounted to:—

Imports	£ 5,999,805
Exports	£ 5,971,205
Total	£ 11,971,010

There was therefore a decrease of £81,626 in the value of the imports, but an increase of £350,742 in that of the exports and of £269,116 in that of the total trade of 1885 as compared with 1884.

The Trade of 1885 was divided between the four ports in the following proportions:—

	IMPORTS.	EXPORTS.	TOTAL.
Kanagawa	5,894,984	4,178,282	8,073,266
Hyōgo & Osaka	1,788,341	1,412,372	3,200,713
Nagasaki	233,408	614,845	848,253
Hakodate	1,386	119,447	120,833

Totals.....5,918,179 6,321,947 12,240,126

There was besides a small foreign trade carried on at the ports of Niigata, Shimonoseki, Hakata, and Idzugarahara, but it was one which bore no interest for Europeans or Americans, and both as its value was in the aggregate very trifling and as it is not referred to in the returns of Her Majesty's Consuls, it will not be further dealt with in this summary.

Coal was exported in considerable quantities in Foreign vessels from Kuchinotsu and some cargoes of wheat went also from Yokkaichi and Shimonoseki to Foreign Countries, but these are not included in the present Returns as the Legation has no means of learning the exact quantities exported.

#### IMPORTS.

The decrease in Imports appears to the following amounts under the general headings of:—

Woolens and Mixed Cotton and Wool-	
len Manufactures	£ 109,462
Kerosene	£ 21,262
Sugar	£ 146,254
Miscellaneous	£ 210,469

While on the other hand the following increase has taken place in the articles included under the headings of:—

Cotton Manufactures	£ 77,923
Metals	£ 137,788
Miscellaneous (Eastern)	£ 190,110

The increase in Cotton Manufactures cannot be considered in any way a satisfactory one as the import is still far below the value which it reached in previous years. The same remark must be made in regard to Miscellaneous Articles of eastern production. Of the total increase in their value, £134,000 was owing to an exceptional import of rice, induced by the prevalence of high prices in Japan, and the increase which has taken place in the generality of the articles is therefore very small. The trade is, however, one which is almost entirely in the hands of Chinese, and its fluctuations are therefore of little account to Europeans.

In regard to Metals, the case is quite different. This is entirely a European trade; its advance in 1885 was not only considerable, but it may be taken as an earnest of much greater things to come. The "Sundries" included tin plates, steel and steel wire, brass ware, lead, pig and sheet, tea-lead, quicksilver, yellow metal, and zinc to considerable amounts. Steel of fine quality is made in Japan; copper is one of its staple products, but with those two the country's capacity for supplying its own wants in the useful metals seems to be limited, and those wants are now yearly growing.

Of the decrease that has taken place in Woollen and Mixed Cotton and Woollen manufactures, the principle staple, mousseline de laine, alone shows a falling off of £190,980, or more than half of the value of its import during 1884. This decrease, large as it is, is brought into greater prominence by the figures shown for previous years, the value of the import in 1879 having been over £600,000 and in 1880 nearly £700,000. The trade in it is almost entirely a French and German one.

Flannels and Italian cloth both showed an increase: flannels of £23,190 and Italian cloth of £77,577. In the latter case, the value of the increase in the goods of British production was £78,777, those of French and German production showing a decrease, while in the case of flannels, the increase was almost entirely in those of German production. In 1880, the value of German flannels imported into Japan was little over £3,000: in the past year it was nearly £44,000, as against a little over £10,000 from Great Britain.

Blankets and Woollen and Mixed Cotton and Woollen Cloths both show a considerable de-

crease, common in the case of Blankets to those of British French and German Manufacture, but in that of cloths only to French and British, the German import showing a slight increase. Five years ago, the trade in the latter staple was entirely a British one. Considerably over one third of it has since then been gradually diverted, to Germany principally, but in a smaller degree to France.

The total import of sugar shows a falling off of £146,254 as compared with that of 1884. The falling off is, however, only in the coarser description of brown sugar from Amoy, Formosa, and Manila. White sugar, the production of Hongkong refineries, shows an increase both in quantity and value, in quantity of cwt. 74,381 and in value of £14,624, and its import is now more than two and a half times what it was in 1880. Since the latter year the taste which the Japanese formerly had for coarse brown sugar seems to have been gradually declining, as the decrease in its import has not been met by any corresponding increase in its production in Japan, and it is not improbable that the import burthened as it may be with a heavy import duty, which the poorer classes of the people, by whom it is consumed, will be unable to pay, will at no very distant date be confined to the finer kinds of white. There is one small establishment for the production of refined sugar from Beet root, but with this exception all refined sugars are imported from abroad and principally from Hongkong.

The trade in miscellaneous articles remains much the same as last year, the decrease in its whole value being a great deal more than accounted for by the decrease in the value of steamers bought in England by the National Steamship Company.

#### EXPORTS.

The Export Trade of 1885 exceeded that of 1884 by £350,742, all the principal staples, with the exception of rice, sharing in this increase. Silver showed a diminution in quantity but an increase of £119,432 in value; tea, coal, copper, and dried fish, in each case, an increase both in quantity and value, that in value being in:—

Tea	£ 151,936
Coal	£ 19,819
Copper	£ 73,279
Dried Fish	£ 24,733

With the exception of 1882, the export trade of the past year is the largest that has yet been done by Japan, but it still only represents a value of about one pound sterling for each six persons of the population, a fact which speaks but poorly either for the productive powers of the country or the industrial capacity of the people.

Once a free admission into the country and an opening to invest their capital in it are afforded to foreigners, there can be little doubt that a large impetus will be straightway given to the whole export trade.

Tea will be prepared for export at the place of production at one half the cost at which it is now done at the open ports; the immense tracts of land, well suited for the growth of wheat, which exist in the country, and which, with abundance of cheap labour close at hand, now lie absolutely unused, may be brought into cultivation, and there is no reason why wheat grown in Japan should not find as ready a market in England as that transported by sea from the Western States of America.

With a large development of the Export trade a corresponding increase in the imports might be confidently expected. When the Japanese has money he may be relied upon to spend it, and give him the means, he will be quite ready to provide himself and his family with the host of articles that minister to his comfort and well-being which can only be obtained from Europe or America.

While, therefore, the people of the country would themselves probably be, in the first instance, by far the largest gainers by its general opening to foreigners, it is equally probable that in the end the countries at present interested in Japanese trade would derive a commensurate and permanent benefit from the increased demand they would find here for their own productions.

Original from

## SHIPPING.

It will be seen from Table III. that out of a total of 975 vessels with a tonnage of 1,134,722 tons under foreign flags entered during the year, 568 with a tonnage of 731,080 tons were British. In regard to the number of British vessels these figures show a decrease of 68 vessels in 1885 as compared with 1884 but a comparison cannot be made in the tonnage, as the figures in the present table represent nett, while those given in 1884 represented gross tonnage.

Although the value of the Import and Export trade of Nagasaki bears but a very small proportion to that of Kanagawa and Hyogo, the returns from it show that both in numbers and tonnage the British Shipping entered there during the year considerably exceeded that of either of the two last named ports, and that, notwithstanding the fact, that it was heavily handicapped by the prevalence during the greater part of the summer of a very severe epidemic of cholera. However, the general value of foreign trade may decline at Nagasaki, it is probable that as a shipping port affording large and remunerative employment to ships of size sufficiently moderate to enable them to enter Chinese ports at all times, and of good carrying capacity in proportion to their size, it will continue to advance steadily. Its central position and excellent and well sheltered harbour are great points in its favour, and it only requires the successful working of the numerous coal mines by which it is surrounded to furnish freight for a much larger number of vessels than the Japanese can themselves hope to possess for many years to come.

## CENSUS.

The number of European and American residents at the open ports and at Tokyo during the year 1885 was 2,298. Of this total 1,065 were British subjects, 269 Germans, and 201 French Citizens, the balance representing eleven other different nationalities.

There were 210 foreign firms carrying on business, of which 91 were British, 46 United States, 33 German and 18 French.

The number of Chinese residents in Japan during the year was 3,876, and there were 139 Chinese firms established in business.

As compared with the corresponding figures for the years 1876 and 1880 the above numbers show a considerable decrease in regard to European and American residents, but a very large increase in that of Chinese.

In the first mentioned year, there were 2,673 Europeans and Americans, and 2,107 Chinese.

In 1880, there were 2,359 Europeans and Americans, and 3,584 Chinese.

The European and American residents in Japan have therefore within ten years fallen in number by 375, while the Chinese have in the same period increased by no less than 1,769.

The decline in the numbers of European and American residents must to a large extent be attributed to the diminution of the number of Foreign employes in the service of the Japanese Government. The great majority of the Foreign residents in Tokyo come under this class, and they have in the ten years declined in number by nearly 200.

At the same time, it must in some degree be attributed either to a falling off of business or to its transfer from European to Chinese hands. In 1876 there were 221 Foreign firms established in Japan, in 1880, 258, while in 1885, the number was 210. There is no return of the number of Chinese firms in 1876, but in the following year it was 53, in 1880 it was 102, and in 1885 139.

The term "firm" includes not only mercantile establishments strictly so called, but store-keepers and other commercial concerns of every description.

The comparative numbers of British residents in the three years above referred to were:—

In 1876 ..... 1,242  
In 1880 ..... 1,057  
In 1885 ..... 1,065

H.B.M.s' Legation, Tokyo, July 14, 1886.

## I.—COMPARATIVE RETURN OF THE FOREIGN IMPORT TRADE OF JAPAN DURING THE YEARS 1885 AND 1884.

## CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

## BISHOP BICKERSTETH.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you grant me space for a few words with reference to the Rev. Mr. Irwine's action in connection with the correspondence forwarded from Hakodate by the newly-appointed bishop to Japan on the 20th ultimo. I wrote a letter on the subject on the 8th inst., but withheld it mainly in consequence of an editorial which appeared in the *Japan Herald*, and which I thought would probably serve to virtually terminate the matter, so far indeed as the public is concerned with it at present. But a reference to last night's issue of the same paper shows I was much mistaken. "The whole matter had better now be dropped" was sound advice; but it is advice which has been placed in an absurd light by the editor's own action only two days later.

Passing over the inaccuracies and mirth-provoking conceits noticeable here and there in your contemporary's article of the 11th (of which the cool assumption that "persons who have paid any attention at all to the subject" almost regard "Bishops in these parts" as "sacredotal superfluities" is perhaps the gem), I must say that it seems to me somewhat disingenuous to characterize the Rev. Mr. Shaw's letter as a "voluntary intrusion," etc. The action which Mr. Shaw criticised might with more correctness, have been designated a voluntary intrusion.

Mr. Irwine committed a very indiscreet and decidedly indecorous act in publishing the correspondence with Bishop Bickersteth at a stage when there was nothing to necessitate publication, and when, as a matter of fact, the gentleman most concerned beside Mr. Irwine himself could hardly have received the reply so prematurely given to the world, much less have responded to it. Even if the reverend gentleman was anxious to take the public into his confidence, he might at least have waited until he had either put the bishop's communication before his Church Committee as requested, or until he had received some evidence of the reception his reply had been accorded. But instead of doing so,—instead of protesting, if he wished to protest, and then abiding further developments—Mr. Irwine must needs cast his reply broadcast; though he must have known it to be a reply which would certainly provoke hostile comment, and very likely give the many in this place ready to smile and sneer at aught directly or indirectly affecting the missionary element, a fresh opportunity for an adverse word and a laugh. And it should not be forgotten that, though Christ Church is "a purely local and congregational body" and "self-supported" (that is, practically), it is undeniably the sole Church in the place which one would have supposed likely to welcome a "bishop of the Church of England in Japan";—it being, in effect, the local approximation to the established Church which the majority of us attended and prized at home; and moreover it was at the outset, I believe, and for several years actually connected, in some fairly direct way with the English State Church.

Under these circumstances, and seeing that Mr. Irwine is an ordained clergyman of the Church of England, he might well have acted upon Bishop Bickersteth's request, and deferred the taking up of such an antagonistic position and the accompanying call upon each of the three local papers until such time as interference was directly attempted, or other action which Mr. Irwine might consider unwarrantable and uncalled for taken. Further, it is to be noted that though Mr. Irwine tells Bishop Bickersteth that it was for the missionary work that he was specially chosen (which is doubtless true, as probably all the English Episcopalian clergymen in the country except Mr. Irwine are missionaries), the document attesting the consecration is addressed "To all the faithful in Christ Jesus throughout the world, and especially to the British Residents, and to all others whom it may concern, in Japan." This alone, one would have thought, should have ensured a different reception of the communication at the hands of one occupying the Rev. Mr. Irwine's position. Exception has been taken to the Rev. Mr. Shaw's letter. If Mr. Shaw had not noticed the correspondence somebody else would have. Mr. Irwine appears to resent Mr. Shaw's interference. He should have been more careful how he proceeded in the first instance. His procedure courted criticism; and if the criticism cuts, it is absurd to cry out about

interference, and ask who constituted Mr. Shaw "the champion not only of Bishop Bickersteth but also of the congregation of Christ Church." It was not a question of championing any one's rights, though certain rights were referred to incidentally; it was merely a case of exposing procedure which, to say the least, was unbecoming, and preventing erroneous impressions concerning a recent arrival which otherwise might have deepened into beliefs.

Mr. Irwine states that Mr. Shaw's admission *en passant* that "the bishop has not, cannot have, any legal right of visitation" proves that "his letter as an answer was superfluous." I do not think so, for I too have no doubt that in the eyes of many Mr. Irwine stands as a bold champion of the rights of Christ Church Congregation against a bishop's aggressiveness.

In his letter of the 7th inst. Mr. Irwine cites a case of a degraded clergyman in support of his opinion that "in England Episcopal supervision is the slowest and most expensive defence conceivable;" and mentions that "if the clergy were the easily-handled tools of the Episcopacy Mr. Shaw credits them with being, we should never have had John Wyclif and the English Bible and we should have had Popery and the Confessional." This is carrying things to extremes indeed. Mr. Shaw doubtless had in mind men of principle, not men who would evade the consequences of their own faults and wrong-doings, or men capable of remaining in a Church whose tenets and ritual they are incapable of appreciating or are false to. And we have yet to learn that the notable seceders Mr. Irwine names took their pronounced and uncompromising stand in consequence of something no more vital or important than the request Mr. Irwine has outfaced and run a risk of quarrelling with Bishop Bickersteth for. When the Rev. Mr. Irwine has something worthy of his opposition, I am sure he will not want sympathizers and supporters; but his present action is far enough removed from the heroic in all conscience.

Let me in conclusion briefly refer to the reverend gentleman's letter of the 11th inst.—a letter which unnecessarily reminds us that he is a freemason and a radical. The letter is a very peculiar one, regarded as an effort to make peace. But the quotation from "The Acts" is what I desire to notice particularly. "They have beaten us openly, uncondemned \* \* \* let them come themselves, and fetch us out." What does Mr. Irwine mean? If this quotation correctly indicates his view of his brother clergyman's interrogations and censure, I doubt if "peace with honour" will be secured."

By the way, if the committee and congregation of Christ Church support the views of the incumbent, they will of course desire to be termed Congregationalists. Apologizing for trespassing on your space with such a lengthy letter, and enclosing my name,

I remain, Sir, Yours faithfully,

A YOKOHAMA LAYMAN.

Yokohama, September 12th, 1886.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I am requested by Bishop Bickersteth to ask you to publish his letter which I enclose, and I also beg to hand you my reply for publication.

I am, Sir, yours faithfully,

E. CHAMPNEYS IRWINE.

Yokohama, September 13th, 1886.

Hakodate, September 9th, 1886.

REVEREND AND DEAR SIR,—Your letter of August 24th was forwarded to me in the interior, which will explain my delay in acknowledging it. Allow me now to ask your attention to the following points.

1. I gather from your letter that you are not acquainted with the position occupied by bishops of the Church of England, whose dioceses lie outside the limits of the British Isles. This position can only be rightly understood if it is constantly borne in mind that the relation of an individual bishop to Anglican clergy and congregations of English churchmen in foreign lands is of a purely spiritual character. The bishop neither possesses nor could possess any coercive jurisdiction. The action of the State extends no further than the nomination of the bishop by a Minister of the Crown on the acceptance of a nomination from the Archbishop of Canterbury, his commendation to the kindly offices of Her Majesty's Representatives abroad, and the delimitation of his diocese.

During the last half century bishops have been sent in this way to almost all parts of the world, where Englishmen reside.

The Church has established such dioceses in the

belief, which has been justified now by the widest experience, that English churchmen residing in foreign countries desire to continue to receive the full ministrations of their own communion, and also for the sake of converts to the Christian faith. On his part the bishop is bound by his consecration vows to afford the assistance of his office to all members of the Church, who may desire to avail themselves of his ministrations.

Ordained clergy of the Church of England receive the bishop's license on commencing their work, present to him their candidates for confirmation, &c., and, if they leave the diocese, receive from him the certificate, which is necessary to their admission to another diocese of the Anglican Communion. On their part they are bound by their ordination vows to use the services of the Church so far as circumstances permit, and to render obedience to their Diocesan in all things lawful. You will notice that such a relationship is strictly spiritual. It depends on the loyalty of the officers of the Church to their vows and of her members to herself.

2. This brings me to the immediate subject of your letter. No doubt you and the congregation and committee of Christ Church, Yokohama, have the fullest right to decide what position you will hold in relation to the Church of England; whether, that is, you will be within or without its communion. You cannot be both, nor can you receive the privileges of the former position, unless you are prepared to incur its responsibilities.

I cannot for one moment doubt what answer will be given to this question both by yourself as an ordained clergyman of the Church and by your congregation.

I hope to return to Tokyo next week and shall be glad of an opportunity to confer personally both with you and with the committee of Christ Church.

That God may guide us and His Church in this land into all truth and peace is the constant prayer of

Your very faithful servant in Christ,

EDW. BICKERSTETH,

Bishop.

The Rev. E. C. Irwine.

Christ Church Parsonage, Yokohama,

September 13th, 1886.

RIGHT REVEREND AND DEAR SIR,—In reply to your letter of September 9th I must in the first place beg most respectfully to object to the term "diocese" as employed in the first paragraph of the same. The term "diocese" is inadmissible in reference to matters between yourself and myself, since the word implies powers other than the "spiritual powers" which alone you claim in your letter.

My allegiance was given upon my entrance into the ministry of the Church of England to the State and Church conjointly, and I cannot recognize as my "Diocesan" any one whose authority is founded merely upon spiritual claims. Nor can any merely spiritual authority possessed by you affect my entrance into or exit from any diocese in England.

The second paragraph of your letter continues: "No doubt you and the congregation and committee of Christ Church, Yokohama, have the fullest right to decide what position you will hold in relation to the Church of England, whether, that is, you will be within or without its communion." To this I reply that whatever our right may be, *your action*, or withholding of action *cannot excommunicate us jointly or severally*.

Lastly, I most respectfully, but firmly, decline any further controversy written or unwritten upon the subject of our mutual relations, as the only way of assuring that peace which you so earnestly desire.

I conclude with the sincere hope that when my congregation requires Episcopal ministrations, I may obtain them from you as readily as they have been always obtainable from the Bishop of a kindred communion.

I have the honour to be, Right Reverend and dear Sir, yours faithfully,

E. CHAMPNEYS IRWINE,

Chaplain of Christ Church.

To the Right Reverend Bishop Bickersteth, Hakodate.

#### THE SILVER QUESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—What power is under silver at the present time that gives it such a "boost." It must be really dreadful for the gold standard advocates to see that exchange is taking an upward turn; and at such a rapid rate. And then to know that silver

should regain some of its erstwhile value in the face of the lengthy arguments put before the public of Yokohama by the gold standard writers, must give these writers an awful twist. The logic of events may vindicate the "silver fanatics" and "addled-pated doctrinaires" sooner than was anticipated. This turn in exchange cannot be altogether a funny business, it must mean something. At least it means some measure of satisfaction to the importers of Japan, as well as to all the holders of silver throughout the Far East. There is hope yet that the advocates of silver money may not have built their hopes on an unstable foundation. For the time being they may rejoice at the turn in the tide that for so long a period has held its ebbing course. We all may be happy yet. Possibly the bottom has dropped out of the silver mines all over the world, and there is anticipated a scarcity of the white metal. If the advance is due purely to financial manipulation, it knocks the pins from under the argument that silver was too abundant for the uses of the world, and brings us to the conclusion that manipulation has regulated the fall in the interests of money speculators only. The course held to by the United States in coining silver is now having its effects. No doubt that is what is the matter.

Yours, &c.,

X.

Yokohama, September 11th, 1886.

#### THE DESTINY OF KOREA.

(Translated from the *Nichi Nichi Shimbun*.)

We cannot view the state of affairs in Korea without a feeling of deep sympathy with the unlucky peninsula in reference to her vague and uncertain future. She is a neighbour and an old friend of ours, and from historical as well as geographical points of view her existence or destruction, her prosperity or adversity, cannot but have more or less effect upon us, both directly and indirectly. We have accordingly done our best since the Restoration to lead her out into the open sunshine of civilization, to encourage the development of her national spirit, to remove from the minds of her rulers and people the recollection of the irritating incidents of 300 years ago and thus to make her feel at home with an earnest and sincere friend. We have shown her every possible patience and forbearance, forgiving inexcusable offences and granting unallowable requests; in short, during these long ten years, it has invariably been our object to establish her position as a nation. But instead of our desire being accomplished, her destiny appears to be impelling her along a course which becomes more and more dangerous as each political tempest overtakes her. Who can we blame for all this but the King and his subjects, who, unable to adhere to a resolute policy of national development, seek to enjoy temporary ease and tranquillity at the cost of national existence?

Unfortunately for Korea events seem to justify our oft repeated prediction that her spirit of dependence upon another country will be the cause of her ruin. From financial and commercial points of view the possession of the peninsula will confer little profit upon any Power; but the importance of its position is such that it is on all sides admitted to be the wisest policy to keep it as an independent state between the three countries, Japan, Russia, and China. We, therefore, recognized Korea's independent status in the treaty of Kowloon, 1876, thereby giving her an opportunity to emancipate herself from a foreign yoke. Her people awoke after that event to the importance of maintaining an independent position in order to her future prosperity and development, and, seizing the opportunity thus given them, they manifested the utmost zeal in the introduction of reforms in their military, political, educational, and industrial systems, and in trying to enter the same path of progress as Japan. But she was soon turned by the interference of China to look toward that country as her legitimate sovereign, and even to desire an explicit declaration of her dependent position by treaty. It was extremely fortunate for her, however, that the plenipotentiary of the United States of America, clearly seeing through the scheme of China, rejected the article containing that declaration. Had her dependent status been publicly acknowledged then, we are not at all certain that she would have been at this moment an independent state. There being a wide distinction between independent and dependent countries, no State can assume both characters *vis-a-vis* different neighbours; and it was plainly evident that the Progressionist party and the Loyalist party could not successfully manage Korean affairs at the same time and in the same Government, the one advocating the maintenance of national independence,

while the other was immovable in its intention to rely upon China. But being incapable of pursuing a decisive course of policy, the Koreans tried to bolster up matters by uniting these two radically opposed parties. Little wonder, then, that Korea has been subjected to such a rapidly recurring series of internal disturbances. Moreover, as the primary object of her high officials is to promote their separate private interests, they seldom hesitate, so long as those interests are likely to be advanced, even to adopt measures inconsistent with the welfare of their country; and consequently the collision of these secret and multilateral interests constantly constitutes a source of factious trouble. The Loyalist party believe in the principle of dependence upon China and are chiefly anxious to study the capricious will of the Middle Kingdom. It is, therefore, natural that they should regard Japan with sentiments of suspicion; but the actions of their rival party, the Progressionists, have contributed much to intensify these sentiments. Had the Progressionist party stuck to an independent and bold line of policy, relying upon no foreign Power, and sacrificing all private interests for the good of their country, it might not have been difficult to secure a firm basis for the independence of Korea. But instead of doing so, they secretly plotted to oust the Loyalists from power by relying upon the influence of Japan, while openly advocating the independence of their country. Thus the original issue between principles of independence and those of loyalty to China became a question of preference of one country to the other as a stick to lean on.

This being the case, the high handed policy of China since the revolt of the Tai-wan-kun was drawing Korea nearer and nearer to the position of a dependency, when the *coup d'état* of Kim Yo-kun only served to increase the influence of the Middle Kingdom in the peninsula. While formerly it was asserted that, although nominally a dependent state of China, Korea had the real powers of an independent country, it has now become necessary to remark, on the contrary, that although nominally an independent state, she is about to show signs of dependence upon China. If she is positively powerless to maintain toward China her independent status, both in name and in reality, the best policy for her to pursue would be to openly declare to her treaty Powers her dependent position, and to put herself at the mercy of China. It is an ill-advised policy to try to screen herself by playing Japan and China against each other. At present there is another factor having a most important bearing upon the destiny of Korea. The Korean people seem to think that reliance upon China is a poor guarantee for security against the aggression of Russia, and they show more or less inclination towards the latter Power, hoping to skilfully play these two against each other as a security for safety. But what security have they against the encroachment of Russia? So long as Korea continues to follow her present fickle policy of reliance, the final settlement of her fate will be but a question of time. Even with a harmonious policy of improvement and reform, encouraging the development of the national spirit by the combined efforts of both rulers and people, it would be still extremely difficult to avoid danger. How, then, can the fate of Korea be otherwise than precarious when her rulers are neither faithful to her interests nor courageous in carrying out their policy?

### LETTER FROM LONDON.

(FROM OUR SPECIAL CORRESPONDENT.)

London, July 17th, 1886.

The elections are almost over, the hurly-burly is nearly done, and it may be said, in his own redundant language, that Mr. Gladstone is beaten, smashed and pulverised. The Unionists in the new Parliament will have a majority of at least 120, perhaps 140. The Conservatives have been the principal gainers. Lord Randolph Churchill before the elections said his party would win 50 seats; they will probably win 75 or 80. These gains have been mainly in England. The English boroughs have gone more Tory than in 1885, and the counties have almost wholly returned to their allegiance to the Conservatives. In the agricultural constituencies, indeed, there has been a wholesale transfer from Radicals to Tories. Even in Scotland and Wales, Conservatives and still more the Unionist Liberals have won unhoped for victories. London has gone almost *en masse* against the Premier. The East End and the constituencies south of the river have thrown out the Radicals elected in November last, and the "tossing aristocrats" of these regions, as *The Times* ironically calls them, have gone with Mr. Gladstone's enemies "the classes." If, after the custom of our fore-

fathers, the winners struck a medal to commemorate this election, they could not do better than select the motto on the medal struck after the defeat of the Spanish Armada: *Applauditis (populus) et dissepantur*. The broad result of the elections is that England, borough and county, arrays her members against Scotland, Wales and Ireland. If Mr. Goschen and Sir George Trevelyan fall at Edinburgh and in the Border Burghs, Arch disappears in Norfolk, Dilke in Chelsea and Thorold Rogers (the most intolerant and intolerable man before the public) in Bournemouth. Birmingham has gone solid with Mr. Bright and Mr. Chamberlain, and in common parlance the grand old man is up a gum-tree. I think few serious people who are not consumed with political animosity view his situation with unalloyed pleasure. He has fought this battle with a feverish energy which is almost superhuman; as I said in my last letter he has struck below the belt again and again; he has struck all around him blindly, made charges which were not true, and statements which were utterly unjustifiable. It would be impossible to refer to these in detail. Day after day *The Times* devotes long space to "Mr. Gladstone's letters and telegrams," and day after day it has to give ten times the space to indignant contradictions. Then the language that is bandied about by leaders, not by inebriated followers, is dreadful. Mr. Campbell Bannerman, the Secretary for War, accuses Mr. Goschen at Dunfermline of having been a toady of Mr. Gladstone's in November last, whereupon the *Pall Mall Gazette* retorts that the right honourable gentleman must have been indulging like the King in the old ballad who "sat in Dunfermline tower drinking the blood-red wine." The Premier talks of "a certain Mr. Jesse Collings, the author of a policy of three acres and a cow which I never shared," in reply to which the new member for Bordesley asks why he rode into power then on the "three acres and a cow amendment," and warns the labourers of Dorsetshire that if Mr. Gladstone gets into power again he will neglect their interests as he did before. Mr. Chamberlain telegraphs to the Highland crofters that Mr. Gladstone is the author of a policy for paying millions upon millions to Irish landlords and Irish scoundrels, while he has not a penny or a word to spare for the poverty-stricken, honest, law-abiding crofters. Men who are living out of the excitement will scarcely believe their eyes when they read the leaders in their *Times*. It talks of the Gladstonians as a discredited faction, having no single political idea or aim in common; take their leader away, it says, and they are a collection of items without cohesion. On another morning it is a "ghostly and ghastly simulacrum of a party" without a single vital or vitalising principle. It accuses the Premier of stirring up "all the sour narrow-minded jealousy of England which lies in the minds of the less instructed class of Scotch electors." Another election amenity, to which I should refer because it is very widely believed, is the assertion that Mr. Gladstone's mind has lost its balance. Lord Randolph Churchill alleged this in his election address; Lord Salisbury said the Irish proposals could not have been framed by a man in possession of all his faculties; the *Saturday Review* propounds the question: "Is he Sane?" in a leading article meant to prove that he is not, and the *St. James's Gazette* supports the same thesis in an article called "A Psychological Problem." I can see very little that is insane about the Premier; he has fought this battle against heavy odds; probably never has a more forlorn political hope been led; and he has not been very careful of the weapons he has used; if he wanted to strike a blow that would tell at the instant and in a particular place, he did not balance nicely whether it was quite consistent with a blow struck elsewhere and under different circumstances. But then what man in dire distress ever does balance these things? So Mr. Gladstone has got himself into an unpleasant correspondence with Mr. Bright, the Duke of Westminster and others, in which the dialectical victory was with his opponents; but his arrows had already sped on their way with such success as awaited them, and it is waste of breath to vent in an argument the man who has been so mauled at the polls. It is likely enough that a military critic calmly examining afterwards the frantic efforts of Napoleon at Waterloo might say that the man who directed these was a fanatic.

But now that the Unionists have their majority, the question is what are they going to do with it? The Conservatives have not an absolute majority of the House; if they had the situation would be simple enough. *The Times* strongly advocates a coalition government. Last February Lord Salisbury offered to serve under Lord Hartington. It is hoped that he may be willing to do so again, or at any rate that some arrangement admitting of the Unionists administering the country should be arrived at. This is

a matter of speculation at present, on which your readers will be much wiser when this letter reaches them than I am at the time of writing it. But I shall not be surprised if the course which *The Times* is urging so strenuously should be adopted, for there has been nothing so striking throughout the struggle which has now entered on a new phase as the influence wielded by this great newspaper. Englishmen of this generation have never seen *The Times* take up a side with so much energy, not to say violence. Probably we should have to go back to the later stages of the Crimean war to find any parallel to it. And it is only when it does take a side as it has recently done that one understands the pre-eminent position it occupies even in these days of many newspapers. It was the first to raise the war-cry against Home Rule, and the letters, articles, leaders, &c. with which it has since been filled have formed the quarry from which politicians have drawn their supplies, the quiver which gave them their arrows. Nothing was too great or too small for it; from political essays by the Duke of Argyll, Lord Selborne, Earl Grey, Sir James Stephen and other eminent persons, down to the incident witnessed by a clergyman in Donegal or the record of the inebriated howlings of a few peasants in Galway. No wonder the Irish Nationalists write of it as a "ruffian print," "a miscreant journal," or that Mr. Parnell should talk of it as an "armoury of lies"—an "armoury" against Mr. Gladstone and Mr. Parnell it undoubtedly has been. It would be an interesting task for some non-Englishman who thoroughly understands this country, say M. Taine or M. de Laveleye, or better still Mr. Lowell or Mr. Smalley, to write an estimate of the power and influence now wielded by *The Times* in England. Has it increased or diminished? If one is to judge from the present crisis alone, the answer would undoubtedly be, "enormously increased."

The old nursery rhyme tells us that when Humpty Dumpty fell off the wall, all the King's horses and all the King's men could not replace him, and the same may be said of Home Rule. Nothing can ever again put that question where it was six months ago. Mr. Gladstone and his schemes have been pulverised, but his successors, whoever they may be, will have to bring in a measure of Home Rule of some kind. No party in this country went to the polls with a policy of coercion alone; even the staidest Tories said that a measure of self-government for Ireland was essential, and many added that they would give Ireland the same amount of local self-government that England and Scotland were to have, and in one pregnant speech Lord Hartington said, "perhaps even more." So Ireland remains, as it has been for so long, the question of the day,—the question with which the new government, whether it be that of Lord Salisbury or of Lord Hartington, will have to deal. Home Rule for Ireland is assured; whether it will be a Home Rule which will please Mr. Parnell is another question, and as he is a very able and far-seeing man, it may be that if he is assured he has got all he caught, he will take it and be thankful.

I may note in passing that the *Pall Mall Gazette* a few evenings since, discussing Mr. Gladstone's position, says that one of the reasons why he cannot retain office whatever independent support may be offered him, is that there is a feeling of deep and wide-spread distrust of him. "This spirit of distrust, varying from an uneasy feeling that 'no one can say what the G.O.M. will be up to next' to a spirit of fierce detestation and personal hatred, played so large a part at the late election that it would be difficult to avoid giving it satisfaction." Now, this paper has been strongly Gladstonian all through, and only a few days previously had been urging the Premier to accept office and Hartingtonian Home Rule,—so it is likely to be right in this 'hard saying.'

If I have filled my letter with the election, I am a tolerably faithful reflex of the English people at home, for they talk of nothing but the election. I have never known anything which has so profoundly touched men of all classes all over the country—not even the death of Gordon. Men stay up all night to hear the result of the polls; they get up a couple of hours earlier in the morning to read the paper. At a secluded village in North Berks where I have lately been staying, and where every man, woman and child in the village is connected with agriculture and with agriculture only, the little wayside station some distance off is crowded by farmers and others waiting for the train which brings the paper with the news of the polling—and this in the middle of the hay-making season when farmer-folk work sixteen hours a day and have scarcely time to eat their meals. This excitement all over the country must be my excuse for referring at so much length to the election.

Russia has just caused some surprise in the diplomatic world by abrogating by her own will,

the 59th clause of the Treaty of Berlin declaring Batoum a free port. An ukase to this effect has been signed by the Czar. The clause in question declares it to be the intention of the Czar that Batoum shall remain a free port; and the Russians argue that it certainly was at the time the Czar's intention, and that this intention was carried into effect for eight years, but that commercial circumstances have now totally altered in these regions (which appears to be true enough) so that to retain Batoum free any longer would be inconvenient and oppressive to the inhabitants of the neighbouring districts, and hence the Czar's "intention" is now altered. The Russian press adds to this, which is the official argument, the further plea that the Treaty of Berlin was already broken by the unification of the two Bulgarias, and was so broken in spite of the protests of Russia: in other words, the present step is intended to revenge the Russian diplomatic defeat in Bulgaria at the beginning of the year. The Powers appear to take the news calmly, on the ground that if the business concerns anyone it is England, who got the clause inserted in the treaty; and the general opinion appears to be that England will bide her time, making no fuss about the matter now, but await an opportunity of paying it out subsequently. It is said that Batoum is being fortified in order to enable Russia to attack Turkey next time by way of Asia Minor, inasmuch as the direct route is now cut off in Europe by the insertion of Bulgaria as well as Roumania between her and Turkey. It does not inspire much faith in great international treaties when they can be broken so lightly as this. Russia, however, is an adept at this kind of work.

The late agitation with regard to diplomatists, consuls and trade is bearing fruit in various directions. Lord Rosebery, *The Times* announces, has just decided to print the consular reports at once on their arrival, without waiting for others to come in order that a reasonable sized Blue-book may be produced. No doubt this is something in the direction of more speed in publishing these reports, but, after all, it is very little, for during certain parts of the year there can be no delay whatever as the reports must arrive in batches. All it amounts to is that the laggards will not have to wait for still greater laggards. This is a small mercy, for some reports are incredibly late. The report from Canton, for instance, for 1884, appeared in January or February, 1886. I suppose these reports are of some practical value to merchants, although it is not easy to see how. They were originally planned by McCulloch, the statistician and political economist, who succeeded in getting Lord Palmerston or Lord John Russell to adopt his scheme. To such a man they may have proved useful; but it is clear that if they are to be published at all they should appear in something like reasonable time.

The long pending negotiation between China and the Vatican are at last completed, and the new legate to Peking is actually named—a Monsignor Agliardi. It will be curious to see how he will work with or rather in spite of the French Minister at Peking. The diplomatic game will be worth watching.

In Burmah matters appear to be growing worse, and considerable reinforcements have been ordered from India. Meanwhile the negotiations with China are at a standstill. The new Chinese Minister appears to be a very different type of man from his predecessor,—slow, hesitating, vacillating, afraid of responsibility, with no great weight at home,—in short, an average Chinese official. The Marquis Tseng is unfortunately very ill at Eastbourne.

#### LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, August 21st.

The trial of the anarchists, at Chicago, which had been going on for forty-eight days, came to a close yesterday by a verdict of guilty of murder in the first degree against seven of the prisoners, and of manslaughter against the eighth. The jury were only four hours in consultation; their minds had been made up before the final speeches of counsel, for it was common talk at Chicago that the chief culprits would swing for their crime. The prisoners were tried for causing the death of one Dugan, a member of the police force, by the explosion of a dynamite bomb, portions of which entered his body. Your readers will doubtless remember that "the Haymarket tragedy," as the affray between the police and anarchists is called, caused the wounding or killing of sixty policemen. Something like a score were either killed outright or disabled for life. It was proved on the trial

that most if not all of the bombs used had been made by one Louis Lingg, and that the orders to use them came from Spies, Feilden, Parsons, and others among the prisoners. It was proved that one at least of the bombs was thrown by one Rudolf Schaubelt. The existence of a conspiracy to attack and paralyze the police with a view to anarchy and plunder was demonstrated; and it was plausibly argued that the chief conspirator was the notorious Most, who was tried in England in 1881, and let off with a light sentence on condition of his leaving the country. This man ought really to have figured in the dock by the side of his disciples Spies and Feilden. He was unable to do so, as he had a prior engagement in the Blackwell Island prison in New York. The counsel for the State connected the teachings of Most with the overt acts of his adherents in Chicago, and the proof of the conspiracy was thus made complete. The evidence of the connection of the prisoners with the manufacture and the use of the bombs was clear, and was not shaken on cross-examination. The prisoners hurt their own case by introducing a mass of testimony the falsehood of which was apparent on its face, and the line of argument pursued by their counsel in vituperating the police and the officers of the law was not calculated to help their clients.

The event is encouraging. We witness so many failures of justice by disagreements of juries, that many people have come to despair of punishing the guilty. It is a remarkable and a happy accident that no confederate or crank managed to get into the jury-box on this occasion. The great bulk of the prisoners were Germans or natives of Central Europe; Feilden, I believe, is an Englishman. How many sympathisers they have in Chicago it is difficult to say. About one-third of the population of that city is German or of German extraction; but among these are some of the most respectable citizens of the place, who can have nothing in common with preachers of anarchy, much less with murderers of policemen. The existence of a socialist club, consisting mainly of Germans, was known to all, and its doings had for some time been watched by the police; but before the Haymarket affair, the Mayor and most of the respectable people believed that the moublings of the club would amount to nothing more than a flash of powder, which would blaze up and vanish, leaving no damage behind. We now learn that this country is not exempt from the accidents which give so much trouble to European Governments, and that if law and order are to be preserved in our great cities, we must adopt the stern measures of repression which have been found necessary under monarchical governments. It is quite likely that, after the convicts have been sentenced, Governor Oglesby, who is a kind hearted man, will exercise his prerogative of mercy, and commute the death sentence of some of the seven to imprisonment for life. But the example of even three executions will operate to teach European anarchists that unsale as their little games are in their own country, they are likely to be even more severely punished in this.

The Irish national league of America met for their annual session at Chicago on Wednesday. There was only one row, which was caused by the irrepressible Finerty, who is the clown in the Irish circus; in the main the speeches were reasonable and the resolutions fitting. These latter return thanks to Parnell, and his Parliamentary associates; to Mr. Gladstone and the English, Scotch and Welsh democracy for their support of Home Rule; to the American people for the sympathy they have extended to the Irish cause; and to the officers of the League for the faithful manner in which they have discharged their duties. They denounce "the cruel and dishonest system of extortion to which the Irish people are subjected by rack-renting landlords," and declare their unshaken confidence in the policy of Parnell. The convention appears to have had equal confidence in Parnell and in the boycott, for it passed almost unanimously a resolution advising members of the League to "hurt the enemy in the way he will feel it most by refusing to purchase any article of English manufacture, and by using all legitimate influences to discourage tradesmen from keeping English manufactured articles on sale." Judge Fitzgerald, the Chairman, declared that "we can have, we will have, no peace until England ceases her deadly hostility to the friends of freedom and freedom's Isle," and a Methodist clergyman of the appropriate name of Pepper proclaimed that if Parnell called for help, there "would be at least one vacant pulpit in the United States." At the very hour when their soul stirring utterances were arousing the Convention to vociferous enthusiasm, Lord Randolph Churchill, who has not generally been classed among the friends of Ireland, was announcing in Parliament that the Salisbury Government had decided to the conclusion

that the adoption of measures of coercion in Ireland would be unwise.

At last I have the pleasure to inform you that the quarrel between the Post Office Department and the Pacific Mail Steamship Company has been adjusted, and that after 1st September, the ships of that line will carry the United States mails as formerly, receiving, in full payment for the service, the sea postage. This will be a great convenience to merchants who, ever since the war broke out between Col. Vilas and the company, have had to rely on the ships of the Oriental and Occidental line for the transmission of their correspondence. The adjournment of Congress without even seriously considering the subject of a subsidy left the company no choice but to surrender to the Postmaster; and Col. Vilas thus comes off conqueror with all the honours of war.

Washington is empty, as usual at this season, Mr. Bayard being the only member of the administration at the seat of Government; he would not be there if it were not for the Cutting case. He has already taken three different views of this case, and if he be given time, will probably take a fourth before he is through. Meanwhile Cutting is in jail, draped in the American flag, and trying to settle to his own satisfaction whether martyrdom is as profitable a business as he had imagined. The latest story is that he is in English pay. A party of Englishmen are said to have bought great estates in Chihuahua and Sonora, and are described as plotting a war between Mexico and the United States, which would lead to the annexation of northern Mexico, and would add vastly to the value of their property. The cunning rascals! The President is fishing in the Adirondacks, and it has been flashed over the wires to the uttermost ends of the land that he has already caught a two-pound trout.

It is on the cards that the working of the Constitution of the United States may undergo a change this year without effort and without contest. When the Constitution was formed, the adhesion of the smaller states—Rhode Island, Delaware and Georgia—was only secured by conceding to them equal representation with the great states in the upper branch of the Legislature. Thus while the House of Representatives in Congress was said to represent the people, the senate was said to represent the states. The distinction assumed substantial importance when the slavery question gave vitality to the principle of state rights. For half a century the smaller states have jealously guarded their privilege of equal representation in the senate—a privilege which secures to Nevada a power in legislation equal to that of Massachusetts, though its population is scarcely larger than that of a ward of Boston, and to Delaware, whose whole people are not more numerous than the inhabitants of one of the suburbs of New York city, an equal voice with the state of New York in determining the policy of the Union. Eleven years ago, from motives not exactly understood now, the legislature of Nebraska passed a law requiring the people to express at the November polls their preference for a U.S. Senator. The effect would have been to practically withdraw from the legislature the right of choosing a Senator and to confer it on the people. The Act remained a dead letter. The people neglected to express their preference, and the legislature of Nebraska has gone on electing Senators in the old way. Now comes Mr. C. H. Van Wyck, whose term as U.S. Senator expires this winter, and demands that the Act shall be enforced. He is an anti-monopolist, at daggers drawn with the Union Pacific Railway Company, which dominates the State. He well knows that the company will cajol, or bully, or buy a sufficient number of members of the legislature to defeat his reelection, and hence he appeals in advance from their judgment to that of the people. There is no doubt but the latter would return him to the Senate if they could, and though an expression of their opinion would not be binding on the legislature, it would raise a strong suspicion of fraud if the latter body were to disregard such an expression. If Nebraska takes the hint, and practically leaves the choice of a legislature to the people, it is certain that the example will be followed by other States. The scandals attending the election of United States Senators cry aloud to heaven. Persons get themselves elected members of State legislatures simply in order to sell their votes to rich men who covet the distinction of sitting in the American House of Lords. If legislatures could be stripped of the prerogative of choosing Senators and the duty devolved on the people at large, a fruitful source of corruption would be stopped.

## THE FULLERT CASE.

IN THE MINISTERIAL COURT OF THE UNITED STATES OF AMERICA AT TOKIO, JAPAN.

September 11th, 1886.

P. C. FULLERT, Appellant, *versus* THE PEOPLE OF THE UNITED STATES, Respondent.

## JUDGMENT.

This is an appeal from the judgment of the United States Consular General-Court at Kanagawa, rendered on the 30th day of June, 1886, refusing to grant a motion for a new trial for one P. C. Fullert, defendant, in the Court below, who was charged with and convicted of aiding and assisting one G. R. Watkins, Paymaster in the United States Naval Service, in deserting from said service while in Japanese waters, and within the jurisdiction of the said United States Consular General Court. On the trial of this case in the Court below, the Consul-General, acting judicially and under the specific authority conferred by Section 4,106 of the Revised Statutes of the United States, summoned to sit with him in the said trial two associates, citizens of the United States, and being "persons of good repute and competent for the duty." From the certified transcript of the record of this trial in the Court below it also further appears that after the final submission of the case by Counsel for the Government and for the defendant respectively, the Consul-General and his two associates concurred in opinion that the defendant, P. C. Fullert, was guilty as charged; whereupon the Consul-General alone gave judgment, as the statutes direct in such cases provided, and decreed the penalty affixed to said judgment should be, "imprisonment for six months and a fine of two thousand dollars." Upon the rendition of said judgment, and within the statutory limitations, the counsel for the prisoner gave notice of a motion that said judgment be vacated and new trial be granted in said case because of certain errors, set out in his motion, and irregularities in the rulings of the Court below; insufficiency of evidence to support the verdict and the judgment; for want of jurisdiction, and newly discovered evidence since the trial, &c. All of which are fully related in the transcript of the record, filed in this Court; but which it is unnecessary to set forth *in extenso* in this opinion, for the reason that the decision of this Court on this appeal from the judgment refusing the motion for a new trial in the Court below—does not require the consideration of the "merits of the case" whether for or against the prisoner at the bar, or whether the Court erred in administering the law or was biased against the defendant, as charged by appellant, in the judgment rendered. The motion for a new trial was denied, from which the prisoner appeals to this Court, and submits the accompanying records of the trial—and by the learned counsel who represents the appellant presents his grounds for said appeal orally as well as by brief to the Appellate Court. The argument of the Respondent's Counsel was presented in behalf of the United States in the Court below on the hearing of the motion for a new trial, and fortunately, with the brief of the authorities, has been preserved in the transcript, which in the absence of that able counsellor, will be considered as presented in person, supplemented as it has been, by the appearance of the Vice and Deputy Consul-General, who, as *amicus curiæ*, has been permitted to file a brief for the Government in this appeal. This much it has been necessary to recite to a complete comprehension of the legal status of this appeal, and to a clear understanding of the grounds upon which this Court bases its decision. 1. The United States Ministerial Court for Japan is a statutory tribunal, and created by law to meet the peculiar and exceptional demands incident to the situation existing in all those non-Christian countries, where by Treaty Conventions—the exercise of jurisdiction, both civil and criminal, has been granted to Consular and Ministerial representatives (or Special Judicial Tribunals as constituted by the British Government), of what are known as the "Treaty Powers." Said jurisdiction may be duly exercised within certain fixed and limited boundaries and on certain conditions of residence, over the citizens and subjects of said Powers. Original jurisdiction (reference is now had solely to United States representatives) is lawfully exercised by the Consuls of said United States in all matters of civil redress, or of crimes to which American citizens are parties, subject to the exceptions and limitations mentioned in Section 4,106 of the Revised Statutes, which reads as following:—"Section 4,106. The jurisdiction of such Ministers (referring to the Minister of the United States,) in all matters of civil redress, or of crimes, except in capital cases for murder or

insurrection against the Governments of such countries respectively, or the offences against the public peace amounting to felony under the laws of the United States, shall be appellate only; provided, that in cases where a consular officer is interested either as party or witness, such Minister shall have original jurisdiction." In order to a complete understanding of the original jurisdiction which may be exercised by the U. S. Minister, we quote Section 4,090 as follows: "Section 4,090. Capital cases for murder or insurrection against the Government of either of the countries hereinbefore mentioned, by citizens of the United States, or for offences against the public peace amounting to felony under the laws of the United States may be tried before the Minister of the United States in the country where the offence is committed if allowed jurisdiction; and every such Minister may issue all manner of writs to prevent the citizens of the United States from enlisting in the military or naval service of either of the said countries, to make war upon any foreign power with whom the United States are at peace, or in the service of one portion of the people against any other portion of the same people, and he may carry out this power by a resort to such force belonging to the United States, as may at the time be in his reach." While the original jurisdiction of the Ministerial Court is thus limited by the section just referred to, the appellate jurisdiction of the Court is likewise limited and clearly defined by the United States Statutes. Within these limitations only may the appellate powers of this Court be lawfully invoked and exercised to correct errors of law or matters of fact occurring in the trial below, in order to reform or overturn if necessary, the judgment of the Consular Courts. These limitations to the exercise of appellate jurisdiction in criminal cases by this Court are defined by sections 4,089 and 4,106 of the Revised Statutes of the United States, which we quote *in extenso*: "Section 4,089. Any Consul when sitting alone may also decide all cases in which the fine imposed does not exceed five hundred dollars, or the term of imprisonment does not exceed ninety days; but in all such cases, if the fine exceeds one hundred dollars, or the term of imprisonment for misdemeanour exceeds sixty days, the defendants or any of them, if there be more than one, may take the case, by appeal, before the Minister, if allowed jurisdiction, either upon errors of law or matters of fact, under such rules as may be prescribed by the Minister for the prosecution of appeals in such cases." "Section 4,106. Whenever, in any case, the Consul is of opinion that by reason of the legal questions which may arise therein, assistance will be useful to him, or whenever he is of opinion that severer punishments than those specified in the preceding sections will be required, he shall summon to sit with him on the trial, one or more citizens of the United States, not exceeding four, and in capital cases not less than four, who shall be taken by lot from a list which had previously been submitted to and approved by the Minister, and shall be persons of good repute and competent for the duty. Every such associate shall enter upon the record his judgment and opinion, and shall sign the same, but the Consul shall give judgment in the case. If the Consul and his associates concur in opinion, the decision shall, in all cases except of capital offences and except as provided in the preceding section, be final. If any of the associates differ in opinion from the Consul, the case, without further proceedings, together with the evidence and opinions, shall be referred to the Minister for his adjudication, either by entering up judgment thereon or by remitting the same to the Consul with instructions how to proceed therewith." These statutes, strictly construed, give to the Ministerial Court of the United States for Japan appellate jurisdiction in the following cases, to wit: 1st. In all cases tried by a U. S. Consul when sitting alone "when the fine exceeds one hundred dollars or the term of imprisonment for misdemeanour exceeds sixty days," &c. 2nd. In all cases where any of the associates differ in opinion from the Consul (sitting as a Court) as to the guilt or innocence of the prisoner on trial, or as to matters of law or of fact which may affect the final judgment of the Court. "The case" (following the express directions of the statute) without further proceedings, together with the evidence and opinions, shall be referred to the Minister for adjudication, either by entering up judgment thereon or remitting the same to the Consul with instructions how to proceed therewith." In strict legal construction a formal appeal to the Minister can only be made under the specific provisions of Section 4,087 R.S.; where the associates and Consul differ in opinion, the case comes before this Court without a motion for adjudication, and must be so referred by the Court below at once in the discharge of the imperative obligations

imposed by the laws in such cases made and provided. In the case now on appeal before the Court there is no question raised as to the agreed statement of fact appearing in the transcript, from which this Court is informed that on the trial of the case of the United States against P. C. Fullert in the Consular-General Court, the Consul-General then presiding did summon to sit with him in the said trial two citizens of the United States "of good repute and competent for the duty" and in all respects coming up to the standard of qualification demanded by the laws. Neither is there any contention about the fact that the associates concurred with the Consul-General in pronouncing judgment of guilty against the defendant Fullert, and that the penalty affixed by the judgment of the Court was imprisonment and fine as heretofore recited. The judgment was therefore final, and beyond the power of this or any other tribunal to afford relief by appeal. The motion for a new trial was properly made in the Court below, and there can be no doubt as to the right of that Court to grant such a motion, and award a new trial to said defendant. The Consul-General in the exercise of his undoubted legal prerogative declined to grant a new trial and dismissed the motion, and the judgment dismissing said motion is on record, and is also final, from which no appeal lies to this Court. If no general appeal lies under section 4,106 from the judgment of the Court pronouncing the guilt and affixing the punishment of the defendant (which view seems to have been acquiesced in by the learned counsel for the defendant)—*a fortiori* it would follow, in the absence of any statutory qualification of Section 4,106—allowing special appeals in certain cases—that an appeal from a mere order denying a motion for a new trial in a case where the judgment is final could not be entertained by this Court; and was not intended by the law-making power to be so construed by the Ministerial Court of the United States. If the judgment in the case rendered by the Consul-General Court is final, neither the spirit or reason of the statutes, which decrees its finality, could allow the object of the law to be defeated and the final judgment set aside by the indirect and circuitous method of an appeal from a motion denying a new trial in the Court below. The self-evident aphorism that the "greater contains the lesser," &c., is applicable to the powers of judicial tribunals as in material matters. If no appeal is allowed directly from the judgment, which is pronounced on the law and the facts of the case, certainly no appeal can be invoked from a subsequent order of the same Court denying a new trial, which if allowed by this Court would disturb the verdict and the judgment, which the laws make final and therefore not subject to appeal. But *per contra*, this Court has been referred to Section 4,091 of the Revised Statutes, and the contention is made by the learned counsel for the defendant that said section qualifies the provisions of Section 4,106, and he insists, in an argument of great ingenuity as well as ability, that under the last clause of said Section 4,091, the U. S. Ministerial Court may entertain the present appeal from the judgment of the Consular General Court denying the motion for a new trial. We quote the section on which the appellant mainly relies as follows: "Section 4,091. Each of the Ministers mentioned in section forty hundred and eighty-three shall, in the country to which he is appointed, be fully authorized to hear and decide all cases, criminal and civil, which may come before him, by appeal, under the provisions of this title, and to issue all processes necessary to execute the power conferred on him which comes up with it, or to hear the parties further, if he thinks justice will be promoted thereby; and he may also prescribe the rules upon which new trials may be granted, either by the Consuls or by himself, if asked for upon sufficient grounds." It will be observed that this section relates to the exercise of appellate powers by the Ministerial Court in such cases criminal and civil which may come before it on appeal under the "provisions of this title," and that he may "prescribe the rules upon which new trials may be granted, either by the Consul or by himself, if asked for on sufficient grounds." This evidently refers:—1st. To the rules and regulations to govern the Consular Courts in the matter of new trials; and 2nd. To the rules and regulations which may be prescribed for the Ministers themselves, in granting new trials in those cases where appeals are allowed to his Court by laws, and to those cases which may be tried by the Ministers themselves in the exercise of original jurisdiction. These "rules and regulations" have already been made by the United States Minister, and duly adopted by Congress, and have the force and effect of law. But these "rules and regulations" create no new rights unknown to the laws, and are intended only to aid and assist in their administration and execution; constituting what may be figu-

ratively and appropriately called the machinery of the courts necessary to reach the ends of justice—in the process of its attainment. This Court is clearly of the opinion that this Section does not in any sense qualify or enlarge the appellate powers of the Ministerial Court, in relation to appeals from the final judgment, or from any subsequent order of the Court below refusing a new trial. In these views we are not left without the authority of honoured precedents. In the "Foreign Relations of the United States, of 1876," page 352, it is announced by the honourable the Secretary of State, and not since overruled, as an instruction to my predecessors, that, "no power is given to the United States Minister in Japan to make a regulation which will establish or impair the rights existing between parties, or to create or impose new obligations on citizens. He is confined to making regulations which will enable the established Courts to administer justice between parties according to existing laws and to punish those who offend against the laws." The power and authority, therefore, conferred by Section 4091 (confidently invoked by appellant's Counsel) on the United States Minister to make regulations governing new trials, &c., could not be construed to give a law-making power to the United States Minister; and, especially, could not confer a power upon that officer to nullify and repeal in substance existing laws. The published "Regulations" (see 126th rule, page 24), have already complied with Section 4091, and disposed of the matter of appeal definitely in the following words:—"An appeal may be taken from a final judgment in an action or special proceeding commenced in the Court in which the same is rendered (*when not made final by law*) (the italics are ours)—within one year after the rendition of the judgment; from an order granting or referring a new trial," &c., &c. All these appeals referred to in said Regulations are qualified by express reservation of my predecessors and concurred in by the United States Consuls in Japan—"when the same is not made final by law." The laws of the United States make judgment against the appellant Fullert (defendant in the Court below) a final judgment, and therefore no appeal whether from the main judgment or from interlocutory orders can be allowed. These views are in the line of the former decision of this Court in the case of *ex parte O'Neil*, (Hon. John A. Bingham presiding) where it was held by that eminent jurist that no appeal lies to this Court from a judgment in any criminal case wherein the United States Consul and associates concurred in opinion as to said judgment. (See *ex parte O'Neil*, Records of United States Ministerial Court, March 17th, 1882. See also United States *versus* Ross, page 3, United States Consular Court Digest.) There may be cases of evident hardship and even oppression under the cover of judicial process, where the denial of an appeal leaves the wronged and the oppressed without a legal remedy; and yet the experience and the history of jurisprudence as administered in all enlightened ages, and as especially illustrated by the English and American Courts is that limitations as to jurisdiction and the right of appeal must be prescribed and distributed among the various tribunals, civil and criminal. There must be an end somewhere to litigation involving not only property rights but the life and liberty as well of the citizen and the subject. In America, the District and Circuit Courts of the United States (as contra-distinguished from the State Courts) exercise exclusive and original jurisdiction in all penal offences against the laws of the United States. Their judgments, too, are final in all criminal cases heard by them. In the case of *ex parte Watkins*, tried before the United States District Court, the Supreme Court of the United States ruled as follows:—"This Court has no appellate jurisdiction to revise the sentence of inferior Courts in criminal cases, and cannot, even if the excess of the fine were apparent on the record, review the sentence (7th Peters, 574)." The Consular Courts of the United States in extraterritorial countries, and the Ministerial Courts are analogous as to jurisdiction and appellate powers to the District and Circuit Courts and the Supreme Courts of the United States. We cannot, therefore, inquire into the merits of this case, as it was tried in the Consular-General Court. If errors existed, or a judgment influenced by even improper though honest prejudice, as is alleged by Counsel, has been pronounced, it is final, and as authoritative as if acquiesced in by the prisoner himself or approved by his counsel. It might be the misfortune of the Government—in rare and exceptional cases, as it is said, to the credit of the United States Consular service, in all past administrations—to suffer from inexperience and want of intelligent knowledge of the laws by that service, but it cannot be charged to the insufficiency of the wisdom of the laws themselves, or their authors. In the case of *ex parte O'Neil* the Ministerial Court took occasion,

while denying appellate jurisdiction to the prisoner, to admit, from an inspection of the transcript of the record and the petition then before the Court, that the "penalty imposed by the Consular Judge was in excess of the penalty prescribed by the laws of the United States for the crime of manslaughter," &c.; but added thereafter that "the judgment of the Consul in the case being final, it is for the President of the United States, and not for the Minister, &c., to relieve the petitioner from the judgment, or from the excess of a penalty." It also appears from the opinion of this Court in that case that on his "official representation to the President, his award of conditional pardon remitted the excess of the sentence." The learned counsel for the appellant, in his supplemental brief, relies on section 4,089, which provides that a Consul sitting alone may decide all cases in which the fine imposed does not exceed five hundred dollars, or the term of imprisonment does not exceed ninety days; but that in all such cases if the fine exceeds one hundred dollars or the term of imprisonment for misdemeanour exceeds ninety days the defendant may take the case, by appeal, before the Minister, either upon errors of law or matters of fact. He insists that section 4,106, which declares that the judgments in all criminal cases (whether felonies or misdemeanours) shall be final whenever the Consul and Associates concur in opinion, is qualified by section 4,089, allowing appeals of this character by the following words of the section:—"the judgment shall be final except in capital cases, and except as provided in the preceding section," which is section 4,105, and not section 4,089 as insisted upon by the Counsel. We cannot recognize the distinction or the qualification, as invoked by the Counsel when sought for in either section 4,105 or 4,089. To construe section 4,089 harmoniously with the subsequent sections of the Statutes, it must be read to confer on the Consuls full judicial authority to sit alone, within the limitations therein mentioned, and to render judgments where the fines do not exceed five hundred dollars or the term of imprisonment does not exceed ninety days; but if the fine exceeds one hundred dollars or the imprisonment exceeds sixty days, an appeal will be allowed," &c. If the fine does not exceed one hundred dollars or the imprisonment sixty days, the Consul's decision is final. There is no conflict in the laws thus interpreted by this Court. We hold that an appeal does lie to this Court from the judgments of all Consuls, when sitting alone in all cases when the judgment exceeds sixty days. But this last is one of the only two exceptions referred to by Section 4,106, and this exception does not refer in terms to section 4,089, nor embrace the case at bar. In this case the defendant was tried not alone by the Consul, but with the assistance of two associates and they concurred in opinion, and the law makes the judgment rendered a final judgment, from which there is no appeal. The only appeal, or petition (as announced by this Court in the leading case of *ex parte O'Neil*) which can now be made by the appellant, is directly to the President of the United States whose pardoning power under the Constitution may be invoked at all times by American Citizens, or by those who, being neither native-born nor naturalized, may yet claim the protection of that Government, by virtue (as did the appellant) of serving at the time of his arrest on a vessel flying the national flag. Following the express requirements of the Statutes of the United States, the rulings of the Supreme Court of the United States in analogous cases, and the decisions of my predecessors, acting judicially I am of opinion that the appeal of P. C. Fullert from the order of the Consular-General Court, denying his motion for a new trial, cannot be entertained for want of jurisdiction in this Court. The said appeal is therefore dismissed, and this decision will be duly certified to the Consular-General Court at Kanagawa for its observance accordingly.

RICHARD B. HOWARD,

Envoy Extraordinary and Minister Plenipotentiary of the U.S. of America in Japan,  
Acting Judicially.

As His Excellency was about to declare the Court closed,

Mr. Lowder said he wished to make an application.

The Minister said he could not entertain any application with reference to this case.

Mr. Lowder said it was not in reference to the decision at all but in reference to the case.

The Minister said he could not hear Mr. Lowder in any judicial capacity, but he might hear him as Minister.

Mr. Lowder said then he would address his Excellency as Minister. If the facts stated in the record, which had thereby come to his Excellency's knowledge, and the arguments he had based on those facts had had any weight with

the Minister—as he would fain hope they had—it would appear that his client was now suffering punishment at the hands of a Court without jurisdiction for an offence of which he had not been proved to be guilty. He had now exhausted every process that was known to him in a fruitless endeavour to obtain a reversal of that conviction, for although the Court below assumed jurisdiction—

The Minister at this stage, remarking that as the statement was being made to him in his ministerial capacity he should adjourn the Court, made order that the Court be adjourned *sine die*.

Mr. Lowder said he was about to observe that although the Court below assumed jurisdiction in this case it would appear that there was no Court in this country with authority to reverse that conviction. The only recourse open to him therefore was to appeal to the President of the United States, as had been pointed out. It was his intention to appeal to the President of the United States and that appeal would take the usual form of a petition for pardon, which petition he trusted would be forwarded to its proper destination by his Excellency. But he knew enough of these matters to be aware that it was not so much the petition of appeal itself, as the document which might accompany it as covering despatch. If the covering despatch is in favour of the prayer of the petition then that prayer is granted almost as a matter of course. If otherwise, then the petition of appeal has very little chance of a favourable consideration. Now, in ordinary circumstances it would be highly indiscreet for him to ask the Minister what would be the nature of any communication he might make his Government, but if he was indiscreet in this matter he trusted his indiscretion might be overlooked in consideration of the fact that he was pleading for the liberty of his client. He would ask the question that he was about to put to his Excellency not out of any mere idle curiosity but with a specific and definite purpose. If the Minister should answer his question in the affirmative, namely that the petition of appeal he should ask his Excellency to forward would have his support, it was his intention to embody that statement in an affidavit, which affidavit he should use in support of an application to the Court below for a stay of procedure pending the appeal. Thus, although it would be seen that the Ministerial Court had no power whatever to reverse the decision arrived at in the Court below, still it was in his Excellency's power as Minister of the United States, in this matter that he had mentioned, to remedy what he considered to be an injustice, and he felt perfectly certain from his Excellency's well known goodness of heart that he should not in this matter have invoked the Minister's assistance in vain.

The Minister said he hoped it would be understood that he had listened to the remarks of Mr. Lowder purely in a ministerial capacity. He appreciated what the learned Counsel had said in reference to this matter, and while he could not anticipate what he would do officially until the occasion arose, he did not hesitate to say this to the learned counsel, whose zeal and ability he had, without detracting from the learning and ability displayed on the side of the prosecution, borne testimony to in an enduring and permanent way, that when, if ever, such a petition was presented he would carefully examine the record that had already been submitted and would give his opinion in writing as his advice deferentially to the President of the United States. He could not undertake to state in an official way what he would do previous to the presentation of the petition.

Four sets of torpedo machinery ordered by the Naval Torpedo Bureau from Germany arrived at Yokohama the 13th instant. One will be erected in the torpedo factory at Uraga, and the remainder will be used in the torpedo office which it is proposed to establish under the control of the 2nd and 3rd Admiralty Offices.

The General Staff Office has engaged Mr. Ogawa Shin-ichi, a photographer, to teach the art to military officers.

It is stated that the authorities are now discussing the advisability of transmitting to the sender of a postal order a receipt from the receiver, taken at the office of payment, instead of giving a receipt from the office where the money has been handed in.

The *Famats Kan*, *Atago Kan*, *Musashi Kan*, and *Tokio Kan*, which are at present in course of construction at Yokosuka are being pushed on rapidly, the machines working day and night. The *Daisen Shuten* will probably be launched about November next. The *Takachiho Kan*, *Anaki Kan*, and *Yetsu Maru* are in dock. The *Naniwa Kan*, which had been undergoing slight repairs, has left the dock.—*Fiji Shimpō*.

## LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, September 15th.

## ANOTHER IRISH BILL.

Lord Randolph Churchill has promised Parnell that he will give an opportunity for the discussion of a bill re-valuing judicial rents and suspending eviction on payment of three-fourths of the rent.

## THE BULGARIAN REVOLUTION.

Prince Alexander has gone to Darmstadt, and a regency has been established. He will return if recalled by the Bulgarian Assembly. The Porte requests the Powers to prevent armed intervention. The Czar requiring it, Alexander has resolved to abdicate, otherwise there will be a Russian occupation.

The British Ambassador to Turkey has been summoned to London to discuss the situation of Bulgaria. The Powers are exchanging views on the subject.

The Under Secretary (for Foreign Affairs,) in reply to a question, has stated that England is not interested in Bulgaria specially, but the future of the latter must be based on the Treaty of Berlin.

## THE DEPRECIATION OF SILVER.

A Royal Commission has been appointed to investigate the question of the depreciation of silver.

[FROM "LE SAIGONNAIS."]

Paris, August 26th.

The statement that Karaveloff, the President of the Council, was at the head of the insurrectionary movement in Bulgaria was a false rumour. Karaveloff has, on the contrary, overthrown the provisional Government established by the Revolutionists.

Prince Alexander is free and is at present on German territory.

Correct answer received from "TESA."

Several speculators, with the object of obtaining a profitable monopoly, purchased most of the available high ground in the neighbourhood of Yokohama, so that in complying with the requirements of a recent notification—that the ground forming the sites of new houses should be raised to a certain elevation—house owners must purchase materials from them. The local assembly, however, have decided, after consultation with the Governor, to purchase high-lying ground belonging to the Government in the neighbourhood of the town, in order that material may be at the disposal of the people at a cheap rate.

It is rumoured that the Government have decided to sell the Gakushuin and High Normal School buildings and that the Jingo-kyo-in has offered to purchase them.—*Shogio Denpo*.

## TIME TABLES AND STEAMERS.

## YOKOHAMA-TOKYO RAILWAY.

TRAINS LEAVE YOKOHAMA Station at 6.35, 8.00, 8.50,\* 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50,\* 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

TRAINS LEAVE TOKYO (Shimbashi) at 6.35, 8.00, 9.15,\* 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50,\* 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

FARES—First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90.

Trains marked with (\*) run through without stopping at Tsurumi, Kawasaki and Onori Stations. Those marked (†) are the same as above with the exception of stopping at Kawasaki Station.

## TOKYO-MAYEBASHI RAILWAY.

TRAINS LEAVE TOKYO (Ueno) at 5.25 and 9.25 a.m. and 12.25 and 4.50 p.m.; and MAYEBASHI at 5.25 a.m. and 12.25 and 4.50 p.m.

FARES—First-class (Separate Compartment), yen 3.80; Second-class, yen 2.28; Third-class, yen 1.14.

## TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI at 6.50 and 9.55 a.m., and 1.00 and 4.10 p.m.; and YOKOKAWA at 8.25 and 11.30 a.m., and 2.40 and 5.45 p.m.

## TOKYO-UTSUNOMIYA RAILWAY.

TRAINS LEAVE TOKYO (Ueno) at 9.25 a.m. and 4.50 p.m.; and UTSUNOMIYA at 9.30 and 4.55 p.m.

FARES—First-class, yen 3.50; Second-class, yen 2.10; Third-class, yen 1.05.

## SHIMBASHI, SHINAGAWA, AND AKABANE JUNCTION.

TRAINS LEAVE SHINAGAWA at 8.49 and 11.49 a.m., and 2.44 and 6.29 p.m.; and AKABANE at 9.55 a.m., and 12.50, 4.05, and 8.35 p.m.

FARES—First-class, yen 70; Second-class, yen 46; Third-class, yen 23.

## KOBE-OTSU RAILWAY.

TRAINS LEAVE KOBE (up) at 5.55, 7.55, 9.55, and 11.55 a.m.; and 1.55, 3.55, 5.55, 7.55, and 9.55 p.m.

TRAINS LEAVE OSAKA (up) at 4.45, 7.6, 9.6, and 11.6 a.m.; and 1.6, 3.6, 5.6, 7.6, and 9.6 p.m.

TRAINS LEAVE KYOTO (up) at 6.46, 8.46, and 10.46 a.m.; and 12.46, 2.46, 4.46, 6.46, and 8.46 p.m.

TRAINS LEAVE OTSU (down) at 5.45, 7.45, 9.45, and 11.45 a.m.; and 1.45, 3.45, 5.45, and 7.45 p.m.

TRAINS LEAVE KYOTO (down) at 6.45, 8.45, and 10.45 a.m.; and 12.45, 2.45, 4.45, 6.45, and 8.45 p.m.

TRAINS LEAVE OSAKA (down) at 6.25, 8.25, and 10.25 a.m.; and 12.25, 2.25, 4.25, 6.25, 8.25, and 10.25 p.m.

FARES—Kobe to Osaka: First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90. Kobe to Kyoto: First Single, yen 2.25; Second do., yen 1.40; First Return, yen 3.55; Second do., yen 2.10. Kobe to Otsu: First Single, yen 2.85; Second do., yen 1.70; First Return, yen 4.30; Second do., yen 2.55.

## OCEAN AND COASTING STEAMERS.

Steamships are regularly despatched from the Port of Yokohama for the following destinations:—

FOR EUROPE—The P. & O. Company's steamer sails fortnightly on Sunday, via Inland Sea Ports, making connection with the English mail at Hongkong, for Marseilles and Plymouth. The Messageries Maritimes Co.'s steamer sails fortnightly on Sunday, carries the French mail, and makes connection at Hongkong with the mail-boat for Marseilles.

FOR SAN FRANCISCO—The steamers of the O. & O. Co. and the P. M. Co. sail hence, approximately, every 10 days.

FOR CHINA—The steamers of the Nippon Yusen Kaisha sail weekly (Tuesday) for Shanghai, calling at Kobe and Nagasaki. Steamers of this Company also run to Korea and Vladivostok, at intervals, their sailing notices appearing in the local papers.

## YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatoba daily at 8.30 a.m., and 12.00 m., and 4.15 p.m.; and leave Yokosuka at 6.30 and 11.00 a.m., and 4.00 p.m.—Fare, 20 sen.

## PASSENGERS.

### ARRIVED.

Per American steamer *San Pablo*, from San Francisco:—Messrs. C. B. Stors, J. W. Mathews, F. W. Leaf, W. G. Skipworth, W. G. Gorbam, Burt O. Squier, and H. Drysdale in cabin. For Shanghai: Mr. and Mrs. Morehouse and E. Davis in cabin. For Hongkong, 493 Chinese in steerage.

Per Japanese steamer *Omi Maru*, from Shanghai and ports:—Mrs. Cecil D. Holmes, Mrs. Nellie Sutherland, Mrs. M. P. Lord, Miss Walker, Governor Hara, General Nozaki, Dr. W. R. Lambuth, Messrs. Easto, George M. Hart, H. J. Hunt, L. B. Abraham, McCleary, L. Becar, Kobayashi, Torao Taten, and James H. Hart in cabin; Messrs. J. Arima, Matsusaki, Ijino, Hatori, Fujimoto, Abba, and C. J. Olsen in second class; and 68 Japanese and 6 Chinese in steerage.

Per Japanese steamer *Hiroshima Maru*, from Kobe:—1 European and 8 Japanese in cabin; 2 Japanese in second class; and 14 Japanese in steerage.

Per French steamer *Tanis*, from Hongkong via Kobe:—H. E. Dimitri Schevitch (Russian Minister) and servant, Mr. and Mrs. Ch. E. Candler, infant, and 2 servants, Messrs. T. Oyama, Young, T. Young, 2 Chinese, and 20 Japanese.

Per Japanese steamer *Yamashiro Maru*, from Kobe:—Governor Kitagaki, Messrs. Kobayashi, Hachisuka, Okura, Shibuya, Honjo, Ikeda, Abe-yabe, Cheng Chak Ting, and A. Hachisuka in cabin; 4 Japanese in second class; and 91 Japanese in steerage.

Per Japanese steamer *Niigata Maru*, from Hakodate:—Bishop Bickersteth, Rev. P. K. Fyson, and Mr. and Mrs. Tamura Kumenoske and daughter in cabin; 1 Japanese in second class; and 53 Japanese in steerage.

Per Japanese steamer *Takago Maru*, from Kobe:—Mr. and Mrs. Evington and child, Messrs. Lening, Katsumo, Kishida, Saki, Itakura, Murakami, and Hara in cabin; and 74 Japanese in steerage.

### DEPARTED.

Per American steamer *City of New York*, for San Francisco:—Miss Luella Kelly in cabin.

Per British steamer *Teheran*, for Hongkong via Kobe and Nagasaki:—Colonel and Mrs. Tennant, and native servant, Captain and Mrs. Deane and 2 children and European servant, Rev. C. Bishop, Rev. J. C. Davison, Mr. Wong-tai, Miss Ohama, Miss Olake and infant, Messrs. S. Bramwell, E. O. Smith, Okeden, W. F. Hall, S. P. Wilson, T. W. Hellyer, Leong Wing-tah, Ah Shun, Wan Kai, and T. Dailow in cabin; and 4 Chinese, and 3 children in steerage.

Per Japanese steamer *Satsuma Maru*, for Shanghai and ports:—Miss Fisher, Mr. and Mrs. Ho Tung, Miss Ho So, Messrs. E. Davis, J. Brown, Shingushi, Hidaka, Tamari, Otsuka, Amano, Yamaguchi, J. Chappell, G. Le Roy, W. G. Skipworth, and Kusen in cabin; Mrs. Inouye, Misses Hasegawa (2), Messrs. Wm. Muir, T. Uchida, Saigo, T. Ota, Iriye, and Yamagata in second class; and 10 Europeans, 3 Chinese, and 56 Japanese in steerage.

Per Japanese steamer *Hiroshima Maru*, for Kobe:—Rev. Bishop Wilson, Rev. Collin Denny, Mrs. Scott, Miss Scott, Mr. and Mrs. Symes, Mr. Lambuth, and Mr. K. Takamatsu in cabin; 8 Japanese in second class; and 87 Japanese in steerage.

### CARGOES.

Per British steamer *Teheran*, for Hongkong via Kobe and Nagasaki:—Silk, for France 303 bales, and for London 14 bales; total 317 bales.

Per Japanese steamer *Satsuma Maru*, for Shanghai and ports:—Treasure, \$18,500.00.

### REPORTS.

The Japanese steamer *Omari Maru*, Captain Thomas, reports:—Left Fushiki the 9th September, at 5 p.m. and experienced strong N.E. winds up to Tsuruga Straits; and thence to port fresh variable winds and fine weather. Arrived at Yokohama, the 13th September, at 5.30 p.m.

The Japanese steamer *Hiroshima Maru*, Captain Burdis, from Kobe, reports fine weather.

The American steamer *San Pablo*, Captain E. C. Read, reports:—Sailed from San Francisco on August 25th, at 2.54 p.m.; thence to port moderate to fine weather. Arrived the 13th September, at 3.16 p.m. Time, 18 days, 6 hours and 54 minutes.

The British steamer *Hampshire*, Captain Keruich, reports:—Left Hongkong the 7th September, at 5.30 p.m. and experienced strong N.E. winds with short sea to Formosa Straits; thence to Linschoten Islands N.W. winds veering to W., S.W. and S., but blowing steadily from S.E. to Matoya, with high sea; thence to port light easterly winds, with long swell, very hazy and passing fogs to Rock Island, and light N.E. winds with thick fog to Kanonsaki; thence to port fine and clear. Arrived at Yokohama the 13th September, at 2.30 p.m.

The British steamer *Southwold*, Captain Press, reports:—Left Hongkong the 6th September, at 6 p.m. and experienced fine weather with light easterly winds until the 9th, at 6 p.m., when wind freshened from N.E.; at midnight blowing strong E.N.E. and a high sea; shipping high seas fore and aft and deck constantly full of water; washing the hatches fore and aft. Gale and sea continued until the 11th, at 4 a.m. wind and sea decreased; thence fine weather with light easterly winds and heavy swell to Rock Island; thence to port light N.E. winds and thick weather. Arrived at Yokohama the 13th September, at 11.30 a.m.

The British steamer *Harter*, Captain Grandin, Hongkong, reports light winds from S. to E. and N.E., fine weather, and heavy southerly swell.

The Japanese steamer *Yamashiro Maru*, Captain Mahlan, reports:—Left Kobe the 14th September, at 10 a.m. and experienced moderate to southerly winds and fine weather to Rock Island; thence to port light southerly winds. Arrived at Yokohama the 15th September, at 5 p.m.

The Japanese steamer *Niigata Maru*, Captain Drummond, reports:—Left Hakodate the 14th September, at 8 a.m. and experienced cloudy weather with frequent passing showers of rain, and with slight S.W. breeze and smooth sea. Arrived at Oginohama the 15th, at 7.45 a.m., and left at 2.30 p.m. on same day; light S.W. winds and fine weather, and smooth sea. Arrived at Yokohama the 16th September at 4.20 p.m.

The Japanese steamer *Takago Maru*, Captain Brown, reports:—Left Kobe the 16th September, at 10 a.m. and experienced strong easterly winds and heavy rain squalls to Oshima; thence to port fresh gale from south with rain squalls and heavy S.E. swell. Arrived at Yokohama the 17th September, at 5.20 p.m.

## LATEST COMMERCIAL.

### IMPORTS.

The Market has been very quiet indeed and transactions are again on a small scale; country buyers do not seem to be in a hurry to relieve the local speculators and consequently clearances go on very slowly. Prices on the whole are steady though in most cases nominal, but a general decline has taken place in English Yarns without leading to business.

**YARNS.**—300 bales Bombays have been sold at about previous prices or a shade better, but only 50 bales English Spinnings, for which the Market closes dull at lower quotations.

**COTTON PIECE GOODS.**—Sales are reported of 1,500 pieces Turkey Reds, 1,000 pieces Twills, and 1,000 pieces Prints, but in Grey Shirtings, T. Cloths, Velvets, &c., there has been nothing doing.

**WOOLLENS.**—The demand has been poor, and the only sales reported have been 1,500 pieces Mousseline de Laine, 1,000 pairs Blankets and some small lots of Italians and Silk Satins.

### METALS.

There is generally a feeling of quiet perceptible in this market and very little business has been done during the week.

**IRON.**—Large arrivals from Europe and China have been landed; and buyers look for a turn of the market in their favor, especially as exchange tends upwards.

**WIRE NAILS.**—Nothing new in this department; there is a fair current demand, and some stocks which have been stored in the bonded warehouse are now offering on the open market.

**TIN PLATES.**—A few hundred boxes ex-steamer from Hongkong have been quitted at good prices.

	PER CEN.
Flat Bars, 4 inch	\$2.70 to 2.75
Flat Bars, 4 inch	2.80 to 2.90
Round and square up to 2 inch	2.60 to 2.80
Nailrod, assorted	2.40 to 2.50
Nailrod, small size	2.60 to 2.70
Wire Nails, assorted	4.50 to 5.50
Tin Plates, per box	5.60 to 6.00
Pig Iron, No. 3	1.20 to 1.25

### KEROSENE.

Position unchanged as regards the general market. Buyers meantime are supplying themselves from the auction sales of damaged cargo ex Republic. 11,000 cases Devoe from this vessel were sold on the 13th instant, and there are more to follow.

	PER CEN.
Devoe	Nom. \$1.70 to 1.72 1/2
Comet	Nom. 1.65 to 1.67 1/2
Stella	Nom. 1.60 to 1.62 1/2

SUGAR.

The market has been quiet, and prices are on the decline for Brown, White sorts remaining as before.

	PER PICUL.
White, No. 1	\$7.25 to 7.30
White, No. 2	5.90 to 5.95
White, No. 3	5.60 to 5.70

White, No. 5	4.00 to 4.10
Brown Fortinos	4.00 to 4.05

EXPORTS.

RAW SILK.

Our last issue was dated the 10th instant, and we have now to record a falling off in the amount of business done. Nett Settlements for the week are only 100 piculs, divided thus:—Hanks 30 piculs, Filatures and Reels 3 piculs, Kakeda 47 piculs. In addition to these figures Japanese have taken about 70 piculs for Export, which are included in the usual statistics given below.

The trade has received a sudden check from the pronounced rise in foreign exchange. During the week fully 300 piculs have been taken into godown, but the Settlements are reduced to about 100 piculs by heavy rejections of previous purchases. The buying so far has been chiefly for Europe, the U.S. trade not participating. Holders are strong, and refuse to adjust their prices to the ruling exchange; so there is likely to be but a small business at present.

Arrivals continue on a grand scale, and the Stock list shows an increase of 1,200 piculs on the week. Quotations generally cannot be reduced; middlemen and brokers here see the necessity of reducing prices, but complain that they cannot get their principals up country to view matters in the same light.

There have been two mail departures during the interval, the P. M. S. *City of New York* on 11th inst. and the P. and O. steamship *Teheran* on the morning of the 12th. The former had 237 bales for the American trade and the latter 317 bales for European countries, principally France. Export to all parts is now 3,249 piculs against 3,446 last year and 5,433 piculs at same date in 1884.

**Hanks.**—Quite a revival in this department, the trade still running on *Hachoji* sorts at about \$570. One or two parcels better Silk called *Tomi-yoka* have been dealt in at \$835, but really prime hanks are held for very long prices. The business at present is entirely for Continental Europe; for this class of Silk sellers are obtaining full rates, and no reduction whatever is perceptible in current prices.

**Filatures.**—The Settlements are very meagre, and buyers deem it impossible that prices can hold. On the other hand sellers are inclined to wait and "see it out." Consequently trade languishes and the stock piles up. Among the sales we note *Shimeisha* (fine size) at \$770 with Koshu sorts at \$720.

**Re-reels.**—Trade insignificant; some few small dealings in middle class Bushu at \$675 and a foreign speculator is reported to have resold his holdings of *Five Girl* chop at the same figure. Good silk in first hands, however, is very strongly held; buyers and sellers appear to be quite five per cent. apart.

**Kakeda.**—A little spurt in old Silk, a considerable parcel being entered in the list at \$620. New staple is dear and firmly held at our quotations, which however are purely nominal at present.

Export Tables, Raw Silk, to 17th Sept., 1886:—

	SEASON 1886-87.	1885-86.	1884-85.
Europe	1,197	900	2,806
America	2,050	2,666	3,074
Total	3,247	3,566	5,878
Settlements and Direct	1,197	3,446	5,433
Export from 1st July	3,650	3,550	6,100
Stock, 17th Sept.	7,800	5,700	5,100
Available supplies to date	11,450	9,250	11,200

WASTE SILK.

A fairly large business recorded in this department, although during the last few days the Market seems to feel the pinch of exchange. Settlements for the week are 700 piculs, viz:—*Pierced Cocoons* 300 piculs, *Noshi-ito* 300 piculs, *Kibiso* 60 piculs, *Sundries* 40 piculs. Direct Export has also taken about 100 piculs for Marseilles.

The demand has been about equally divided between *Pierced Cocoons* and *Noshi*; but now buyers are not entering into fresh contracts, being busy with preparing recent purchases for shipment. Holders fight hard against any reduction in prices, and it looks as though we might have a quiet spell just now.

**Pierced Cocoons.**—The usual buyers for the Eastern and Western continents continue their operations at recent values. One large parcel of *Tama Cocoons* reported at \$72.

**Noshi-ito.**—Chief business in *Oshu* at \$190 and *Joshu* assorted at \$120 to \$125. *Hachoji* still commands \$160 and prices all round are firm.

**Kibiso.**—Small trade at full rates; ordinary *Filature* fetching \$155, *Oshu* \$115 and middling *Joshu* \$68.

**Sundries.**—Business reported in *Neri* at \$27 1/2 for uncleaned stock—the *Oshu* produce is not yet on the Market.

There has only been one shipping opportunity this week, the *Teheran* (12th instant), which took 59 bales *Pierced Cocoons*, 80 bales *Noshi*, 4 bales *Kibiso*, 17 bales *Doppioni*, 12 bales *Neri*—chiefly for French and Italian ports. Export to date is now 2,784 piculs against 835 piculs last year and 3,545 piculs at same date in 1884.

QUOTATIONS.—(NEW WASTE)

Pierced Cocoons—Good to Best	\$130 to 150

Taysam Kinds	245	Sundries	150
Total piculs	7,560	Total piculs	7,600

TEA.

There has been no abatement in purchases during the past week, as the volume of transactions effected reaches fully 2,600 piculs, making the total

Settlements aggregate 182,585 piculs as compared with 145,700 piculs in 1885. Business at Kobe continues to be large, the total Settlements at that port being about 107,000 piculs, against 90,000 piculs in 1885. Prices for Common to Good Medium remain fairly steady while Fine and upwards are scarce and very dear. The *Carrie Delap*, which sailed on the 16th instant, took 15,900 lbs. from Kobe for Canada. These are additional figures, not previously reported. The steamship *Port Jackson* took from Kobe, on the 4th, 113,982 lbs. for New York and 160,095 lbs. for Canada, making 274,077 lbs. The P.M. steamship *City of New York* took from Kobe 93,354 lbs. for New York, 106,065 lbs. for Chicago, and 11,210 lbs. for San Francisco, making a total of 210,629 lbs. The same steamer took from this port 343,866 lbs. for New York, 97,707 lbs. for Chicago, 131,253 lbs. for San Francisco, and 97,470 lbs. for Canada, making a total of 670,326 lbs. She sailed on the 11th instant. The German bark *Bylgia* sailed on the 13th instant, and took 77,891 lbs. for New York, 76,403 lbs. for Chicago, and 46,834 lbs. for Canada, making a total of 201,128 lbs.

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 25TH, 1886.

### BIRTHS.

At No. 222-B, Bluff, on the 18th inst., the wife of the Rev. IRVIN H. CORRELL of twin Daughters.

### SUMMARY OF NEWS.

THE weather during the week has been raw and damp.

COMPLETE maps of Hokkaido are to be prepared shortly.

CHOLERA is raging with great virulence in Shio-gama, Sendai.

A NUMBER of Kobe policemen have commenced the study of law.

COUNT INOUE and party returned to Tôkyô the evening of the 17th instant.

PRINCESS SANJO, mother of the Lord Keeper of the Privy Seal, is dangerously ill.

MR. IWAMURA, Governor of Ishikawa Prefecture, arrived in Tôkyô the 18th instant.

It is stated that a new branch naval office will be established at Izugahara, Tsushima.

MARQUIS MAEDA, who had been staying at Ikao, returned to Tôkyô the 20th instant.

COUNT YAMAGATA, Minister of State for Home Affairs, returned to Tôkyô the 19th instant.

THE total number of round fans manufactured last year by dealers in Yokohama was 3,382,800,

of which 1,353,100 were for export and 2,029,700 for use in this country.

THE fares on the Nagahama, Ogaki, and Tsuruga railway have been reduced by one-third.

A MONUMENT to the late Prince Iwakura has been erected at Kita-Iwakura-mura Nishi-Kamogori, Kyôto.

THEIR Imperial Highnesses Prince and Princess Arisugawa returned to Tôkyô the 19th instant from Ikao.

DURING last month 18,261 tons of coal were shipped for Hongkong and Shanghai from Kuchinotsu.

THE Naval Department has decided to use cypher telegrams in reporting the arrival and departure of men-of-war.

THE *Hikaku Maru*, belonging to Mr. Kawasaki Masazo, has been sold by public auction for 1,175 taels.

H.L.M. THE EMPEROR has granted a sum of yen 100 towards the funeral expenses of the late Viscount Toyooka.

MR. MISHIMA TSUYO, chief of the Metropolitan Police, returned to Tôkyô the 19th instant along with Count Yamagata.

COUNT OYAMA visited the Narashima reclamation works the 18th instant, and returned to the capital the following day.

It has been finally decided to proceed with the construction of a railway line between Iwamisawa and Muroran, Hokkaido.

A LANDSLIP took place at Nakamura, Ishikawa, Yokohama, the 17th instant at 1 p.m., destroying two houses, but no lives were lost.

MR. N. R. O'CONOR, C.B., C.M.G. returned to Yokohama the 15th instant from Nikko, and left for San Francisco the 23rd instant.

MR. MURATA YOSHIDUMI, newly appointed Japanese Consul at Fusan, will leave for his post about the beginning of next month.

MR. R. W. IRWIN, the Hawaiian Minister, who has been staying at Miyogisan, returned to Tôkyô on official business the 21st instant.

THE *Hidesato Maru*, which left Yokohama the 9th ultimo, carrying Kim-yo-kun to the Bonin Islands, returned the 16th instant at 8 p.m.

MR. MORIMURA YUTAKA, a well known merchant, left for San Francisco in the *Belgie* to inspect the branch office of his firm in New York.

NOTES to the value of yen 3,000,000 will be publicly burned in the compound of the Printing Bureau for four days from the 27th instant.

THE new Russian Minister paid a complimentary visit to Count Ito and to the various foreign legations the forenoon of the 17th instant.

MR. KAWAZU, who had been occupied at Nagasaki in connection with the present enquiry,

arrived at Yokohama in the *Hiroshima Maru* the morning of the 20th instant, and proceeded to the capital immediately.

It is stated that the authorities propose to confer on Mr. Mori, Admiral Enomoto and several first class senators of the Genro-in, the rank of Viscount.

ADMIRAL ENOMOTO arrived at Nagaoka, the 16th instant, and was entertained by the officials and a number of private individuals at the Gekiseki Kan.

It is stated that the Nippon Yusen Kaisha offices will be removed to the building lately occupied by the Kyodo Unyu Kaisha, about the 15th of October.

THE Naval Department proposes to purchase about 9,800 *tsubo* of land at Uraga to form a rifle range for the use of the naval forces stationed there.

A SEAM of coal has been discovered near Takatsukamura, Ikarukagori, Tamba, and application has been made to the authorities for permission to work it.

THE customs revenue collected at the port of Nagasaki during August amounted to 810,989, being an increase of 81,114 as compared with the same period last year.

THE Yamaguchi Prefecture Government have telegraphed to Tôkyô that much damage was done to the crops by the heavy storms which prevailed about the 18th instant.

THE inquiry at Nagasaki remains pretty much *in statu quo*. Mr. H. W. Denison, legal adviser to the Foreign Office, has been sent to relieve Mr. Kirkwood on the commission.

PRINCE LOUIS NAPOLEON has purchased in Tôkyô a pair of screens valued at yen 1,800, two hanging lanterns, a pair of porcelain flower vases, a number of old pictures, and 3 excellent sword blades.

MESSRS. HIRAO AND NIKI, of the Central Tea Association, who were despatched some time ago to the districts of Formosa, China, and India to report on the tea trade, returned to the capital the 21st instant.

TWO Chinamen who were apprehended by the customs authorities on suspicion, the 18th instant, at the Eastern Hatoba, were found to have a quantity of opium concealed on their persons. They were handed over to the Chinese Consulate.

THE Translating and Recording Bureau of the Foreign Office removed to new offices in the compound of the Department the 17th instant. The Commercial Bureau will be removed to the building lately occupied by the first named Bureau.

THE *Tushin Nippo* states that the total quantity of tea sold to foreign firms in Kobe by Japanese merchants since the new leaf appeared in the market, up till the 15th inst., was 1,400 cattie in April, 3,753,700 cattie in May, 3,865,000

catties in June, 1,954,100 catties in July, 1,487,700 catties in August, and 716,800 catties in September.

THE estimates of the revenue for the 20th fiscal year, which have been under investigation at the Accountants Bureau in the Financial Department, are now almost completed. It is stated that, as compared with those of the 19th fiscal year, they show a slight reduction.

ACCORDING to the present survey of the Tōkaidō Railway, the first section (Tōkyō-Numazu) is 68 miles in length, the second (Numazu-Hamamatsu) 90 miles, and the third (Hamamatsu-Atsuta) 59 miles, making a total of 217 miles—Tōkyō to Nagoya.

MR. MATSUNARI ISABURO was sentenced at the Tōkyō Correctional Court, the 21st instant, to forfeit a sum of yen 12 which he had obtained by selling 150 copies of a book entitled "Future Record of the 23rd year of Meiji" without first sending a copy for approval to the Government.

THE Japanese Consulate at Fusan, Korea, reports, under date the 31st ult., that the total value of goods brought to Fusan from Japan for the first half of this year was yen 231,466, of which yen 30,000 represented English muslins, yen 60,000 Japanese rice, and yen 10,000, a kind of gauze.

IT has been found necessary to commence repairs, which will amount in cost to over \$30,000, on the German steamer *Prinz Heinrich*, which went ashore recently near the mouth of the Amoor river. Over \$20,000 was spent in getting the vessel afloat, of which \$12,000 was paid to the steamer *Feilung* for towing the *Prinz Heinrich* off the reef on 30th June last.

THE Japanese Consulate at Jinsen, Korea, reports, under date the 30th ult., that the total value of goods brought to Jinsen from Japan for the first half of this year was yen 413,433, of which yen 120,000 represented English muslins, yen 70,000 Japanese rice, and yen 50,000 a variety of gauze. The total value of goods exported from Jinsen was yen 265,720, of which yen 140,000 was for gold-dust, yen 80,000 for cattle hides, and yen 10,000 for silver dust. Of the exports, goods to the value of yen 10,250 were returned to the country.

THE total traffic receipts on the Yokohama-Tōkyō line, during August last, were yen 32,791, of which yen 26,334 were for passengers, and yen 6,457 for parcels, &c. The total traffic receipts on the Takasaki-Yokokawa line were yen 4,518, of which yen 2,915 were for passengers, and yen 1,603 for parcels, &c. The total traffic receipts on the Kobe-Otsu line were yen 42,223, of which yen 27,270 were for passengers, and yen 14,952 for parcels, &c. The total receipts on the Tsuruga-Ogaki line were yen 6,105, of which yen 3,508 were for passengers, and yen 2,596 for parcels, &c. The receipts on the Naotsu-Sekiyama line from the 15th to 31st ultimo, were yen 737, of which yen 633 were for passengers, and yen 104 for parcels, &c.

IN Imports sales have been small, though there is now a prospect of more activity. Yarns and Plain Cottons have been much neglected; transactions have been small and prices remain steady. There has been a little more business in Metals at reduced prices. Large quantities of Kerosene have been sold at quite a rise in price

and business looks encouraging. Deliveries are on a large scale and stock amounts to about 570,000 cases. The Sugar market is weak and business has been insignificant. There has been a steady demand for Raw Silk for Europe, and a considerable quantity has been taken in by American buyers within the last day or two. Holders are more inclined to do business. Arrivals have been large and stocks comprise a good assortment. A large business has been done in Waste Silk both for Europe and America. Prices are still strong, supplies are free and stocks are well assorted. Higher prices prevail in the Tea trade, and the demand runs mostly on superior grades, which are only obtainable, however, in small lots. Foreign exchange has steadily improved.

#### NOTES.

WE learn from the *Yiji Shimpō's* Nagasaki correspondence that the negotiations have been proceeding there since the 6th instant under the name of a "Conference of Commissioners of the Two Countries." The meetings were originally held at the Prefectural Offices, but they are now convened at the Kōshinkan, in the Public Park, the object of the change being to secure greater privacy. In pursuance of this principle, newspaper correspondents, who were formerly allowed to publish everything not deemed injurious, are at present carefully excluded from all access to what is going on, and several of them have left Nagasaki in a state of great disappointment. It would seem that the Commissioners have not yet concluded their enquiry into the affair of the 13th instant, and the natural inference is drawn that a long time must still elapse before any decision can be arrived at with regard to the incomparably more serious fracas of the 15th. The Chinese Commissioners, Secretary Yang, Consul Tsai and Mr. Drummond, are attended by a numerous train of followers on their way to and from the place of meeting.

Our Nagasaki correspondent confirms the intelligence previously received from other quarters to the effect that Mr. Drummond's zeal on behalf of his clients is a marked obstacle to the progress of the Nagasaki negotiations. Our correspondent, indeed, goes so far as to hint that Mr. Drummond's efforts are not inspired by any desire to bring about a speedy settlement, and it has been suggested by the vernacular press that when a man is in receipt of 200 taels daily, he becomes not unnaturally indisposed to abbreviate the period of emolument. We do not believe that any faith is to be placed in such an inference. No explanation of Mr. Drummond's action need be sought outside the fact that his duty as a barrister is to make things as difficult as possible for his opponents, and to utilize every conceivable expedient in behalf of his clients. It may, however, be safely asserted that the part he has taken shows the extreme unwisdom of importing foreigners, above all foreign lawyers, into the discussion. In a judicial enquiry such legal aid might be useful, but on a commission which can decide nothing, either diplomatically or judicially, and which can perform no function except that of collecting and recording evidence, a foreign barrister bent only upon dressing up a case, is quite out of place. If the Chinese really desired to elicit the truth and accelerate a settlement,

they would long ago have seen the wisdom of letting their foreign counsel return to Shanghai. But they are not at all desirous of hastening a decision or arriving at the truth. They must see as plainly as possible that in the end they will be obliged to confess themselves in the wrong, since their sailors, having been permitted to land contrary to the advice and desire of the Japanese local authorities, undoubtedly commenced the fight. It is natural that they should seek to postpone the evil day, but it is neither wise, just nor statesmanlike.

We should hope that Vice-Admiral Lang's back is broad enough to bear the blame laid upon it by his Chinese friends, but assuredly they seem disposed to make a scape-goat of him. Their story, it is understood, attributes to him the responsibility of disregarding Prefect Kusaka's warning. The Prefect, it is said, called upon the Consul Tsai after the affair of the 13th, and suggested that the Chinese sailors should not be allowed to land in large parties. Admiral Ting was disposed to respect this suggestion, but Vice-Admiral Lang explained that to keep the men on board would injure their health, and that by sending them ashore in sufficient numbers, all danger of a disturbance would be avoided. Thereupon leave was given to about one half of the sailors in the four ships, so that, on the evening of the 15th August, no less than six hundred Chinese liberty-men were deporting themselves in the streets of Nagasaki. Even if the Chinese expected this tale to be credited, we do not perceive what they can hope to gain by telling it. In the first place, they admit their own disregard of the Japanese local authorities' suggestion—a disregard which places them flagrantly in the wrong from the outset. In the second place, Vice-Admiral Lang's advice and their following it are two totally different things. To plead that they preferred the opinion of one of their own officers to the request of the officials of a country whose hospitality they were enjoying, is simply to proclaim their incapability of exercising discretion. Such an excuse is on a par with another contention credited to them; namely, that Prefect Kusaka ought to have adopted precautions to restrain the citizens of Nagasaki, and ought to have provided an extra force of police. That is an amusing confession of the disorder and want of discipline to be expected of their own seamen. We have never heard of such a flagrantly reckless proceeding as the granting of leave to six hundred sailors after a disturbance had already occurred between them and the police and in the very teeth of a warning from the local authorities that any such step would be perilous. It certainly is not the fault of the Chinese Admiral that Nagasaki was not sacked.

Japanese papers publish the following telegrams:—

Nagasaki, September 16th (Afternoon).

It is stated that Captain Lang has lost much of the confidence of the Chinese Government and has been reported by Admiral Ting as taking a peaceful position at the enquiry. The foreigners in the settlement say, however, that Captain Lang's view is the proper one.

With regard to the enquiry some Chinese are endeavouring to suborn witnesses in their favour.

(*Nichi Nichi Shimbun*).

Nagasaki, September 17th, 8.10 p.m.

(Delayed in transmission).

Mr. Kin-Kaku-u, a Korean refugee who had fled to Jinsen, applied for a passage to Vladivostok on the *Takachiho Maru*, which, however, was refused.

Original from  
UNIVERSITY OF ILLINOIS AT  
URBANA-CHAMPAIGN

From this date the enquiry will deal with the disturbance of 15th ultimo.

(China Shimbun.)

Nagasaki, September 17th, 8.10 p.m.  
(Delayed in transmission.)

The enquiry into the disturbance of the 13th ult. was concluded at the eighth sitting. To-day's sitting refers to the riot of the 15th ultimo.

(Nichi Nichi Shimbun.)

Nagasaki, September 18th, 7.15 p.m.

During the last sitting of the enquiry Mr. Kirkwood became slightly indisposed, and the meeting was therefore closed.

(Fiji Shimpō.)

Nagasaki, September 19th, (Forenoon.)

Min-yong-ik, who went to Chefoo, en route for Tientsin, has disappeared, and therefore an official of the Korean Foreign Office is to start for China to explain the state of matters in connection with the rumoured Russo-Korean secret treaty.

Mr. Deany has left for Tientsin. Mr. Ching-ai, Chinese Director of the Chinese Telegraph office in Seoul, has been re-called to Tientsin. His return is said to be connected with the false report as to the arrival of Chinese forces at Seoul.

Admiral Ting with six men-of-war arrived at Jinsen and left immediately.

Nagasaki, September 18th, (Afternoon.)

The enquiry has been suspended meantime on account of the indisposition of Mr. Kirkwood.

Kobe, September 18th, (Afternoon.)

Mr. Kawazu left for the capital to-day in the *Hiroshima Maru*.

(Mainichi Shimbun.)

Nagasaki, September 19th, 11 a.m.

Mr. Hashiguchi, an interpreter, arrived at Nagasaki this morning.

Nagasaki, September 20th, 11 a.m.

Messrs. Kirkwood and Deura, left for the capital yesterday evening.

Nagasaki, September 20th, 6 p.m.

Owing to the return of Mr. Kirkwood to the capital the Nagasaki Prefectural Government office has been informed that Mr. Denison of the Foreign Office will be despatched to the port.

Nagasaki, Sept. 19th, 11 p.m.

Mr. Drummond has advised the Chinese Government that no Chinese men-of-war should arrive at Nagasaki until the enquiry is concluded.

(Nichi Nichi Shimbun.)

Nagasaki, September 20th, 5.50 p.m.

Messrs. Kirkwood and Deura have left for the capital by order of the Government.

Messrs. Hashiguchi, a clerk of the Foreign Office, and Tei, a student secretary of the Japanese Consulate at Tientsin, attended the sitting of the enquiry as interpreters to-day.

(Fiji Shimpō.)

Kobe, September 21st (Forenoon.)

Messrs. Kirkwood and Deura left for the capital yesterday. It is stated that they have been recalled on official business relating to treaty revision.

Owing to the return of Messrs. Kirkwood and Deura, Governor Kusaka and Mr. Hatoyama will take charge of the enquiry.

The tenth sitting of the enquiry was held to-day.

(Nichi Nichi Shimbun.)

Nagasaki, September 21st, 5.15 p.m.

The enquiry has been closed until the arrival of Mr. Denison to take the place of Mr. Kirkwood.

Kobe, September 22nd, 3.20 p.m.

Messrs. Kirkwood and Deura arrived this morning from Nagasaki and leave for the capital in the *Yokohama Maru* to-day.

(Mainichi Shimbun.)

Nagasaki, September 22nd, 2 p.m.

Mr. Kirkwood has started for the capital taking with him all the minutes of proceedings, and the Chinese representatives have also transmitted copies to Li Chung-tang through the Chinese Consulate. It is stated that the points of both sides as to the enquiry have been entirely decided.

Nagasaki September 21st, 8 a.m.

At the enquiry held yesterday the circumstances attending the purchase of weapons by the Chinese sailors were enquired into.

Nagasaki, September 21st, 3 p.m.

A meeting of the Japanese representatives was held to-day, closing at 10 a.m.

It is stated that at the next sitting of the enquiry it is proposed to call and examine the persons who sold weapons to the Chinese.

Nagasaki, September 22nd, 6 a.m.

Two or three Chinese residents who assisted the Chinese sailors during the late disturbance have fled to Hongkong.

Nagasaki, September 22nd (Afternoon.)

The *Tsai-yuen* and *Nan-wei*, arrived to-day at noon. Admiral Ting has also arrived.

Nagasaki, September 23rd (Afternoon.)

Admiral Ting is in the *Tsai-yuen*. He proposes to stay at Nagasaki until the enquiry is completed. Mr. Drummond has rented for four months the building lately used as the French Consulate.

CHINA, if she opened her eyes, might read a useful lesson in Russia's recent doings in the Balkan peninsula. By a treaty to which all the great Powers of Europe were consenting parties, and by his own subsequent acknowledgment, Prince Alexander of Bulgaria was a vassal, and his country a tributary, of Turkey. Yet Russia has quietly contrived his deposition, without taking any counsel of the Porte or giving herself any concern as to Turkey's rights. If that is the way the Czar's Government behave in the face of explicit European engagements, what respect are they likely to pay to China's spasmodically asserted and repeatedly repudiated claims of suzerainty in Korea? We observe that the *Hochi Shimbun* forcibly discusses the danger lurking in Korean politics—a danger constantly pointed out in these columns—that the foreign relations of the little Kingdom have come to depend upon faction feuds, and that the besetting tendency of Korean statesmen is to invite alien assistance for the satisfaction of their own personal ambitions. Since the unsuccessful *coup d'état* of Kim Yoon, the political power has fallen almost entirely into the hands of the Min family, who have China's support. The party opposed to them sees no better hope of recovering its influence than an appeal to Russia. Even without such a friend in the citadel, the *Hochi* thinks that Russia is in a manner compelled to turn aggressive eyes upon the peninsula, as much by the force of her traditional policy as by the example of England at Port Hamilton. If China desires to encourage Russian designs, she need only pursue her present fiftful tactics, disavowing all responsibility in connection with Korea, but at the same time feeding the fever of intrigue by capricious and violent interference. Her friends say that at the first genuine symptom of Russian aggression she would put her foot down with unmistakable firmness. Perhaps she might; but on what legitimate grounds? The only treaty she has ever concluded in which Korea is mentioned, explicitly deprives her of any right to send troops to the peninsula without Japan's assent. That treaty places her on precisely an equal footing with Japan so far as concerns the exercise of any armed control in the peninsula or the extension of protection to it against foreign aggression. Meanwhile, her spasmodic attempts to play the part of suzerain, combined with her persistent reluctance to accept any of the responsibilities of such a rôle, are calculated solely to promote confusion in Korea, to deceive the world and to encourage Russian designs.

Writing on the subject of telegraphic communication between Fusan and Sôul, the *Fiji Shimpō* says:—Towards the end of last month, the people of this country were suddenly surprised by alarming rumours respecting the state of affairs in Korea. It was widely believed that a mob had attacked the foreign legations and that the Korean Prime Minister had been degraded, and it was even asserted that the King had been made a prisoner. But the arrival of letters from Sôul showed us that the whole affair, about which so much excitement was produced in this country, was nothing more than a

farce played by the Chinese Representative and in the interest of Min Yon Ik and a few others. All this unnecessary anxiety and excitement would have been saved us, had there been a direct line of telegraphic communication with the Korean peninsula, secure from Chinese molestation. When we think of the dangers in the present situation of Korea, we can never feel secure so long as the peninsula is not directly connected with this country by a telegraphic line. At the time that the Nagasaki, Fusan cable was laid, it was arranged with Korea that for a period of 20 years no other country should be allowed to construct telegraph lines in the territory of that country. When, in violation of this promise, Korea permitted China to construct the Wi-ju line last year, our Government made the Korean Government agree to construct a telegraph line with their own money between Fusan and Sôul within six months, counting from January last. The line ought to have been completed before the end of June, but the period was extended to November next. Still there is no sign of the fulfilment of the pledge. If Korea is unable to execute the work herself, we must construct the line promptly with our own hands. The distance between Fusan and Sôul, is in round figures, about 100 Japanese *ri*; so that the cost of the work will be about 100,000 *yen*, while the completion of the line will hardly require many days. The expense should be repaid by Korea in yearly instalments, on the security of mining taxes or some other suitable source of income. The line should be under Japanese control. It is our earnest hope that the Government will at once take this matter into their hands.

THOUGH Greece has apparently resigned herself to the condition of affairs brought about by the intervention of Europe under Great Britain's lead on behalf of peace, she evidently does not wish to see such resignation construed as an abandonment of the hopes cherished by her people. The present quiet along the Thessalian frontier is considered only the lull before the great storm, and the organs of the Government do not cease to exhort the nation to be prepared for great immediate and future sacrifices. The *Hora*, a ministerial organ, writes:—The signs of the present state of affairs teach us that we dare not wait long, for the events themselves do not wait for us. A new storm threatens shortly to burst upon the Peninsula, and when the critical hour approaches, the nation must be ready. Greece, as a nation and as a State, must not merely take care of its internal progress and development, but its gaze must steadily be fixed upon its foreign relations, and the resolve to attain national unity must be maintained. The land will therefore hear the call for yet greater sacrifices than those already accomplished, and the Government is convinced that the nation will joyfully respond to its call. This is no doubt the position of almost every inhabitant of Greece, and for national unity and the realization of the Pan-Hellenic ideal the people will gladly spend their treasure and their lives. But the lack of credit abroad and the distrust of the people shown by their fear that money contributed to the national cause might be appropriated for purposes other than those for which it was intended, plainly indicate the necessity of caution on the part of the Government, and in this respect M. Trikoupis is likely to take warning

by the fate of his predecessor. That sooner or later there will be, as regards the Eastern question, another appeal to force, there can be little doubt, and one cannot, with this conviction, feel otherwise than sad when looking upon the heroic efforts of certain European States to preserve the peace. Turkey still owes Russia the larger part of the war indemnity stipulated at the Berlin Congress; in fact, it was not until the 1st of January, 1884, that the first instalment of it was paid. On the 1st of January, 1885, the Government at Constantinople was unable to find the part of the indemnity then due, and the Ottoman Bank, on account of Russia's importunity, helped the Porte out of the difficulty. Last January it was the old story over again. Turkey, exhausted by her war preparations, was more unable to pay than ever before, and Russia granted postponement only to urge the matter again months afterward. Thus there is in this question alone a permanent source of danger, and the Porte seems to have no other remedy to tide over financial difficulties but the ruinous and suicidal system of delivering the fiscal department of whole provinces into the hands of the country's creditors, and it is just such concessions that Russia is understood to be now asking for as the price of further patience. Surely the peace of Eastern Europe rests on a fickle basis; but its preservation and the final solution of the vexed Balkan problem seems to depend entirely upon the growing importance of the Danubian Principalities, and upon their pursuing a truly independent and national policy. An alliance, with the consent of Germany and Austria, it is said, had been effected between Roumania and Bulgaria with the object of unitedly preventing any violation of their common frontiers. Add Servia as a third ally, and secure for this triple alliance the hearty support of Great Britain and the Central Empires, and the preservation of peace is not likely to continue the Herculean task it is at present, while at the same time the first step to the much-desired Balkan confederation will have been taken. Every successful effort, therefore, to prevent war will be a gain in this direction, and the value of the ultimate object when once attained, would well repay the best efforts of European statesmen on behalf of the peaceful development of the Continent.

MR. CHARLES NEWTON SCOTT contributes to the last number of the *Contemporary Review* an essay full of regrets that manifestations of the real God-Child in art are so few and far between. He speaks, of course, with becoming enthusiasm of the revelation at Bethlehem that "united in a common heart-worship the rough untutored shepherd of the hill-side and the sage initiated into the mysteries of Eastern religion or the subtleties of Eastern thought." Greek art has given us the infant Zeus suckled by a goat, and the infant Hercules strangling serpents. But these were not objects of worship in any sense. Mr. Ruskin, indeed, says of Greek art:—"I noted you the singular defect, that it never gives you any conception of Greek children. Neither—up to the thirteenth century—does Gothic art give any conception of Gothic children; for, until the thirteenth century, the Goth was not perfectly christianized, and still thought only of the strength of humanity as admirable in battle and venerable in judgment, but not as dutiful in peace, or happy in simplicity." Probably

Cupid's occupation disqualified him for admission to Mr. Ruskin's catalogue, otherwise the chubby lad is sufficiently prominent to be called a feature of Greek art. Egypt offers no example of any "little figure representing the idea of duty conceived as perpetually born anew," and though in India we have the child-god Krishna, his title to be counted a type of happy simplicity is rather shaken by the fact that, while still an infant, he trifled with the affections of a cowherd's wife and sixty thousand milkmaids. The new-born Gautama of Buddhism, "pointing with one hand to heaven and with the other to the earth he wished to save," the baby so often seen in the arms of Kwanon, the Goddess of Mercy, better satisfies the orthodox conception. But who shall claim Kwanon and her baby as a genuine product of Buddhism? "I must not, however," Mr. Scott proceeds, "be too confident that we may not one day come across an exquisitely lovely rendering of a Bodhisatva-child by some artist of Japan, another of so many delightful surprises from the charming country which the folly or cupidity of a political faction has just delivered over to the tender mercies of Western philistinism, since the time, not very distant, when it was generally supposed that its plastic art would hardly get beyond the fabrication of grotesque monsters." We should not wonder if a Bodhisatva-child of the required pattern did turn up one of these days, but our ability to discuss the chance dispassionately is disturbed by Mr. Scott's verdict about "the folly or cupidity of a political faction" and "the tender mercies of Western philistinism." This is a new description of Japanese reformers and the result of their reforms. Poor Japan! If she veered to all these winds of doctrine she would find herself in rough waters.

Each space of four or five years in Japanese history since the Restoration has been so pregnant with events that one forgets how short a time such an interval really constitutes in the life of a nation. Thus imperceptibly and, perhaps, heedlessly we have drifted within four years of the time when a Japanese parliament, whatever may be its powers and privileges, is to sit in Tōkyō. Hitherto—we speak of the last two decades—the country has been governed by what is commonly called a bureaucracy, but is in reality an aristocracy of ability and service. Will the establishment of a parliament mark the opening of an era of government by party? Everywhere else it has been attended by such a result, and the Japanese are beginning to reflect curiously on the redistribution of political power which is likely to take place when the duty of electing representatives devolves upon the people. The *Nichi Nichi Shinbun* has an interesting article on the subject. It dismisses as unworthy of credence a rumour recently circulated to the effect that the defunct Liberal Party (*Jiyū-tō*) is about to be revived, and devotes itself rather to answering a question which has of late assumed shape and pertinence; namely, what side will the present Ministers of State take in the new assembly. Will they sit on the right or on the left? It would seem that the advisability of some distinct declaration with reference to this point has been urged by outsiders, and that the *Nichi Nichi Shinbun* has also been pressed to institute enquiries and publish their result. But the editor avows that he has not the means and is under no obligation to undertake such a task.

He is of opinion, however, that party considerations will occupy an entirely secondary place in the minds of the present Ministers, and that their engrossing care will be directed to the maintenance of the national honour abroad and the peace and happiness of the people at home. At present they are intent upon framing the constitution; a task which, in point of importance, throws all questions of party entirely into the shade. The vital problem of Japanese statesmanship is how to change the empire from an old-fashioned Oriental State into a new home of western civilization; how to strengthen Japan, and enable her to support her position among the Powers of the world with credit and honour. In pursuing this great national programme, Ministers stand on a plane raised far above matters of party. Political parties may be compared to artists engaged in decorating and furnishing a house. But Japan has not yet passed the stage of construction. Her architects are still engaged upon the foundations. When these are securely laid, it will be time enough to think of minor embellishments. So long as a political party does not run counter to the fundamental laws of the State or act injuriously to the national well-being, its tenets are its own property; the Government need not concern itself about them. When they find practical expression in the parliamentary arena, it may be necessary to take them into account, but not till then. Thus the *Nichi Nichi Shinbun*.

ALL who are interested in aquatic sport must be gratified by the success of the sailing matches which have been got up during the present summer. We believe the majority—if not all—of the owners of the craft that have taken part in the matches have practically decided to form an association having for its object the encouragement of sailing matches. It has always seemed to us that this form of sport falls properly within the scope of the Yokohama Amateur Rowing Club, though it might be argued that, strictly speaking, the club has to do with rowing, not sailing. But it must not be forgotten that the first incitement to these sailing matches was furnished by a contest which took place under the auspices of the Yokohama Amateur Rowing Club, and for this as well as other reasons it is to be regretted that the connection of the sailing matches with the Club has not been maintained. We believe, indeed, that an attempt has been made to affiliate the present incipient sailing association with the Rowing Club, but the effort was a failure, the latter body preferring to enjoy the full amenities of the position which it has achieved. As will be seen from our advertising columns the Club announce a sailing race to take place October 2nd, which event will practically close the season.

OKAYAMA has been visited by a severe and destructive storm. The event occurred on the 11th of September, a day called by farmers *ni-hyaku-hatsuka* (220th day), and—equally with September 1st, which is called *ni-hyaku-tōka* (210th day)—much dreaded on account of the atmospheric disturbances which have constantly been associated with it. On this occasion a number of bridges were carried away and great damage was done to houses in the town of Okayama—Okayama is the capital of Bizen, a province on the Inland Sea. At villages farther inland the effects of the gale were less perceptible, but considerable injury

was done to the crops of rice and cotton, as well as to the persimmons, pears and oranges. The worst record comes from Yorishima-mura and Kashiwajima-mura. At the former place, sixty houses were submerged, ten families rendered wholly destitute and thirty junks broken up. At the latter place, all the houses except two were swept away.

From Hakodate correspondence we learn that the schooner *Arctic*, which has undergone a thorough overhaul in the yard of Mr. Thomson, was launched, the afternoon of the 13th instant. When the schooner put into Hakodate, the 31st ultimo, she was in a very leaky condition and her sails were out of order. The scarf of the keel, with the foot of the stem and the heel of the stern-post, were found in a very defective state, the trenails being all more or less started. In addition to the repairing of these parts, the chain-plates were shifted, and the sails repaired and strengthened. After taking in ballast and stores the vessel will proceed north about the end of this week. Foreign shipping in the harbour, the 13th instant, were the United States steamship *Omaha*, to leave the 15th instant, and the schooner *Mercur*, to leave for Nagasaki, the 14th instant.

THE eighth and ninth volumes of the Journal published by the Society for the advancement of Medical Science in Japan are now before the public. The Society numbers among its members many of the most distinguished physicians and surgeons in Japan, and its Proceedings are full of information interesting and valuable to the student of this country's progress. The 8th volume opens with a paper by Dr. W. Norton Whitney, on the Biographies of Distinguished Japanese Physicians, being the second of a series which the writer is engaged in compiling. The essay gives a good idea of the terrible difficulties with which Japanese doctors had to contend, at the end of the last century and the beginning of the present, in their attempts to replace the Chinese system of medicine by the Dutch. This is followed by a resumé of an address delivered by Mrs. Mary C. Leavitt before the Society. Mrs. Leavitt is the apostle of temperance. Her lecture is devoted to showing that the use of tobacco and alcohol, and the practice of unchastity are fatal to the physical development and beauty of the human race. She prescribes from the 20th to the 25th year as the marriageable age for women, and from the 23rd to the 30th as that for men. It will be long, we apprehend, before these limits are observed in Japan, where a woman is considered to have passed her prime at 23 or 24. At the same time, were we asked to name the chief causes of the physical inferiority of the upper classes in Japan, we should unhesitatingly say, the inordinate use of tea and tobacco, early marriages and incontinence. Reference may be made here to the opening essay, by Dr. Whitney, in the 9th Volume of the Sei-i-kai's Proceedings. We learn there that the average height of Japanese recruits for all branches of the service, in 1883 and 1884, was 63.56 inches, and the average chest measurement was 33.17. These figures effectually dispose of the notion that the Japanese lower orders are exceptionally small men. It must be remembered that the question is of conscripts, not volunteers. In England, with voluntary service, the standard for the infantry is 64 inches of stature and a chest girth of 33 inches. The average is about 66 inches

of height and 35 of girth. In Germany, however, the average of 725 conscripts, as recorded by Dr. Whitney, was 62.23 inches of stature and 32.13 inches of chest girth—figures inferior to those for Japan. In the same table we find the measurements of 15 Koreans, who are said to be normal specimens of their race. Their average height is 70.55 inches, and their average girth round the chest 32.74 inches. The Japanese is, therefore—judging by these returns—a shorter and more powerfully built man than the Korean, whose chest measurement is entirely out of proportion to his stature. These volumes contain also reports of the meetings and discussions of the Sei-i-kai; papers on cholera in Japan; extracts from journals and medical publications, both Japanese and foreign, and various useful statistics.

A CALCULATION of an interesting character has, according to the *Choya Shimbu*, been made by the Section of Agriculture and Commerce in the Osaka Municipal Government, the object being to arrive at some estimate of the losses incurred by the inhabitants of that city in connection with the cholera epidemic. The method adopted was to compare the amounts of sales of various commodities and the profits of merchants during the same period—May 1st to August 31st—of 1885 and 1886. The figures, of course, are essentially approximate only, but they are at any rate suggestive—though we fail to see just what consideration guided the compilers in their selection of "direct losses." The following is the list:—

DIRECT LOSSES.	
SUFFERERS.	AMOUNTS. YEN.
Dealers in second-hand clothes .....	154,520.000
Dealers in rags .....	50,884.000
Theatres and other places of public amusement .....	34,700.714
Actors and others .....	61,768.500
Tea-houses attached to theatres .....	11,770.000
Total .....	322,647.114
INDIRECT LOSSES.	
SUFFERERS.	AMOUNTS. YEN.
Dealers in dry goods .....	83,809.210
Dealers in cotton goods .....	28,790.000
Dealers in imported goods .....	43,746.500
Dealers in cotton yarns .....	39,458.700
Dealers in petroleum .....	88.800
Dealers in ships' stores .....	4,517.000
Shipping houses .....	65.000
Dealers in rice and other grain .....	113,714.000
Dealers in fuel and wood charcoal .....	45,010.500
Consignees of merchandise .....	84,536.200
Land transport agents .....	904.316
Steam shipping agents .....	4,883.300
Hotels .....	15,321.900
Dealers in <i>Katsunobushi</i> , salted and dried fish .....	34,400.100
Fish merchants .....	6,906.677
Vegetable dealers .....	29,082.453
Dealers in <i>sake</i> .....	31,382.000
Dealers in <i>shu-yu</i> .....	20,974.000
Dealers in <i>kombu</i> .....	1,752.500
Dealers in <i>mechi, dango, and manjyu</i> .....	48,764.050
Restaurants .....	54,547.500
Grocers ( <i>kambutsuya</i> ) .....	50,000.000
Dealers in sugar .....	50,500.000
Dealers in tea .....	3,290.000
<i>Geisha</i> , prostitutes, etc. ....	41,470.505
Total .....	841,935.071
Grand Total .....	1,164,585.185

It has long been asserted that official secrecy is virtually unachievable in China. The thing is accounted for by the easy hypothesis that money goes a long way in the Middle Kingdom, and that silver will unlock the lips of almost any Chinaman. We imagine that the recipients of these purchased confidences are pretty often the dupes of their informants. Of this, however, they never admit the faintest suspicion, but go on with pleasant assurance laying bare the secret springs of court intrigues and political complications. They have discovered, for example, that the edict of the Empress Dowager declaring the young Emperor old enough to assume the reins of Government

and directing that a wife should be found for him, was dictated purely by feminine pique because her Ministers could not find money to re-build a pleasure garden, and because the youthful Emperor declined to vacate some apartments which she desired to occupy. In short, Her Majesty, annoyed at finding that her power was not as great as she could wish, determined to be revenged by divesting herself of power altogether. What is more, this curious method of getting even with her disrespectful subjects succeeded so admirably that, overcome with alarm lest the State should lose her wise direction, they prayed and importuned her until she consented to superintend the Government even after the young Emperor had ascended the throne. There is just one probable element in this story; namely, that by effacing herself the Empress would also accomplish the effacement of a great number of officials who owe their positions to her favour and whose hopes of preferment depend upon her maintenance of power.

MR. SEELEY, Professor of Modern History at Cambridge, has recently endeavoured to show by means of statistics that fifty years hence there will be two States so powerful by the progressive increase of their populations as to overshadow all the rest. One of these is the great North American Republic and the other is Russia, both of which will then count about 150 millions of inhabitants. In the face of such gigantic political and commercial factors, other States will individually dwindle into insignificance, and the only means to meet the danger threatening Europe will be, according to Professor Seeley, a great confederation of all other States for the purpose of mutual political and economic self-defence. Great Britain, too, will at that time, including her colonies, but leaving out of account India, count her subjects in the neighbourhood of 250 millions, but only a great federation would, according to the Cambridge *savant*, be able to develop sufficient strength to meet the stress of such a situation and to maintain English supremacy on the sea. The Irish problem might be turned to good account in this direction, and serve as a touchstone of further endeavours in the line of Federation. Should success crown England's efforts to effect a reconciliation with Ireland on a federal basis, the long-wished for Imperial Federation will be but a question of time, and the agitation in behalf of the scheme and the conviction of the wisdom of its realization will advance in proportion to the gravity of the dangers necessitating such a consummation. In France, Professor Seeley's observations have caused some sanguine Frenchmen to advocate a similar colonial union and the further establishment of a greater France beyond the sea; but a large number of their countrymen take an opposite view, and hold that Great Britain, instead of ever being able to establish such an Imperial Federation, will, as time advances, find more and more that colonies far away beyond the sea are to her a source of weakness rather than strength. There politicians predict therefore that, instead of a federal union, the future will witness the rise of three separate States in Australia, Africa, and Europe. Community of race and language, they claim, does not suffice to keep together such widely severed portions of the globe, and in confirmation of this view they point to Great Britain and her former North

American colonies, to Spain, Portugal, and other States. While they thus try to quiet the fear of their countrymen that an Imperial Federation on the part of Great Britain and her colonies would injure French interests, and while in proof of the assertion that colonies are sources of weakness rather than strength, they are able to point to the opinion of many Englishmen, notably Goldwin Smith, they admit that the danger from the side of Russia is a real one, to be speedily met, in a military as well as in an industrial sense. To meet it they propose not the formation of a French Imperial Federation, which at the best could be but a weak imitation of the English model and would be infinitely less powerful, but the organization of the "United States of Europe" exclusive of Russia. In such a confederation France would play the prominent rôle, not by force of arms, but by her spirit, by her universally known language and her literature. If the danger from Russia should ever become such as depicted by Professor Seeley, Germany and Austria as the most exposed empires of Europe would certainly find it in their interest assiduously to cultivate the goodwill of France. It is, of course, possible also that the danger from Russia will prove to a great extent imaginary. The great Northern Empire may, in the course of the next fifty years, experience such internal changes as will alter the entire constellation of the political situation in Europe. The Continent, now bristling with bayonets, may then, unshaken by wars and rumours of war, devote its time and thought to the works of peace alone, after the manner of the great and prosperous commonwealth on the American Continent.

Quite an interesting and novel exhibition of popular self-assertion appears to have taken place in connection with the scheme for disposing of the indigent residents of Osaka. The idea was to remove from the prosperous parts of the city this squalid and insalubrious element. The rural district of Nishinari-gori was selected as the future location of the poor folks, and a plan was evolved for the erection of suitable tenements there. The project looked very pretty at first and was enthusiastically supported by the representatives of the four urban divisions of the city. But when finally submitted to a recent meeting of the City Assembly, it elicited violent and determined opposition. Crowds of people came together to watch the result, among the number, on the 7th instant, being some 350 of the former *Eta* class of Nishinari-gori. The audience vociferously applauded every one who opposed the scheme, and vigorously hooted its supporters. Every village in the Nishinari-gori district sent more than three delegates to the assembly. So strong was the feeling that all the members of the Nishinari-gori Rural Assembly who advocated the measure, are reported to have subsequently sent in their resignations, fearing worse things than mere hooting. Previous to the meeting of the Osaka Assembly, the headmen and spokesmen of 135 villages in the Nishinari-gori district came together on several occasions, and forwarded petitions praying that their villages might be excepted from the scope of any measure passed in Osaka. The motion on which the project was defeated when before the Assembly was one to the effect that such a scheme constituted an important feature of the remodelling of the city, and that in view of the not distant opening of

the country to mixed residence, it would be wiser to take no step until a measure of more general character should be proposed. We do not exactly see what mixed residence has to do with the matter, but probably a pretext only was wanted. The recalcitrant folks, however, are evidently not yet relieved of an apprehension that official authority may be invoked to carry over their heads a scheme so sensible and simple. They have nominated fifteen deputies who shall form a commission of enquiry with instructions to carry remonstrances personally to Tôkiyô, if necessary. The *Nichi Nichi Shinbun*, discussing this matter, expresses much surprise that the delegates of the four urban divisions of Osaka should have allowed themselves to be dictated to by the delegates of one rural division. But after all, the sacrifice demanded of the former was only to let things remain in their old groove, whereas the latter were asked to offer domicile to all the refuse of the city. The determination shown by the Nishinari-gori folks, and their success in making their voices heard, are evidences of what we may expect in Japan under parliamentary government.

We have received a specimen series of Longmans' New Primers and Standards, and have no hesitation in saying that in point of intelligent compilation and skilful gradation of exercises these books compare favourably with any we have ever seen. In many respects the Primers are excellently adapted for use in Japanese schools, but it must be confessed that portions of their contents would scarcely be comprehensible if separated from the nursery lore peculiar to England, or if interpreted literally. Unless a Japanese child were familiar with the exhilarating ditty of "Hi diddle diddle the Cat and the fiddle," he would be puzzled to understand an extract such as "the dish ran off with the spoon"; and to be told that "the rat has a hat in his hand" might convey to him a perplexing idea of natural history. We never could comprehend the phantasy which induces writers of primers to have recourse to nonsense where sense would serve their purpose a great deal better, any more than we can understand Ollendorff's absurd theory that to teach a man a foreign language it is necessary to prescribe his reason and fill him up with phrases which could be used only in a lunatic asylum. Unfortunately, however, there are no primers quite free from such faults, nor are there, we believe, any so free from them as Longmans'. These might fairly hope to win a firm place in Japanese schools if the educational authorities of this country had not wisely resolved to have a series of primers and standards specially prepared for Japan. From the time when the headings of copy books ceased to be strings of unconnected words and became moral maxims and aphorisms, those engaged in the instruction of the young have gradually awaked to the fact that the teaching of language may also be made an occasion for imparting general information in history and folk-lore. The Japanese, therefore, instead of going to European nurseries and archives for the contents of their Readers, have decided to exploit the rich mine of their own traditions, and we believe that the English Readers which they now have in the press will stand very high among all compilations of the kind. The time is past when primers and standards, even so

excellent as those of Longmans', might have been adopted in the schools of Japan.

It may interest our Japanese readers to know that a chapter of Longmans' Fourth Standard is devoted to a description of their country. It is a description with much milk and water in it, but such as it is, here it is:—

1. Far away from England, in a country which it takes us several weeks to reach in a fast ship, live the Japanese. Like the English their home is in a group of islands, but while the British Islands lie in the Atlantic Ocean, the Japan Islands are situated in the Pacific.

2. For many years after Europeans first visited these islands, very little was learned about the people who lived in them, for the Japanese would not allow foreigners to travel in their country. But of late years all that is changed, and instead of being unwilling to admit strangers, they now employ many English in their army and navy, they travel in European countries, and are willing to learn all they can of the civilization of the West.

3. They are a clever and ingenious people. Not only have they copied the machinery, ships, railways, telegraphs, and most of our latest inventions, but in very many ways they have improved upon what they have learned.

4. We are often apt to think that we are much superior to the nations of the East, but there are many things we can learn from the Japanese. They are a peaceful race, living mostly by agriculture, which they have brought to a high state of perfection. They have fine schools in every town, and believe that money spent in educating the people is one of the best investments a nation can make.

5. The picture shows a party of Japanese young ladies taking tea. They are dressed in loose garments which look very comfortable, and their faces betoken good temper and intelligence.

6. There are no chairs or table. Before serving the tea a thin cushion was placed on the floor for each to kneel upon. The tea service is most likely of blue and white porcelain. They do not make their tea as we do, and when they see our method they laugh and say that we spoil the tea.

7. Perhaps they are right. The Japanese ought to know, for they and their neighbours, the Chinese, used tea long before we had ever heard of it. Some English people at first thought that *tea-leaves* were good to eat. A funny story is told of an old lady who lived long ago. She had never seen any tea, and when a pound was sent to her to try it, she put it into a pudding cloth and boiled it, and then wrote to the friend who sent it, saying that she "did not think it a very nice vegetable, and preferred cabbage."

8. The Japanese grind their tea into powder as we do cocoa. They place a small quantity in each cup and then pour the hot water over it. They do not make it very strong, and it is of a pale amber colour. It is served without sugar or milk.

9. These people are light-hearted and fond of amusement. Whole families may be seen in the streets, playing a game like battledore and shuttlecock. Father, mother, and children vie with each other in keeping the shuttlecock in the air, and when one lets it fall, the others run after the unlucky wight and strike him or her with their bats.

10. They are also fond of flying kites. Not only children but men and women may be seen flying kites of all sizes, and some of them are of the most fantastic shapes, being made like birds, beasts, dragons, or any fanciful form the owner can devise.

PROFESSOR TOYAMA, in an interesting essay on the Japanese drama—to which we shall take a future opportunity of referring at greater length—repeats the opinions recently expressed in the columns of the *Fiji Shimpô* with regard to the advisability of educating a higher tone of social morality in Japan. He animadverts, especially, on the admission of *geisha* to private circles, and observes that, at M. Remenyi's concert in the Rokumeikan, women of this class were present, a fault for which foreigners, he says, were to blame. It is necessary that a reformer should have at least as much zeal as discretion. Professor Toyama is certainly not wanting in the former quality, and to this, perhaps, not less than to his high ability, are due the excellent results his efforts have already produced. But his criticism of M. Remenyi's concert, seems to us rather thoughtless. The simple fact is that the great violinist desired to be heard by all classes of professional musicians in the capital, and that, in accordance with his wishes, second class tickets were given to a few *geisha*,

as well as to other artists of the stern sex. For aught we know to the contrary, the Japanese *dansuise* may have fallen low enough to merit Professor Toyama's ban of ostracism, but to say that any public entertainment could be contaminated by the presence of these refined and modest-looking *artistes* is something very like fanaticism. What sort of ideal does Professor Toyama contemplate? Would he station censors of morals at the doors of theatres and concert halls, so as to sift the applicants for admission and exclude every questionable element from the audience? If so, he had better begin his crusade in Europe, for there is much more need of it there than in Japan. The worthiest reform becomes an object of ridicule when it is carried beyond the limits of reason.

THERE is some probability that the secrets of the Fenian organization and, perhaps, incidentally the real connection between the Fenians and Parnellites, may be exposed at a trial now pending. Mr. St. John Brennan, an ex-Fenian, has brought an action for libel against the Messrs. Ridgeways, the Rt. Hon. W. A. Smith and Mr. Ellis Ashmead Bartlett. The Ridgeways are sued as the publishers of a pamphlet accusing Mr. Brennan of complicity in the Phoenix Park murders, Mr. Smith, as the head of the firm of booksellers who circulated the pamphlet, and Mr. Bartlett, as the proprietor of a journal which quoted copiously from it. Mr. Parnell and other Irish leaders are cited as witnesses, and an application has been made to the Government to guarantee the safe conduct to and from England of McCafferty, James Stevens, and other Fenian notoriety who are under the ban of British law. These men are to give evidence in behalf of Brennan, and their disclosures are looked for with much interest. It is possible that the real motive of the action is to establish the difference between the Clan-na-Gael and the anti-dynamite sections of the Fenian organization, and, at the same time, to show that a connection between the Fenians and Parnellites need not necessarily be disgraceful to the latter. Mr. Parnell has suddenly elected to disavow all relations with the Fenians, but as he cannot, with any show of veracity, deny that he has endeavoured, more than once, to bolster up his cause by intimations of Fenian co-operation in its worst form, and as it quite plain that if his party is to retain Gladstonian support, it must sever all real or suspected connection with dynamitards and assassins, this suit is easily attributable to a political purpose.

THE discovery announced by our Nagasaki correspondent, whose letter we published in this issue, confirms an impression generally entertained for several years back; namely, that immense and practically inexhaustible deposits of coal exist in Kiushu. Borings conducted by Mr. Iwasaki's employes prove, we are told, that virtually the whole of the island of Matsushima—some ten thousand acres in area—has a bed of coal, from 4 to 14 feet thick, lying about 300 feet below the surface. The island is only twenty miles from Nagasaki and has a small, but secure, harbour of its own, capable of accommodating three or four large colliers. In Mr. Iwasaki's hands the capabilities of the new mine are sure to be energetically developed. This discovery will probably lead to investigations among the innumerable islands lying off

the west coast of Kiushu. Many of these islands are at present almost entirely unproductive, and if it should be found that they possess deposits of coal sufficiently large and sufficiently near the surface to be worth exploiting, the wealth of southern Japan will be materially increased.

NOW that the approximate facts of Prince Alexander's deposition, restoration and abdication are before us, it is perfectly plain that Russia has again been busily engaged in those plots for which her diplomacy is notorious. The revolution was devised and carried out by her agents. It took Alexander completely by surprise. Lord Salisbury appears to have been equally unprepared for it, but whether the same can be said of German and Austrian statesmen, is another question. As for Alexander, his last act appears to us worthy of his previous career. Had he persisted in retaining power, he would have been obliged to face a civil war, in which, indeed, the greater part of the Bulgarians would probably have been on his side, but his opponents would have received strong and active help from Russia. Such a struggle must have militated seriously against the success of the union, his great object. Of course there is a good deal of jeering at England's expense. She is said to have received another slap in the face and her critics tauntingly predict that she will not fight. But what about Germany and Austria? Assuredly if these Powers can sit contented and quiet while Bulgaria and Roumelia are turned into a Russian province, there is no manner of reason why England should move. Russia's doings in the Balkan peninsula may have had some uneasy significance for Great Britain in former times, but the control of the Suez Canal has placed the problem in a new light. The only moral to be deduced is that this persistence in intrigue must have the effect of hastening the inevitable collision between England and Russia.

WE have already alluded briefly to a change recently effected in the character and cost of the *Hochi Shimbun*, but the event and its motives seem to deserve more detailed notice. Speaking broadly, the change consists in a more careful selection and sifting of news, and a reduction in price and size. The dimensions of the page are cut down from 2.09 ft. and 1.54 ft. to 1.73 ft. and 1.25 ft. and the price from 4 *sen* a copy, or 83 *sen* a month, to 1.5 *sen* and 30 *sen* respectively. The charge for advertising is also reduced to 5 *sen* a day per line of 23 characters, with a decreasing scale according to the number of insertions. This is as cheap again as the *Yiji Shimpō's* rate; 3 *sen* cheaper than that of the *Nichi Nichi Shimbun*, and 2½ *sen* cheaper than that of the *Chōya Shimbun*. The considerations which have led to these alterations are embodied in a circular letter addressed to his colleagues by Mr. Yano Fumio, editor of the *Hochi*. Mr. Yano has just returned from a tour abroad. His observations lead him to think that the prices charged for Japanese journals are too high, and that by lowering their rates they will be able to increase the circle of their readers. If this necessitates a reduction in the size of the paper, Mr. Yano thinks that even that may be advantageous, as there is much superfluous matter published at present. A fish, he says, though rendered smaller by the operation, may be all the more palatable if its head, fins, and bones are re-

moved. He is not in favour of daily leaders, and he deprecates the habit of writing hasty editorials on every new occurrence. One innovation which he proposes is the insertion of an article specially adapted for ladies' perusal. He has also much to say on the subject of style. It should be the object of writers, he thinks, to gradually eliminate the differences between the written and spoken styles of Japan. In the columns of the *Hochi*, therefore, he purposes to limit the employment of Chinese characters as much as possible, and he promises to compile a special dictionary by the aid of which anyone will be able to read the *Hochi Shimbun*. He will have a column of notes and queries; will insert Japanese poems and occasionally offer prizes for compositions of that nature, as well as for essays on literary and scientific subjects. He takes exception to the excessively critical tone of the Japanese press in respect of Governmental proceedings, and, while admitting that this tendency may be the outcome of patriotism, desires that it should be checked, and that when approval is justly merited it should be expressed as readily as censure. Finally, he suggests the use of promissory notes in the payment of subscriptions, so as to meet the convenience of all classes. All this is doubtless very wise and well considered. Mr. Yano's ideas and their clear enunciation may have an excellent effect upon Japanese journalism generally. We venture to suggest, however, that the omission of minor Governmental notifications may be found by the readers of the *Hochi Shimbun* to be anything but an improvement.

THE much dreaded *nihiyaku-hatsuka*, or 220th day, which fell on the 11th instant, appears to have maintained its evil reputation in several of the south-western prefectures. We read in the vernacular press that official reports from Kumamoto speak of overcast and changeable weather setting in on the 8th instant, and culminating in a storm, which began to blow on the morning of the 10th, attained its greatest violence at 7.30 p.m., and subsided by 1 a.m. of the 11th. The rice, millet, cotton and tobacco crops all suffered more or less severely. In Miyasaki prefecture a strong north-easter began to blow at 4 p.m. on the 10th, and five hours later the wind-gauge registered a velocity of 38 miles. The gale then veered to the west and quickly subsided. Here also the crops were considerably damaged. In Hiroshima prefecture rain began to fall on the 10th, accompanied by a gradually rising wind. At 10 p.m. the barometer fell with a suddenness unparalleled in recent years. At 1 a.m., the following morning, the waves rose to a great height, and the storm increased in force until, at 3 a.m. on the 12th, a velocity of 40 miles was registered. After this the storm changed to the south and subsided rapidly, the weather becoming calm by 8 a.m. In this prefecture floods in the rivers and the fury of the sea caused much damage to houses and injuries to people and animals. Numbers of bridges were swept away, and the rice and cotton crops suffered to an extent which in the case of the former is estimated at 4 per cent. and in the case of the latter at 3.

WHEN the detailed comments of the home Press with regard to the new Ministry reach us, we shall doubtless find large and well-earned praise bestowed upon Lord Salisbury. So soon as the

issue of the elections could be forecast with tolerable certainty, people began to speak of the approaching crisis as the opportunity of Lord Salisbury's life—the opportunity of his life, not in the sense that it would restore him to political power, but in the sense that it would enable him to show himself superior to considerations which are supposed to be paramount with nearly all men of talent. The *Spectator* spoke thus on the subject:—"Lord Salisbury should, if he is wise, postpone his own admitted claims, and those of some immediate followers, and allow the group of Unionist officers, in spite of their comparatively insignificant following, to assist in forming a Government under Lord Hartington as Premier, reserving to himself only the Foreign Secretaryship and the Leadership of the Lords. \* \* \* It is, we are perfectly sensible, a very great thing we are asking of Lord Salisbury,—so great a thing, that our hope is by no means so strong as our conviction. It demands from Lord Salisbury and his nearest colleagues a degree of self-abnegation such as politicians are rarely prepared to show." This great thing Lord Salisbury did, and this exceptional self-abnegation he showed. It is true that his overtures to the Unionists were not accepted and that the strong Government for which the country hoped was not formed. But the credit of having made a singularly magnanimous and patriotic attempt belongs, none the less, to Lord Salisbury.

KIM YO-KUN never emerged so distinctly from obscurity as when his deportation became a point of political expediency. And through him the place of his banishment—the Bonin Islands, or Ogasawara-jima as the Japanese call them—has acquired vicarious celebrity. A gentleman who returned thence by the *Hideyoshi Maru*, which reached Yokohama the 16th instant, has sent the following account to the *Choya Shim-bun*:—"This year's crops have been considerably damaged by repeated gales. The islanders live in small huts thatched and having their sides also covered with date leaves. Their staple articles of diet are rice, imported from the mainland, tortoise and other fish. Naturalized foreigners (whoever they may be) eat Indian corn and dates. The islands are without birds or animals, with the exception of a small bird called *yagi*, and a species of fur deer. Both of these are very destructive to crops, and the authorities give fixed rewards to any one killing them; but as the islanders have no weapons they are seldom in a position to claim the reward. Tortoises are caught in two methods. One is to creep up to them while they are on the beach, and turn them on their backs. The other is to employ a female tortoise as a decoy. The climate is equable, being neither very hot in summer nor very cold in winter. Three crops of Indian corn are obtained in the year. The work of cultivation is much impeded by the presence of large roots of trees, but farming operations are nevertheless most lucrative. The man talked of stock-farm of Mr. Tanaka Tsurukichi, popularly called the Robinson Crusoe of the east, is very different in fact from the descriptions published by the *Jiji Shimpō*. It supports only about 800 pigs and 15 head of cattle. The sheep sold to Mr. Tanaka by the Japanese Government have all perished, on account of the flies which are so numerous as to be a pest. The few student agriculturists who were induced by the *Jiji*

*Shimpō's* glowing accounts to join Mr. Tanaka, are reported, by the *Choya's* correspondent, to be regretting their rash conduct. Mr. Tanaka is now engaged in establishing a salt manufactory, but its completion is still some years distant. The correspondent adds that Mr. Kim Yo-kun, the Korean refugee, leads a very free life so far as his personal movements are concerned. He resides in a Government building opposite the prefectural offices.

Mr. Beecher has not been an "all-round" success in England. If he could have adhered rigidly to his originally announced resolution of avoiding political expressions altogether, he would doubtless have fared better. But, unfortunately for himself, he let it be known, or his friends let it be known, that his sympathies were all on the side of Gladstone and Home Rule. The result may be traced in the following genial remarks of the *Saturday Review*:—

That quality of Mr. Beecher's "massive oratory" (we believe that to be the correct phrase), which the poverty of the English language compels us to call its humour, is marked and obvious, perhaps broad. Mr. Beecher improves upon St. Paul. "Charity vaunteth not itself," says the Apostle, though the Revisers and Mr. Beecher, with a fine disregard of rhythm and association, turn "charity" into "love." "It does not, every time it lays a golden egg, rise from the nest to cackle." Hens are sometimes accused of making too much fuss over what is, after all, only a process of nature. But we are bound to say that a hen who performed such a very remarkable feat as that indicated by Mr. Beecher would have some right to cackle, and that the owner of the hen, and therefore presumably of the auriferous deposit, would be very much obliged to her for doing so. Mr. Beecher's style is as elegant as it is witty. It "is not puffed up," says St. Paul, again of charity. "Oh, that there were some men that could be touched with a lancet," exclaimed Mr. Beecher, "how the puffed-upness would come down!" "A sudden and slight inflation of the cheek," says an admiring auditor, who communicated his impressions to the *Daily News*, "helped to exemplify the need of the operation." The worst of the greatest preacher in the world suddenly inflating his cheek is, that some people would always suspect the inflation of being caused by the insertion of the preacher's tongue. When Mr. Beecher is funny, there can be no temptation to laugh, even in a sacred place. "You have not, I believe, much experience in England of a certain hypocritical insect known to us in America as the mosquito. Well, the mosquito always says a prayer before he puts his bill in to suck your blood." Is this natural history, or is it humour? In either case it shows how solid must be a pulpit reputation which can survive such shocks unharmed. But Mr. Beecher's activity has not been altogether confined to what irreverent people call "the wood" when it is said that he is under other than spiritual guidance, being indeed, to put it vulgarly, "farmed out." Mr. Beecher has of course been asked by "a gentleman" what he thought of Home Rule and of Mr. Gladstone. Mr. Beecher, with striking modesty, declines to "take any part in the canvass," which, it may be observed, he was not asked to do. Concerning the Irish Catholics, he enigmatically remarks that "they will be no more dangerous to liberty in a state of freedom than if deprived of legitimate political power; nay less so." This is one of those sentiments which have, in Macaulay's forcible phrase, the same effect upon a practical politician as a dose of ipecacuanha. As for Mr. Gladstone, he is "overthrowing the kingdom of Satan," and is invited to take comfort in the reflection that the Founder of Christianity "was charged with consorting with licentious associates." Decidedly Mr. Beecher had better stick to the pulpit, where he could perhaps "give points" to Archdeacon Farrar.

THE *Pall Mall Budget* says:—"When the Emperor William travels, every possible measure is taken to provide for his comfort. The Emperor's special train consists of three saloon carriages, connected with each other by a covered way. The Imperial carriage proper is richly hung with blue damask, and at one end there is a small compartment in which the Emperor likes to stand at the window when making short journeys. A small saloon next to this couple contains a sofa and a spring seat, opposite which is the Emperor's camp bed. Near the saloon is the study, in which stands a desk with writing materials, whose appearance shows good wear.

Upon a bracket above the desk is a small model of the Column of Victory in Berlin. Adjacent to the study is a dressing-room, fitted up with extreme care and good taste. A final room contains two small sofas, a leaf-table, and a large mirror. With the Emperor's own carriage is a carriage for his suite, and this is, of course, quite differently fitted up. It contains five or six apartments, each containing a table and two small couches. All the rooms are connected by telegraph with the Emperor's apartments. The carriages are provided with gas throughout."

ENGLAND came off with flying colours in the last international chess tournament. Her players secured both the first and second prizes, the former falling to Mr. Blackburne, of London and Manchester—who was first in the tournament of 1881 also—and the latter to Mr. Burn of Liverpool, a comparatively young performer. The third prize was divided between Gunsberg—a German domiciled in London and winner of the 1885 tourney—and Taubenhauß of Paris. The fourth prize was gained by Mason, an American residing in London; Zukertort and Mackenzie are bracketed sixth and seventh in order, but receive no prizes, a fact which, in the case of a player so brilliant and so frequently victorious as Zukertort, is regarded as one of the strangest features of the tournament. The play throughout seems to have been of a very high order. It was remarkable for its open character. The "Royal" fashion of *début* was freely adopted in contradistinction to the close games which were all in vogue some years ago. This is refreshing, because it was at one time feared that most of the great gambits were doomed to be employed in drawing-room chess only.

News has been received in Tôkyô to the effect that the terms of a convention have at length been concluded between the Hongkong Government and China for the prevention of opium smuggling *via* the colony. It was rumoured some time ago that China was likely to obtain everything she wanted in this matter, and that among the things she wanted was the privilege of establishing some sort of preventive service within the limits of the colony. Such a result seemed scarcely credible, and we are glad to say that it has not to be recorded. The arrangements agreed to are very simple. They involve nothing more than the coöperation of the Hongkong authorities. We are not at liberty to state the terms in detail, as they have not yet received the sanction of the Hongkong Legislative Council, but the gist of them is that the local authorities undertake to assist the Chinese Customs, and to be responsible that the traffic in opium shall henceforth be entirely above board. In return for these concessions, the Chinese on their side consent to remove the restrictions at present existing with regard to the carriage of foreign merchandise in junks to Kwantung. They also agree to certain fiscal modifications which are not yet public property, but of which we are free to say that their effect will be to largely facilitate the import of foreign goods into the south-western provinces of China *via* Hongkong and Canton, and to effectually discount the advantages conferred on the same trade *via* Tonquin by the recently concluded Franco-Chinese treaty. The arrangement seems to us eminently satisfactory. The duties devolving upon the Hongkong authorities are of a simple character, and the

*quid pro quo* obtained from China is very substantial. Praise is due also to the prudence displayed in eliminating this source of friction before it had begun to disturb the friendly relations between Great Britain and China, and before public opinion in England had begun to excite itself over the sentimental aspects of the question. Mr. N. R. O'Connor, whose visit to Hongkong and Canton was the proximate cause of the agreement, is to be congratulated upon the happy results which have attended his diplomacy. He was doubtless ably assisted by Mr. B. Brennan, H.B.M. Consul in Tientsin, who represented England on the Commission appointed to negotiate the question, and whose remarkable knowledge of China and the Chinese had been brought to bear on the problem for more than two months.

A CHINAMAN, if he studied his classics and obeyed their behests, ought to be a very artificial sort of person. According to Dr. Legge's translation of "The Texts of Confucianism," a properly instructed son should, on the death of his father, "appear quite overcome, and as if he were at his wits' end; when the corpse has been put into the coffin, he should cast quick and sorrowful glances around, as if he were seeking for something and could not find it; when the interment has taken place, he should look alarmed and restless, as if he were looking for some one who does not arrive; at the end of the first year's mourning he should look sad and disappointed, and at the end of the second year's he should have a vague and unreliable look." A considerable endowment of histrionic talent is needed to conform accurately to this canon, but during the centuries of reverend observance accorded by China to the precepts of her Sage, it is very possible that heredity has converted the art of mourning into an instinct and that the average Celestial now finds no difficulty in looking "alarmed and restless," "sad and disappointed," or "vague and unreliable" at will.

We read in the *Fiji Shimpō* that Kim Yo-kun has sent a letter to his friends in Tōkyō. In it he complains of the variable weather of his new abode, the heat being oppressive when the sun shines, and the temperature almost cold during rain. The water, he adds, is brackish and yellow in colour. Even during the day one is obliged to use mosquito nets, on account of the flies which fill the air, buzzing "like thunder." The letter concludes thus:—"I have rented a small patch of land on the eastern coast where I intend to raise potatoes and other vegetables for my own use. Henceforth I shall subsist on the products of my own labour, humbly entrusting my fate to the keeping of Heaven. Moreover, my old friends may well rejoice—as indeed I rejoice and laugh at myself—for I am the recipient of a certain fixed amount as a means of livelihood from the Government of Japan. Surely this is what Buddha calls 'the fathomless benevolence.'"

SOMEbody may be interested to know that the *Economiste Français* has received the following intelligence on the subject of treaty revision in Japan:—"A Tokio, on revise péniblement les Traités; d'après les on-dit, cette opération n'aboutira pas, les ministres étrangers ne voulant pas accorder la juridiction et les Japonais refusant à ouvrir le pays, ce à quoi, d'ailleurs, les commerçants étrangers ne tiennent pas autre-

ment, car ils ne s'illusionnent plus sur les avantages qu'ils retireraient de cette mesure. On se contentera vraisemblablement de modifier les tarifs douaniers pour avoir l'air d'avoir fait quelque chose." The *Economiste* has always been remarkable for the untrustworthiness of its Japanese items.

AN extensive fire raged on Tuesday morning in the vicinity of Isezakicho. The fire broke out at half-past three o'clock, in Fukutomicho, Sanchome, originating at No. 31, and was driven by the slight north-westerly wind then prevailing, over a large area of property. Most of the houses in Fukutomicho Sanchome, Nichome, and Ichome have been destroyed, amounting in number to over six hundred, and the flames all but reached Isezakicho on the south-east. The steam engine from the Yokohama police station was early brought into action, as also were a large number of hand engines, and the manual pumps of the Yokohama Fire Brigade in charge of Mr. Morgan. Mr. Walter, chief superintendent of the Brigade, was present during the morning. A plentiful supply of water was obtained from the creek which adjoins the locality on two sides.

NAVAL reform seems to be a prominent plank in the platform of Lord Salisbury's Cabinet. It is said that the present Admiralty Board hold strong views on the subject, and that they will shortly submit propositions to raise money by means of terminable annuities for the purpose of bringing the navy to a state of efficiency and perfecting the defense of the empire's outlying coaling stations. Lord Charles Beresford is the head and front of this movement. With characteristic thoroughness he proposes, it is said, to destroy a large number of obsolete men-of-war, so as to save the money hitherto spent upon the useless repair of ships of this class.

OF all singular methods of interment to which the human body can be subjected, surely that of a workman lately killed in the Woolwich Arsenal is among those most fitted to strike the morbid imagination. This man was engaged with others in attending to the casting of a large steel ingot when he was caught by the molten metal and burned to a cinder, portions of his remains being incorporated in the steel as it cooled. Then the War Office authorities had to consider as to the disposal of the steel ingot in which the charred bones of the unfortunate workman were embedded. "It seemed repulsive to utilise the metal in the manufacture of ordnance, and it was decided to send the steel, which weighed several tons, to Plumstead marshes, where it has been buried."

A LONDON telegram, dated the 24th ultimo, announces that despatches from Calcutta state that the news of the demand of the Emir of Bokhara upon the Ameer of Afghanistan for the possession of the Oasis of Rhojassah has created considerable excitement throughout India, as it is feared it is the inception of another Russian *coup d'état*, which has Afghanistan for its object.

No such parody of our nineteenth-century civilization has been presented to the public for many years as the recent riots in Amsterdam. The populace were amusing themselves by a most barbarous sport. A soaped eel was tied alive to a stake, and people, sailing past in boats, tried to grasp and secure it. The eel, being tenacious of life, sometimes endures this torture

for hours, thus contributing gallantly to the enjoyment of its tormentors. It appears to have occurred to the Amsterdam Burgomaster that this traditional sport was a little degrading. The police were ordered to stop the eel-baiting, and the result was a riot in which twenty-five persons were killed and ninety wounded. Such a story, considered in outline, takes us back to any period, no matter how remote, of the world's savagery.

THE cholera returns for Yokohama during the past week were:—Saturday, 18th instant, new cases, 7; deaths, 7. Sunday, new cases, 9; deaths, 2. Monday, new cases, 5; deaths, 4. Tuesday, new cases, 3; deaths, 5. Wednesday, new cases, 6; deaths, 3. Thursday, new cases, 3; deaths, 5. Friday, new cases, 3; deaths, 2. Total cases, 36; deaths, 28.

THE cholera returns for Tōkyō during last week were:—Friday, 17th instant, new cases, 125; deaths, 179. Saturday, new cases, 63; deaths, 47. Sunday, new cases, 74; deaths, 61. Monday, new cases, 65; deaths, 59. Tuesday, new cases, 49; deaths, 23. Wednesday, new cases, 74; deaths, 58. Thursday, new cases, 60; deaths, 59. Total new cases, 510; deaths, 486.

MR. H. W. DENISON, legal adviser to the Foreign Office, proceeded to Nagasaki on Tuesday, presumably to carry out instructions from H. E. Count Inouye, who is now in Tōkyō. We trust that Mr. Denison's advent will materially alter the character of the present proceedings in the matter of the Nagasaki riot.

As will be seen from our telegram the tender of the Peninsular and Oriental Steam Navigation Company for the conveyance of the mails to the East has been accepted. The contract, which will begin at the New Year, is for ten years, that is two years longer than the present contract.

KIM YO-KUN's voyage to the Bonins was in keeping with the stormy days that immediately preceded his deportation from Yokohama. The *Hideyoshi Maru* experienced such heavy weather that she did not reach her destination until August 29th, thus having been twenty days on the voyage.

THE sums spent by the Governments of civilized countries upon printing and telegraphing must be immense. We observe that the expenditure of the Indian Government on printing alone during the five years ended 1885, was £1,221,600, or an average of £244,320 yearly.

THE steamer *Carisbrooke* has been ashore in the Swatow River. She got on the Chen To Rock on the 10th instant but floated off five hours afterwards. She is believed to be very little damaged.

THE Siamese barque *Ban Lee* (Captain Martin) was lost on the coast of Annam the 22nd ultimo while bound from Hongkong to Bangkok. The *Ban Lee* was a vessel of 260 tons and had a general cargo.

THE *City of Sydney* brought the American mails for the first time under the new arrangement, concluded between the Post-Master General and the Pacific Mail Steamship Company.

THE telegraph lines are interrupted between Kobe and Shimonoseki, communication with Nagasaki and places abroad being in consequence suspended.

## THE ROMAJI-KAI.

(COMMUNICATED.)

THE Romaji-kai has now been in existence long enough to warrant an endeavour to estimate precisely what it is doing and what it is not doing; to sum up the difficulties of which it has overcome some and is attempting to overcome others; in a word, to try and define to ourselves the precise position the Society occupies in the country.

It may be well, in order to arrive at something like an adequate notion of how the case stands, to commence by briefly stating the encouraging features of the movement inaugurated by the Romaji-kai, together with the considerations which tend to qualify the same. Among the former may be enumerated the number of persons who have joined the Society; the prominent position occupied by some of the members; the existence of various branch associations throughout the country, and the attempts that are being made to propagate the system of transliteration adopted by the Society. On the other side of the account we have several considerations. In a country where the rage for societies and associations is as great as it is here, the payment of a small subscription and the enrolling of a name among the members of a society, like that of the Romaji-kai, does not, in a large number of cases, argue any very profound interest in the objects which the Society is seeking to realize, or any certain readiness to promote those objects. Again, although there is no denying that the Society has among its members some very prominent men, yet the opportunities which they have for pressing its claims are, in point of fact, very limited. The number of those who, if not opposed to the movement, think it altogether impracticable, is so large, that the feeling of deference to the opinions and ideas of others, which constitutes such an invariable characteristic of the polished Japanese gentleman, is quite sufficient to deter several men of rank and influence who belong to the Society from advocating its cause on any but prescribed occasions. Public business is carried on in the old way. Officials in their official capacity are for the most part bound, as matters now stand, to ignore the new movement. The Chinese character and not its Roman equivalent, is the official organ of thought. These considerations, though not, perhaps, of sufficient weight to warrant the conclusion that the influence of high officials on behalf of the Romaji-Kai is nil, seem important enough to reduce that influence to a hardly appreciable minimum. Further, in a great movement such as that inaugurated by the Romaji-kai, too much importance cannot be attached to the existence of branch agencies, to act as centres of influence throughout the country. But from what we have been able to gather on

the subject, the lack of intelligent interest in the objects of the Society is even greater in the provinces than in the capital. The members attend meetings and listen to some noted Tōkyō speaker, when, on rare occasions, such a person makes his appearance among them; take a glance at the monthly magazine, and there the matter ends. If the reform is to succeed, it is essential that there should be in every large provincial town a band of men who will hold classes for explaining the system to the young, and who will in their correspondence and general business do everything that lies in their power to bring the Society into notice.

It is undoubtedly a promising feature of the movement that a considerable number of scholars connected with various Government Departments are making use of the Society's system of transliteration on those somewhat numerous occasions when Japanese names have to be written in Roman letters, and that thus, so far as names are concerned, the mode of spelling adopted by the Society bids fair to supersede all other modes. It would be easy to adduce numerous instances of this, but to call attention to them just at the present moment seems inexpedient. It is preferable to allow the work to go on, as much as possible, unobserved until it has effected something which no hostile hand can uproot.

The existence of a monthly magazine which contains articles written by prominent scholars is to be considered foremost among the attempts to make known the system advocated by the Romaji-kai.

On the other hand, opposing influences are not wanting. Side by side with members of the Romaji-kai who, as Government officials, teachers, or writers, are quietly introducing the Society's method of transliteration into the various publications of State Departments, there are a number of officials who are employing other methods. A day will come, as was pointed out in this journal several months ago, when some system of transliteration must be decided on by the Government and enforced in all the Departments. If this is done, and if the system of the Romaji-kai is felt to be, all things considered, the fittest and therefore most worthy to survive, then, and not till then, will the position of the Society be unassailable. Pending this consummation, it becomes all members of the Romaji-kai to remember that too much importunity might provoke officialdom to assume a hostile, instead of a neutral, attitude.

As a set-off to the publication of the *Romaji Zasshi*, we have to place the circulation of an opposing organ, known as the *Romaji Sinshi*, maintained by Mr. TANAKADATE and his followers; and we have to note the fact that the *Romaji Zasshi* is necessarily very little read. It contains nothing that cannot be better understood by a Japanese when written with the character to which he is accustomed. Some of the articles are on difficult subjects, and for

the sake of deciphering them busy men cannot reconcile themselves to waste time in conjectures as to the identification of homonyms. In adopting, with one or two exceptions, and these, in our opinion, not invariably happy ones, Dr. HEPBURN's mode of writing Japanese, the Romaji-kai made a good commencement. But they seem to have fallen into the error of supposing that this was all that was required of them. To imagine that Sinico-Japanese can be made thoroughly intelligible, in the absence of ideographs, by means of the present system of writing alone, is over-sanguine. With a language in which words pronounced alike often convey several different meanings, it is impossible to determine the sense precisely in every case by the context. The Japanese may almost be said to have grown up to think by means of and in connection with the ideograph; it is to them not only a means of expressing thought on paper but of developing thought in the mind, and when it is entirely absent they seem have to lost a useful land-mark. We do not say for a moment that Japanese children cannot be taught to do without the character, though the labour of teaching them, so long as the colloquial language remains impregnated with Chinese, must prove a work of much greater difficulty than many suppose. But we maintain that the system of writing adopted by the Romaji-kai is too antipodal to that which it is intended to supplant. The transition from the one to the other makes too large a demand on the patience of the adult generation. To tell a man who has been accustomed to use a separate sign for every separate idea, that he must make one sign do for a number of distinct notions or things, and that the use of the new symbols will lead to no confusion whatever, is to make a pretty large demand on his credulity. Of all systems of writing, those in which a combination of Roman letters is made to stand as a thought-symbol or ideograph, are the simplest, and those in which the Chinese characters are employed, are the most complicated. Is it not, then, a somewhat large order, to attempt to replace the most complicated system of ideography with the most simple, in one generation and at one leap, without resorting to any intermediate aids whatever? Would not those who look upon the whole movement originated by the Romaji-kai as visionary—and we must not veil our eyes from the fact that they still constitute an overwhelming majority—change their minds in reference to it, if, as the commencement of the great reform, a system of transliteration were adopted capable of making a clear distinction between words which, though alike in sound, are entirely different in meaning? There are many ways of doing this. Perhaps the simplest and least open to objection would be to number the words whose pronunciation is alike but whose meaning is different. A very small dictionary could

be prepared, which would explain briefly what the number attached to each character stood for. Thus *ki*<sup>1</sup> tree; *ki*<sup>2</sup> spirit, breath, or air; *ki*<sup>3</sup> honourable; *ki*<sup>4</sup> strange, and so on.

It is very probable that in the course of time the Japanese mind would acquire the habit of thinking without the characters, and in that case, such diacritical marks would gradually become superfluous except on occasions when great accuracy was *sine quâ non*.

It would be easy, of course, to invent a Japanese diacritical mark for every word whose meaning differs from other words having the same sound. But, even in this case, a dictionary would still be needed to explain the force of these marks, and there is this to be said in favour of numerals, that the characters might be numbered in the order of the frequency of their occurrence in general literature and that by most minds their signification would be more easily remembered than would be the case were any other diacritical marks employed. Numerals lend themselves with peculiar readiness to the forming of mental associations. A system of mnemonics, such as that elaborated by Professor STOKES, would soon enable all ordinarily intelligent Japanese minds to remember what *ki*<sup>3</sup> or *ki*<sup>6</sup> signified.

If nothing of this kind is attempted, and if the present methods are adhered to, we fear that there cannot be much doubt among unprejudiced persons, who are well versed in Japanese affairs, as to the progress of the reform aimed at by the Romaji-kai. It will be lamentably slow, if, indeed, it be effected at all. The law of all successful reform is that there must be called into existence a series of steps for conducting men from the old to the new, and it is one of the essential characteristics of these steps that their connection with the old shall be no less patent than their relation to the new. To our minds the present system of Romanizing Japanese lacks this indispensable condition of success, and therefore it is that thoughtful men who were very sanguine about the success of the movement a year ago, are beginning to feel that the difficulties in the way of rapid progress have not been fully realized even by the foremost promoters of the Society, and that, unless some practical means of combating those difficulties be devised, the purpose of the Romaji-kai can scarcely be attained.

#### A LEGAL PROBLEM.

IT is a nice question to determine how far the law should permit exhibitions which are designed solely to minister to the morbid tastes of the public. The chances were ten thousand to one that Captain WEBB'S mad swim at Niagara would prove as fatal as the most determined leap ever taken from Waterloo Bridge by an unfortunate outcast proved.

Yet while constables and watchmen are stationed to prevent the latter, the former took place unopposed in the presence of thousands of spectators. GRAHAM'S feat, the other day, belonged in a scarcely less degree to the category of almost suicidal rashness. Twenty-five years ago a strongly built steamer with engines sufficiently powerful to keep steerage way even among the swirls and rushes of the Whirlpool Rapids, started to perform the perilous voyage which GRAHAM has now accomplished. She succeeded, but when she reached her journey's end, it was found that her funnel had been broken short off; that her hull was battered almost to pieces; and that her engineer, lying paralysed by terror throughout the passage, had been saved from death only by the extraordinary courage of the steersman, whose hair the experience turned grey. That a man enclosed in a barrel could achieve the same transit without being beaten and bruised out of human shape seemed inconceivable. GRAHAM, however, was allowed to make the essay, and so, doubtless, would any lunatic who had never been medically declared *non compos mentis*. Surely that is an over-subtle metaphysical distinction which admits a man's right to hold his life so cheap as to imperil it almost to the verge of certain sacrifice for the sake of gain, but denies his right to end an existence which has become intolerably painful. LEOTARD'S incredible leaps at the Alhambra and BLONDIN'S aerial voyages at the Crystal Palace were at least as attractive for the sake of the deadly hazard they involved as for the sake of the marvellous muscular and moral control they demanded. Women who had fainted and strong men who had sat shuddering at these performances, were drawn again and again to witness them by a taste of the same class as that which attracts a crowd of abandoned roughs to an execution. Everyone knew that an accident of the most trifling character, the relaxation of a muscle, a momentary distraction, or the least failure of accord between the arrangement of the apparatus and the intention of the performer, must involve loss of life. Yet refined and highly educated people came in thousands to see how far these risks might be adventured. When BLONDIN crossed Niagara on a rope carrying a boy on his back, several moralists cried out that he did wrong to imperil the life of another, whatever liberties he might take with his own. They did not then know that to the necessary dangers of the feat there had been added the savage villainy of certain speculators, who, to save their bets, cut some of the steadying guys and thus caused the rope to swing so that BLONDIN and his companion only escaped by a miracle. Certainly it may be urged in defence of all such feats as those of BLONDIN, LEOTARD, SAM PATCH and ROBINSON that the conditions necessary to secure success are

under control. Given perfectly devised arrangements, perfectly trained muscles and an absence of unusually disturbing elements, and there is scarcely any limit to the exploits of which the human body is capable. But when there is the accompaniment of such accidents as a boiling whirlpool, or a mass of water rushing through a narrow chasm with such violence that the centre of the stream is heaped up ten feet above the level of the sides, then the risk is neither calculable nor controllable. To the same class, as it appears to us, belong the performances with lions and tigers now nightly witnessed at CHIARINI'S Circus. Into the middle of the manège there is drawn an iron cage containing three lions. They are full grown beasts of immense power. Born and perpetually confined behind these iron bars, they seem to have lost all their natural ferocity. They look with sleepy eyes at the people crowding about their cage and appear quite reconciled to their lot. Should you happen to see them, however, when the preparations for their performance are in progress, you would change your mind as to their docility. These preparations consist in unlocking the door of the cage and strewing the bottom with straw. The lions evidently know what is going to happen. They lash their tails and growl fiercely. There is no mistaking the feelings with which they regard their share in the programme. But the moment their trainer enters the cage—which he does through a low trap-door—their truculent mood is exchanged for one of sullen uneasiness. They are plainly afraid of the man, but at the same time as much perplexed as cowed by the situation. As for the trainer, he seems the picture of courage and resolution. In his hand he carries a heavy cutting whip, and from the moment of his entry to that of his exit he uses this unsparingly. Experience has doubtless shown that only the constant sting of the lash can secure the lions' obedience. Under the influence of this reminder they allow their mouths to be tampered with, crouch in corners, leap upon shelves fastened high up in the cage, and jump backwards and forwards over a bar amid the din and smoke of crackers. But their patience is sorely tried by it all. At intervals one of them retires into a corner, and with its back to its tormenter relieves its bosom by a growl half plaintive, half furious. The exit of the trainer, too, is a thrilling instant. As he steps backwards through the trap-door, he is completely at the mercy of the lions. And they are half conscious that it is so. Only they do not recognise the opportunity until the time to profit by it is past. As the iron door clangs, a sharp, angry growl announces their awakened consciousness of what they might have done. It is a fine exhibition of moral strength conquering brute force. But the chief impression you carry away is, not appreciation of this victory,

but a conviction that some time or other the beasts will have their revenge. The lash that wrings reluctant obedience from them to-day, may to-morrow fall too heavily for their patience. The slightest relaxation of this state of terror; the slightest access of blinding anger, and their savage instincts must re-assert themselves. At any instant the pain of the blows they receive may be stronger than the unnatural docility they have developed. If you care to form a weak conception how it would fare with their trainer under these circumstances, you have only to look at his comrade, who now has charge of the elephants in the same menagerie. This man used to take liberties with lions. There were two cubs and a lioness, and he had taught the latter to drag him about the cage. One day the cubs mistook their mother's mood and sprang upon the man as she held him down. Strange to say the lioness took the trainer's part and drove the cubs away, but not before they had crippled and disfigured him for life. His successor nightly escapes a worse fate by little less than a miracle. If an athlete, knowing that he can get over the ground exactly as fast as a steam engine travelling at a certain velocity, were to run before that engine every day in a place where no means of escape to either side existed, making no allowance for possible variations in his own muscular energy or in the engine's pace, the police would soon restrain his vagaries. The lion trainer's task is still greater. Between him and death there are only the stroke of a whip and the chance of three full-grown lions keeping their temper constantly under the strongest provocation to lose it. Is there a material difference between such performances and the bull fights of Spain or the scenes formerly enacted in the Roman arena? If so, we fail to detect it.

#### THE MORALS OF WHIST.

LOVERS of the unapproachable game, whist, will have read with interest Mr. R. PROCTOR's remarks on the "Peter" published in *Longman's Magazine* and reproduced recently in these columns. But that they will have fully endorsed PROCTOR'S views, we are very much disposed to doubt. PROCTOR'S position amounts simply to this—that no strategy is permissible at whist unless it be strategy which is capable of effecting something by its own strength. You may play a "Peter" in all the plain suits with twos and threes, but your devices will remain absolutely fruitless unless your partner, obtaining the lead, gives you the trumps for which you are so anxious. But when your "Peter" is played with tolerably big cards, it assumes a different character. It is then capable of deceiving the adversaries as to the state of your hand, and inducing them to lead trumps under the impression that you are

short in a suit. The latter manoeuvre is pronounced by PROCTOR to be "strictly in accordance with whist strategy," whereas the former he utterly condemns. He thus commits himself to the proposition that, if by playing a false card you can hoodwink your adversaries into doing something which you want done, you have performed a clever and perfectly legitimate artifice. But if instead of cajoling your adversaries to take a false step, you let them and your partner alike know that you wish that step taken, then you are behaving in a manner "absolutely opposed to the spirit of the established rule of whist etiquette; namely, that no information whatever, by word or gesture should be given by a player as to the state of his hand." Well, but if "no information whatever" is to be given, why should false information be given? PROCTOR approves of false information. "You may mislead," he virtually says, "but you must not endeavour to compass your end by honest play." There is no mistake about his meaning. Take his own words:—"Suppose that a player, A, who has a strong hand, especially in trumps, holds the knave and a small one in a suit which is led by the enemy, he being fourth player. If the trick is won by third player with the king or queen, A may perhaps deem it well to play the knave rather than the small one. For while the knave will fall, and most probably fall ineffectively next round, its play first round may lead the enemy to suppose A holds no more in the suit, and therefore to lead trumps lest one of their strong suits be ruffed, or lest perhaps a cross-ruff fatally injurious to them should be established. Now, supposing the enemy not thus entrapped to lead trumps, A's partner, if he is an old hand, will naturally observe A's attempt to get trumps led by the enemy, and will therefore at the first opportunity lead them himself. It would be the same if A played knave from knave ten, instead of from knave and a small card not in sequence with it, except that in this case the device, as costing nothing, would not imply quite so strong a wish for a trumplead as in the other case. In every such case, where a player obviously played a higher card when a lower one would have done as well, or—if not in sequence—even better, to induce the enemy to lead trumps, there has been an expression of a wish that trumps should be led. And this wish has been expressed in a manner strictly in accordance with whist strategy. The player has done what seemed good for his game and his partner's, and the partner, if a player, seeing what has thus been held good strategy, makes his inferences accordingly, precisely as he does from the play of his partner, or of either opponent when leading, or when second, third, or fourth hand. This is part of the game, and the issues of such manoeuvres are among the *guadia certaminis*." Now observe where this reasoning leads. If your partner, being an "old hand," dis-

covers your attempts to get trumps led by your adversary, he will lead them himself on the first opportunity, and both you and he will have behaved very prudently and properly. But if you directly attempt to get trumps led by your partner, the case is quite different. You have an undoubted right, you are told, to induce him to lead trumps by the vicarious dodge of trying to wheedle your adversaries into leading them; but you have no right to induce him to lead them by the direct device of warning your adversaries not to lead them. This reasoning is much too subtle for us. It seems absurd to say that you may signal for trumps provided your signal be made with cards of such dimensions that the order of their play becomes in itself a matter of importance, but that you must not signal with cards so small that the order of their play is unimportant except as a matter of accuracy. If the "Peter" may be flown with the knave and a small one, why not with the ten and a small one; or the nine and a small one; or the eight and a small one? The indications conveyed by single cards depend almost entirely upon the combinations in the various hands. An eight played second in hand on a two led, may convey the same and as certain information as a queen played on a king. Take an example—A holds king, knave, nine, four, and two of a suit; B holds eight and three; C, ten, seven and five; D, ace, queen, and six. A leads the two, or the four, if he is a finished player. What is B to do? He wants to get trumps led, but he dares not play the eight, according to PROCTOR'S ethics. Yet, as the cards are distributed, if B plays the eight, A will certainly conclude at the end of the round that B holds no more of the suit, so that, according to PROCTOR'S ideas, B, if he only knew, the hands, would be quite justified in signalling with his eight and three under these circumstances. Is it not evident that PROCTOR'S distinction is fanciful and illogical? It places him in another dilemma also. For if it is not right to signal with small, practically worthless cards, neither is it right to return the better of two cards remaining from a three-card suit, when the card returned is too insignificant either to help in clearing your partner's suit, or to enable him to finesse, or to get you out of his way. Failing some one of these three purposes, you do nothing but convey to him information pure and simple, when you return him the higher of your two remaining cards; and therefore, according to PROCTOR'S ethics, you are not justified in so playing. But where is the line to be drawn? How can you tell, unless you see your partner's hand, what assistance he may not derive from a six or a seven returned by you? If the whole thing is to be purely matter of discretion, then the possibility of drawing rigid inferences from the fall of the cards disappears, and whist becomes a mere game of hazard. Another

point, which cannot fail to strike anyone reading PROCTOR'S thesis, is that he tacitly advocates the playing of false cards. He finds it quite proper to try and deceive your adversary by playing a knave or a queen on his king, or by playing a knave before a ten. Now we believe that no truer dictum was ever delivered concerning whist than that of JAMES CLAY. He laid down that a false card should never be played except with a partner so bad that no regularity in your play can convey to him any information, or with a partner so weak that you cannot injure him by deceiving him. Otherwise, the practice is only pardonable in dotage or in extreme youth. Here is what CLAY says:—"I hold in abhorrence the playing of false cards. I freely admit that to this practice there is great and frequent temptation, and I find it accordingly to be chiefly the vice of the very young, or the very old whist player. Youth is too careless, and old age too feeble, to resist. I am not surprised at this, for there is great enjoyment, when your trick succeeds, in having taken in your adversary, and having won the applause of an ignorant gallery, while if you have played in the common-place way, even your partner scarcely thanks you. You have done your duty—nothing more—and he had a right to expect it of you; but he will trust you another true. Do not deceive him." It is true that, by a singular contradiction, JAMES CLAY, when he comes to consider the origin of the "Peter," seems to sanction the playing of false cards; as, for example, the knave or the queen before a small one in a two card suit when you know that the ace and king are both against you. But if CLAY deviates from his own doctrines, that does not destroy their sound sense. At all events, he does not advance the extraordinary maxim that, while it is legitimate whist to inform your partner by deceiving your adversary, it is illegitimate to inform your partner and your adversary at the same time. He admits the "Peter" as a perfectly legal development, but he advances the one solid argument against it, that it injures the game. "It has simplified the game," he says, "to an indifferent player, and greatly diminished the advantage of skill. The time for leading trumps used to be the point, of all others, demanding the greatest judgment. Now, almost as often as not, the tyro knows whether his partner wishes trumps to be played. So much is this the case, that a player of great reputation, who claims such credit as may be due to the inventor of this signal, has often said that he bitterly regrets his ingenuity, since it has deprived him of one-half of the advantage he derived from his superior play."

### THE LATEST EXPONENT OF FREE TRADE.

IN LORD PENZANCE'S essay on the Idolatry of Free Trade, the Cobden Club found facts and arguments which could not be suffered to pass in silence. They accordingly commissioned one of their most distinguished members, Mr. G. W. MEDLEY, to prepare and publish a reply. It appears in the *Nineteenth Century* for June. Lord PENZANCE employed chiefly comparative arguments. The pivot upon which his reasoning may be said to have rested was that, whether we consider the half-century immediately subsequent to the repeal of the Corn Laws, or whether we consider the decade between 1870 and 1880, the rate of development of British commerce was below the average rate of development in Europe and America. Hence he inferred that to credit Free Trade with having conferred special advantages on England is erroneous, since, so far from showing conspicuous rapidity of growth, British trade compared unfavourably in this respect with the trade of Protectionist countries.

This line of reasoning is not novel. It has been frequently followed by continental writers who, desiring to establish the decadence of English greatness, reduce the increase of each nation's trade to a percentage of its whole trade, and then compare these percentages. By such a process it is found, for example, that a country the volume of whose trade grows from 100 millions to 120 millions in a twelvemonth, progresses three times as slowly as a country the volume of whose trade grows from one hundred thousand to one hundred and sixty thousand in the same time. The rate of the former's development is 20 per cent.; that of the latter 60. From such an inference there is but a short step to the conclusion that the one country enjoys a prosperity three times as vigorous as the other.

It would be equally accurate to determine the relative value of vulgar fractions by comparing their numerators without reducing them to a common denominator. Why should we not say that the nation whose trade increased by twenty millions in a twelvemonth is more than thirty times as prosperous as the nation whose trade increased by only sixty thousand in the same interval? This then, is the weak spot in Lord PENZANCE'S reasoning. Mr. MEDLEY puts his finger on it at once. He turns from per-centages to totals, and shows the figures relating to Great Britain and her three principal rivals for 1884:—

	IMPORTS AND EXPORTS.	PER HEAD OF POPULATION.
Great Britain ...	685,985,000	19 8 0
France .....	303,040,000	7 18 0
Germany .....	323,285,000	6 17 6
United States ...	290,138,000	5 3 3

A significant table, this. It shows at a glance what immense corrections must be applied before a method of comparison

such as that employed by Lord PENZANCE can be accepted. Nor does the table tell the whole story. Two big items have to be added: that England owns more than the half of the effective ocean tonnage of the world, and that she has managed to make other nations her creditors to the extent of from 1,500 to 2,000 millions sterling, thus drawing from them an annual tribute of from 60 to 80 millions sterling. These colossal results have been achieved chiefly under the system of Free Trade.

Another argument of Lord PENZANCE—the staple argument of the Fair Traders—is that, though Free Trade may cheapen imports for consumers at home, it does not save our commerce from being loaded with fetters abroad. We open our own markets to foreign manufacturers, thus enabling them to compete on equal terms with British workmen, whereas British workmen are excluded from foreign markets by hostile tariffs.

This reasoning resolves itself into a double question. Do we fare worse than protected countries in foreign markets, and should we benefit by the partial exclusion of foreign manufactures from our home markets? Take the former question first. It is answered by the following tables:—

In the markets of the United States in 1884,	
Great Britain sold goods to the value of	£32,510,000.
France sold goods to the value of	14,169,000.
Germany sold goods to the value of	13,004,000.
In the markets of Germany in 1884,	
Great Britain sold goods to the value of	£25,365,000.
France sold goods to the value of	12,194,000.
United States sold goods to the value of	6,261,000.
In the markets of France in 1884,	
Great Britain sold goods to the value of	£24,652,000.
Germany sold goods to the value of	16,676,000.
United States sold goods to the value of	11,180,000.

To Free-Trade England falls the lion's share of the trade in these homes of Protection.

With regard to the latter question—would Great Britain benefit by the partial exclusion of foreign manufactures from her home markets?—the answer is contained in the fundamental doctrine of Free Trade, that a nation ought not to be taxed for the advantage of a special fraction of the population. If people are required to pay higher for their coats and their chairs in order that a monopoly of tailoring and upholstery may be secured to English tradesmen, the only result is that labour which might be more profitably employed in other directions, is unduly attracted to the business of making coats and chairs. At enhanced cost we become self-supplying in the matter of dress and furniture, and we necessarily cease to sell in foreign markets the products of the labour which has been abnormally attracted to the manufacture of these articles. To the Fair Trader there is one difficulty in this reply. It assumes that labour can always be sold; that there is no necessity to provide an artificial market for it. Lord PENZANCE and his school deny that labour is thus favourably circumstanced. "Certain trades," they say, "unless protected against foreign competition must be stifled by it.

If they are stifled, it by no means follows that the labour formerly employed by them can find a new and profitable field." A little reflection shows that if this train of reasoning be pursued to its logical conclusion, labour becomes an object of public charity. Employment is to be found for it by imposing a tax on the nation. Rather than endorse a creed so repugnant to sound sense, the Cobden Club says:—"Let labour perish which is incapable of supporting itself in the open field of Free Trade. To support it by taxes is simply to impose a disabling burden upon the people."

In order to show how British trade has developed under this wholesome system, the following table is quoted by Mr. MEDLEY:—

	1830.	1875.	Increase.
United Kingdom.....	88,000,000	601,000,000	7-fold
British Colonies.....	21,000,000	322,000,000	14½
France.....	42,000,000	368,000,000	9
Germany.....	39,000,000	319,000,000	8
Low Countries.....	30,000,000	275,000,000	9
United States.....	35,000,000	225,000,000	6½
Austria.....	12,000,000	160,000,000	13
Russia.....	24,000,000	128,000,000	5½
South America.....	14,000,000	101,000,000	7
Italy.....	11,000,000	98,000,000	9
Scandinavia.....	8,000,000	66,000,000	8
Spain and Portugal.....	11,000,000	39,000,000	3½
Turkey and the East.....	15,000,000	85,000,000	6
	350,000,000	2,787,000,000	8-fold

We are here confronted by the striking facts that the volume of the trade of Great Britain and her colonies exceeds the aggregate trade of France, Germany, and the United States, and is more than one-third of the total trade of the world.

One other table deserves to be quoted as showing results which may fairly be connected with the establishment of the system of free imports:—

Our exports averaged in the five years:—

1836-40.....	about £ 50,000,000
1841-45.....	about £ 54,000,000
1846-50.....	about £ 61,000,000
1851-55.....	about £ 89,000,000
1856-60.....	about £ 124,000,000
1861-65.....	about £ 222,000,000

We cannot do better, by way of conclusion, than quote a passage in which Mr. MEDLEY draws a graphic comparison between the condition of the representative of Free Trade and that of her Protectionist rivals:—

The fact that among the nations we are first, and by far the foremost, in trade, manufactures, commerce, and navigation, is one which in itself is most striking, and one which in reasonable minds leads to inquiry respecting the means by which such a supremacy as ours has been attained, and begets a predisposition to look with favour on any methods we may have adopted. When we do inquire, we find that between us and other nations there is in our fiscal system one feature which distinguishes it from that of any other great nation—that is, Free Imports. On the one hand Great Britain stands alone with her Free Imports, queen of the realms of commerce; on the other, grouped together we see other great nations with Protection as their system, not one of them approaching her in the magnitude of her international commerce, most of them, together with her numerous colonies, being indebted to her enterprise and her capital for the development of their resources, and owing her fabulous sums of money, from which she derives an annual tribute which, half a century ago, would have been deemed a potentiality beyond the wildest dream of avarice. To Lord Penzance and other Protectionists, however, all this goes for nothing. Free Traders are termed idolaters, and are accused of bringing their country to ruin.

### BISHOP BICKERSTETH AND CHRIST CHURCH.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have recently been inspecting the Mission of the Church of England among the Aino, and was not aware, till I returned to Hakodate on Thursday last, of the discussion which had taken place in your columns in regard to the relation of the Bishop of the Church of England in Japan to the congregation of Christ Church, Yokohama. By the mail of last Friday I addressed a letter on the matter to the Rev. E. C. Irwine, with a request that he would forward it to you for publication. I need now only repeat that the basis of the authority of the Anglican Episcopate throughout the world, with the exception of England, is purely ecclesiastical and spiritual. It rests not on law but on conscience, not on a coercive jurisdiction—which is an adjunct of establishment—but on the free recognition of what is involved in the membership of the Church, and, in the case of its ordained Ministers, on the obligation of vows voluntarily undertaken. The only penalty of its disregard is the loss of the spiritual privileges which, in the view of Churchmen, it confers. The object of the letter addressed by the Archbishop of Canterbury, on the consecration of a Bishop, to the English Churchmen in the diocese to which he is appointed, is to intimate to them that their Church has extended its full organization to the country where they reside, and again places all its ministrations within their reach.

I hope to take the first opportunity after my return to Tokyo at the end of this week to consider the whole question with the Chaplain and Committee of Christ Church. I cannot doubt that, when misapprehensions have been cleared away, a principle which has worked well in many other lands, and led in our day to the widest extension of the Episcopate which Church History records, will be found suitable for Japan.

I allude with some hesitation to another matter. The mode of signature referred to in your columns was adopted by me in accordance with the desire of the Archbishop of Canterbury. Shortly after my arrival in Tokyo Her Majesty's Minister pointed out to me in the most considerate way that the use of such a signature was liable to misconstruction in this country, and, at his request, I agreed to discontinue it till further reference could be made to the Archbishop. I received yesterday a letter from His Grace saying that he concurs in the disuse of the signature in my case.

I am, Sir, Your obedient servant,

EDW. BICKERSTETH,

Bishop of the Church of England in Japan.  
Hakodate, September 13th, 1886.

### A NIGHT AT KOBE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The foreign settlement of Kobe is, as you know, an inviting place, fronting the sea, across which comes to it the pleasant southerly breeze that renders even the present high degree of heat quite tolerable. It has broad and handsome streets, which almost keep themselves clean; pretty and spacious houses; gas in abundance, and a Model Municipal Government, secured against all native interference. With these blessings, it enjoys a fine sea beach; a wide and well-turfed Bund; an ample Recreation Ground; good hotels, and a convenient and hospitable club, in the vicinity of which one may any evening hear that rapturous hammering of the floor which testifies that the Kobe youth is thoroughly relishing his game of billiards.

Possessing such advantages Kobe well deserves the title which the residents proudly give it of being "the finest settlement in the East;" and it is but natural that it should be regarded as offering unrivalled attractions to visitors.

And so in fact it does to all who can do their sleeping in daylight, and be content to pass their nights in observing the various activities which then break forth. For in the day time, Kobe is delightfully tranquil. Its sober merchants and festive clerks are then alike occupied at their desks; its tea-firing women are shut up with their pans; its coolies drag their carts quietly, and its innumerable dogs and cats are mostly dozing.

Nothing is easier than to sleep through the warm summer day, if one inclines and can afford to do so.

It is only when the shades of night settle over the town that one becomes aware of the real energy that lies dormant here. This is nothing short of astounding, and it is to this circumstance that your readers will owe this letter, if you consent to print it. For, after having vainly tried for the last three hours to get some sleep, I now desperately attempt to describe some of the noises that make that kind of refreshment so difficult to obtain in Kobe. It is no Walpurgis fable that I have to tell, for the mountains hereabouts are particularly orderly, and I am quite incapable of soaring above plain facts, but those who care for some zest of the diabolical may still find it in this prosaic account of an ordinary Kobe Night.

A grand cat-battle in the little garden of my next neighbour just before midnight was but a prelude, which he considerably brought to an end by the discharge of a jug of water; but when this was over, one became conscious that a good deal of similar entertainment remained. First, some dozens of dogs who have been fitfully rousing each other for hours, now find occasion to redouble their exertions. Secondly a gentleman near by who has a piano, has chosen this present hour to play on it an accompaniment for a friend who is singing the "Lorelei," in a very spirited manner, about half a tone below the pitch of the instrument, while another is whistling a somewhat similar melody in quite another key. Third, the chanciclers of some other neighbours, who affect their "own fresh eggs," are celebrating some imaginary victory over their rivals, or rehearsing their "Hail to the smiling morn," which is now not far off. Fourthly, the guests of an entertainment round the corner are now going home happy, beguiling their way and the toil of their *kurumayas*, by a strong chorus about "marching through Georgia" and "John Brown's body." Fifthly, the municipal scavengers are just starting on their nightly round, each one rattling two buckets and shouting over to his mates at every corner the measure of his success. One of these useful persons has been at the gate just opposite for the last twenty minutes pounding upon it with the end of his bamboo with such force, and declaring his object with such vigour, that the wonder is how the inmates of the compound remain insensible to his calls, especially as the neighbours generally are by this time at their windows, to see where the fire is or if some murder is not being committed. Of course, too, such dogs as had relaxed in their barking are by this incident excited to their utmost efforts. Sixthly, and in such quick succession to the bucket-scavengers as to give one a sensation of awe at the reserved forces of our energetic municipal government, there start out several huge box carts, so built that every movement they make sounds like a roar of thunder. These are the rubbish-gatherers of the settlement, which call at every gate, where the drawers demand the quota of the premises in tones of such determination that it is quite marvellous how so many people have the courage to delay them, and can withstand so long their tremendous summonses to deliver. When these fierce fellows pass on, there follow troops of tea-firing women, all in shrillest babble, looking out thus early for employment on the coming day. By this time I have, of course, surrendered all design of sleep and find quite welcome the regular *rat-tat-tat-tat*, of the watchman, whose unmoved composure in the midst of the hubbub all about him has the same soothing effect that comes to one who hears the Captain's cheery orders in the horrors of a hurricane at sea. A similar sensation follows my discovery that all the while that I have been listening with hopeless exasperation to these continuous and various disturbances of the resonant air of this summer night, the policeman of the municipality has been slowly pacing up and down these very streets, unconscious that anything whatever is amiss in them, and by his magnificent equanimity severely reproaching people like myself who find such noises troublesome. I see him now, this admirable officer, benevolently inclining his majestic head, crowned with the awful emblems of authority, from one side to the other, as if the noise-matters were his special pets and protégés, as needful as himself to vindicate the order and dignity of the town, as, indeed, they may be.

Happy Kobe, is no doubt his thought; blessed Kobe, where no one really sleeps till he goes to his final rest in the cemetery; where there are no lonely rounds for night officers; where the inhabitants keep themselves in such continual vigilance that ferocious burglars and all their kin are quite unknown. To people who like noise as much as the residents here appear to do, no place that I know of offers such a number and variety of attractions in the middle of the night. But I must now cease to sound its praises; for while I am writing, the jealous cats, the vigilant dogs, the midnight musi-

clans, the boisterous guests, the persistent scavengers, the thunderous carts, the chattering women, the placid policeman, and even the night itself, have all gone, and quiet has returned; for it is

DAWN.

Kobe, September 1886.

## FOREIGN DRESS FOR JAPANESE LADIES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I do not often have the privilege of seeing your esteemed paper. But a friend having shewn me the numbers containing some correspondence on the subject of the adoption of foreign dress by us Japanese ladies, I venture to ask for a brief space in your valuable columns to set the question in its true light. I have not yet been abroad, but I have read English books; and I must say that the remarks made by your various correspondents (evidently gentlemen) reminded me of Mrs. Poyser's famous (and so true) remark, that "men are poor creatures." Like true men, they see the surface of the matter, but they do not even guess its inner spirit. Those who are in favour of European dress talk of the inconvenience of Japanese clothing, of its injurious effect on our health, of its want of decency. The writer of one article who is in favour of Japanese dress talks of the great extravagance entailed by the adoption of foreign dress, of how French *couturières* will fatten on the finances of Japan.

Now, Sir, pray allow me to state that these gentlemen do not understand the matter which they attempt to discuss. Perhaps they are philosophical bachelors, who have never even priced an *obi*. If they had, they would know that a really first class Japanese toilette may cost several hundreds of yen. I know a lady who, two or three years ago, spent 800 yen on her *reifuku*. A single hair-pin may cost 100 dollars; a comb may cost 150 dollars. As for indecency in Japanese clothes, there is none for any woman who knows how to walk properly. As for injury to the health, there is no item of the Japanese style of dress which can be compared for unwholesomeness with the tight lacing of our European and American sisters, which sometimes costs them their lives, and their small boots, which compress their feet almost as much as those of the Chinese. Neither are Japanese clothes inconvenient to those who are accustomed to them since girlhood. And yet hundreds of us Japanese ladies are willing to discontinue our comfortable and wholesome clothing, and endure the discomfort and unhealthiness of foreign dress for a very good reason, which we all know in our own hearts, though we do not often mention it. The reason is this:—When we are dressed in foreign clothes, we are treated as ladies must be treated. On the contrary, when we are dressed in Japanese clothes we are treated,—well, more like upper servants. I cannot indeed complain of my own husband, because he is always kind to me. Nevertheless, I could not fail to observe that it was only after I had adopted foreign dress, that he allowed me to walk before him in public places, for example, on entering the ball-room of the Roku-mei-kan. It is the same case with foreign men. Even men in the position of gentlemen look at us in an insulting manner when we are dressed in Japanese clothes. Perhaps they do not know the difference between a lady and a tea-house girl.

That, Sir, is the reason why we wish to adopt foreign dress. We dress, not for vanity, nor for healthiness, nor for any other motive, but in order to get our rights as in civilized Christian countries. Please use your valuable newspaper to help us to obtain these rights, even if it does cost a few millions of dollars sent to the Paris dress-makers. Surely it is better for our country to have its ladies properly treated, than to possess much gold and silver.

I am, Sir, with much respect,

Your obedient servant.

A JAPANESE LADY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—If I may do so without an air of patronizing impertinence, I should like to compliment your last correspondent, "A Japanese Lady," on the equally good English and good sense of her letter about the introduction of foreign dress. But when she goes on to say that men are poor creatures who can only see the surface of a question without even being able to guess its inner spirit, why! Sir, I feel that I really must take up the cudgels on behalf of my own sex, Mrs. Poyser notwithstanding.

I shall not, in reply to the Japanese lady's wholesale condemnation of us men's power of judgment, retort by a quotation of any of the many thousands of disparaging things that have been

said about the female intellect from the time of Adam downwards. To do so would be ungallant. It would also involve more or less untruth; for all general accusations against classes are partially untrue. How much more a wholesale condemnation of one half of the human race! But if your fair correspondent sees beneath the surface of the question, truly divining that the chief motive which makes her country-women long for European frills and furbelows is, not any minor consideration of vanity or of comfort, but the instinctive knowledge that the adoption of European dress carries with it, as if by magic, the respect accorded to ladies in Europe and America—if she sees this, I and many other foreign men see more and deeper still. We see that her opinion, though doubtless correct so far as it goes, fails to reach down to the heart of the matter. Looking at the question in its broadest light, the choice and feelings of the ladies have very little to do with it. It is really quite amusing to collect, as specimens of the unsatisfactory reasoning which satisfies certain minds, the various independent explanations that are given of the different drops in the great stream of change that has come resistlessly over Japan. The artist thinks he sees special reasons for the Europeanization of Japanese art; the architect for the Europeanization of Japanese dwelling-houses; the scholar for the spelling of Japanese with European letters, and now the Japanese ladies for the adoption of European garb. Truly these coincidences would be miraculous, if we were to suppose that each of them and of a hundred other items is settled in favour of the imitation of Europe on account of the arguments special to itself. But if the cry is (and certainly the true doctrine is) "look beneath the surface!"—then we need not look so very very long before we get to the bottom. The whole way down, from top to bottom, the stream of Japanese life is running one way, as all streams always do and must do. The Japanese could no more, by wishing it, re-establish their old government or bring back their old customs, than a river could run uphill. There are eddies, no doubt in this as in other rivers. But even the water in the eddies gets dragged along at last, and the straws on their surface get dragged along with it. In the same manner, the ladies and all the women of Japan are bound to follow the men sooner or later in the adoption of foreign costume. There is no choice for them in the matter. It is their fate. If it does not come in one day, it will come in another. The dances at the Roku-mei-Kwan last winter were the slight peg on which the change has by many been supposed to hang. But who, thinking over the matter, could suppose that so small a thing could have revolutionized the habits of hundreds, had not everything been on the brink of change already? No, ladies, you *have* to wear foreign dress. Fate insists on it. But there is just one little point, on which, as fate does not insist upon it, you should insist yourselves. Fate does not insist on your dresses fitting nicely. That depends on you. It depends on you whether you make your purchases at Worth's or in the Ginza.

I am, Sir, etc.

A FOREIGN GENTLEMAN.

September 19th.

## OBJECTIONABLE ADVERTISING.

TO THE EDITOR OF THE "JAPAN MAIL."

DEAR SIR,—Visitors to Japan continually complain of the difficulty experienced in knowing where to go for the purchase of articles of Japanese production, and express astonishment at the apathetic neglect of advertising, the uses of which seem wholly unknown in this country. The gravity of a complaint of this character lies in the dependence of foreign visitors upon *jinrikisha*-men, so-called "guides," and others, for introduction to art collections or to the leading shops; with what result may be imagined: and as the number of visitors has been very large this year, the loss to non-advertisers has been considerable. Perhaps the public of Japan are at last awaking to the importance of advertising, for on a recent visit to Tokyo I observed in the station two large frames decorated with advertisements. This is a step in the right direction; but foreign travellers must still remain unenlightened, for the text of the advertisements is purely Japanese, unrelieved by a single clue to an explanation to the foreign mind in a language it is competent to understand. If, however, the text is obscure, care is taken to make the illustrations offensively distinct; and the Railway authorities will probably accept the well-meant hint that the illustrated advertisement now (or a few days ago) exhibited in Tokyo, ought to be forthwith suppressed for the simple reason that it ought never to have been permitted to appear.

Yours truly,

PATERFAMILIAS.

Yokohama, September 21st, 1886.

## FRENCH TORPEDO BOATS.

MONSIEUR LE RÉDACTEUR DU "JAPAN MAIL."

Le *Japan Daily Mail* a publié, il y a deux mois environ, un telegramme anglais annonçant la perte en haute mer de huit torpilleurs français, et je trouve, dans votre article du 16 courant sur les expériences de l'escadre de la Méditerranée, la phrase suivante:—"The reported loss of a number of French torpedo boats on the high sea,....."

Dans la séance du 3 Juillet de la Chambre des Députés, M. l'Amiral Aube, Ministre de la Marine, a démenti cette nouvelle dans les termes suivants:—"J'ai appris, il y a quelques instants, la nouvelle absolument fautive, je me hâte de le dire, que publie un journal du soir" au sujet de la perte en haute mer de huit de nos torpilleurs.

"Cette nouvelle, je le répète, est fautive, absolument fautive. Tous nos torpilleurs sont depuis trois jours à Toulon."

Je vous prie, Monsieur le Rédacteur, de vouloir bien publier cette rectification, et d'agréer l'expression de ma considération très-distinguée,

A. BOUGOUIN.

Attaché Militaire, Légation de France.

Tokio, 21 Septembre.

## AN OPEN LETTER TO PROFESSOR TOYAMA.

DEAR SIR,—A few days since, I chanced to take up the *Romaji Zasshi*, in which was your article on the Education of Girls and the Methods of Extending Christianity. Though knowing but a little of the Japanese language, a few lines of reading convinced me at once that a splendid mine of Japanese idioms was at hand, and, in the hope of making many of them my own, I began to study the article line by line, marking the *Zasshi's* borders black with pencil notes, and mentally thanking you for the great favour I was receiving. Then, as I read on, I gradually forgot my desire for idioms, and found myself pushing forward with intense interest through your criticisms of missionary methods to the method you frankly avow as the one most likely, not only to secure a more rapid acceptance of Christianity, but also to materially improve the condition of the women of Japan.

Though I think you are hardly just to us in some of your remarks, I cannot refrain from expressing great pleasure in your article as a whole, and I for one heartily thank you for saying what you have, and in this public manner. For your article is one of many signs that Christianity is attracting the attention of thoughtful minds in Japan, and that there are many who, though not accepting it as a personal religion, are ready to be counted as friendly to it, provided they gain also certain evident advantages. And the one you earnestly advocate is the establishment of girls' schools, well provided with foreign teachers.

This open expression of your opinion affords me the opportunity to say that, when the missionaries of the various Christian organizations of the West come to Japan, and urge the people to accept the religion of Jesus, it seems most reasonable that we should find out as rapidly as possible what methods of propagation will be most conciliatory and acceptable to you all, and at the same time will result in the widest knowledge of the truths our Great Teacher framed. The people of every non-Christian land have the right to freely say how they would like to have missionaries work, and of course missionaries have the right to listen or not to the suggestions that may be made. But if they are wise men and women they will not waste their strength in uselessly working on lines that create only a prejudice against both themselves and their religion; rather they will gladly embrace every opportunity of removing existing prejudice by encouraging the suggestions of thinking people among whom they are working.

That your suggestion is not merely the thought of an individual, but is a wide desire on the part of your people is readily shown by many facts. While writing this, a letter comes to me from a prominent city modestly asking if our mission will aid in establishing a girl's school by granting one lady teacher, and the letter asserts that the Governor and several other officials will favour such a school. Within the last few months, our mission has had several applications from inland cities for lady teachers, the requests, in some cases if not in all, being accompanied with the statement that all other expenses of a girl's school would gladly be borne by members of the community. I doubt not that every mission is taxed to its utmost by such requests, nor do I doubt but that all missionaries believe just as you have so ably said,—that one of

Original from

UNIVERSITY OF ILLINOIS AT  
URBANA-CHAMPAIGN

the best ways to spread Christianity is to educate the girls under Christian influences.

It is also, as you say, a critical time, a time that should not be lost by any carelessness on our part. And so I would beg you to push this scheme of female education and carry it to success. With your influence you can, I believe, effect essentially in the following way all you have eloquently contended for in your article.

With the good feeling now existing between Japanese and foreigners, it seems to me the time has come for joint action in carrying out so great a project as yours. You, and cultured gentlemen like you, will never be satisfied, except as a temporary expedient, to see the children of Japan in schools under purely foreign control. However broad your views, you will always be out of sympathy with such schools, and your criticisms are so weighty that they will be able at any time you offer them to the public to affect the schools' reputation. But were you to give the weight of your name to the formation of private companies who would offer to build girls' schools, and to guarantee able and sympathetic teachers, on condition that the missionary societies would provide a sufficient number of capable lady teachers (your idea of four or five married couples for each school might have to be moderated), I believe the various societies would be greatly pleased with the offer, and would do all they could to unite with you in a movement promising so much. Knowing, as I do, that sensitive and high-spirited Japanese do not like to be wholly indebted to foreigners, I can see no way of greatly increasing the number of efficient Christian girls' schools, as you desire, except by some joint action of prominent Japanese philanthropists with missionary societies, the details to be worked out and agreed upon in mutual consultation.

I beg you to bear with me in one more remark. You ask us to give up running about the country preaching, in uncouth Japanese, sermons with little power to influence the hearers. All you say of our poor preaching is, alas, too true. I think every missionary who tries it mourns over his failure to come anywhere near his ideal. And here let me praise your people for the patience and politeness with which we missionaries are uniformly treated when attempting to use your most discouraging language. You would have us stop trying to use it, and devote ourselves mainly to female education. But did it occur to you that you were overlooking the fact that other gentlemen, cultured and gifted with broad sympathies, like yourself, are heartily asking us to go here and there, and thanking us for our painful preaching? Nay, there are those who have ranked high in foreign colleges, who do not hesitate to ask us to preach on the same platform with themselves. I am doubly glad of your public criticisms so kindly given, because they enable me to state to you and others, who naturally have fallen into the little error of thinking that missionaries are placing themselves unsolicited before the public, that I do not know of any missionary in Japan who goes to speak where he is not invited by responsible Japanese. There may be such. There were in the early days. But I am sure there can be but few such now.

As I said above, the people of Japan have the right to suggest to us the best ways of working. Only each suggester needs to bear in mind that there are many other suggesters. And the missionaries will always be glad to modify their methods in any way that promises better and more rapid results.

Hoping that at an early day your interest and future efforts in female education will lead to the establishment of many, many successful girls' schools, whose influence will be felt in the home life of all your people,

I am, sincerely yours,

J. H. DE FOREST.

Osaka, September 4th, 1886.

### THIRD SESSION OF THE JAPAN ANNUAL CONFERENCE OF THE METHODIST EPISCOPAL CHURCH.

The third session of the above mentioned body was held in the chapel of the Philander Smith Biblical Institute at Aoyama, Tokyo, beginning the 2nd and closing the 9th instant. The past year, it was reported, has been marked by a healthy growth in all departments of the work. The native churches have been strengthened and are beginning to take hold of the problem of self-support with an earnestness that promises well for the future. New work has been opened up and the influence of the church is becoming more and more widely felt. The field of labor extends from

Otaru in the Hokkaido to Kagoshima in Kiushiu, and plans are on foot to enter the Riukiu Islands. Noteworthy among the events of the year has been the erection of the fine theological hall for the Philander Smith Biblical Institute at Aoyama, Tokyo, and the commencement of another large hall at the same place, which will probably be completed within the next six months. This new building is to be the home of the Tokyo Anglo-Japanese College. Measures were adopted looking toward the strengthening of Cobleigh Seminary, the educational institution of the Conference at Nagasaki. Two Departments—an English and Biblical—were organized, and a foreigner was placed at the head of each. In addition to its own regular educational work the Conference has, during the past year, given an instructor in the English language to Mr. Y. Fukuzawa's private college—the Keio Gijiku—and also one to the middle college at Sendai. The labours of these teachers have been followed by the conversion of many of the students in both schools. The union of the different methodistic bodies engaged in evangelizing the Japanese into one large, strong Methodist Church of Japan has long been the earnest wish of many of the foreign and native workers. This year this has in part been realized; and it is sincerely hoped that the near future will see the much needed and greatly desired union accomplished.

From the reports made to the Conference, the membership of the Methodist Episcopal Church in Japan is shown to be at present 1,754, with 462 probationers or a total of 2,216. During the year baptism was administered to 800 persons, of which number 140 were children; 53 Sunday schools and 189 teachers gave instruction to 1,877 scholars. The amount of money contributed by the native membership amounted in the aggregate to yen 1,425.50. The three schools for young men under the auspices of the Conference enrolled for the academic year 1885-6 401 students, the four seminaries for young women 350. At present the two theological schools have about 30 students studying for the ministry; while the Bible Woman's training school in Yokohama has about 20 women preparing to be Bible readers and evangelists to their country-women.

The scarcity of foreign workers, both male and female, is greatly felt and a call for strong reinforcements from America was made. The following was the disposition made of the foreign force now in the field.

#### TOKYO DISTRICT.

J. SOPER, Residing Elder.

TOKYO ANGLO-JAPANESE COLLEGE.

R. S. Maclay, D. D., General Director.

THEOLOGICAL DEPARTMENT,  
Philander Smith Biblical Institute.

#### HAKODATE CIRCUIT.

G. F. Draper, Preacher in charge.

#### WOMAN'S WORK.

Mrs. C. W. Green. | Mrs. G. F. Draper.

### LETTER FROM NAGASAKI.

(FROM OUR OWN CORRESPONDENT.)

Nagasaki, September 15th.

The importance of the coal-fields of Kiushiu, more especially those in the immediate vicinity of this port, has never been undervalued either by the Government or the people, nor has the probability of the exhaustion of the Takashima mine at a date more or less remote ever ceased to be a matter for apprehension to those whose interests centre around the coal industry of Nagasaki. But while the heavy output from that mine has been steadily maintained for so many years, the enterprising owner has never lost sight of the fact that mines are not inexhaustible, and large sums have been spent by him upon the exploitation of coal-beds on the adjacent coast and islands. And it is with much pleasure that we have to record one more instance in which the enterprise and sagacity of the Iwasaki family have conduced to the extension and assurance of the trade and prosperity of Nagasaki. Last week work was started for opening out a large colliery on Matsushima, an island situated some 20 miles to the north of this. For many years, the coal on the island has been worked in a desultory, hole-and-corner way by farmers and fishermen; but about two years ago, the Government, in order to save so valuable a coal-field from the clutches of impecunious mining speculators, closed the workings there and announced their intention of granting mining rights to persons only who were able to provide the necessary guarantees for establishing and carrying out a large and liberally conducted undertaking. Mr. Iwasaki of the Mitsu Bishi Company, having succeeded in obtaining permission to prospect and open out the field, has been, for the past 18 months, engaged in exploiting the island by means of a large staff of skilled workmen under the control of Mr. J. M. Stoddart, the well-known and experienced chief mining engineer of Takashima, and with the aid of heavy machinery belonging to the Takashima Colliery. The exploitation has been carried on by diamond drilling machines by which eight bores have been put down at various points of the island; the aggregate depth of all the bores amounting to 3,000 feet. The result of these borings has been to prove the existence of three different seams of coal at about the depth of 100 yards from the surface throughout the area of the entire island (over 10,000 acres) with the probability of their extending under the sea in several directions. The thickness of these three seams are approximately 14 feet, 8 feet and 4 feet.

There seems to be no doubt that Mr. Iwasaki has here met with a well-merited success, as the figures given above may be taken as considerably under rather than over the mark, the enterprise having been conducted unostentatiously and with great caution.

The colliery, for which the actual work of shaft sinking, &c., was started last week, is situated on the verge of a small, landlocked harbour on the northern end of the island. The harbour, though small, will easily accommodate three or four of the ordinary 1,000 tons steam colliers, the depth of water being about 10 fathoms up to the shore, upon which it is proposed to erect a jetty. The entrance to the harbour is clear and easy, and steamers will thus be able to come within two hundred yards of the mine mouth to receive their coal. In regard to quality, Matsushima being in the same coal basin as the well-known Takashima veins, the coal will be of the same description.

Very little is known as to the progress of the investigations by the Commissioners into the late fracas. The general impression existing here seems to be that Mr. Drummond is not in favor of a speedy settlement of the question. No effort have been spared by him to obtain respectable foreign evidence to support his case, but this will not be found an easy matter. Much is made of the assertion that many of the Chinese sailors were cut in the back, but it is merely an attempt to bolster up a weak case. When a cowardly blow falls, one does not as a rule ponder long over the manner in which the retort is to be given.

## LETTER FROM LONDON.

(FROM OUR SPECIAL CORRESPONDENT.)

London, July 31st.

The political news of the fortnight may be summed up in a few words. Lord Salisbury has taken office, having failed to get Lord Hartington either to form a coalition, or to take office as the head of a Liberal Unionist Ministry. But the leader of the Liberal Unionists has promised the new Government a cordial support. The process of Cabinet-making is now nearly finished. Lord Randolph Churchill is Chancellor of the Exchequer and leader of the House of Commons, Sir Michael Hicks-Beach going to Ireland as Chief Secretary, and Lord Iddesleigh takes the seals of the Foreign Office. These were offered to Lord Lyons, who is about to retire from the Embassy at Paris, but were declined by him on account of age and ill-health. Had he accepted the post he would have been succeeded in Paris by Lord Lytton, who will probably get the Embassy ultimately if the Conservatives remain in office. A curious appointment is that of Mr. Henry Matthews, Q.C. to be Home Secretary. This gentleman has just entered Parliament for Birmingham, being the first Tory who has got in for that place since 1832. He is one of the half dozen foremost men at the Bar, the leader in the Oxford Circuit, and was principal counsel against the Queen's Proctor in the recent proceedings connected with the Crawford divorce case. But he has had no official experience whatever, and was only for a short time in Parliament nearly twenty years ago. As he is a bachelor, and has been making between £10,000 and £30,000 per annum for a number of years back, no doubt he can afford to throw up a certainty for the precarious honours of politics, although how he has jumped at once into one of the highest Cabinet offices is beyond ordinary comprehension, unless it be as a compliment to the new Conservatism of Birmingham. It is said to be the intention of the Government to bring the business of the year to a close as soon as possible, and to mature a policy for Ireland before January or February next. There are symptoms that the Gladstonians will not agree to grant the remainder of the supplies without a declaration as to the Irish policy of the new ministry, but doubtless Lord Hartington will help to frustrate this scheme if it be attempted.

One may say of Sir Charles Dilke as Mr. Disraeli exclaimed of Lord Palmerston after his crushing defeat on the *Arrete* question, "There was a Dilke." Your readers will understand that there are two proceedings necessary to secure a divorce, the first is to obtain a decree *nisi*, the second, about six months later, to get this decree made absolute, and it is not until the second stage, which, in most cases is purely formal, that the divorce is effected. At either stage the Queen's Proctor can interfere to prevent collusion, and on other grounds, one of them being that at the proceedings to obtain the rule or decree *nisi* evidence having an important bearing on the case was not before the judge. This, stated in untechnical language, was the ground of the Queen's Proctor's intervention in the present case. Sir Charles Dilke was examined, so was Mrs. Crawford, and after the evidence of the latter it was at once seen that the case against Sir Charles Dilke was impregnable. His strongest witnesses were contradicted in the most absolute way by independent testimony, and no one was surprised when the jury took only a few minutes to find what was practically a verdict against him. He has taken his farewell of public life, but it is not yet quite clear that he and two of his witnesses will not be prosecuted for perjury. The Divorce Court, however, is the scene of perjury on one side or the other every week, and besides, the fall of Dilke is so great already that few would willingly see him further punished, to say nothing of letting loose again the floodgates of filth which have inundated the papers for days. He was beyond question the ablest and the most cultured of English Radicals, and was the only one of that party who had the knowledge, experience and fibre for dealing adequately with the foreign affairs of the country. So he is not the only loser by the affair. His visit to Japan left an indelible impression on his mind; he was always glad to talk and hear about the country, and a few years ago he said to a resident of Japan who made his acquaintance that he hoped one day to revisit the country and revive his old impressions. The visitor suggested that as he was in the Foreign Office he had an abundant opportunity of knowing all that was going on in Japan, but he said that was quite a mistake as he had to deal with the commercial department where they never saw a document from the Far East, and, as a matter of fact, he knew as little of what was going on there as a

man in the street. Referring to a discussion respecting Sir Harry Parkes which was then going on in the London press, he expressed much surprise that the English papers had so little news from Japan; there was no correspondence from there, and no one knew or had any ordinary means of learning how the Japanese were working out the vital political problems they had before them—most of them questions which would be of peculiar interest in England. The person to whom he was speaking hinted that if he said as much to the editor of *The Times* or of the *Daily News*, the omission would soon be rectified. Probably he never did so, as he was just then in the thick of the negotiations for a commercial treaty with France, but readers of *The Times* at any rate have no reason for complaint now on this score.

I referred in my last letter to the violence of language which has been an unpleasant characteristic of the late election. Lord Randolph Churchill, at the time I wrote, bore off the palm from all competitors in this respect, but he must now yield it to Mr. Gladstone. There was perhaps in this case the excuse of keen disappointment; the ex-Prime Minister's letters and telegrams to his supporters giving them testimonials and warm wishes for success were "thick as leaves on Val-lombrosa," and the more strongly he urged electors to vote for them, the more certain was their defeat. He showed himself especially anxious for the success of his friend the Liberal Whip, Mr. George Leveson-Gower in North-west Staffordshire, and on the defeat of the latter wrote him a letter of condolence, in which he urged him to study Irish history, and added: "I have done in that way the little that I could, and I am amazed at the deadness of vulgar opinion to the blackguardism and baseness—no words are strong enough—which befoul the whole history of the Union." It appeared to me at the time that Mr. Gladstone "gave himself away" when he wrote this letter; in other words, that it was a serious blunder, due probably to peevishness and disappointment at the succession of disasters just then befalling his friends. For he had spent his time and force prior to and during the election in proving that in questions such as this of Home Rule, the instinct of the populace leads them straight, and that *vox populi vox Dei* is in England historically accurate. But suddenly the *vox populi* is more deadness of vulgar opinion to blackguardism and baseness, and not the *vox Dei* at all! *The Times* pertinently asks what Mr. Gladstone, who has wielded such influence over vulgar opinion, and over the course of government for nearly half a century, has been doing all that time, and how it is he has only now discovered the blackguardism and baseness. Professor Goldwin Smith wants to know whether a man who can use this extraordinary language and who is in such a frame of mind that he can permit himself to talk in this fashion of the acts of a previous generation of English statesmen, is fit to deal with Ireland now. *The Pall Mall Gazette* suggests somewhat usefully that Mr. Gladstone's mind is unhinged or warped by the absorbing study of one question, and that after all it is a good thing he is going, and that the Gladstonian era in English politics is at an end. This last statement we may be permitted to doubt; there is no sign that the Grand Old Man is played out; very far from it, and I have little doubt that this will presently appear when the new Parliament meets to wind up the business of the year.

The papers are now all busy pointing the moral of the recent election. The lessons drawn by the *Spectator* are worth quoting, for this is one of the soberest and ablest journals in England. As a rule it is strongly Gladstonian, although it went against its leader on the Home Rule question. Its lessons are in brief, these: (1) and most important, the immense stability of judgment which we must attribute to the British democracy, for it is now evident that the most brilliant of all the leaders of the Liberal Party cannot carry the country with him, if he proposes any measure that distinctly alienates and alarms any substantial portion of the party of progress. (2) When any momentous change is at issue, the Irish vote counts virtually for nothing in Great Britain. (3) Under household suffrage, even within the first years of its application to the counties, the distrust exhibited by the counties of a great and sudden change is not much less than that exhibited by the boroughs; and (4) "the most unique lesson of all" is that in the most Radical of all sections of the community, there is a very real and potent Conservatism directly you come to touch on any issue which affects the strength and solidity of the State. I give these conclusions as far as possible in the words of the writer in the *Spectator*. They appear to me to sum up the less superficial results of the election better than anything else I have read on the subject.

Admiral King Hall, who commanded some years

ago in the China seas, died a few days back at his seat in Wiltshire. Another British Admiral well known in the East, Sir Henry Keppel, is as ubiquitous and popular as ever he was, notwithstanding his advanced age.

A memorial tablet to Sir Harry Parkes, with a bust by Brock, is to be placed in the crypt of St. Paul's near the monuments of Nelson and Wellington. The English subscription list has been published. Nearly all the names are familiar as household words in the East. One of the secretaries is Mr. W. G. Howell, to whose name it should be needless for many years to come to append any description in the columns of the *Japan Mail*, and whose admiration of the late Minister was as warm as his support through thick and thin (with just a stray exception when the editor went on the war-path alone, and vented his solitary indignation on all and sundry) was energetic and valuable.

A good deal has been heard about Hongkong and its ex-Governors lately. Sir George Bowen is everywhere. The colonial visitors are being taken all over the country; mayors, corporations, universities are doing their best to entertain them, and Sir George is the spokesman of their thanks everywhere. The memorial to Sir Arthur Kennedy was cast a few days ago, and his successor in Hongkong performed the ceremonial part of the work. Meanwhile, Sir John Pope Hennessy is making history in Mauritius. I cannot profess an intimate acquaintance with the politics of that colony but whatever the burning questions may be there, they appear to make a good deal of fuss. The Governor is never at a loss for literary champions, possibly because he was once a brother of the quill himself, and knows the value of that little implement in modern times. Mr. Henniker Heaton, an old Australian, and now member for Canterbury, has fought Sir J. P. Hennessy's Mauritian battle in *The Times*, which opens its columns readily to any defence of the Governor, and which on occasion will pat him gently on the back in its leading columns. Notwithstanding this, everything, I grieve to say, is not going as happy as a marriage bell in Mauritius. Here is the latest summary of news from that belated island. It has a familiar ring about it:—"Several meetings of the Council have taken place, but there is not much to be said about them, excepting that at one of them the Lieutenant-Governor and Colonial Secretary, Mr. Clifford Lloyd, had put a very simple question to the Governor, Sir J. Pope Hennessy, which was not answered. Mr. Clifford Lloyd had been very roughly handled by certain of the papers managed by some of the Governor's particular friends. On the presentation of the memorial laudatory of his administration, the Governor in thanking his friends, used very strong language against the Hon. M. de Coriolis, junior member for Port Louis, who resented it in a long letter published in the papers. The Governor had asked all the Members of Council to dinner at Kiduit, but twelve officials and unofficials refused the invitation. A levee in honour of the Queen's birthday was held at Government House, Port Louis, on May 26; 464 representatives of all classes of the community attended, and the Governor, instead of the usual bow, shook hands with one and all." It is perhaps too much to hope that this last act of graciousness will remove the successive unpleasantnesses recorded in the previous sentences. Of one thing, however, we may feel tolerably sure by past experience viz: that whatever may happen, and wherever the fault may lie, His Excellency will emerge tolerably victorious and well content from his administration of Mauritius. In these days of topsy-turvydom in politics, who knows what the future may have in store for this prominent political Irishman? It was stated that had Lord Salisbury remained in power last year, he intended availing himself of Governor Hennessy's services at home, and those who know the Governor are persuaded that when he has served the regulation period for a pension, he will give up the Colonial service for active political life at home. He will cheerfully forget (I say nothing about forgiveness) all about Hongkong and the rest, and give up to party what some colonials devoutly believe was never meant for them.

*The Times'* correspondent at Peking telegraphs that Russia threatens to occupy Port Lazareff, unless England abandons Port Hamilton, and that the Chinese fleet under Admiral Lang has left Chefoo for Lazareff. *The Times* seeks to show that there is a great difference between the action of this country and that of Russia in regard to these two Korean ports, but most people will probably be of opinion that the difference is that 'twixt Tweedledum and Tweedledee. If China proposes to act vigorously in regard to Lazareff there may, however, be a difference in the result.

The difficulty between this country and China with regard to Burma has been settled by a convention signed at Peking. We agree to the decennial presents, a joint commission is to arrange the delimitation of the frontiers, and the Thibet mission is to be withdrawn for the present as the Chinese fear local disturbances. The conditions under which trade is to be conducted into south-western China in future will be specified in a subsequent convention.

### CRICKET.

Cricketing was resumed on Saturday, after the customary break occasioned by the very hot weather, by a match between teams chosen by Messrs. Mollison and Dodds. The weather was not altogether favourable, although cool, the strong wind interfering somewhat with the bowlers. A very pleasant game was obtained, however, despite the fact that there were several absentees. The enforced abstinence of Mr. Duff, who, through indisposition had to content himself with the unexciting duties of scorer, naturally militated a little against the success of the match; with this gentleman withdrawn, the sides were not at all evenly balanced.

Mr. Mollison won the toss and sent Messrs. Wheeler and Playfair to the wicket against the bowling of Messrs. Hearne and Dodds. Thirty had been made before these two were separated by a well delivered ball from Hearne sending Playfair back. In the meantime Mr. Baggallay had taken Dodd's place in bowling. Mr. Edwards joined the Doctor, but only made 4 before he was run out;—a stroke of good fortune for the men fielding which might well have been avoided, had the Doctor been more alive to the position. Mr. Melhuish followed and made a 'two' and one 'single' before being bowled by Hearne. Somewhat prior to this Mr. Sutter, who was late in arriving, relieved Baggallay at the Pavilion end. Mollison was the next to bat. Another stand was made here; runs being put on steadily. With the score at 68, Hearne bowled Wheeler, who had carefully put together thirty. Mollison, too, should have been disposed of, for he gave Hearne what seemed to on-lookers to be a comparatively easy catch. Mr. Denning followed, —only to put his first ball into Sutter's hands; Mr. Hodges also, who took his place, was caught out by Playfair, without contributing anything. There remained but Mr. Gefeney, who just managed to break his "duck's egg" before giving an easy catch to Mr. Easton. Mollison, who was playing well, carried his bat out for 25, including several free hits for 3.

Messrs. Baggallay and Easton opened the innings for Mr. Dodd's side, Wheeler and Edwards taking the ball at the Pavilion and Settlement ends respectively. Easton was caught out by Playfair off Edwards' third ball. Sutter followed. A ball from Baggallay off Wheeler was held by Edwards in the next over. Dodds joined Sutter and drove Wheeler for 3; and the Doctor's next ball took Sutter's bails. Kilby, who next appeared, had no better luck, being bowled by Edwards in the next over. Four wickets in four overs for four runs. Mr. Moss then went in, and a short stand occurred—Edwards delivering two maiden overs, before Wheeler caught Moss out off a ball of his own delivery. This brought Mr. Wileman out. A few "singles" were made, and a bare chance for a catch given Edwards by Wileman before Dodds retired, splendidly caught by Playfair. Hearne was the next to go to the wicket, Melhuish relieving Wheeler in bowling. A few more runs were put on, but after making 4, Hearne fell to a ball from Edwards. Mr. Irwine, the last to bat, helped to prolong the innings a little, Wileman driving a slow ball from Edwards for a 3, whilst Irwine himself added four "singles" before he was caught out by Dodds off Edwards. Wileman retired "not out" for 14, for many of which he might have thanked Hodges, who missed an easy catch given off the Doctor's last ball. The entire innings closing for only 37.

Mr. Dodds's team followed-on, doing somewhat better in the second innings. Sutter and Easton opened the batting, Edwards and Melhuish bowling. The latter's bowling however, was too fruitful of runs, and at the second over from the Pavilion end, Dr. Wheeler took the ball. Easton, after scoring 8, including a bold hit for 3 off Melhuish, was caught at point by Playfair, and gave place to Wileman who was run out for 1, though he remained with Sutter long enough to see the figures run up to 19. Baggallay followed, only to be caught out right away by Mr. Irwine, who was holding at the time as a substitute. Hearne joined Sutter, and made four, before being bowled by the Doctor. Playfair at this stage relieved Edwards, who did not appear to be

bowling in his usual form. Moss was the next to bat; and had not Sutter placed a ball from Playfair in Edwards' hand, a stand might have been made, for Moss hit freely and well, before being run out shortly after Irwine appeared. Dodds did not go in.

We are glad to hear that there is some talk of a match between the officers, etc., of the P. & O. S. N. Co.'s steamship *Teheran* and the Club.

The fielding on Saturday was fair, but most of the players evinced want of practice. Playfair's catches at point struck us as being particularly good. It is to be regretted that there was not a large attendance; one would have thought that members would show their interest in the game by being at the match re-commencing the season.

### IN THE U.S. CONSULAR-GENERAL COURT.

Before C. R. GREATHOUSE, Esq., Consul-General.  
TUESDAY, September 21st, 1886.

#### THE FULLERT CASE.

The case of P. C. Fullert came to-day before this Court on the following motion:—

Peter C. Fullert, the above named defendant, by his counsel, Mr. John Frederic Lowder, moves on the record, and on the accompanying affidavit, that proceedings against him may be stayed pending the result of his appeal by petition for pardon to the President of the United States, and that he may be released from custody in the meantime on providing such bail or other security as the justice of the case may demand and as to this honourable Court may seem fit.

(Signed) F. LOWDER,  
Counsel for P. C. Fullert.

In support of the motion,  
Mr. Lowder said in order to the success of this motion it appeared to him that he should have to contend for the affirmative of two propositions, the first being that this Court possessed the power which it was asked to exercise; and, secondly, if so, that the case at the bar was a fit and proper case for the exercise of that jurisdiction. Now, unless the second point were answered in the affirmative it would be a useless waste of time to argue the first point and therefore he should first of all proceed to the second point, namely to support the affirmative of the proposition that this was one of those cases—that this case presented those features—which influenced the Courts at home having a similar jurisdiction to that which was now invoked to be exercised in favour of the prisoner. The motion, as his Honour would have observed, was based on the record of this Court, and also upon an affidavit. The affidavit was made by himself and was in the following words:—

I, John Frederic Lowder, barrister at law, a British subject, duly admitted to practise in this Honourable Court, having my chambers at No. 28 Yokohama, make oath and say as follows:—

1. I am Counsel for Peter C. Fullert, and have acted as such throughout his recent trial in this

Court on a charge of aiding and assisting Paymaster Watkins to desert from the United States ship *Ossipee*.

2. A petition for pardon has been addressed to the President of the United States by the said P. C. Fullert by way of appeal against his conviction on the charge aforesaid, and the same has been duly perfected and forwarded to the United States Minister in Japan for transmission to the President.

3. The said petition will be forwarded to its destination by the mail steamer leaving Yokohama on or about the 23rd day of September instant, and the grounds on which the prayer of the petition is based are such as to make it highly probable that the objections raised on behalf of the prisoner will prevail and that the same will meet with the full approval and support of the United States Minister to Japan.

4. No reply to the said petition can be received in Yokohama much under one month from the date of its despatch, and in the meantime, and ever since the early part of May last, the said P. C. Fullert is and has been undergoing imprisonment in the United States Gaol at Yokohama.

5. The said P. C. Fullert is prepared with bail for his surrender to this Honourable Court in the event of the prayer of his said petition not being granted.

(Signed) F. LOWDER.

Sworn at Kanagawa this 20th day of September, 1886, before me,

(Signed) C. R. GREATHOUSE.

Now, with reference to the third paragraph of this affidavit, that would require possibly some elaboration considering that there was there a bare statement—although it was a statement made by himself under a due sense of the responsibility he incurred in making it—that the grounds on which the prayer of the petition was based were such as to make it highly probable that the objections raised on behalf of the prisoner would prevail and that the same would meet with the full approval and support of the United States Minister to Japan. In order to elaborate that point he would read the petition itself in order that his Honour might understand the points that would come before the President for consideration. Mr. Lowder then read the petition which is as follows:—

TO THE PRESIDENT OF THE UNITED STATES.  
The petition of P. C. Fullert, humbly sheweth as follows:—

1. At the time of the happening of the events, hereinafter related, your petitioner was and still is a subject of the German Empire.

2. He has always borne a good character in Yokohama, where he has resided and followed his calling for many years past without offending against the law.

3. The *Arctic* is a small schooner built in Japan for the otter and seal-hunting trade. She is principally owned by one Miner, a citizen of the United States, who was also the managing owner of the said vessel.

4. In the month of April your petitioner accepted service as master of the said vessel, he himself having a small interest in her, and received instructions from Miner to fit her out and get her ready for the hunting season, which commences at the end of April or the beginning of May.

5. The *Arctic* was ready to leave, and did leave Yokohama on the 21st April last.

6. Some time prior to her departure Miner informed your petitioner that there would probably be a passenger going by the *Arctic* for the season to enjoy the otter hunting, which intimation caused your petitioner no surprise, as large sums are paid by sportsmen for such privilege.

7. Before leaving Yokohama, therefore, your petitioner asked Miner whether he was to have a passenger, to which Miner replied that he was not quite sure yet. Your petitioner then informed Miner that he should take the *Arctic* to Kaneda Bay, where the passenger might come on board if he joined the vessel within the next forty-eight hours, otherwise he would miss his passage.

8. All other hunting schooners leaving Yokohama stop at Kaneda Bay or some other convenient anchorage before putting to sea. This custom is necessitated by the fact that the native crews as a rule come on board in a state of intoxication. It gives them time to get sober; affords an opportunity of getting stragglers on board; and advantage is taken of the stoppage to store the provisions for the cruise, which are put on board at Yokohama just as the vessel leaves that port. The stay at Kaneda Bay, for the purposes aforesaid, is from 36 to 48 hours, inclusive of the passage down.

9. The *Arctic* was ready to sail from Kaneda

Original from

Bay on the morning of the 23rd of April last. Just prior to her departure a boat came alongside bringing one Crocker, who was well known to your petitioner as a person in the service of Miner.

10. Crocker informed your petitioner that by Miner's instructions he had brought with him the passenger aforesaid, who had come on board.

11. Your petitioner, being occupied with his duties in getting the vessel off, paid no particular attention to the said passenger; but observed that he was dressed in citizen's clothes. Crocker then left the vessel and the *Arctic* proceeded to sea.

12. Some time afterwards your petitioner asked the said passenger for his name, who replied that it was Gordon. As the vessel got farther north the weather became much colder than it had been, and, finding that the said Gordon had not brought suitable clothing with him, your petitioner lent him some of his own clothes, such as are worn by other hunters. The *Arctic* arrived at the island of Shikotan on the 1st of May last and there anchored, as is customary, for the purpose of cutting wood.

13. On the 4th of May the United States ship *Ossipee* anchored off Shikotan Island, and there, after an armed boat came alongside the *Arctic* in command of Lieutenant Sewell, who asked your petitioner whether Paymaster Watkins, a deserter from the *Ossipee*, was on board the *Arctic*, to which question your petitioner replied in the negative. Your petitioner was then without further parley taken on board the *Ossipee* and questioned by Captain McGlensy, the commander of that vessel.

14. In reply to Captain McGlensy your petitioner informed him that a passenger who gave the name of Gordon had joined the *Arctic* at Kaneda Bay; he described the appearance of the said Gordon to the best of his ability, and informed Captain McGlensy of all the particulars above set out, concealing nothing.

15. Captain McGlensy then produced a photograph of a group of officers and asked your petitioner whether he recognised his passenger in that group; whereupon your petitioner pointed to the photograph of Paymaster Watkins.

16. Paymaster Watkins was arrested on the Island of Shikotan, and your petitioner was taken out of his ship and conveyed to Yokohama by the *Ossipee* and handed over to the Consul-General of the United States.

17. Up to this time your petitioner had never heard of Paymaster Watkins; had no knowledge whatever of his intention to desert, and did not even know the name of the *Ossipee*; neither had anything happened to arouse his suspicions or to lead him to believe that his passenger was other than he pretended to be, namely, a Mr. Gordon who was taking a passage for the pleasure of the sport of other-hunting.

18. Your petitioner subsequently ascertained that he was so arrested and conveyed to Yokohama as aforesaid without any charge having been preferred against him and by virtue of a warrant issued in blank by the Consul-General of the United States, and in which your petitioner's name was subsequently inserted by order of Captain McGlensy.

19. On arrival in Yokohama, Mr. McCance, the keeper of the United States gaol at Yokohama, was instructed by Consul-General Green to make complaint against your petitioner charging him with aiding and assisting and concealing him knowing him to be a deserter.

20. Thereupon your petitioner was sent for and questioned by the United States Consul-General, whose questions he answered frankly and honestly and to whom he gave all the information above set out. But the Consul-General did not believe your petitioner and imputed to him a knowledge of certain persons on shore whom the Consul-General suspected of having planned and carried out the desertion of Paymaster Watkins, and whom he was desirous of punishing. Your petitioner protested that he had given all the information in his possession and that the only two persons whom he knew in the matter were Miner and Crocker aforesaid. The Consul-General then said that if your petitioner would give up the names of his principals he would be released, otherwise it would be the worse for him, as he would have to go back to gaol, take his trial and submit to be punished instead of his principals.

21. Your petitioner again protested, as the fact was and is, that he had no principals other than Miner and that until his arrest he had no knowledge of Paymaster Watkins or his intention to desert from the *Ossipee*.

22. Thereafter your petitioner was put upon his trial for aiding and assisting Paymaster Watkins to desert, knowing him to be a deserter. The Consul-General aforesaid presided at the trial, being assisted by two associates; found your petitioner

guilty, and sentenced him to six months' imprisonment and to pay a fine of \$2,000.

23. Your petitioner took exception, among other things, to the jurisdiction of the Court to try and punish a subject of the German Empire, and contended that the evidence adduced at the trial was not sufficient to convict him; for which and for other reasons appearing on the record he applied for a new trial, but his application was refused by the Consul-General.

24. Your petitioner then appealed to the United States Ministerial Court at Tōkyō against the refusal of the Court below to give him a new trial, but the Ministerial Court decided that it had no jurisdiction in the premises, as the judgment of the Court below, whether right or wrong, was made final by law.

25. Your petitioner humbly submits that he is undergoing punishment at the hands of a Court having no jurisdiction over him, for an offence of which he is innocent and of which he was not proved to be guilty.

26. Your petitioner is advised by his Counsel, and verily believes, that there is no remedy for the injustice complained of other than an appeal to the President of the United States for a pardon.

27. Your petitioner therefore prays that the prerogative of pardon may be extended to him by the President of the United States.

And your petitioner will ever pray, &c.

(Signed) PETER C. FULLERT,

Dated at the United States Consular Gaol at Yokohama, Japan, this 13th day of September 1886.

It is humbly conceived that the foregoing is a fit and proper case for the exercise of the prerogative of pardon.

(Signed) F. LOWDER,

Counsel for the prisoner P. C. Fullert.

The Consul-General suggested that the name of Mr. Green should be inserted after the words "Consul General" in the petition.

Mr. Lowder said he would endeavour to make that addition before the petition left. With this petition, of course, would go forward the record of the whole proceedings from the commencement to the end, and in order to bring out all the points upon which he relied for a reversal of the judgment of this Court it would be necessary for him to go over arguments which he had addressed to this Court, and very recently to the Ministerial Court, at great length; but unless his Honour wished to go over those arguments he would take it for granted that the Consul-General had read the record and had in mind the points on which his arguments were based. The points were contained in the statement and affidavit upon which the new trial was originally asked for in this Court. In this case it was necessary to prepare not only a statement but also an affidavit and in that statement would be found all the points upon which he relied in asking for a new trial, and which would be relied upon in support of the petition to the President of the United States. The statement was this:—

(1.) The evidence for the prosecution was insufficient to justify the judgment. The prisoner will refer to the whole evidence for the prosecution and to the evidence for the defence, for the purpose of showing, first that the evidence for the prosecution was insufficient to support the onus of the proof; secondly, that it was insufficient to rebut the presumption of innocence; thirdly, it should have left so strong a doubt on the minds of the Court that the prisoner was improperly convicted; fourthly, that the damages would therefore appear to have been given under the influence of prejudice.

(2.) Error in law occurring at the trial and excepted to at the time.

The following errors will be relied upon:—

(1.) That P. C. Fullert was improperly put upon his trial, he having been already "in jeopardy" for the same offence. The evidence to be relied upon in support hereof will be the judgment of the Court, dated 17th May, 1886, together with the original charge against Fullert, on which trial judgment was based.

(2.) That P. C. Fullert, being a German, was not subject to the jurisdiction of the Court. The evidence to be relied on in support hereof will be that part of the decision of the judge of the Court on motion made in Court on the 18th May for the discharge of the accused, which states:—"Had the accused taken refuge in his own Consulate, grave questions of international law would have arisen." Also the evidence of Fullert himself, where he alleges himself to be a German, and the statement of the Judge of the Court that he had communicated with the German Consulate asking for evidence of the nationality of the accused, &c.

(3.) That a certain advertisement contained in a number of the *Japan Herald* was improperly admitted as evidence. Mr. Pina's evidence will be relied on; also that of Mr. Weiller, and reference will be made to the arguments of Counsel and the decision of the Court thereon.

(4.) That P. C. Fullert was charged as a seaman of the United States, whereas there was not sufficient evidence in law to show that he was so at the time of committing the alleged offence. The evidence of Mr. Seidmore will be relied upon, as also exhibits Nos. 3 and 4.

(5.) That P. C. Fullert was charged with aiding and assisting Watkins "in deserting" from the U.S.S. *Ossipee*

on the 23rd day of April, 1886. Reference will be made to the evidence of Commander McGlensy and of Lieutenant Sewell, also to that of the boatmen, and of the accused, and it will be contended that it was an error in law to convict the accused of aiding and assisting Watkins to desert on the 23rd April in view of the evidence which showed Watkins to have already deserted on the 22nd April. (6.) That the judgment of the Court does not specifically find the facts necessary to support the charge.

F. LOWDER,  
Counsel for P. C. Fullert.

The affidavit was:—

In the matter of the trial of the action criminal No. 27 intitled "The People of the United States against P. C. Fullert," which took place on the 18th day of May last, and following days in the United States Consular General Court at Yokohama.

I, John Frederic Lowder, a British subject, having my Chambers at No. 28, Yokohama, barrister-at-law, make oath and say as follows:—

(1.) I acted as counsel for P. C. Fullert at the trial aforesaid.

(2.) Warren Green, Esquire, Consul-General of the United States, presided at the said trial.

(3.) Since then, and since giving notice of my intention to move for a new trial, I have been informed by the said P. C. Fullert, and verily believe, that prior to the said trial, and while Fullert was under arrest and detention in the United States Consular gaol on the charge on which he was tried at the said trial, the said Warren Green held a conversation with Fullert, in the course of which he, the said Warren Green, expressed a decided conviction that Fullert was guilty of the offence charged and that if he would not give up the names of the person or persons who were the principals in aiding Watkins to desert it would be the worse for him, the said Fullert, and he would have to suffer for them.

(4.) I further declare upon oath and say that since the trial aforesaid I have discovered evidence material for the said P. C. Fullert, and which he could not with reasonable diligence have discovered and produced at the trial, to wit that on the evening of the 22nd day of April last Paymaster Watkins did not come ashore and did not take a boat from the shore as alleged by the witness Kojima Tokijiro; and further that said Paymaster Watkins is now undergoing trial by Court-martial on a charge for that he did on or about the 22nd day of April, 1886, desert from the *Ossipee* and from the United States naval service, and did remain absent as a deserter therefrom till the 5th day of May, 1886.

(5.) The trial took place without a jury.

Sworn at Kanagawa this 15th day of June before me

WARREN GREEN,  
U.S. Consul-General.

Among those points which, as he said before, he had already argued at great length, there were many, appearing on the face of the record itself, which certainly would induce any Court of Error to review the proceedings in the Court below, and he should submit, therefore, on that short statement of the facts of the case, that if this Court had jurisdiction to exercise the power he was now invoking on behalf of the prisoner there was ample in the case to show that it was one of those cases in which that power ought to be exercised. This principle was laid down many years ago in Courts in England. After quoting sections 251 and 252 of Bishop on Criminal Procedure, Vol. 1, the headings of which are respectively "When and before whom bail may be given" and "In what cases? guilt doubtful," Mr. Lowder went on to say that these clauses evidently referred to the exercise of the discretion of the judge before the defendant had been convicted and before sentence had been passed. But he would now argue this point: that notwithstanding that Fullert had been convicted and sentenced, nevertheless this Court had power to grant this motion, namely by staying proceedings and by temporarily releasing the prisoner from custody until the result of this petition to the President by way of appeal had been notified to the Court.

The Consul-General asked Mr. Lowder to explain what sort of proceedings he meant when he spoke of a stay of proceedings. There was nothing going in Court with regard to Fullert's case, that he knew of. What proceedings was he to stay?

Mr. Lowder said he took that expression from section 4,095 of the Revised Statutes which had reference to a stay of proceedings by the Minister in China or Japan. That was where he got the expression, and but for this section he should not have made use of it. He had meant to refer to this section later on but he might as well do so now. He would do so for the purpose of showing that the application, although perhaps novel in this Court and in Yokohama, was certainly by no means unknown to the law; that it was an application which he thought he was right in saying was frequently made in the United States Courts as it certainly was in the Courts of Great Britain in cases of misdemeanours, to which he was now referring, and frequently granted. And this section showed that certainly in a case where a Minister was exercising either original or appellate criminal jurisdiction he might exercise the power Counsel was now invoking. Further as showing that the principle was not unknown even to this particular law or charter which gave jurisdiction to these Courts, he presumed that the expression "stay of proceedings" meant a re-

lease from the sentence or a stay of proceedings in carrying out the sentence, whether already partially carried out or not—that the proceedings to carry out the unexpired portion—or if the punishment had not commenced, then that the proceedings to punish the prisoner be stayed. It would be seen that in the motion he was now arguing on he asked for a stay of proceedings and a temporary release from custody on providing such bail or other security as the justice of the case might demand; therefore admitting that even although the judge might be inclined to grant the prayer of the motion nevertheless it was only fair and proper and right that he should add to the decree or order a further decree providing that the prisoner should provide such other security as the Court might think fit. It was rather interesting to investigate the question of where this power of releasing a convicted prisoner originated—whether, that was to say, it was a power which could not be exercised by this or any other Court unless it be a power expressly given to the Court by statute, or whether it took its origin in the common law, whether indeed it may not be said to be the exercise of a common law discretion. He hoped to be able to show the Court that it was in its origin a common law discretion, and that although several states in the United States had legislated, and the British Parliament also had legislated, with regard to this, conferring a specific power upon the Courts, this legislation was considered expedient in order to give expression to the common law, and that it did not create a new right or privilege which had not existed many years before. If he was successful in that; if he was successful further in showing that this Court, in the absence of express legislation, ought to be governed by the principle of the common law, then he should ask his Honour to agree with him that jurisdiction would be rightly exercised in this particular case. That this Court had, unless under certain circumstances, to be governed by the common law would, he thought, be manifest from the perusal of section 4,086 of the Revised Statutes. In a Court, especially a Court such as this, of somewhat limited jurisdiction, when a question of jurisdiction arose they must in the first place look to the charter or law constituting it and under which it exercised its functions. Consequently in all questions of this nature the charter to be looked to was the original act of 1860, the further act of 1870, and the Statutes Revised, which embodied these acts under the title of "Foreign Relations." But though these acts give a Court certain jurisdictional powers and point out—in some instances more or less clearly, and in some others ambiguously,—what the jurisdiction of these Courts is, it was never intended that every power to be exercised by this Court should be found set out in detail in any one section, otherwise this section 4,086 would certainly never have been inserted. If it was found then that the power he was now invoking was not conferred upon this Court in so many words they had to go back to 4,086 and that again brought them back to this, that this Court, in the absence of express legislation, was to be governed by the common law, and this in turn brought him back to what the common law was on the point. The first case that he had been able to find was that of *Rex v. Saltash*, 2 Showers, 93, 1078 to 1095, cited in Bishop on Criminal Procedure note 1, section 255. The next case cited was Anonymous, 3 Sal. 58, from note 2, section 253; these reports extended from 1680 to 1705. The third case was *Rex v. Reader*, 1 Strange, 1; Strange's reports extending from 1716 to 1740. Before arguing on these cases he read the text of the work from which he was citing—sections 253 and 254—in which the broad proposition was laid down that the tendency of the later English doctrine in cases of misdemeanour was in the direction that if it was probable that the objections would be sustained the Courts could accept bail. But the American Courts went farther than that—

The Consul-General said he remembered one of the American cases referred to by Mr. Lowder and two similar cases had happened recently in which similar applications were made.

Mr. Lowder, continuing, said in the case at the bar there was an affidavit showing that the petition for pardon had been duly perfected and was to be sent forward by the Minister of the United States. Unfortunately there was no Court except this to which he could make this application because he could not get any Court to hear him, and if the power were not in this Court then it would follow that in all such cases, however manifestly unjust the case may be, there was no jurisdiction by means of which to afford justice. It was for that reason that he had cited at the commencement the 251st section.

The Consul-General said he had always understood bail to be some security to be given that the party would render himself up in execution and therefore the bail was generally given before the

Court of First Instance and meant that the prisoner would appear before that Court and render himself in execution of whatever the judgment might be, or when an appeal was taken to a higher Court, and then meaning that he would render himself amenable to whatever judgment might be given there. Now, in this case there was no appeal—that had been decided—and he did not know that there was any case in which the Court could give bail when there was simply an appeal to the Queen or the President.

Mr. Lowder said he had not been able to find any such case; he did not suppose a case had ever arisen. Generally the pardoning power of the executive is invoked in a case where the judge trying the case imagines or certifies that there has been a miscarriage of justice, but the appeal then went immediately from the Judge to the Secretary of State and was at once decided, in the course of a day or two. Therefore no application of this kind, so far as his researches went, had ever been made pending a petition for pardon. It had not been made, he submitted, because the occasion for it had never arisen; but clearly in the case of this Court, situated as it is out here, and with the pardoning power many thousands of miles away, if the Court could see that the power is one that is exercised by it he thought his Honour would not hesitate to say that, following that principle and if the justice of the case required it, the principle would be put into operation in favour of the prisoner rather than that he should be detained in custody when he should not be so detained, and when it was an injustice so to detain him.

The Consul-General said it was unfortunate that there was no appeal from the judgment of this Court, but in a great many cases in the United States appeals were not permitted. The judgment in this case was final by the statute.

Mr. Lowder said but for the judgment being final by the statute there would have been a writ of error. The only remedy now, however, was by a petition for pardon to the President, and that petition really assumed the form of an appeal from the conviction of this Court. If his Honour would look upon it in that light and would then apply to it the principle decided in the case he had cited he thought the Court would be able to come to the conclusion that the prisoner in this case should be released. No harm could result, he submitted, because the Court would naturally take ample security for the rendition of the prisoner at the proper time, when in the event of the pardon not being granted he could be put back into prison for the rest of his term of imprisonment.

The Consul-General here made an observation based upon what he had noticed in the English statutes and also, he was sure, in the statutes of the United States. Suppose, he said, a prisoner were sentenced to imprisonment for a year, and, having appealed, were released on bail at the end of six months, if the judgment of the lower Court were confirmed and the prisoner were again arrested he would be credited with the first six months. Suppose his Honour, however, were to discharge Fullert; that no reply were received from the United States in answer to the petition for three months, and at the end of that time he were to issue a warrant for the arrest of Fullert, he could have no judgment to show for this second arrest. Fullert might say that his punishment was under the original judgment, which stood unrevoked, unchanged and unaltered, and that judgment expired on 1st November while now it was the 1st of December. If he took that position the only record his Honour could turn to was that he had agreed with the prisoner to let him out.

Mr. Lowder said there was the security of the bailor. And besides it would be found the judgment mentioned no date of commencement or termination: it was simply imprisonment for six months. As far back as 1716 to 1740, long before there was any statute in England or the United States, the right was exercised as a common law right, in support of which he pointed to the case of *Rex v. Reader*, already cited. He should, taking all considerations into account, ask the Consul-General to make up his mind that he had the power to exercise this authority; that was to say, grant the prayer of the application and what was called in the act a stay of proceedings.

The Consul-General remarked that it seemed to him as if there should be a power of superseding to await the action of the President. It was clear, too, that as in the English statutes the Minister should have the power of pardon.

Mr. Lowder said the power to be invoked would come under the head of what Blackstone called falsifying or reversing the judgment.

In the course of further discussion, The Consul-General remarked that the judgment found Fullert to be a citizen of the United States.

Mr. Lowder said no, it found him to be an American seaman. That was one of his strongest points: that in a Court of unlimited jurisdiction everything necessary to give jurisdiction should be stated in the charge and found in the judgment. The charge stated him to be a seaman of the United States, while the evidence showed him to be employed as master of the vessel, which simply got papers from the Consulate.

The Court then adjourned.

## A RUSSIAN PRINCE MALIGNED.

TO THE EDITOR OF THE "SAN FRANCISCO CHRONICLE."

SIR,—In the *Japan Daily Mail* of July 24th, 1886, the following article appeared:—

"A story is current which shows that even Americans can be too confiding. The scene is laid in Vladivostok, whither an enterprising citizen of the United States made his way some months ago. At Vladivostok officialdom reigns supreme. Men must do exactly as they are ordered by the police or accept the consequences, which are pleasantly uncertain. Nevertheless there is room for enterprise. Those who manage to make themselves agreeable to the authorities do a roaring trade. One can understand that these conditions might tempt a speculative 'foreigner' with some command of coin. And one can understand, also, that under these conditions the patronage of an official of note might appear extravagantly valuable. This explains how the American got there, and also how he came to wish that he had stayed away. He found there a certain Russian Prince who wanted money and had many prospects to offer in exchange for it. The Amur is still undeveloped. The Prince promised sundry concessions in that region, and the American, leaving a partner behind him in Vladivostok, went home to procure \$70,000, which was sent out in hard cash, together with sundry vessels chartered for the 'development.' One thing more the Prince wanted—a somewhat difficult thing to procure, being nothing less than a steam launch capable of running thirteen knots an hour. There could be no straining at trifles. The launch was ordered and in due time shipped for its destination. Meanwhile the Prince had suggested to the partner that direct inspection of the region to be developed might be desirable, and the latter, acquiescing, set out upon his travels. While he was absent a Japanese steamer appeared upon the scene, and the Prince shipped himself quietly away. Shortly after his disappearance the original American arrived, and would have been in consternation had he not had in his possession sundry documents duly signed by the Prince. These were carried forthwith to the Governor, but, alas! people that deal with Princes are in the vicinity of danger. His highness' signature, though as an autograph very pretty and very distinguished, was for legal purposes quite valueless. It is not improbable that a thirteen-knot steam launch may be offered for sale in these markets ere long."

As I am the "confiding American" referred to, and as the Russian prince named is no less a person than Prince Ferdinand Wittgenstein, Major-General in the Russian army and Aide-de-Camp to the Emperor, as well as a member of the Imperial family, I deem it a duty to the Prince as well as to myself (as I am well known to be the holder and principal owner of the privileges), to state that the respectable journal has been misinformed, and in its leading columns has given place to a Münchhausen story.

The Prince is visiting Japan for his health. He has not been the author nor am I the victim, of any swindle. I beg leave to state that the valuable privileges I own were officially granted to me under contract and by special dispatch of his Excellency Governor-General Baron Kotz, Governor of Pacific Siberia, registered at the Russian Consulate in this city, and furnished me under the royal Consular seal by A. E. Olarofsky, his Imperial Russian Majesty's Consul-General here, said dispatch, partly in cipher, being No. 93, royal Siberian archives, and No. 195 series of San Francisco, 1885, dated December 23, 1885.

If a royal prince is to be called a swindler, I hope the estimable journal spoken of will be careful to verify the facts, and not use by implication the name of a man who deeply respects the princely gentleman referred to.

RICHARD H. SAYAGE.

Palace Hotel, S. F., August 23, 1886.

## LATEST TELEGRAM.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, September 19th.

For Europe, via Hongkong, per P. & O. Co.	Tuesday, Sept. 28th.
For Shanghai, Kobe, and Nagasaki, per N. Y. K.	Tuesday, Sept. 28th.
For America, per P. M. Co.	Saturday, Oct. 2nd.

## TIME TABLES AND STEAMERS.

## YOKOHAMA-TOKYO RAILWAY.

TRAINS LEAVE YOKOHAMA Station at 6.35, 8.00, 8.50,\* 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50,\* 6.00, 7.15, 8.30, 9.45, and 11.00† p.m.

TRAINS LEAVE TOKYO (Shimbashi) at 6.35, 8.00, 9.15,\* 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50,\* 6.00, 7.15, 8.30, 9.45, and 11.00† p.m.

FARES—First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90.

\* Those marked with \* run through without stopping at Tsurumi, Kawasaki and Utsunomiya Stations. Those marked † are the same as above with the exception of stopping at Kawasaki Station.

## TOKYO-MAYEBASHI RAILWAY.

TRAINS LEAVE TOKYO (Uyeno) at 5.25 and 9.25 a.m. and 12.25 and 4.50 p.m.; and MAYEBASHI at 5.25 a.m. and 12.25 and 4.50 p.m.

FARES—First-class (Separate Compartment), yen 1.80; Second-class, yen 2.28; Third-class, yen 1.14.

## TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI at 6.50 and 9.55 a.m., and 1.00 and 4.10 p.m.; and YOKOKAWA at 8.25 and 11.30 a.m., and 2.40 and 5.45 p.m.

## TOKYO-UTSUNOMIYA RAILWAY.

TRAINS LEAVE TOKYO (Uyeno) at 9.25 a.m. and 4.50 p.m.; and UTSUNOMIYA at 9.30 and 4.55 p.m.

FARES—First-class, yen 3.50; Second-class, yen 2.10; Third-class, yen 1.05.

## SHIMBASHI, SHINAGAWA, AND AKABANE JUNCTION.

TRAINS LEAVE SHINAGAWA at 8.49 and 11.49 a.m., and 2.44 and 6.29 p.m.; and AKABANE at 9.55 a.m., and 12.50, 4.05, and 8.35 p.m.

FARES—First-class, yen 70; Second-class, yen 46; Third-class, yen 23.

## KOBE-OTSU RAILWAY.

TRAINS LEAVE KOBE (up) at 5.55, 7.55, 9.55, and 11.55 a.m.; and 1.55, 3.55, 5.55, 7.55, and 9.55 p.m.

TRAINS LEAVE OSAKA (up) at 4.45, 7.6, 9.6, and 11.6 a.m.; and 1.6, 3.6, 5.6, 7.6, and 9.6 p.m.

TRAINS LEAVE KYOTO (up) at 6.46, 8.46, and 10.46 a.m.; and 12.46, 2.46, 4.46, 6.46, and 8.46 p.m.

TRAINS LEAVE OTSU (down) at 5.45, 7.45, 9.45, and 11.45 a.m.; and 1.45, 3.45, 5.45, and 7.45 p.m.

TRAINS LEAVE KYOTO (down) at 6.45, 8.45, and 10.45 a.m.; and 12.45, 2.45, 4.45, 6.45, and 8.45 p.m.

TRAINS LEAVE OSAKA (down) at 6.25, 8.25, and 10.25 a.m.; and 12.25, 2.25, 4.25, 6.25, 8.25, and 10.25 p.m.

FARES—Kobe to Osaka: First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90. Kobe to Kyoto: First Single, yen 2.25; Second do., yen 1.40; First Return, yen 3.55; Second do., yen 2.10. Kobe to Otsu: First Single, yen 2.85; Second do., yen 1.70; First Return, yen 4.30; Second do., yen 2.55.

## OCEAN AND COASTING STEAMERS.

Steamships are regularly despatched from the Port of Yokohama for the following destinations:—

FOR EUROPE—The P. & O. Company's steamer sails fortnightly on Tuesday, via Inland Sea Ports, making connection with the English mail at Hongkong, for Marseilles and Plymouth. The Messageries Maritimes Co.'s steamer sails fortnightly on Sunday, carries the French mail, and makes connection at Hongkong with the mail-boat for Marseilles.

FOR SAN FRANCISCO—The steamers of the O. & O. Co. and the P. M. Co. sail hence, approximately, every 10 days.

## YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatoba daily at 8.30 a.m., and 12.00 m., and 4.15 p.m.; and leave Yokosuka at 6.30 and 11.00 a.m., and 4.00 p.m.—Fare, 20 sen.

## LATEST SHIPPING.

## ARRIVALS.

*Tokio Maru*, Japanese steamer, 1,350, Wynn, 18th September,—Kobe 17th September, Shanghai and ports, General.—Nippon Yusen Kaisha.

*Belgie*, British steamer, 2,695, W. H. Walker, 20th September,—Hongkong 14th September, Mails and General.—O. & O. S.S. Co.

*Stettin*, German steamer, 1,815, Warnkers, 19th September,—Hongkong 11th September, General.—Ahrens & Co.

*Hiroshima Maru*, Japanese steamer, 1,862, G. S. Burdis, 20th September,—Kobe 18th September, General.—Nippon Yusen Kaisha.

*Thibet*, British steamer, 1,671, W. D. Mudie, 20th September,—Hongkong 11th September via Nagasaki and Kobe, General.—P. & O. S. N. Co.

*Wakanoura Maru*, Japanese steamer, 1,342, A. Christiansen, 20th September,—Hakodate 16th September, General.—Nippon Yusen Kaisha.

*Kiorio Maru*, Japanese steamer, 236, Eguchi, 21st September,—Handa 20th September, General.—Nippon Yusen Kaisha.

*Niigata Maru*, Japanese steamer, 1,096, Drummond, 21st September,—Kobe 20th September, General.—Nippon Yusen Kaisha.

*Tokai Maru*, Japanese steamer, 634, Fukui, 21st September,—Yokkaichi 20th September, General.—Nippon Yusen Kaisha.

*Chitose Maru*, Japanese steamer 356, Kaya, 22nd September,—Handa 21st September, General.—Nippon Yusen Kaisha.

*Toyoshima Maru*, Japanese steamer, 596, Tokito, 22nd September,—Yokkaichi 21st September, General.—Nippon Yusen Kaisha.

*Fearless*, German cutter, 18, L. Gierow, 22nd September,—North Pacific Islands 19th September, Fur and 33 Seals.—Captain.

*Yamashiro Maru*, Japanese steamer, 1,512, Mahlmann, 22nd September,—Kobe 21st September, General.—Nippon Yusen Kaisha.

*Eudora*, British bark, 1,142, Fulton, 23rd September,—Kobe 19th September, General.—Frazar & Co.

*City of Sydney*, American steamer, 3,400, D. E. Fricke, 23rd September,—San Francisco 4th September, Mails and General.—P. M. S.S. Co.

*Mino Maru*, Japanese steamer, 550, Pender, 23rd September,—Yokkaichi 22nd September, General.—Nippon Yusen Kaisha.

*Omi Maru*, Japanese steamer, 1,525, Swain, 23rd September,—Hakodate 21st September, General.—Nippon Yusen Kaisha.

*Seirio Maru*, Japanese steamer, 478, Tamura, 24th September,—Sendai 22nd September, General.—Nippon Yusen Kaisha.

*Yokohama Maru*, Japanese steamer, 1,298, Haswell, 24th September,—Shanghai and ports, Mails and General.—Nippon Yusen Kaisha.

*Hakodate Maru*, Japanese steamer, 346, Inouye, 24th September,—Handa 23rd September, General.—Nippon Yusen Kaisha.

*Nagato Maru*, Japanese steamer, 1,160, Young, 25th September,—Kobe 24th September, General.—Nippon Yusen Kaisha.

*Suruga Maru*, Japanese steamer, 436, Kuga, 25th September,—Yokkaichi 23rd September, General.—Nippon Yusen Kaisha.

## DEPARTURES.

*Hampshire*, British steamer, 1,700, Kerruish, 19th September,—Kobe, General.—Smith, Baker & Co.

*Menzaleh*, French steamer, 1,276, C. Benois, 19th September,—Hongkong, Mails and General.—Messageries Maritimes Co.

*Stettin*, German steamer, 1,815, Warnkers, 20th September,—Kobe, Mails and General.—Ahrens & Co.

*Tokio Maru*, Japanese steamer, 1,350, Wynn, 21st September,—Shanghai and ports, Mails and General.—Nippon Yusen Kaisha.

*Wakanoura Maru*, Japanese steamer, 1,342, A. F. Christiansen, 21st September,—Yokosuka, Ballast.—Nippon Yusen Kaisha.

*Yetchu Maru*, Japanese steamer, 684, Thompson, 21st September,—Otaru, General.—Nippon Yusen Kaisha.

*Hiroshima Maru*, Japanese steamer, 1,862, G. S. Burdis, 22nd September,—Kobe, Mails and General.—Nippon Yusen Kaisha.

*Tokai Maru*, Japanese steamer, 634, Fukui, 22nd September,—Yokkaichi, General.—Nippon Yusen Kaisha.

*Belgie*, British steamer, 2,695, W. H. Walker, 23rd September,—San Francisco, Mails and General.—O. & O. S.S. Co.

*Chitose Maru*, Japanese steamer, 356, Kaya, 23rd September,—Yokkaichi, General.—Nippon Yusen Kaisha.

*Flintshire*, British steamer, 1,017, Doncaster, 23rd September.—Kobe, General.—Adamson, Bell & Co.

*Niigata Maru*, Japanese steamer, 1,096, Drummond, 23rd September.—Hakodate, Mails and General.—Nippon Yusen Kaisha.

*Toyoshima Maru*, Japanese steamer, 596, Tokito, 23rd September.—Yokkaichi, General.—Nippon Yusen Kaisha.

*Mino Maru*, Japanese steamer, 550, Pender, 24th September.—Yokkaichi, General.—Nippon Yusen Kaisha.

*Omi Maru*, Japanese steamer, 1,525, Swain, 24th September.—Kobe, Mails and General.—Nippon Yusen Kaisha.

*Sagami Maru*, Japanese steamer, 1,182, Kenderdine, 24th September.—Sakata, General.—Nippon Yusen Kaisha.

## PASSENGERS.

## ARRIVED.

Per British steamer *Belgie*, from Hongkong:—Messrs. H. C. Maclean, E. Bancal, and Villiers in cabin.

Per Japanese steamer *Tokio Maru*, from Shanghai and ports:—Messrs. Howard Cortland, Peter C. Walker, H. S. Bateman, M. Adler, Hara, Matsuda Kusakari, and Otakasaka in cabin; Messrs. G. E. Hay, Hawazu, and Shiraka in second class; and 60 Japanese in steerage. For Bremen: Mr. A. Krauss in cabin.

Per British steamer *Thibet*, from Hongkong:—Major Harrison, Mr. and Mrs. Hogart, Surgeon R. H. Como, Messrs. Caldwell, C. Mooney, Midzutan, Lo Ham-sing, Ah Lee, Mugford, Hirao, and J. Futasuga in cabin; and 26 Japanese in steerage.

Per Japanese steamer *Yamashiro Maru*, from Kobe:—Rev. and Mrs. McKim, Miss Hellyer, Mr. and Mrs. Burmeister, Mr. and Mrs. Saiki, Mr. and Mrs. Obana, Mr. Kataoka and son, Messrs. F. W. Hellyer, C. W. Fearon, Saiki, Hasegawa, Hattori, Haraguchi, Kobayashi, Kanamaru, and Kotow in cabin; 3 Japanese in second class; and 203 Japanese in steerage.

Per American steamer *City of Sydney*, from San Francisco:—Marquis and Marchioness Hachisuka, companion and servant, Mr. and Mrs. F. Abegg, Rev. and Mrs. A. Oltman, Rev. and Mrs. F. A. Cassidy, Miss Mary Prince, Miss Wintermuth, Rev. J. W. Saunby, Messrs. E. W. Fisher, A. Kerr, H. S. Harton, Stewart M. Brice, F. Kirino, L. G. McCormack, and A. Ruhl in cabin.

Per Japanese steamer *Yokohama Maru*, from Shanghai and ports:—Mrs. Y. Duer, infant and amah, Mrs. Jas. Simpson and child, Mrs. G. I. Ross, Messrs. Kirkwood, Masfen, H. E. Reynell, Doebbling, Bois, J. Riach, J. S. Southey, Mori, Kuki, Nagayama, Shigehisa, and Deura in cabin; 5 Japanese in second class; and 2 Europeans, 105 Japanese, and 2 Chinese in steerage.

## DEPARTED.

Per French steamer *Menzelsh*, for Hongkong:—Mr. John Carroll and family, Messrs. W. Ryder, Dent, E. Smith, Yoshima, James Young, Edward Young, Ganaguer, Bonnelle, Le Bouch, Fahle, Girand, Gourens, Granet, Destrez, Lebon, Dubois, Theleppo Agresti, and Shaku Komen in cabin.

Per German steamer *Stettin*, for London via ports:—Mr. and Mrs. Horace Fletcher and child, Mrs. A. J. Marsh, Mr. H. Ahrens and servant, Miss M. Schoeck, Messrs. A. Taoge, and A. C. Bloxham in cabin; and 2 Europeans and 13 Chinese in steerage.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Captain and Mrs. Bunbury, Miss Matsuko, Count Matsura, Rev. Mr. George, Messrs. H. W. Denison, T. Yoshikawa, R. Moto, S. Tsuchiya, Y. Yasuoka, S. Shibuya, K. Aoki, N. Nakayama, and K. Hashiguchi in cabin; Mrs. T. Katsu, Miss F. Nakai, Miss Yamawaki, Messrs. T. Yamawaki, N. Ishii, N. Najima, T. Inouye, and T. Furukawa in second class; and 77 Japanese in steerage.

Per British steamer *Belgie*, for San Francisco:—Prince Louis Napoleon, Mrs. McKim, three children, and Japanese servant, Captain W. H. Parker, Mrs. Alex. Center, Master Alex. Center, Messrs. M. Levy, G. W. Marriott, G. Goward, M. Marians, John Middleton, M. Michella and servant, Jas. Russell and servant, G. S. Davis, A. G. Angier, M. Alsagoff and servant, Ed. Almeida, and N. R. O'Connor in cabin.

## CARGOES.

Per French steamer *Menzelsh*,—Silk, for France 86 bales.

Per German steamer *Stettin*, for London via ports:—21 bales Raw Silk for London; 40 bales Waste Silk for Marseilles; 7 bales Waste Silk for London.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Treasure, \$9,500.

Per British steamer *Belgie*, for San Francisco:—

Per American steamer *City of Sydney*, from San Francisco:—29 packages U.S. mail, and general merchandise.

Per Japanese steamer *Yokohama Maru*, from Shanghai and ports:—Treasure, \$200,000.00.

## REPORTS.

The German steamer *Stettin*, Captain F. Warners, reports:—Left Hongkong September 11th, at 1 p.m. and first 3 days experienced light easterly wind and cloudy sky; midnight on 15th wind freshened from S.E. and blew a strong gale with heavy squalls of rain and a high confused sea; wind shifted to S.W. and moderated; on the 16th, at 8 a.m. wind shifted to N.W. and increased to a strong gale with heavy rain and thick weather with heavy cross sea; ship shipping heavy seas fore and aft; midnight on the 16th, gale decreasing and wind shifted to south and blew a strong breeze with a heavy cross sea and cloudy sky and continued so to Rock Island; and from thence to port strong S.W. wind and clear weather. Arrived in Yokohama, September 18th, at 10.30 p.m.

The British steamer *Belgie*, Captain Walker, reports:—Left Hongkong, September 14th, at 3 p.m. and experienced light easterly and N.E. winds and smooth sea throughout the passage. Arrived in Yokohama, September 18th, midnight.

The Japanese steamer *Wakanoura Maru*, Capt. Christiansen, reports:—Left Hakodate the 17th September, 4.45 p.m. with light S.E. wind and cloudy weather, from Nuro Saki to Kinkasan moderate gale from south with rough head sea, light S.W. and N.E. wind and fine clear weather to port. Arrived the 19th September at 8.45 p.m.

The Japanese steamer *Hiroshima Maru*, Captain Burdis, reports:—Left Kobe, September 18th, at 6 p.m. and experienced light variable winds from S.W. to North and fine weather throughout the passage. Arrived in Yokohama at 4 a.m. on 20th.

The Japanese steamer *Niigata Maru*, Captain Drummond, reports:—Left Kobe the 20th September, at 10 a.m. and experienced overcast and cloudy weather, and north-easterly winds to Ichiyasaki; thence variable winds round Oshima till midnight; thence fresh breeze commenced to blow from east, and at daylight it became much stronger with high head sea to Rock Island; thence wind shifted to N.E., cloudy and threatening weather attended with showers. Arrived at Yokohama the 21st September, at 6.45 p.m. Passed three steamers—*Oxfordshire*, French mail boat and *Anjer Head* in the vicinity of Hinomisaki.

The Japanese steamer *Yamashiro Maru*, Captain Mahlmann, reports:—Left Kobe the 21st September, at 10 a.m. and experienced light easterly winds and smooth sea to Omisaki; thence to Sagami strong S.S.W. winds and high sea with heavy rain; and thence to port calm and overcast. Arrived at Yokohama the 22nd September, at 5 p.m.

The American steamer *City of Sydney*, Captain D. E. Friele, from San Francisco, reports moderate weather with variable winds.

The Japanese steamer *Omi Maru*, Captain Swain, reports:—Left Hakodate the 22nd September, at 8 a.m. and experienced fresh southerly winds and heavy rain during the first part, and the latter part fresh variable winds and overcast sky. Arrived at Oginohama the 23rd at 8 a.m. and left the same day, at 3 p.m. with light northerly winds, southerly swell, and light rains throughout. Arrived at Yokohama the 23rd September, at 4.30 p.m.

The Japanese steamer *Yokohama Maru*, Captain Haswell, reports:—Left Shanghai the 18th September, at 8 a.m. and experienced light northerly winds and fine weather. Arrived at Nagasaki the 19th, at 5.20 a.m., and left at 4.20 p.m. first part fresh easterly winds and latter part calm and overcast attended with light rain. Arrived at Kobe the 22nd, at 5 a.m., and left at 9.35 p.m. on the same day, light northerly winds to Omisaki; thence to port fresh N.E. winds and light rain. Arrived at Yokohama the 24th September, at 6 a.m.

## LATEST COMMERCIAL.

## IMPORTS.

Yarns and Plain Cottons have again been neglected and other textiles have been more or less dull, but dealers are hopeful that the advent of cooler weather with the diminution of Cholera in Tokyo may bring about the improvement that has been kept in anticipation for many weeks past. Transactions have been small; prices remain generally steady but nominal to a very great extent, whilst clearances have scarcely been satisfactory.

YARNS.—100 bales equally divided between English and Bombay form the sales for the week, and at present there are no signs of renewed activity.

COTTON PIECE GOODS.—150 pieces Velvet, 100 pieces Cotton Italians, 1,000 pieces Silesias, 1,000 Dyed Shirtings, 1,000 pieces Prints, and 1,500 dozen Printed Handkerchiefs are all the sales reported, Plain Cottons being utterly neglected.

WOOLLENS.—Sales comprise 2,000 pieces Mouseline de Laine, 1,000 pieces Italians, 300 pieces Cloth, 100 pieces Silk Satins, and 4,000 pairs Blankets.

## METALS.

More doing but at lower prices all round—the heavy arrivals from home and from China having had their effect.

IRON.—Business done at 10 cents reduction, holders being glad to accept these offers in face of recent arrivals and higher exchange.

WIRE NAILS.—Stocks are piling up and ordinary assortments are decidedly weaker. A fair amount of business at the reduction.

TIN PLATES.—Nominally the turn easier, but Stocks are not large.

	PER TON.
Flat Bars, 1 inch	\$2.60 to 2.65
Flat Bars, 1 1/2 inch	2.70 to 2.75
Round and square up to 1 1/2 inch	2.60 to 2.75
Nailrod, assorted	2.40 to 2.50
Nailrod, small size	2.60 to 2.70
Wire Nails, assorted	4.50 to 5.50
Tin Plates, per box	5.60 to 5.80
Pig Iron, No. 3	1.20 to 1.25

## KEROSENE.

At last we have to record a move. About 50,000 cases Devoe 115° have been sold at \$1.77 both "spot" and "futures." In addition to these purchases there have been damages sold at auction and the trade all round looks more promising. Deliveries continue on a good scale and present stock (including vessels unloading) is 370,000 cases.

	PER CASE.
Devoe	\$1.77 to 1.80
Comet	1.72 to 1.75
Stella	None

## SUGAR.

Business has been very small and the market is weak for all descriptions.

White, No. 5	4.00 to 4.10
Brown Formosa	4.00 to 4.05

EXPORTS.  
RAW SILK.

Our last issue was of the 17th instant; since that date we have had a fair amount of business passing, and Settlements for the week reach 345 piculs, divided thus:—*Hanks* 22 piculs, *Filatures* and *Reels* 300 piculs, *Kakada* 23 piculs. Besides the trade done by foreign houses, the Doshinsha has exported 70 bales by yesterday's mail for New York.

The steady demand for Europe has continued; but American buyers kept aloof until a couple of days ago, when they took in a considerable quantity of Silk, very little of which is yet weighed-up. Holders now show a little more disposition to be moving; they find that sterling exchange does not again drop to the very low quotations of last month, and are inclined to do business at some reduction upon recent values.

Arrivals continue upon a good scale, and there is now a fine assortment on offer from nearly all producing districts. The Stock-list gives a total of 8,500 piculs—principally *Filatures* and *Re-reels*, the staple from Oshu province not having come to hand very freely at present. Quotations for all kinds except *Hanks* show some reduction.

There have been three mail departures during the week: French mail 19th, German mail 20th, and American mail 23rd. The *Menzel* carried 80 bales for France; the *Stettin* 21 bales for London and the *Belgie* 253 bales for New York. Present export to all parts is now 3,620 piculs against 3,485 last year and 5,547 at same date in 1884.

*Hanks*.—Principal Settlements in *Hachioji* at \$570; there has been a lull for some days but at closing considerable transactions are reported as being under consideration.

*Filatures*.—Quite a sudden demand arose, and on the 21st several important parcels were taken into godown. These have not been definitely settled, but the wires are at work; and either weighing or rejection may be looked for in a few days. Among the figures mentioned are *Yone-dawa* \$800, *Hakuduru* \$740, *Koshu* \$710, \$700, \$600, with *Mino* and *Bishu* at \$680.

*Re-reels*.—Buyers are reported to be in treaty for several large parcels including *Tortoise* at \$600, *Satomi* \$670, with other *Yoshu* and *Bushu* kinds at \$660 and \$650.

*Kakada*.—Some few attempts at business, "Red Horse-head" being entered in the list at \$690 with a fragment of old staple at \$650.

In other *Oshu* sorts and *Taysam* kinds no transactions as yet.

## QUOTATIONS.—(NEW SILK.)

Export Tables, Raw Silk, to 24th Sept., 1886:—

	SEASON 1886-87.	1885-86.	1884-85.
Europe	1,304	612	2,925
America	2,303	2,618	3,072
Total	3,607	3,230	5,997
Settlements and Direct	3,620	3,485	5,547
Export from 1st July	4,050	3,650	6,700
Stock, 24th Sept.	8,500	6,500	5,300
Available supplies to date	12,550	10,150	12,000

## WASTE SILK.

Again a large business to be recorded here, buyers for both Europe and America making play. Settlements for the week are 800 piculs, divided thus:—*Cocoons* 210 piculs, *Noshi* 500 piculs, *Kibiso* 50 piculs, *Neri* 40 piculs. The Export Kaisha are said to be contemplating further shipments immediately.

Demand has run strong upon *Cocoons*, *Noshi*, and *Kibiso*, chiefly for Continental Europe. Prices generally are strong and quotations cannot be changed from last week; it is probable, however, that the rising exchange may soon have some effect in this respect. Supplies come in freely and stocks are well assorted in most departments.

Both French and German mails had cargo; outside steamers have also taken something. The *Menzel* carried 145 bales various Waste chiefly for Marseilles; the *Stettin* 47 bales for various European ports, the *Oxfordshire* 18 bales *Mawata* for New York, and the *Port Adelaide* has 20 bales *Cocoons* on board for the same destination. Total Export is now 3,394 piculs against 950 piculs last year and 4,233 piculs at same date in 1884.

*Cocoons*.—The trade in these goes on steadily at quotations, business being done in all grades down to *Tama*, *Doppioni* and *Waste cocoons*.

*Noshi*.—Large settlements in *Foshu* (assorted) at from \$127 1/2 to \$120, *Hachioji* at \$162 1/2, *Mino* \$158 with *Oshu tegawa*, *hosuri*, etc. at \$155.

*Kibiso*.—Some business in Medium *Yoshu* at \$72 1/2 but prices generally in this department seem to be more than buyers can stand.

*Mawata*.—Nothing done.

*Neri*.—About 40 piculs uncleaned at very high prices; at lower values there would be a much larger trade.

## QUOTATIONS.—(NEW WASTE.)

Pierced Cocoons—Good to Best	\$130 to 150
Noshi-ito—Filature, Best	180 to 190
Noshi-ito—Filature, Good	160 to 170

Export Table, Waste Silk, to 24th Sept., 1886:—

	SEASON 1886-87.	1885-86.	1884-85.
Waste Silk	2,618	950	3,294
Pierced Cocoons	776	—	939
	3,394	950	4,233
Settlements and Direct	6,000	900	7,400
Export from 1st July	8,300	7,800	5,000
Stock, 24th Sept.	—	—	—
Available supplies to date	14,300	8,700	12,400

*Exchange*.—Foreign has steadily improved in sympathy with better prices ruling for silver on the London Market. Present quotations are firm as follows:—LONDON, 4 m/s., Credits, 3/24; Documents, 3/24; 6 m/s., Credits, 3/31; Documents, 3/31; NEW YORK, 30 d/s., G. \$77 1/2; 4 m/s., G. \$79; PARIS, 4 m/s., fcs. 4.06; 6 m/s., fcs. 4.10. Domestic unchanged, Kinsatsu being nominally at par with silver yen.

Estimated Silk Stock, 24th Sept., 1886:—

RAW.	PICULS.	WASTE.	PICULS.
Hanks	1,650	Pierced Cocoons	700
Filature & Re-reels	5,050	Noshi-ito	3,500
Kakada	875	Kibiso	3,500
Sendai & Hamatsuki	605	Mawata	140
Taysam Kinds	260	Sundries	160
Total piculs	8,500	Total piculs	8,300

## TEA.

The past week possesses no new features beyond the Settlement of 2,460 piculs at higher prices. The demand runs on fine and upwards. It is reported that these descriptions are in good demand in the United States. Tea in stock consists entirely of Common to Fine. Finest and upwards are only obtainable in small lots. The same condition prevails at Kobe, where there is a good demand for high grade Teas with higher prices. The usual Tea shipments from Japan are as follows:—The steamship *Galley of Lorne*, which sailed from Kobe on the 17th instant, took from that port 190,601 lbs. for New York and 31,086 lbs. for Canada, making a total of 221,687 lbs. The Suez Canal steamer *Lennox*, which sailed from Kobe

on September 21st, took 164,810 lbs. as follows:—112,107 lbs. for New York and 52,703 lbs. for Canada. The O. & O. steamship *Belgie*, which sailed from Yokohama on the 23rd inst. took 76,660 lbs. for New York, 133,618 lbs. for Chicago, 8,090 lbs. for San Francisco, and 93,395 lbs. for Canada, making a total of 351,761 lbs. from Kobe.

Common	\$13 & under
Good Common	14 to 15
Medium	16 1/2 to 18
Good Medium	18 1/2 to 20 1/2
Fine	23 to 25
Finest	27 & up'ds

## EXCHANGE.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to name; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 2ND, 1886.

### MARRIAGE.

On the 25th September, 1886, at H.B.M.'s Consulate, Yokohama, and afterwards at Christ Church, by the Rev. E. C. Irvine, M.A., HENRY STEELE, Esq., Yokohama, to FLORENCE EVA, third daughter of the late C. A. Fearon, Esq., of Shanghai and Chislehurst.

### SUMMARY OF NEWS.

COUNT KAWAMURA arrived in the capital on Thursday.

MR. ISHII, Governor of Mie Prefecture, arrived in the capital the 27th ultimo.

MR. ORITA, Governor of Yamagata prefecture, left for the capital the 27th ultimo.

THE accounts of the Yokohama Choral Society show a credit balance of \$135.

TOKYENO experiments took place the afternoon of the 21st ultimo at Ichikawa.

ADMIRAL ENOMOTO arrived at Yokohama the 26th ultimo, proceeding to the capital the same day.

LOT of land at Awoyama has been lately purchased by the War Department at a cost of yen 53,485.

MR. ANDO TARO, Japanese Consul at Hawaii, has been permitted to receive and wear a decoration conferred on him by H. M. the King of Hawaii.

H.I.H. PRINCE ARISUGAWA, Field-Marshal and President of the General Staff Office, was ap-

pointed to the command of the Imperial Bodyguards the 28th ultimo.

FOLLOWING the lead of the *Hochi Shimbun*, the chief journals of the capital have reduced their prices.

THE mother of Count Okudaira died in Tôkyô the 24th ultimo at the age of 76 years, after a long illness.

ACCORDING to official investigation, the total number of medical practitioners throughout the empire is 34,210.

THE sum of yen 3,500 was obtained from the Mitsui Bank the 25th ultimo by means of a forged deposit receipt.

MR. TAKAHIRA, Japanese *Chargé d'Affaires* at Sôul, who has been recalled, will shortly leave his post for Japan.

MR. MORIOKA, President of the Nippon Yusen Kaisha, returned to the capital the 26th ultimo along with Admiral Enomoto.

A SAILING VESSEL named the *Manchu Maru*, loaded with coal, went ashore off Haneda during the gale of the 24th ultimo.

CHOLERA seems to have all but disappeared from Yokohama, no new cases, and only one death, being reported on Wednesday.

OWING to signs of cholera spreading in Utsunomiya, all Government and private schools have been closed for a week.

COUNT INOUE, who returned recently from Hokkaido, attended the Cabinet Office for the first time, the 24th ultimo.

PRINCESS SANJO, the mother of the Lord Keeper of the Privy Seal, who was reported to have been dangerously ill, has recovered.

LIEUTENANT-COLONEL OSEKO NAOHISA has been permitted to receive and wear a decoration conferred on him by H.I.M. the Czar.

MR. AOKI NOBUTOKA, President of the Hakodate Court of Appeal, was attacked by cholera the 24th ultimo, and died the same day.

REMOUR says that all the troops of the Tôkyô Garrison (except the Imperial Bodyguards) will in future be stationed in suburban depots.

MR. MATSUKATA SHOSAKU has been permitted to receive and wear a decoration conferred on him by Her Majesty the Queen Regent of Spain.

MR. NAKAYAMA JOJI has been permitted to receive and wear a decoration conferred on him by H.M. the King of the Hawaiian Islands.

COUNT SANO, who arrived at New York the end of last month, visited all the dockyards and iron-founding establishments in the neighbourhood.

THE Naval Department has made arrangements with the Railway Office for the construction of a branch line from Fujisawa to Yokosuka. Of the estimated total expense of yen 400,000,

the Department has decided to pay yen 250,000, the Railway Office defraying the remainder, yen 150,000.

MR. MISHIMA Tsuyo, Chief of the Metropolitan Police, who had been confined to his residence by indisposition, attended office the 28th ultimo.

MR. R. W. IRWIN, the Hawaiian Minister, visited the Palace the 24th ultimo and presented his credentials to His Majesty as Minister Resident.

JUDGE IKEDA YAICHI, President of the Criminal Section in the Taishi-in, will, soon it is said, be promoted to the post of President of the Hakodate Court of Appeal.

MR. SUGIURA MATAZO, of the Educational Department, has been ordered to accompany Mr. Fenollosa, who is expected to leave shortly for Europe on official business.

THE *Manchu Maru*, which was reported to have gone ashore off Haneda, was floated off and arrived at Yokohama the evening of the 27th ultimo in tow of a small steamer.

MR. YOSHIKAWA, vice-Minister of State for Home Affairs, has had a conference with Governor Takasaki, on the subject, it is believed, of harbour improvements for Tôkyô.

H.I.H. PRINCE KOMATSU and suite had a farewell audience of the Emperor, and paid farewell visits to members of the Imperial family and to the Foreign Representatives, the 28th ultimo.

A number of field officers now in the capital gave a farewell entertainment, the 25th ultimo, at the Korakuen, Koishikawa, to H.I.H. Prince Komatsu, who is to leave for Europe to-day (2nd instant).

PREPARATIONS are now being made in Osaka Arsenal for the casting of one 29 centimetre gun three 28-centimetre guns and one of 24 centimetres. When finished they will be mounted on the fort at Kanonsaki.

THE RUSSIAN MINISTER, accompanied by Messrs. A. de Speyer, W. Boukhovetsky and other officials, visited the Palace the 24th ultimo at 11 a.m. and presented his credentials to H.I.M. the Emperor.

MAJOR FUKUSHIMA, who was despatched some time ago by the General Staff Office to India, to report on the state of the military forces and on the topography of that country, returned to Tôkyô the 25th ultimo.

MR. BOKU KI-EI and two other Koreans, who accompanied the present Ambassador to Japan, left for Korea, the 28th ultimo. Mr. Li Gen-kyo, the Ambassador, will remain with Mr. An Kei-shu in the capital, for some time.

VISCOUNT MORII TADAHUMI, and Messrs. Fujita Tokuro, and Nakayama Kakichiro, student secretaries of the Japanese Consulate at Hawaii, have been permitted to receive and wear decorations conferred on them by H.M. the King of Hawaii.

THE steamer *Tonoura Maru*, plying between Tôkyô and Yokosuka, was sunk in the latter

harbour about noon on the 26th ultimo, by fouling her anchor. No lives were lost, and it is expected the vessel will be floated.

THE annual general meeting of the Yokohama Choral Society took place on Monday. Mr. J. T. Griffin was re-elected President, and Mr. O. Keil, vice-president, and the report of the committee was adopted, but, in consequence of a difference of opinion among the members as to the purchase of a piano, the meeting was adjourned for a week.

THE discussion as to the relations between Bishop Bickersteth and the minister and congregation of Christ Church, Yokohama, has been settled. The Rev. Mr. Irwine, in acknowledging receipt of a letter from H.B.M. Consul, enclosing copy of a circular from the Hon. Sir Francis Plunkett, intimates that he "will now cheerfully submit to Bishop Bickersteth in all matters of spiritual jurisdiction."

A DISPUTE has arisen between Messrs. Mourilyan Heimann & Co. and the Mitsui Bussan Kaisha, as to the rejection of a quantity of tea which the former firm alleges is not up to sample. As the result of correspondence between the buyers of the tea in question and the Yokohama Tea Brokers' Association, a meeting of foreign tea buyers was held on Wednesday, at which it was resolved to appoint a committee to act with Japanese delegates in the arbitration of disputes between foreigners and Japanese. A committee of three was elected to bring the question before the Japanese brokers.

FOR the most part the Import Market is very dull, dealers manifesting little inclination to operate, and holders being content to wait for a change. Yarns, Cotton Piece Goods and Woollens have been moving very languidly at unaltered prices. In Metals rather more business has been done. Arrivals are large and prices show a downward tendency. The demand for Kerosene continues, purchases for the week aggregating 25,000 cases at the previous week's quotations. Sugar prices, especially for Formosa sorts, have been stimulated by business to the extent of about 5,000 piculs; White descriptions, however, have benefited very slightly. In Raw Silk the demand has increased and full prices have been paid for suitable parcels; arrivals are free, and, notwithstanding the large volume of business transacted, Stocks have increased to over 8,700 piculs. There has been pretty heavy buying in Waste Silk, and prices remain strong. A slight decrease has taken place in the volume of Tea transactions, prices ruling firm all round. Exchange has made a further advance.

#### NOTES.

READING the various criticisms written about the Nagasaki affair, it seems to us that there is much misunderstanding abroad. The critics appear to lose sight of the fact that the original wrong-doers—we speak on the strength of the evidence thus far published—were not civilians but man-of-war's men. Had the Japanese police arrested the Chinese sailors *flagrante delicto*, they (the police) must have handed over their prisoners to the Chinese Consul, who, in turn, would have sent them on board their ships. It would then have rested with the Admiral to determine whether the men should be tried by military law, or whether they should

be arraigned before the civil authorities—*i.e.* the Consular Court. The fact that no arrests were made does not materially alter the situation. The Japanese still occupy the position of complainants, and the decision as to the place and form of trial still rests with the Chinese Admiral. But the wrong-doers, not having been seized, have to be identified, and that may be a matter of some difficulty. It is now known that there were 600 Chinese sailors on shore, the evening of the riot. Of these about 400 had returned to their ships before the fracas occurred. It may well be embarrassing to determine who had returned, or were on their way, to the ships, and who were still ashore when the disturbance broke out. This, however, by the way. What we desire to emphasise is that the normal course of procedure after the trouble would have been the arraigning of the Chinese sailors, either in the Consular Court or before the Naval authorities, at Japanese instance; while the Chinese, on their side, if they thought they had any cause of complaint against Japanese civilians or police, should have entrusted the duty of collecting evidence to their Consul and brought their case into the Japanese local courts. No one seems to have yet divined what good purpose is to be served by the Committee now sitting and we confess that we share the common perplexity.

WE gather from expressions in the Japanese press that Mr. Kirkwood's recall to Tōkyō from Nagasaki while the Commission of which he was a member is still sitting, is regarded in some quarters as an indication that the line taken by him did not meet with approval. Such an inference would be both untrue and unjust. We have reason to know that Mr. Kirkwood's action was entirely approved throughout, so much so that a strong desire to retain his services was officially expressed by the Nagasaki Local Authorities. The simple fact is that Mr. Kirkwood has other duties which necessitated his return to Tōkyō. He is a member of the Law Commission, which had its first meeting at 3 p.m. last Friday. The labours of this Commission, being an essential preface to the approaching Conference on Treaty Revision, take precedence of everything else, and naturally could not be allowed to suffer interruption for the sake of the Nagasaki street brawl.

A very comical correspondent of the *North China Daily News* who signs himself "Neutral," proposes that the result of the investigation now in progress at Nagasaki should be made an *experimentum crucis* as to "whether either, neither, or both, of the nations concerned are becoming fitted to enter fully into the comity of nations." This gentleman, despite the title which he has assumed, is plainly prejudiced against the Japanese, for he lays much stress upon the fact that, although "the examination is going on with closed doors, the local press, *pendente lite*, declares by inference that the case cannot go against the Japanese." The truth is that no trial is going on at all, but only a conference which may or may not be followed by a trial. Apart from that, however, we recommend "Neutral" to turn to the columns of the English press during the negotiation of any international question. He will then see whether the attitude of the Japanese press is unprecedented or unbecoming. Perhaps, also, he might do well to examine the Chinese press, such as it is, in order to make

himself acquainted with the gross falsehoods which it has ventilated with reference to this very affair. Fortunately it is not necessary to satisfy all the sententious critics who constitute themselves judges of Japan's and China's national status.

THE *Mainichi Shimbun* infers that Japan and China are not yet prepared to run alone, since they have thought it necessary to employ foreign Counsel in the Nagasaki negotiations. The inference is natural, but in Japan's case scarcely justified. In China, so far as we know, there are no barristers, properly so called, and if Admiral Ting desired legal advice, it was inevitable that he should rely on foreign aid. But both the Japanese negotiators are duly qualified barristers. Mr. Kusaka, Prefect of Nagasaki, is a barrister of the Inner Temple, and Mr. Hatoyama, his associate, is a Master of Law of Yale College. Either of these gentlemen would have been perfectly competent to deal with all the legal phases of the question without any foreign assistance. It was only when China employed Mr. Drummond that Japan thought it expedient to send Mr. Kirkwood, who is now relieved by Mr. Denison. Our own opinion is that no such step was necessary on Japan's part; but it is at all events certain that China took the initiative in introducing a foreign element, and that Japan only gave a Rowland for an Oliver.

THERE is a rumour—in this case apparently founded on truth—that the Chinese Consul at Nagasaki has disavowed the most important of his declarations in connection with the Nagasaki affair. In the minutes signed by himself and his colleagues and published in Tōkyō, it is recorded that he acknowledged the affair to be simply a local disturbance, and denied that either the Chinese officers or the Chinese officials had any connection with it. This was the natural and sensible course. But it is said that he now repudiates the minutes, on the ground that the proceedings were conducted in English and that their import was not fully interpreted to him. The rumour, indeed, goes so far as to assert that in this view of the matter he is not contradicted by his English associate, who thus voluntarily accepts the position either of subserving his own judgment wholly to that of the Chinese Consul, or of resorting to a subterfuge not particularly creditable. Inconceivable as is this *volte-face*, its purpose is still more puzzling, for assuredly every assumption of official responsibility in connection with such an affair, is simply so much additional disgrace.

THE *Nichi Nichi Shimbun* says:—According to the *Chinsei Nippo* of September 18th, the Nagasaki enquiry seems to have entered upon the affair of the 15th August, after the sitting of the 17th ultimo, for on that day the policemen Sakamoto and Kawamura, who were insulted by the Chinese sailors at Hirobaba immediately before the breaking out of the row of the 15th, were summoned for examination. The Nagasaki journal of the 19th ultimo says:—"The Chinese are usually called an unpatriotic people, but recent events cause us to modify somewhat this opinion of their character. Notwithstanding that the question of culpability in reference to the disturbance of the 15th ultimo is settled beyond all doubt, they are still hopefully endeavouring to discredit the conduct of our constables and inhabitants.

On the 10th instant, at 2 p.m., they assembled at their Buddhist temple and held a secret conference, at which they are reported to have decided that they must bribe Japanese as witnesses, and that for this purpose those living at Hirobaba and Shinshi would be the most suitable, as they are dependent for their livelihood on the patronage of the Chinese residents. It is rumoured that many of the Chinese residents are assiduously engaged in collecting evidence, and among these may be mentioned Tai Shogo, Tai Toku-go, Toku Tai-go, Hio Kiojo, and Son-Shiki.

Japanese papers publish the following telegrams:—

(*Nichi Nichi Shinbun.*)

Kobe, September 24th, 2.50 p.m.

Mr. Denison arrived this morning and left again for Nagasaki in the *Tokio Maru*.

(*Mainichi Shinbun.*)

Nagasaki, September 24th, 1 p.m.

The *Ching-yuen* and *Nanzui* brought a number of sailors, who are to appear before the enquiry as witnesses.

Governor Kusaka has requested the Chinese Consul to retain the Chinese sailors in the ships for the present.

Nagasaki, September 27th, 2 p.m.

Governor Kusaka has requested the authorities to send more officials to Nagasaki as the present staff find it difficult to get through the business.

(*Choya Shinbun.*)

Nagasaki, September 24th, 6 p.m.

The *Nan-sui*, which arrived lately, is of 2,400 tons and 2,400 horse-power, carries 8 Armstrong guns and has a crew of 250 men.

(*Fiji Shimpō.*)

Matsuyama (Iyo), September 25th.

Afternoon (Delayed in transmission).

The heavy rains, which have prevailed since last night, have caused the rivers to overflow destroying some dwelling houses.

Kanazawa, September 25th (Afternoon).

Strong southerly winds during last night destroyed much property in the shape of houses and trees.

About half-past five this morning the gale moderated and rain fell heavily.

Fukui, September 25th (Afternoon).

(Delayed in transmission.)

Strong winds prevailed last night, and much damage was caused to property.

Wakayama, September 25th (Afternoon).

The instruments used in the Meteorological Observatory here were destroyed by the storm of last night. A number of junks have been damaged.

Shizuoka, Sept. 25th (Afternoon).

Postal communication has been interrupted owing to floods in the east and west caused by the storms of last night.

Awomori, Sept. 25th.

A southerly gale prevailed about 10 a.m. this morning and destroyed a number of houses. The storm moderated, however, about 2 p.m.

Hakodate, Sept. 26th (afternoon.)

A number of vessels in the harbour have been lost. Eight or nine persons have been killed or injured. Half of the houses in town have been almost destroyed. The wind has now moderated.

Nagasaki, September 26th, (Afternoon.)

Count Matsuura Sen and Mr. Denison arrived this morning in the *Tokio Maru*. The Count has come here on his way to Hirado, which was the possession of his family in feudal times.

(*Mainichi Shinbun.*)

Nagasaki, September 29th.

The Japanese representatives have handed to the Chinese Consulate minutes of the proceedings previous to the arrival of Mr. Drummond in accordance with a request made by the Chinese Consul. It is stated, however, that the documents were returned with a note to the effect that they were incorrect.

Governor Kusaka and Mr. Hatoyama received a letter of instruction from Count Inouye to-day.

Nagasaki, September 30th (Afternoon).

The Chinese Consul sent a private letter to Governor Kusaka to-day. It is stated that the

letter contained a statement of an unpleasant character.

(*Fiji Shimpō.*)

Nagasaki, September 30th (Afternoon).

The 10th and 11th sittings of the enquiry were held yesterday and to-day.

THE *Tōkyō Foron Shinshi* publishes the following information in regard to the criminal law of Korea, furnished by a gentleman who has studied the subject. The Korean criminal law, says the *Foron Shinshi*, according to our authority, is made up of well established usages, and has suffered little or no modification, beyond slight changes made some years ago in adopting the Chinese code of the Min dynasty. Legal documents are kept in the hands of the Minister of Justice, Chief Judges, Governors, and other judicial personages and no other officials, much less private citizens, are allowed to see them. The punishments for criminal offences are divided into 7 classes: (1) executions in the street (2) simple execution, (3) exhibition of the criminal's head to public view, (4) exile, (5) beating, (6) imprisonment, and (7) confiscation. The first three kinds of punishment should be carried out only after the Minister of Justice has obtained the King's warrant by a written application. But a custom prevails of reporting the execution to His Majesty after it has taken place. Various iniquitous judgments are delivered by Chief Judges and Governors under the influence of bribes. Sentences of death are carried out every year in the months of September and October. There are four kinds of exile, the first of which is banishment to a solitary island, and all the others, though different in name, resemble each other in meaning; that is to say, banishment to some remote place on the continent. Punishment by beating is of three different kinds: beating with a small rod, beating with two large rods, and beating with small rods over the whole surface of the body. It usually happens that criminals undergoing the last two kinds of flogging die before the process is over. Imprisonment is not regulated in duration by the nature of the crime but by the amount of the bribes offered. The treatment in prison is very cruel, the criminals not being allowed to wear a sufficient quantity of clothing or to have proper supplies of food. The last mentioned punishment, confiscation, has many very cruel aspects in execution. When an offender receives sentence of confiscation, the property personal, movable, and immovable, of all the rest of his family, is likewise confiscated, which reduces the whole family to beggary on account of the offence of one of its members. Bribery prevails so universally that even those sentenced to death may be dismissed, if a sufficient amount of money be paid to all the law officials concerned in the trial of that particular case. When the amount paid is not sufficient to warrant dismissal, the degree of the penalty is lessened in proportion to the amount. Moreover, a man can prosecute his neighbour and subject him to any punishment by bribing the law officials. It is very common to see rich merchants and farmers sentenced to death, exile or confiscation for no other offence than that they have excited hatred or avarice in the minds of their neighbours or of the law officials by their riches. Therefore all moneyed people take care to keep the judicial authorities of the district friendly by skillfully bribing them. These corruptions are regarded in Korea with little wonder, for they are of constant occurrence.

We think it necessary to refer to a matter which, though of little interest to our readers, concerns our own veracity. For many years it has been the custom of H.B.M.'s Legation to publish the Consular Trade Reports in this journal. The proofs of these Reports are corrected at the Legation, with the exception of the Kanagawa Report, which can be submitted without inconvenience for its author's revision. After publication by us the Reports are copied by our local contemporaries. A certain number of bound copies have also to be supplied to H.B.M.'s Legation, and it has hitherto been our habit to prepare a few such copies for sale, though the operation is rather a labour of love than a source of profit. This year the *Japan Gazette* has conceived the idea of competing with us by selling on its own account the Reports copied from our columns. We have nothing to say against this, except that it will prove a barren enterprise. We deemed it, however, within our right to warn the public that only the Reports published by the *Japan Mail* had been revised at H.B.M.'s Legation. To this warning the *Japan Gazette* replies thus:—

*Merchants and others are informed that the British Consular Trade Reports issued from this office have been carefully revised and corrected by H.B.M.'s Consuls in Japan, the gentlemen who compiled same.*

It has been already stated that, except in one instance, the Reports are not revised and corrected by the Consuls, their authors, but by a member of H.B.M.'s Legation. Unless, therefore, in the interval between copying the Reports from our columns and issuing them in pamphlet form, the *Japan Gazette* took steps to forward them to the various ports and have them specially revised by their compilers, its assertion is plainly incorrect. If it did not take such steps, it has placed itself in an equivocal position.

MR. KIM KAK-U, one of the principal Koreans whose names are connected with the recent complications in the peninsula, appears to have attempted flight to Vladivostock. According to a telegram received from Nagasaki and published by the *Nichi Nichi Shinbun*, he applied for passage to Vladivostock by the N.Y.K.'s *S. Takachiho Maru*, which was then lying at anchor in the port of Ninsen. His application was refused, in accordance, doubtless, with official instructions. What became of him subsequently seems to be unknown; but inasmuch as the fate of Kim Yo-kun would deter him from coming to Japan, while to go to China would mean immediate arrest, and inasmuch as he has neither means nor knowledge for travelling to Europe or America, it is presumed that he is still hiding in Korea. In that case the Chinese can easily lay hands on him, and by examining him clear up the mystery of the secret treaty with Russia. Failing some such investigation, the *Nichi Nichi* thinks that the truth of the Russian treaty will never be discovered. Russia, indeed, denies the existence of any such document, but our Tōkyō contemporary finds it impossible to believe that there can have been so much smoke without some fire. The attempted flight of Kim Kak-u to Vladivostock is a corroborating circumstance. It must be remembered, too, that a similar relation between Russia and Korea was said to have been established, or nearly established, in Mr. Möllendorff's time, and that in conformity with the agreement then made, Russia sent, but subsequently recalled, men to organize the Korean army. All this also was denied by Russia, and perhaps

with perfect truth. Different minds are differently endowed with credulity, and will take different views of the matter. If China causes Kim Kak-u to be arrested, there may be new histories to record. But when she has found out the truth, the *Nichi Nichi Shimbun* pertinently asks what she is going to do. "We would advise her," concludes the Tōkyō journal, "not to invite perils by proceeding to too great lengths."

\* \* \*

The *Choya Shimbun* takes a curious line with regard to this affair of Kim Kak-u. It regrets very much that the conduct of the Government towards Kim Yo-kun has effectually closed Japan's doors to Korean refugees. Most people would be disposed to regard this as distinctly a subject for congratulation, but the *Choya* has an idea of its own. It thinks that if Japan purposes adopting a vigorous policy towards China and Korea, occasions will certainly arise when the presence of men like the two Kims would be very useful. When Kim Yo-kun was ordered to leave Japan, many persons apprehended that he might proceed to Russia and cause endless trouble. Again, if Kim Kak-u had effected his escape to Vladivostok, he might have become the means of causing serious injury to Japanese and Chinese interests. "If," concludes the *Choya*, "it is the purpose of our Government to leave Korea to China's tender mercies, well and good. But if not, does it seem wise to compel Korean refugees to turn from our doors and seek shelter in Russian territory?" On the whole it appears fortunate that the *Choya Shimbun* has not a controlling voice in the foreign policy of this empire.

It has become such an essential duty with the newspaper reporter to impart a sensational hue to his "facts" that one is disposed to largely discount everything one reads. But after allowance is made for exaggeration, the intelligence received by the last American mail goes to show that the relations between Great Britain and Russia are decidedly strained. We speak, remember, of a period prior to the Bulgarian coup. That must have contributed materially to the state of tension. But things were bad enough already. Russia's action with regard to Batoum was at once clumsy and defiant. It was altogether unlike her usually dexterous and prudent policy to put a needless and bitter slight upon a great rival. She knew well that England would not be mad enough to fight about Batoum, and knowing that, her method of procedure looks very like pure wantonness of insult. The full text of Lord Roseberry's remonstrance has not been published, but it is understood that the reproaches conveyed therein of bad faith were vigorous and unanswerable. Russia's reply was stiff and unsatisfactory, so that the incident left a rankling sore on both sides. It was followed, at a very short interval, by the withdrawal of the British Afghan Frontier Commission. Report, indeed, has it that the latter step was a direct consequence of the Batoum affair; was, in fact, Lord Salisbury's method of adjusting England's policy to the declared character of her *vis-à-vis*. The Conservative Premier is a master of diplomatic formulae, and we can well imagine that he utilized the opportunity to convey some very unpleasant truths to Russia. Whether he took the line that it was futile to prolong the work of the Commission in the presence of an evident

unwillingness on the part of the Russian Commissioners to conclude the delimitation; or whether he professed his inability to discover the advantage of continuing the negotiations when one of the contracting parties had, in effect, claimed the right to repudiate agreements at its individual convenience—whether he took one or both of these lines, the correspondence cannot have terminated very happily for Russia. Add to all this the Bulgarian complications and their result, unquestionably due to Russian intrigue. Such a series of unpleasantnesses cannot but create a perilous temper on both sides.

\* \* \*

One of the inexplicable elements of Russia's recent doings is that M. de Giers is her Foreign Minister. It is hard to believe that a statesman so wise and pacific can be privy to a policy so feverish and aggressive. The explanation accepted by a large section of the public is that the Czar has virtually taken into his own hands the control of the foreign affairs of his empire. Probably there is not an unhappier man in Europe than the Czar of all the Russias. He lives by stealth, in constant danger of dynamite, and engaged in a deadly struggle with a large number of his subjects. To a ruler thus circumstanced at home the prospect of daring and successful campaigns abroad must present many charms. Some, indeed, go so far as to assert that the conspiracies of which His Majesty is the frequent object, working on a mind already shocked by his father's awful and most unmerited fate, have developed a morose restlessness almost beyond control. Such stories are easily credited by the world. If they are true in this instance, both the Czar and the vast empire over which he rules become objects of deep sympathy. But whatever be the truth, it is certain that England and Russia are drifting dangerously near to the point where a collision becomes unavoidable.

The *Kiushu Maru*, which has been for some time undergoing a thorough overhaul at the hands of Messrs. Kildoyle & Co., by whom she was acquired from the Nippon Yusen Kaisha, left the harbour on Friday for Yokosuka to be docked and cleaned. The *Kiushu Maru* is a vessel 207 feet long, 28 feet 5 in. beam, and 20 feet in depth, her cargo capacity being 1,400 tons or 1,000 tons besides bunker coal. She has three decks, hurricane, main and orlop, the hurricane deck extending the whole length of the ship, while the main deck is clear fore and aft for the accommodation of steerage passengers. The *Kiushiu* is fitted with compound surface condensing engines, her high pressure cylinder being 24 inches in diameter and the low pressure cylinder 44 inches, with a 30 inch stroke. The engines are of 140 horse-power nominal. They are supplied with a feed-water heater, and in other respect are very complete and efficient. The boiler is 13 feet in diameter, and 10 feet in length, having three 3-foot furnaces with 206 3/4 inch tubes, the shell of the boiler being of 3/4 inch iron. The 8 1/2 inch crank, thrust, and propeller which arrived in the *Cambodia* yesterday, are of Siemens's steel, all the other parts of the engines, including the low pressure cylinder, the casting of which we described not long ago, being supplied from the Creekside Engine Works. The *Kiushu* will average 9 1/2 knots per hour on a coal consumption of 9 tons per day. In the saloon there are four commodious

cabins for first class passengers, the captain and deck officers being lodged in the upper decks and the engineers on the 'tween decks. The *Kiushu*, as we have said, has undergone complete renovation, new engines and a boiler of the latest type having been substituted for those previously in the vessel, while the decks have been practically renewed.

His Imperial Highness Prince Komatsu and suite leave by the mail steamer to-day for San Francisco. The Prince is accompanied by H. I. H. the Princess, by Mr. Sannomiya, Secretary of the Imperial Household, and Mrs. Sannomiya, and by Lieut.-Colonels Tatsumi and Bojō, of the Imperial Body Guard. Count Arima, brother of Princess Komatsu and ex-Daimio of Chikugo, goes with the party unofficially. The Prince, as has already been announced, is the bearer of the insignia of the First Class of the Chrysanthemum, for presentation to H.R.H. the Prince of Wales. As the discharge of this function constitutes His Imperial Highness's principal business abroad, no unnecessary delay will be made in America, and the party will probably cross the Atlantic about the middle of November. The Princess, it is understood, does not look forward with much pleasure to the prospect of a long sea-voyage, and for her sake it is to be hoped that the passage of the Atlantic may be accomplished before the storms of winter set in. Prince Komatsu has already visited England. He spent two years there—from 1870 to 1872—his object at that time having reference only to study. The distinguished party will probably be absent from Japan until the close of next year.

It was very significant that Lord Salisbury, in speaking with reference to the Address to the Throne, should have ostentatiously broken his silence on the general subject of England's foreign policy by a specific declaration that the integrity of Turkey must be preserved. Read by the light of recent events in the Balkan Peninsula, this announcement seems to mean a great deal. Lord Salisbury returns to office just in time to take up the tangled skeins of the web which he had so materially helped to weave, and already his resolute hand seems to be restoring order. Should the union between Serbia and Bulgaria indicated by a late telegram be accomplished, Russia will have to restore her influence by force, or resume her manoeuvres in the Balkan Peninsula entirely *de novo*, with the memory of several previous failures to hamper her efforts.

A MEETING of the foreign residents of Shanghai was held the 21st ultimo, called by the Chamber of Commerce at the request of the Municipal Council, to discuss the postal arrangements of the settlement. It was resolved:—"That whereas the present mail service at this port is satisfactory to the community, and whereas it is feared that any change in the system by which the carrying or control of the mails would be entrusted to the Chinese will not be an improvement but may be the reverse, therefore resolved that in the opinion of this meeting the withdrawal of the Foreign Post Offices at this port is not to be desired." Another resolution to the effect that the local post office should remain under the control of the Municipal Council was also adopted.

DURING the evening of the 31st August distinct shocks of earthquake were experienced at numerous points on the Atlantic coast of the United States. The disturbance, it was early evident, originated in the Appalachian range in South Carolina; and as, at points outside the limits of greatest violence, much commotion had been felt, the absence of all news from Charleston, South Carolina, gave rise to grave apprehensions. On September 2nd communication was established with Charleston, and it soon became known that a tremendous disaster had visited the city. Shortly before ten, the evening of the 31st August, a terrible earthquake shock was experienced, which destroyed many houses, including the chief buildings of the city, hundreds of persons being rendered homeless in a few seconds. By this first shock, it is estimated that more than forty people were killed outright while many more must have been injured. To add to the horror of the scene, numerous fires broke out in different parts of the city, which, the fire engines being unable to traverse the streets owing to the ruins of fallen buildings, were allowed to burn themselves out. During the remainder of the dreadful night shock succeeded shock at irregular intervals up till ten the following morning; these later disturbances, though much less severe than the first, having the effect of working further devastation on already tottering walls, and driving the inhabitants, especially the negroes, into a perfect frenzy of terror. Scarcely a house in the city escaped damage and all the railway approaches were wrecked. The loss is estimated at \$500,000,000.

We observe that the question of a tramway to facilitate access to the seven Hot Springs of Hakone is again on the tapis. The scheme seems difficult to carry out; but however that may be, its discussion reminds us that tramway enterprise in Japan does not show the vitality which might have been anticipated. It is now several years since the Tōkyō tramways were brought into working order, and by all accounts they have proved a very profitable undertaking. But the example of their projectors does not find imitators. We are disposed to think that officialdom might advantageously interest itself in this matter. A recent return of the Glasgow Street Railways confirms the idea. These railways were constructed in 1871 by the Glasgow Corporation with money borrowed for the purpose. When finished, they were leased to the Glasgow Tramway Company for a term of 23 years, the Company undertaking to pay the interest on the capital; to pay 3 per cent. on the actual cost to form a sinking fund for wiping out the Corporation's debt by the expiration of the lease; to pay 4 per cent. for a renewal fund, and finally, to pay a rent of £150 per annum for every mile of tramway in actual use. The upshot of it all is that the lines are a source of income to the Corporation, and that the money borrowed to construct them is being gradually wiped out, so that, at the end of the present lease, the city will be in possession of a valuable property that has not cost the citizens a penny. Meanwhile the Tramway Company is paying dividends which have averaged 6 per cent. in the past 15 years. This is a precedent which might be advantageously followed in several Japanese cities.

To anyone watching the progress of the present cholera epidemic in Japan, it has been almost

impossible to escape the conviction that atmospheric conditions must exercise a large influence on the degree of virulence of the disease. Most of the phenomena observed in connection with the plague may be explained by the hypothesis that a crop of the *Comma Bacilli*, which after all, are only fungi, germinates, grows, reaches its point of maturity and then decays in the stricken districts, and if this be the case, it is evident that the state of the climate may be of as much account as it is in respect of any vegetable development. Very interesting in their bearing on the problem are Dr. Miquel's conclusions, recently recorded in the "Septième Mémoire sur les Organismes Microscopiques de l'Air et des Eaux." They are as follows:—

(1) An increase in the number of bacterial organisms contained in a cubic metre of air generally takes place when the barometrical pressure is high; this rule is not absolute, but the exceptions are rare. (2) Temperature does not cause such sudden increments; very often, it is true, a large increase in the number of microbes present in the air takes place in summer, but it is important to note that a sustained high temperature causes a manifest lessening in their number. The thermometer is capable of explaining certain seasonal variations, but not the weekly variations. (3) The maximum number of bacterial organisms present in the air corresponds almost always with a low hygrometric condition of the atmosphere; this is explained by the fact that the degree of humidity is always very high during rain, and when the superficial layers of the soil are soaked in water, periods during which the air is always very poor in bacteria. (4) It would appear *a priori* that the number of bacteria should increase with the strength of the wind, but observation negatives this assumption. A maximum number of microbes is found frequently during periods of calm—when the velocity of the wind is only 5-10 kilometres per hour—and minima have been observed during periods when the velocity of the wind was more than 30 kilometres per hour. (5) The direction of the wind exercises a considerable influence at Montsouris. The greatest number of maxima are noted when the wind is N.E., and the greatest number of minima when the wind is S.W. (6) When the amount of ozone in the air is large, the number of microbes present is small. The north winds blow over from Paris and contain but little ozone. They are rich in microbes. The presence of ozone in the air appears to have the power of destroying bacterial organisms, and, on the contrary, absence of ozone and humidity of the air—unless rain is falling—allow of an increase taking place in their number.

From observations at Montsouris, extending over a period of five years—1880-84—the average number of bacterial organisms in a cubic metre of air is stated to be: in winter 200, in spring 495, in summer 650, in autumn 380; the annual number being 445. In February the air is poorest in bacteria [the average of these five years is 165]. Towards the middle of summer the maxima present themselves [July 700].

Observations have also been conducted for a period of four years—1881-84—on the state of the air, as regards bacteria, in the centre of Paris. These observations were made on the air of the Rue de Rivoli, and afford a marked contrast in the number of micro-organisms to the purer air of Montsouris, a suburb of Paris, and where, it is important to remember, the Observatory is situated in the centre of a park. The average of these four years' observations shows that the air of the Rue de Rivoli contains 3,480 bacteria per cubic metre. The seasonal fluctuations are nearly the same as at Montsouris, the minimum being in February (1,700) and the maximum in July (5,010). The average number of bacteria present in a cubic metre of air, for the year 1881, was 6,395, whilst the average number for 1884 was only 1,830. This enormous decrease—which is observed in the intervening years to a slighter extent—is attributed by Dr. Miquel to the better drainage and scavenging of the city, and to the better cleansing of the gutters and watering of the streets in dry dusty weather, in 1884 than in 1881. The death-rate from zymotic diseases—in which are included typhoid fever, small-pox, measles, scarlatina, whooping-cough, diphtheria, dysentery, erysipelas, puerperal fevers, and choleraic diarrhoea of infants—has also fallen very considerably—27 per cent., if increase of population is taken into account—during this period.

We learn from the *Nichi Nichi Shimban* that by the arrival of the *Takachiho Maru* at Nagasaki, the 17th ultimo, news was received about the movements of the Korean Kim Kak-u, who figured so conspicuously in the recent complications. It appears that while the *Takachiho* lay at anchor in Gensan, Kim applied personally to one of her officers for a passage to Vladivostok, pleading that on his way from Sōul

he had been robbed of his money and that his only hope of procuring funds lay in a voyage of Vladivostok, where he had friends. The officer declined to grant a passage, inasmuch as the Company's regulations gave him no such discretionary power. Mr. Kim was thus unsuccessful in his immediate purpose, but he put into the officer's hands letters to three of his friends in Vladivostok. Questioned as to whether a secret treaty existed between his country and Russia, the fugitive declared that that rumour had no shadow of truth but was fabricated by the Chinese Resident, Yuen, whose jealousy had been roused by the action of Kim and his party with regard to telegraphic and other affairs which they—Kim's party—desired to exclude from Chinese interference. Kim remained at Gensan until the beginning of this month, but his present whereabouts is unknown.

THERE have already been ominous indications of a split in the Tory-Unionist camp. Lord Randolph Churchill's inexperience appears to be "the little rift within the lute." His lordship's speeches in the House were interpreted to signify a programme of vigorous assistance to Irish landlords who might be unable to collect their rents, and of wholesale evictions in the event of prolonged resistance on the part of tenants. Such methods being entirely opposed to the policy enunciated by Mr. Chamberlain last April, the Conservative leaders were asked to explain. They succeeded in doing so, but the incident left the impression that the bond between them and the Unionists may easily be broken. The Gladstonians, on their side, criticise Lord Randolph's proposals severely, calling them open Socialism. They say, too, that the expenditure he contemplates for public works, drainage, compensation to landlords and so forth, will aggregate a sum in excess of that estimated for Mr. Gladstone's land purchase schemes. Lord Randolph has apparently contrived to make himself the central figure of the new administration, but the effort, it is said, has cost him so much physically, that he requires the support of brandy and water to make a speech in the House.

THE good people of Shanghai are once more tormented by the old bugbear of a poll tax. It appears that the levying of a registration fee has hitherto been of a somewhat perfunctory character in the model settlement. Previous to 1874, indeed, persons neglecting to register were fined. But after that date individual option settled the question. Those that chose to pay five dollars to have their names inscribed in the Consular books, paid it; those that didn't choose, didn't pay. This happy state of liberty is eulogized by the *North China Daily News*. "We supposed," says that journal, "that the common sense which is not altogether absent from our Consular officials had at last prevailed, and that, when freed from the pressure which the Supreme Court brought to bear on them in former times, they would content themselves with an annual notification that the registration fee was due." But the present Acting Consul General has inaugurated a new system. He has taken to summoning people who neglect to pay the fee; and, what is worse, the Magistrates are evidently in collusion with him, for they impose fines and order costs to be levied. The first victim was Mr. How, an old and well known resident. The defence he set up was interesting. He showed that he had never registered

since 1874; that his omission to do so had never been officially noticed; that out of a British population of from 700 to 800 in Shanghai, not more than from 80 to 100 had registered in 1879 and 1880; and that not one of the officials charged with collecting the fee and imposing fines for neglect to pay was registered. Considered by the light of these facts, the whole thing may well have been deemed a farce. But we cannot see why the Consuls should receive any blame, unless, indeed, it be for their failure to carry out their instructions. Their "common sense" has nothing to do with the question. They are ordered to levy certain fees, and they have no right to exercise any discretion. In Japan the registration rule has always been uniformly enforced, and the Consuls are properly regarded as mere instruments, without any power to grant exemption. As for the fee, the only defence that can be set up is that British residents at the open ports of China and Japan contribute nothing in the way of taxes to the support of the officials engaged in protecting their interests. Against an impost levied for that purpose they could scarcely protest. But when they are told that without the payment of an arbitrarily fixed sum, they will forfeit their rights as British subjects and cease to have any claim to privileges which the treaties confer on all Englishmen, they naturally rebel. The trouble is that their rebellion does not take any more tangible form than fitful grumbling or senseless resentment towards the Consuls. They have never summoned sufficient energy to formulate a united protest, and the plain inference is that the grievance does not cause them much concern.

THE *Hongkong Daily Press* has the following very sound editorial comment on the recent complications in Korea:—"The Chinese Government are exceedingly distrustful—and rightly so—of Russian movements in Korea, and they have at the same time no confidence in the Korean Government. Probably, but for fear of arousing Japanese jealousy, they would ere now have taken very decided steps to control Korean foreign policy. As it is they have meddled and muddled to a considerable extent, and it is to be feared they may repeat the process. The best plan would be to come to a clear understanding with the Japanese Government on the subject, and then relieve the Korean Government alike of all responsibility and control of the foreign affairs of the kingdom. It is evident that the Seoul Authorities are not to be trusted, and are liable at any moment to become the dupes or the prey of a scheming or aggressive Power. Russia may disclaim to-day any intention of taking Korean territory, but unfortunately events have taught that Russia cannot be trusted, and the mingled folly and weakness of the Korean Government render it peculiarly open to insidious attack. Left to itself Korea might no doubt be wheedled into accepting a Russian protectorate, and certainly could be induced to cede a harbour or strip of territory for pecuniary consideration. This being the case, it is the interest of China, and scarcely less so that of Japan, to adopt a policy that will effectually prevent any further coquetting with Russia by the Korean Government."

THE *North China Herald*, in an article which, with seeming truth, attributes the recent complications in Korea chiefly to the impudence

of the Chinese Resident, Mr. Yuen Shi-kai, makes the following statement:—"Within Seoul, itself, and among the country and the coast people near the capital Mr. Yuen Shi-kai created such a strong anti-Chinese feeling, that when Li Hung-chang sent over a body of soldiers—somewhere between three and five hundred men—the Korean population refused to allow them to land, and they were taken back to Port Arthur, the place from whence they had come. Thus, the intolerable Chinese representative, who had threatened the King with dethronement by Chinese arms, had to see the force he had called for sail homewards, without being allowed to land on the shore of a country which his Emperor claims as a tributary." We have seldom read anything so comical as this. The notion of the "Korean populace" refusing to allow the Viceroy Li's soldiers to land, is only one degree less absurd than the hypothesis that Li's soldiers would pay any attention to the Korean populace. These, however are questions of common sense. What is more important is the *North China Herald's* evident belief that the landing of Chinese troops in Korea is a question to be decided by the Korean populace and the senders of the troops. Has our Shanghai contemporary altogether forgotten the Li-Ho convention of 1885, by which Japan and China pledge themselves not to despatch an armed force to Korea without mutual consent? If the Viceroy Li did what the *North China Herald* describes, he was guilty of a deliberate and flagrant breach of treaty. Is that credible?

In applying the title of "Resident" to Mr. Yuen Shi-kai, we are not without reason. Hitherto it has been the custom to call that busy official "Chinese Consul-General" or "Chinese Representative" in Seoul. But it is a matter of fact that when the Viceroy Li was about to nominate Mr. Yuen, the question of title came up for official discussion. The Viceroy was asked by a certain English official what term might be properly employed in addressing Yuen. He answered by enquiring what title Great Britain gives to her representatives at the courts of her Indian dependencies. "Resident" was the reply. "Then Yuen's title is Resident" said the Viceroy, and so that matter was settled. Of course this is another evidence of China's round-the-bush policy. She employs all sorts of mild devices to reconcile the world to the position which she wishes to be credited with occupying towards Korea, but she has not the honesty or the courage to declare herself plainly, or to accept the responsibilities which necessarily devolve upon a sovereign State. Meanwhile the only result of her shilly-shallying is to keep Korea in a condition of suspense and agitation, to encourage intrigues, and to invite foreign interference.

THE *Fiji Shimpō* vigorously pursues its recommendations with regard to the necessity of bringing Japan's defensive strength to a point proportionate with the wealth of the empire. It is explicit as to the advisability of keeping a defensive purpose only in view, but it insists that no time should be lost in bringing the Riu-kiu Islands within the range of that purpose. On the authority of a report compiled by Mr. Tashiro Yasusada, who has been exploring the islands since last year, the *Fiji* gives the following interesting account:—"The Miako and Yaeyama groups are collectively called

"Sakishima." They comprise 18 islands, of which nine belong to each group. In each of the principal islands, officials of the Okinawa Prefectural Government are stationed. Mr. Tashiro had not time to survey the Miako group accurately, and he puts the circumference of the main island at 30 miles (English), whereas it is in reality fully 50 miles. The inhabitants of this group number 30,000, living in 3,600 houses. In the Yaeyama group, the island lying nearest to China—200 miles from Formosa—is called Yonakuni-shima. The whole circumference of this group is 217 miles. The largest island is Nishi-omote-jima, with a circumference of 80 miles. Ishigaki-jima comes next, with a circumference of 77 miles. None of the remaining islands, Yonakuni-shima excepted, has a circumference over 10 miles. The population is computed at 13,800, with 2,640 houses. The best harbour in the Miako group is Harimizu, situated between the main island and Nagarabe-jima. The Yaeyama group has two fine harbours, Ishigaki and Funauki, situated in Ishigaki-jima and Nishi-omote-jima respectively. Of the two Funauki is said to be superior. In shape it resembles the harbour of Nagasaki but is somewhat larger than the latter. In the neighbourhood of this port seams of coal crop out on the surface of the ground. The quality of the mineral is said to be excellent, closely resembling that of Karatsu. The north-western portion of this island—Nishi-omote-jima—is entirely a coal bed, and mining is already going on. The presence of coal in the group was first discovered by Hayashi Tasuke of Kagoshima, some ten years ago. It appears, also, that the celebrated fabric called "Satsuma jōfu" is in reality woven by the Riu-kiu islanders out of flax grown on the spot. From both an industrial and a military point of view there is no gainsaying the importance of the islands to Japan. The *Fiji Shimpō* expresses surprise that a harbour so fine as Funauki, with an abundant supply of coal lying on its shores, should have escaped the keen eyes of western navigators. But our contemporary seems to have forgotten the explorations of Commodore Perry, upon whose maps the existence of coal deposits in the islands is distinctly marked. Commodore Perry's dream was to annex "Lew-Chew," and he was intensely chagrined when his Government refused to sanction the project. The *Fiji Shimpō* concludes by again urging the necessity of securing Riu-kiu either by means of a garrison or by stationing men-of-war there. It also recommends the laying of a line of telegraph from Kagoshima *via* Miako and Okinawa.

WRITING on the cholera epidemic, the *Nichi Nichi Shimbun* says:—"The number of cholera patients in the capital, which at one time rose to over 300 a day, has now gone down to the insignificant total of 60 or thereabouts; and, proceeding at this rate, the epidemic will probably disappear from the metropolis within a week or two. The disease has shown this year a degree of virulence unprecedented in recent years, and probably approaching to that in the period of Ansei. As we have repeatedly warned our readers, it must not be supposed that we can be free from the visitations of this frightful epidemic in future years. Now that the disease is beginning to lose its activity for the present year, we must by all means take every necessary step to meet it in future. It is maintained in certain influential quarters—and this opinion

has affected in no small degree the carrying out of preventive measures—that, until the true nature of the disease and the mode of its treatment shall have been revealed, it will be useless to spend labour upon such measures as prevention, disinfection, and the establishment of cholera hospitals. But to hold such an opinion is to leave the inhabitants of the capital at the mercy of the disease. The zealous efforts of our police authorities and sanitary officials cannot be too highly spoken of; but we may say, without detracting aught from their merits, that they have pretty much gone on the principle of closing the stable door after the steed was stolen. It is their duty to make all necessary preparations beforehand to meet emergencies in future. Many, also, of the complaints against the treatment of patients are no doubt reasonable. In future, the authorities ought to be constantly prepared to afford all possible assistance to the poor sufferers. For this purpose, the arrangement of hospitals, and the appointment of epidemic physicians should be fixed beforehand, so as to be at any time ready. Further it would be highly desirable to instruct officials connected with sanitary matters as to the nature of the disease, its symptoms, various stages of development, the action of acids, the object of disinfection, etc. The construction of a disinfection office, which was rejected at the extraordinary meeting of the City Assembly, but is to be carried out under the veto power of the Governor, ought to be speedily undertaken with judgment and forethought. We are of opinion that at whatever cost and under whatever difficulties the disease must be stamped out. We hope that the municipal authorities will submit the required measures for the purpose to the consideration of the City Assembly, at its ordinary meeting shortly to be convened.

The following Circular Letter has been addressed by H.B.M. Minister to H.B.M.'s Consuls in Japan:—

[COPY.]

Tōkyō, September 24th, 1886.

CIRCULAR.

SIR,—In pursuance of telegraphic instructions received this day from H.M.'s Principal Secretary of State for Foreign Affairs, I have to inform you that the Circular Despatch of the Earl of Derby, dated the 1st of March, 1875, is hereby cancelled, and that the spiritual superintendence of the Bishop of Victoria, Hongkong, over the Ministers and Congregations of the Church of England in Japan, which was therein notified, was annulled by the appointments of the late Bishop Poole and of Dr. Bickersteth as Bishops of the Church of England in Japan.

I have to request that you will take such steps as may be necessary for notifying this fact to any Ministers of British Episcopal Congregations established in your District, and you will act in all respects towards the Bishop of the Church of England in Japan as you were instructed to do by the Circular Despatch above referred to, towards the Bishop of Victoria, Hongkong, giving to the Bishop, when he visits your district, such due support as he may require.

I am, Sir, your most obedient servant.

F. R. PLUNKETT.

H. M. Consul.

THERE must be heavy losses upon Japanese teas this year. Their selling price in New York was never before so low. It is strange that while the price of Chinese and Japanese teas shows a steady tendency to decline in Western markets, that of Indian and Ceylon teas goes slowly but surely upwards. This fact, taken in conjunction with the largely increased production of India and Ceylon, seems to indicate that Japan and China may one day or other be completely ousted from their monopoly of the fragrant staple. Perhaps we should limit the prediction to China,

for Japan has the good fortune to possess the *entrée* of the United States markets, where black tea is not popular. We learn from an interesting article in *Bradstreet's*, that the Anglo-Saxon race are eminently tea-drinkers. The annual consumption of tea in the United Kingdom rose from 1.4 lbs. per capita, in 1840, to nearly 5 lbs. last year, and the Australasians consume 7.44 lbs. per head. It was only in 1850 that tea began to be cultivated in India for export. The out-turn in that year was 216,000 lbs. In 1885 it was 75,941,247 lbs, of which 72,500,000 went to the United Kingdom—a quantity equal to one half of the supply received there from China and Japan. In Ceylon, the development of this industry has been still more remarkable. The production in 1879 was 95,969 lbs; at present it is 6,750,000 lbs, and it is expected to reach 30,000,000—or nearly as much as the total export from Japan to America—by 1888-89. In short, experts predict that if India, Ceylon, the Cape and Fiji develop their tea production during the next decade at the rate of its development during the past five years, the source of the world's tea supplies will be entirely changed. *Bradstreet's*, after noting that the capital employed in the tea industry in Ceylon and India is all procured from Great Britain, and that chiefly Europeans are managing directors of the plantations, deduces the following moral, which strongly supports our constant contention that a new era will dawn upon Japanese industries in the day when foreign co-operation becomes legal:—"One peculiarly interesting truth has been demonstrated by the growth of a tea industry in India and the British colonies, and that is the superiority of Anglo-Saxon management and direction over that of the Chinese and Japanese. With the advantage of experience both these countries have been beaten in their own peculiar industry, which was regarded as an impossibility even by the men who were first engaged in it. The development of the tea industry in the past seven years has been so phenomenal that now even the Chinese and Japanese themselves admit that their export trade is in danger, and that it is just possible that they may lose the greater part of what trade they have left."

THE Prussian Parliament in session from January to July has passed a number of important measures materially affecting the interests of the country. By its ecclesiastical bill a great step has been taken towards the final reconciliation between the Vatican and the Government. The Polish bills, proposed by the Government, were carried by large majorities, and the buying up of large Polish estates in the eastern half of the Kingdom, and their distribution in small lots to German colonists, has in consequence been begun. By additional legislation, a larger measure of local government has been granted to the western portion of Prussia. Another bill provides for the payment of taxes on the part of officers of the army also for municipal purposes; and lastly, a number of measures were passed providing for the construction of canals throughout the country. Of these the most noteworthy are the North-Sea—Baltic Canal—important both for military and commercial reasons; the Dortmund-Ems Canal, intended as a means of easy communication between the industrial and coal regions of Westphalia and Rhenish Prussia and the various North sea ports of Germany, while the Oder-

Spree-Elbe canal is to serve a similar purpose connecting Silesia by a cheap waterway with the ocean. The various Silesian industries look to this Canal for an improvement of their present depressed condition caused by the fiscal arrangements of Austria and Russia. The Government, by construction of canal, and by cheapening railway freights, since the railways became State property in Prussia, has done all in its power to enable German industry to compete successfully with its rivals. The result for the government, however, has been a decreased income from its railways, and for a time it was believed that freights would be raised again; but any such intention has been disclaimed. The recent policy of the government has been to give prominence to industrial or other questions affecting the material well-being of the people, and thus it has strengthened its hold upon its majority in the Russian Parliament, while in the Reichstag the Opposition, though in the majority, has often found itself compelled to waive political considerations and to vote government measures proposed by Prince Bismarck, sometimes with remarkable unanimity. With regard to socialistic agitation, a repressive policy has been vigorously continued throughout the empire, and meetings of striking workmen, as soon as they assumed a socialistic character, were generally dissolved at once. While it has been known that the official programme of social reform would be carried out as rapidly as the Reichstag sanctioned the bills introduced to this end, it has also been generally known that any attempt to hasten that programme by rioting would be promptly and severely dealt with. For the rest, the Government continues to maintain that whatever rights have not been expressly granted Parliament by the Constitution, are still reserved for the Crown, a position which, owing its present policy, the Government has of late been rarely called upon to defend.

DESCRIBING the new torpedo boat sent from Germany to the order of the Chinese Government, the *Hongkong Daily Press* of the 20th instant says:—"The German torpedo boat, No. 60, left here for Foochow on Saturday (18th) afternoon, and at the commencement of the voyage occasion was taken to test her capabilities in the presence of a number of gentlemen in the colony. She left her buoy at about 2.40, with a party on board who had been conveyed there by launch. As the little vessel flew through the harbour she attracted much attention, and, once clear of the thickest of the traffic, she was sent ahead full speed. The engines at that time did about 330 revolutions to the minute, and the vessel accomplished a speed stated to be about 22½ knots, but she was not tested by the log, the speed being estimated. It was also stated that her bottom is now somewhat foul, and that when she is thoroughly clean she can do about two knots more. The engines are triple expansion. The deck is arching, and of steel with a rubber covering. Every inch of space is made the most of possible. There is a fore-castle in which the crew of over a dozen sleep—rather close quarters. Aft that comes some storage accommodation, then the bunkers with the coal, and the boilers and engines. Aft the engines is a small wheelhouse fitted with Thompson's patent compass, of which kind there is another forward with a supplementary wheel. The wheelhouse is also the entrance to the saloon, a narrow companion

passing down from it to the officers' quarters—a neat little saloon, prettily decorated, with sleeping accommodation, pantry, and lavatory. The apparatus for ejecting the torpedoes is forward, there being a shoot for ejecting the deadly missiles on each side of the stem above water. Those on board the vessel were surprised at the small amount of vibration felt while she was tearing through the water at her full speed. Aft, in the vicinity of the propeller, there was of course, a considerable amount of motion felt, but from amidships forward, there was scarcely more vibration than in any ordinary launch in the harbour. The vessel is larger than anything of the kind we have here, and is of the sea-going class, constructed to act independently, and not as part of the equipment of some larger vessel. She carries now three pole masts, which have been put in for the purposes of the voyage out. Her captain and officers speak very highly of her sea-going qualities, and say she is fit to face almost any sort of weather. She is thoroughly closed in, so that water can wash over her and find but few obstructions to vent its force upon. After proceeding as far as Stanley Bay the vessel waited for a launch to come up which had been passed on the way out, and having drunk success to the little war vessel the party were transferred to the launch, which brought them back by Cape D' Aguilar, while the torpedo boat proceeded on to Foochow."

THE strangely imprudent utterances of *The Times* with regard to Port Hamilton have not passed unnoticed in Japan. The *Nichi Nichi Shimbun*, while noting the fact that the strong comments of the English and German press have elicited a denial of the aggressive designs attributed to Russia, declares its inability to appreciate the distinction which the London journal seeks to set up between England's occupation of Port Hamilton and Russia's supposed intention to annex Port Lazareff. "The writer of the article in *The Times*," says the *Nichi Nichi*, "seems to be ignorant of the circumstances attending the Port Hamilton affair. In occupying that place, England neither consulted Korea nor sought the acquiescence of China, but relied solely on her own superior power. With what shadow of reason can her action be distinguished from that attributed to Russia in intention? How can it be denied that Great Britain's example has not sharpened Russia's desire for a naval station in the peninsula?" The *Nichi Nichi Shimbun* proceeds to remark that the attitude of England and Germany has probably emboldened China, and that her recent arbitrary proceedings in Korea are probably to be attributed to this cause. For the safety of the peninsula our Tōkyō contemporary thinks that it should either be recognised as an independent state or declared neutral territory. But in the latter case, who is to guarantee its neutrality? Can England, Russia, Germany, or France be relied on to co-operate with Japan and China in carrying out such a scheme? The *Nichi Nichi Shimbun* acknowledges its inability to answer these questions.

Looking at the quotations for hops in the London *Economist*, we are reminded of the often discussed capabilities of Yezo. Hops flourish splendidly, it is said, at Sapporo, where the Government has several gardens, the produce of which is used at the local brewery. The brewery is one of the few official enter-

prises which covers its expenses and even shows a small margin of profit. But hops this year are scarce in England at 40s. a lb., and if they were produced in Yezo in sufficient quantities for export, some thousands of tons might have been sold at a magnificent profit. The public looks for some results from Count Inouye's visit to Yezo, but we fail to see what even Count Inouye can do until the conditions of Japan's foreign trade are radically altered.

It would seem as if some steps were necessary in order to safeguard the lives of people attached to ships that go into dock at Yokosuka. On Monday morning one of the firemen of the *Wakanoura Maru*, now under repairs, was found lying dead in the dock, into which he must have fallen the previous night before ten o'clock. The dock is particularly dangerous, as it is close to the main road and the yard is very poorly lighted with kerosene lamps which in weather such as that of Sunday night soon give out. It is stated that a short time ago a man from the *Gembu Maru* was lost in the same way at this spot.

ACCORDING to a report of the Metropolitan Police Office, the number of head, the quantity of flesh in pounds, and the value of cattle (native, foreign, and mixed breeds), sheep, and swine killed in the five months since April last, were as follows:—

MONTH.	NUMBER OF HEAD.	QUANTITY OF FLESH, LBS.	VALUE, Yen.
April .....	1,236	399,602	5,820.514
May .....	1,228	379,030	3,004.709
June .....	1,192	385,135	2,832.532
July .....	1,433	470,666	22,859.073
August .....	1,082	572,038	42,398.616

—Official Gazette.

THE typhoon of the 29th August appears to have been terribly destructive in the south. The steamship *Celbes*, of the Netherlands India Steam Navigation Company, while on the voyage from Hongkong to Saigon, encountered the full force of the typhoon, and sustained extensive damage, arriving at Singapore in an almost disabled condition. The Norwegian barque *Batvid* also suffered from the violence of the weather and had to put into shelter at Hainan Island with masts and rigging gone, and in an otherwise helpless state.

THE following announcement in the London *Gazette* will be read with pleasure by Mr. J. F. Lowder's numerous friends in Japan:—

The Queen has been pleased to give and grant unto John Frederick Lowder, Esq., Her Majesty's Royal license and authority that he may accept and wear the insignia of the Order of the Rising Sun of the Fourth Class, which His Majesty the Emperor of Japan has been pleased to confer upon him, in recognition of his services while actually and entirely employed beyond Her Majesty's dominions in his Imperial Majesty's service.

THE *Fiji Shimpō* and the *Choya Shimbun*, in obedience, doubtless, to the example of the *Hōchi Shimbun*, have reduced their price from three sen per copy and sixty-five sen per month to two sen and fifty sen respectively. If the effects of the *Hōchi's* enterprising initiative be equally marked in other journalistic quarters, the Japanese public will owe a debt of thanks to the *Hōchi*.

THERE are two remedies recommended by modern science for cold feet. One is to rise gradually on tiptoe so as to pull all the tendons of the feet at full strain, and having attained that pleasant position, to keep it as long as possible. The operation has to be repeated several times. It involves no hopping or jumping, but is said

to have the result of setting up a lively circulation. The other remedy is to wear a heavy pair of woollen socks over thin cotton ones. Pursuing the sequence of ideas, a third remedy suggests itself; namely, to warm one's feet at a fire.

WE learn that during a heavy gale which prevailed on the west coast about the 18th ultimo the steamship *Takado Maru*, from Hakodate to Sado, went ashore at Iogashima and was wrecked. A hundred lives were lost, only one person being saved.

THE cholera returns for Yokohama during the past week were:—Saturday, 25th ultimo, new cases, 5; deaths, 3. Sunday, new cases, 2; deaths, 3. Monday, new cases, 6; deaths, 4. Tuesday, new cases, 9; deaths, 5. Wednesday, death, 1. Thursday, new cases, 4; deaths, 2. Friday, new cases, 3; deaths, 3. Total cases, 29; deaths, 21.

THE cholera returns for Tōkyō during last week were:—Friday, 24th ultimo, new cases, 46; deaths, 51. Saturday, new cases, 68; deaths, 59. Sunday, new cases, 52; deaths, 43. Monday, new cases, 59; deaths, 45. Tuesday, new cases, 86; deaths, 75. Wednesday, new cases, 84; deaths, 59. Thursday, new cases, 57; deaths, 48. Total new cases, 452; deaths, 380.

THE following subscription to the fund for relieving the families of sanitary officials, received at the Kanagawa Kencho, is acknowledged with many thanks:—

Mr. N. L. T. C. .....	1.70
	Yen 1,490.20

AN TUCK, a godown man in the employment of Messrs. Walsh, Hall & Co., and his wife, were found dead on the morning of the 24th ultimo in their house at No. 81, Settlement. The deceased had been indulging over freely in opium.

THE *Nichi Nichi Shimbun* has followed the lead of the *Hōchi*, *Choya*, and *Fiji Shimpō*, and reduced its price from 4 sen per copy and 85 sen per month to 2½ sen and 50 sen respectively.

WE are informed that the Messageries Maritimes steamship *Menzaleh* with the mails from Marseilles to 29th August, left Hongkong for this port yesterday at 8 a.m.

*L'Echo de Shanghai*, of the 19th ultimo, says that Mr. Yuen, the Chinese Resident in Korea, has been recalled, and names Mr. Wang Tsao, a member of the Hanlin, as his successor.

THE third engineer of the steamship *Propontis*, a man named Todd, committed suicide by jumping overboard in Hongkong harbour on the evening of the 21st ultimo.

WE are informed that the P. & O. steamer *Teheran* left Nagasaki for Yokohama via Kobe at 5.30 p.m. on Thursday, the 30th September.

YOKOHAMA was visited by a heavy gale on the night of the 24th ultimo, the wind developing cyclonic violence, and a heavy rain-fall taking place.

WE learn that Countess Ito has graciously accepted the dedication of a waltz composed by M. Sauvlet.

BISHOP BICKERSTETH has appointed the Rev. H. Maundrell of Nagasaki to be Archdeacon of the Church of England in Japan.

## A NEW ORDER IN COUNCIL.

THE celebrated, ought we not to say notorious, Order in Council of 1881, has undergone a change, which will be best understood by placing side by side the original paragraph and that now substituted for it:—

Original Second sub-section of Section 47.—(b.) Provided, that the foreigner first obtains and files in the Court the consent in writing of the competent authority of his own nation to his submitting, and that he does submit, to the jurisdiction of the Court, and, if required by the Court, gives security to the satisfaction of the Court, and to such reasonable amount as the Court directs, by deposit or otherwise, to pay fees, damages, costs, and expenses, and abide by and perform the decision to be given either by the Court or on appeal.

Sub-section now substituted for the preceding:—Provided that the foreigner (i) first files in the Court his consent to the jurisdiction of the Court; and (ii) also, if required by the Court, obtains and files a certificate in writing from a competent authority of his own Government to the effect that no objection is made by that Government to the foreigner submitting in the particular cause or matter to the jurisdiction of the Court; and (iii) also, if required by the Court, gives security to the satisfaction of the Court, to such reasonable amount as the Court directs, by deposit of money or otherwise, to pay fees, costs, damages, and expenses, and to abide by and perform the decision to be given by the Court or on appeal."

It will be seen that consent by a competent authority of the plaintiff's nationality is no longer an essential preliminary, but is left to the discretion of the Court, and that such consent has reference only to "the particular cause or matter" at issue. This modification is in the proper direction. Take the case of a Japanese suing a British subject in H.B.M.'s Court. The Treaty establishes his absolute right to bring suits in that Court. That British jurisdiction is substituted for Japanese in such cases is purely a concession to foreign convenience, and Her Majesty's Government, as it seems to us, are not justified in barring Japanese access to their Consular or other Courts by provisions which did not exist when the Treaty was concluded. Until 1881 there never was any question of a Japanese plaintiff in a British Court having to furnish himself with an official undertaking that he would consent to the jurisdiction of the Court. It was, indeed, more than doubtful whether such an undertaking could be lawfully given. For its obvious effect would be to extend the jurisdiction of the Court to cases not contemplated by the Treaty. If the official pledge had any meaning at all, it meant that the plaintiff would submit, not to the judgment in the particular suit brought by himself—that was a matter of course—but to whatever judgment might be delivered in a cross-suit brought by the defendant in the same Court. Thus the positions of plaintiff and defendant might practically be reversed, and a Japanese might find himself arbitrarily deprived of rights which the Treaty had explicitly reserved to him; might be obliged to submit to the ruling of a foreign tribunal questions which he was really entitled to bring before his own judicial authorities. Further, the official guarantee of submission, unless it

was to be regarded as a mere mockery, must carry with it an engagement to enforce, as well as to submit to, the ruling of the foreign tribunal. Is any Japanese authority competent to give such an engagement? In other words, is any Japanese authority competent to enforce, as against Japanese subjects, the judgments of a foreign tribunal in cases where jurisdiction has been arbitrarily assumed by that tribunal? We think not. British Courts exist in Japan by virtue of the Treaty, and they have no title to institute, of their own motion, a form of procedure which not only exceeds the privileges granted to them by Treaty, but also infringes the rights reserved to Japanese by the same instrument. During the five years which have elapsed since the Order in Council of 1881 was issued, the Japanese Courts have never attempted to retaliate by requiring British plaintiffs to procure a corresponding engagement from their own authorities. It is to their credit that they have not done so, though, perhaps, such a course would have been best adapted to expose the impropriety of the Order. Even now we are strongly of opinion that the discretion left to H. B. M.'s Courts cannot be reconciled with the provisions of the Treaty. If it is intended, as the language of the Order appears to imply, that the consent of the plaintiff's Government shall concern only the actual suit brought into Court, then it must be confessed that the purpose of the provision is decidedly obscure, since such consent goes without saying. But if it is intended that the consent shall include all the possible issues and cross-suits arising out of the original case, then a condition is prescribed which can scarcely be defended. Things are not as bad as they were, but they might be a great deal better.

The question of security for costs is an unfortunate feature of our legal methods. In the eyes of a Japanese, the enormous expense—quite out of proportion to anything which he has to pay in his own Courts—of bringing a suit before a British tribunal is generally deterrent. And since it cannot be reasonably expected that he should appreciate the tortuous processes and complicated mechanism which the refinements and perplexities of justice have gradually evolved in the West, we need not be surprised that he considers our Courts virtually closed to him. Yet that portion of the Order in Council which refers to security for costs seems almost inevitable. The expense of litigation in England is a species of guarantee for the sincerity of litigants. A man thinks twice before he incurs a heavy, or even ruinous, outlay by bringing a frivolous suit. The broad principle that a plaintiff should himself be prepared to accept whatever risks he requires a defendant to run, is especially applicable where suitors of different nationalities are concerned. Therefore, while we regret, and understand the bad impression conveyed by, the general fact that

British justice is not accessible without extravagant expense, we do not see how discretionary power to require a Japanese plaintiff to find security for costs could properly be withheld from Her Majesty's Courts in Japan. Hitherto the utmost consideration has been shown in exercising that power. Japanese suitors cannot complain that the difficulties of the law have been increased for them by the manner of its administration, neither can they justly expect that legal relief should be made easier for them in British Courts than it is for British subjects.

## PORT LAZAREFF.

A Narticle in the *Fiji Shimpō* on Russia's policy reflects the general uneasiness caused by recent events. The gist of the *Fiji's* statement is that, notwithstanding the rumours persistently circulated at the time of England's occupation of Port Hamilton with regard to Russia's intention to follow this precedent, nothing happened to justify the apprehension until quite recently, when the movements of Russian ships off the Korean coast and the negotiations carried on by her representative at Sōul for the acquisition of a port, recalled public attention to the question. Her attitude towards the peninsula is now watched with keen interest and suspicion. "The other day," says the *Fiji*, "we heard a gentleman, well acquainted with European and Asiatic affairs, argue that Russia is too much engrossed by her domestic troubles to pay much heed to foreign policy. In support of this opinion he alluded to her quiescent attitude during the Franco-Chinese complications, and also to the fact that, while she has the example of England to excuse her, she does not acquire a naval position in Korea. He further stated that the occupation of Port Lazareff would confer little advantage upon Russia, as the place is separated by a vast tract of land from St. Petersburg and has few inhabitants. Viewed cursorily, this opinion seems plausible, but statesmen's minds are very difficult to decipher. When they appear to mean one thing, it is equally probable that they mean another. The course that Russia contemplates towards Korea remains a riddle to us."

One cannot be surprised that the arguments of its foreign friend did not convince the *Fiji Shimpō*. The distance of Port Lazareff from St. Petersburg or the number of its inhabitants can have very little to do with its importance to Russia as a naval station. Port Lazareff, too, is not the only place, or by any means the most desirable place, that the Korean seaboard offers for Russian occupation. This by the way, however. What we desire to note is a fact that seems to escape Japanese commentators altogether; namely, that from a Chinese point of view the occupation of Port Hamilton by England

and the occupation of Port Lazareff by Russian are two wholly different things. We do not mean for a moment to endorse the utterly false statement that the former proceeding had the consent of China. That is another question altogether. The dangers of such a precedent were not necessarily diminished in China's eyes because it was established by a friend. But it has to be remembered that, in the view of the Orient, Great Britain and Russia stand to each other in the relation of antagonists. Not only has China nothing to apprehend from the former, but she may, and probably does, count on British coöperation to restrain the latter's aggression. England occupied Port Hamilton in view of an imminent war with the great Northern Power, whose movements the possession of such a station would materially assist her to check. To China the act may have suggested uneasy forecasts, but its import as an anti-Russian measure was not to be mistaken. Without going so far as to say that anything like an offensive and defensive alliance exists between Great Britain and China, we do feel justified in asserting that, as between Russia and Great Britain, China's choice must have been definitively made ere this. In Russia she sees a perpetually advancing Power, a part of whose boundaries has already become one with her own; who is steadily pushing on to wider and more dangerous contact; who has robbed her of regions precious less for the sake of their intrinsic value than because they are the cradle of the Tartar emperors, and who now directly threatens a State the foreign occupation of which would permanently menace the integrity of the Middle Kingdom. It has been often said that Russia is China's nightmare, and certainly the repose of the Celestial was never more disturbed by this incubus than it is at present. In England, on the other hand, China sees a Power pledged by fate to hold the lists against Russia. Among Japanese critics the *Fiji Shimpō* is conspicuous for re-iterated and bitter allusions to England's occupation of Port Hamilton. We would ask the *Fiji Shimpō* to reflect, as Chinese statesmen have doubtless reflected already, whether so much as a shadow of aggressive design against Japan, China or Korea can reasonably be attributed to Great Britain. England does not desire a foot of territory in these regions. She is interested solely in guarding the vast possessions she has acquired. We do not advance any claim of scrupulosity or unselfishness on her behalf. That would be absurd. All we say is that in this part of the world there is nothing to excite her ambition. Equally with China and Japan she is interested in preserving the *status quo*, and in pursuing a policy which shall confirm the independence and promote the prosperity of these two empires. That, we believe, is the light in which she presents herself to intelligent Japanese eyes also. Have we not, then,

reason to say that a British occupation of Port Hamilton to restrain Russia, and a Russian occupation of Port Lazareff as a step to further advances, are events presenting a wholly different complexion for China and Japan?

It may possibly appear to some that we are condoning now what we formerly condemned; that, whereas we originally denounced the occupation of Port Hamilton, we to-day find reasons to extenuate it. The difference is simply in our point of view. For its effects upon Great Britain's reputation in the East, we can never regard her method of occupying Port Hamilton as anything short of a grave political blunder. By it she needlessly lowered herself to a moral level with Powers whose policy had begun to place her own in favourable contrast. But the danger of the precedent she established depended altogether, and still depends, on the continuity of her policy. If the occupation of Port Hamilton was to be a mere fitful demonstration, followed by a lapse into too familiar methods of passive deprecation, then indeed both China and Japan might well look anxiously to the results of her arbitrary example. But if the raising of the Union Jack at Port Hamilton implied a settled resolve on Great Britain's part to range herself beside China and Japan as a bulwark against that southward movement to which Russia's circumstances and the temper of her officials condemn her, then indeed the two Eastern Empires could only congratulate themselves on the acquisition of such an ally. And the event depends very much on themselves. They may be sure that England will stand her ground if she can count on their honest coöperation. Everything, as it seems to us, clearly indicates who should be the occupants of the different camps in the impending struggle. The statesmen of Japan and China have it in their power to prepare a coalition which will render security as certain as anything human can be certain.

#### A NEW DEPARTURE IN JAPANESE ART EDUCATION.

THE Educational Department has taken a step which will be applauded by all friends of Japan's art industry. It has been decided to send to Europe a commission of enquiry consisting of Mr. E. F. FENOLLOSA, Mr. HAMAO, formerly Vice-President of the Tōkyō University, and Mr. OKAKURA. The object of the commission is to examine and report upon the various art schools in Europe, with a view to the establishment of a similar institution in Japan. It has long been felt by those who take the trouble to look about them, that an almost illimitable field exists for the profitable exercise of Japanese art industry. All the adjuncts necessary to development in this direction are present to an unique degree in Japan—raw

materials, traditions which have become instincts, artist artisans whose talents are available at ridiculously low figures, and an established reputation. But during the past twenty years these talents have virtually been frittered away. There has been no serious attempt to place any of the country's art industries upon an economical basis, or to adapt its products to a really public demand. Enterprise has been inspired by a spirit of the veriest opportunism. It has been thought enough to produce whatever satisfied the fancy of the moment, or attracted the attention of the handful of travellers and dilettanti who still comprise the total of Japan's foreign clientelle. The idea seems to have remained unconceived that this country, if only its resources and endowments were properly utilized, might become one of the world's greatest centres of decorative and ceramic art. Not the smallest attempt has been made to invite the attention of painters and sculptors to the immense field offered by the industrial branches of their art. The splendid examples of glyptic genius which adorn the friezes of Japanese temples or lie neglected among their relics, show plainly what a power was once possessed and exercised. It still exists, more or less dormant, perhaps, but not yet incapable of speedy re-invigoration. To our own knowledge there can be found in Tōkyō to-day more than one sculptor capable of climbing almost, if not altogether, to the greatest heights attained by his predecessors. How are these men engaged? In repairing the works of inferior but older masters; in roughing out cheap deities for way-side shrines, or, worse than all, in carving conventional arabesques and geometrical patterns on the legs and backs of foreign furniture. Among Western collectors there have been a few who detected the uses to which the grandly modelled votive tablets and friezes of Japanese religious structures might be applied in European decorative architecture. But their conception did not extend beyond the acquisition of whatever specimens in this line were to be found in bric-a-brac shops. It never occurred to them that the art whose accidental productions are thus available, might achieve almost infinite results were it turned into a properly directed decorative channel. So it is with ceramics also. The old methods survive under new conditions. In every one of the great pottery districts, the conservatism of domestic industry is still unshaken. The vitality of enterprise is paralysed by the memory of ancient patronage. Domestic industry was respectable and sufficiently efficient so long as the head of a family received a pension from the patron who claimed his best productions. He could conveniently and profitably enlist the otherwise unengaged services of the members of his household, and thus the pieces which he placed upon the open market represented la-

hour saved from unproductiveness, while the specimens which he offered to his patron were genuine toils of love. He still clings faithfully but most foolishly to these traditional methods, although the patronage which made them practicable is a thing of the past. His eyes are not opened by the competition of wiser rivals. He and his *confreres* have each his own kiln and each his own little staff of workmen, and every process of these disassociated industries involves as great a waste of time and material as though there were no lessons to be learned from the rush and rivalry of the world's keenest witted age. Look again at Owari, the chief centre of the porcelain industry in Japan. The material principally used there is a porcelain stone locally named *Ishiko*. The composition of this stone varies within wide limits. Some specimens are found to contain 72 per cent. of felspar, 25 per cent. of quartz and 3 per cent. of clay-substances, while in others the corresponding figures are 54, 40 and 6. It is plain that a potter using such dissimilar materials can never be sure of his results. The Owari keramists naturally find their industry seriously hampered. However uniform may be the temperature of the ovens, the condition of the baked ware can never be predicted. Warped plates, distorted bowls and decrepit vases are just as likely to emerge from the furnace as perfect specimens. Ornamental tiles for example, might be a largely profitable product of the Seto industry. In that line Owari might defy competition, for nowhere else, outside Japan, is art labour available on terms so easy that the decoration of every tile might be an independent conception. But the Owari tiles are practically valueless. The majority are too crooked to be employed in any symmetrical structure, and to use only those with even surfaces entails the rejection of so many that the price become prohibitive. So it is with plaques, table-tops and other large, flat objects which the workmen of Seto and Imari are fond of producing as *tours de force*. These, when they do succeed, are decorative and imposing; but the percentage of failures is absurdly large and the cost proportionately high. Yet the potters of Owari have not even conceived—so far as we can learn—the necessity of such a combination as would enable them to overcome these difficulties by devising special means for the analysis, and, if necessary, the procuring and distribution of the raw material. It would be easy to multiply examples of a similar want of industrial apprehension, but we have said enough to illustrate our proposition. Our own belief is that the radical remedy for this state of things will be found in the combination of foreign expert experience with Japanese artistic capabilities. But the Government must also assist. We have repeatedly in these columns lamented official indifference

to the country's gradual denudation of art treasures, and pointed to the fact that no museum exists where an artisan can place himself *en rapport* with the great schools of national thought. The tendency of the directors of the *Hakubutsu-Kyoku* and of the organisers of recent pictorial exhibitions is to encourage the development of a purely imitative spirit, and to put a premium upon servile obedience to misinterpreted canons. We regard the despatch of the mission alluded to above as an indication that the Educational Department, under Mr. MORI's liberal and intelligent direction, has resolved to emerge from this slough of self-satisfied bigotry. Every member of the mission, above all Mr. Fenollesa, has been for years an ardent student of Japanese art, tracing its gradual development and learning to distinguish such of its features as are really typical of the national genius. Approaching the study of European art schools with this knowledge already garnered, the commissioners will be exceptionally competent to detect the points of contact and divergence of the two arts, and to recommend a system of education which will be at once conservative and assimilative. Their labours are expected to occupy about a year, and will, we trust, eventuate in the establishment of a school for leading Japanese art into directions where its genius will find wide fields for profitable exercise and intelligent development. To some this method of procedure may seem too slow and tentative. But most of the failures hitherto made by Japan in her progressive efforts have been due to over-zealous precipitancy. From the preliminary prudence of the present movement we argue its ultimate success.

#### A RADICAL VIEW ON FEMALE EDUCATION.

(COMMUNICATED).

BY Professor TOYAMA'S essay, published first in the *Tōkyō-gaku-gei-zasshi*, and reproduced in the *Romaji-zasshi*, an epitome of which was given in these columns a few days ago, it will be seen that the theory propounded is entirely new, and that, taken in the sense undoubtedly intended, namely, as a purposed measure of reform, it is radical to the core. Many of Professor TOYAMA'S general remarks on the need of change in the mode of educating Japanese ladies are only too true; and that their truth has been felt is evidenced by various attempts made by the Government and by private individuals during the past few years to effect the required change. Still, it seems to us that the essay, taken as a whole, is open to criticism.

Professor TOYAMA is of opinion that purely Japanese customs should be indiscriminately replaced by foreign. He would have the Japanese lady, as well as the gentleman, in his own words "rejoice

at what gladdens a foreigner, deplore what a foreigner deplores, and be ashamed of what a foreigner considers shameful." In a word, foreign customs are to be imitated and practised, and not until the Japanese lady is well versed in them, will she be qualified to mix with her Western sisters on equal terms. The civilized air which the foreign lady breathes, her Japanese sister must inhale; the thoughts the former thinks the latter must endeavour to think; the emotions that stir the one should not fail to excite the other. Professor TOYAMA would have no difference between an Eastern and a Western lady beyond that of physiognomy.

Now it seems to us that Professor TOYAMA starts with a wrong premise when he takes for granted that all existing Western customs are worthy of being introduced into this or any other Eastern country. He speaks of them *en masse* as civilized customs. But is not this a very unphilosophical way of dealing with them? There are persons, doubtless, who flatter themselves that the commonplaces of modern life in the West are to be looked on as highly civilized customs, on account of their being persistently and strictly adhered to by nations who, in their own opinion and in that of others, are most advanced in so-called civilization. Such a view shows great lack of discrimination. It is well known to all thinking persons that some of our usages and fashions originated in a barbaric or a semi-civilized age, and that they are often found incomparably inferior to the corresponding practices of some Eastern countries. To argue, then, that Western customs and modes of life are to be introduced wholesale into this country is to take for granted that Occidental usages are invariably superior to Oriental. In the matter of learning and the modes of acquiring the same, Professor TOYAMA'S premise may be admitted. Western learning is the result of an enormous amount of observation and reasoning power brought to bear on the various subjects of study. But who pretends that the fashions of society, the mode of arranging the hair, or of bowing to a friend, or of partaking of food at the table, have been settled by reason? It comes to this, then, that some of our customs are extremely irrational, though they are steadfastly conformed to, and that an undiscerning imitation of everything foreign will certainly involve the introduction of the bad with the good. We deprecate anything of the sort. There is another view that may be taken of the matter. Many of the customs of a country have grown out of its history, and as connecting links with the past and mementoes of the stages of progress through which a nation has passed, are rightly held sacred. That a people should discard all these for the sake of anything foreign is a calamity. As there are in every individual characteristics which the community needs, and

which, therefore, it is most desirable should be nourished and preserved intact, so in every nation there are traits of character which constitute elements of strength or beauty, and which it is to the interests of the nation itself as well as of the world at large to keep free from disintegration. The carrying out of Professor TOYAMA'S proposed reform would, we fear, denationalize Japan. It seems to us that instead of proposing such sweeping measures, he would have done well to have defined carefully the particulars in which the lives and customs of Japanese ladies need reform, and to have then discussed how far, without running the risk of denationalizing themselves, they do well to adopt the customs of our Western ladies. As the essay now stands, no one could suppose that the ladies spoken of are those charmingly graceful and highly refined persons, the privilege of whose acquaintance and society Japanese-speaking foreigners know how to appreciate. For what, we ask, are these exquisite and perfectly unaffected manners to be given up? Side by side with them the brusqueness or self-consciousness of some persons who pass for ladies in the West appear pure barbarism, and even the chaste refinement of those Occidental ladies who truly deserve the name, does not exceed, if indeed it equals, the Japanese type. We lay stress on this point because it is the customs (風俗) and fashions that Professor TOYAMA says stand so much in need of reform. It is foreign customs that he would see introduced throughout the breadth and length of the land, and to teach these he desires to have the daughters of ladies of rank and influence educated under the care of the missionaries.

We see no chance of Professor TOYAMA'S theory ever being carried into practice in the way proposed. Missionaries obtain their money from societies. These societies are supported by religious devotees whose object is propagandism. No large sums of money are allowed to be appropriated to the carrying out of any semi-secular scheme, such as that proposed by Professor TOYAMA. The whole tenor of his essay shows that the ultimate object he has in view is to familiarize Japanese ladies with foreign domestic life, and not to spread the Christian religion. The title of the essay is calculated to convey the impression that female education is the means, and the spread of the Christian religion the end in view. But a perusal of the writer's scheme at once dissipates such a notion. Professor TOYAMA, in common with many of his fellow countrymen, holds that the adoption of Christianity would do no harm and might do good to the *women* of Japan, but that the *men* do not need it. This, we must not overlook, is a remnant of the line of thought the Professor wishes to supplant. It involves the hypothesis that the inequality of the sexes is irremediable, and that doctrines and dogmas

which to the *man* appear puerile, may be offered to the *woman* as suitable food for her poor, weak intellect.

All other things apart, we feel sure that could Professor TOYAMA'S proposal be acted on, the training received by Japanese ladies in such strictly religious institutions as missionary schools, superintended as they would be by ladies who are remarkable for their straight-laced notions on most subjects bearing on life and manners, would scarcely attain the objects which Professor TOYAMA contemplates.

As for the children of Japanese Christian ladies growing up to receive all the doctrines of orthodox Christianity without questioning their authority, after the blind fashion of so many Western youths, the thing is impossible so long as the husbands of these ladies and the bulk of the Japanese nation adhere to the position they have assumed in reference to religion.

We agree with Professor TOYAMA when he asserts that school education is insufficient for man or woman, but rather than set the limits he proposes to the instruction received and the experience to be gained by the Japanese lady, we would advocate freer intercourse between native and foreign ladies generally, and one or two thoroughly worked government institutions to teach foreign cooking, dress-making, and the like. As for making the daughters of the land conform to all the minutiae of foreign customs, we repeat that we should be sorry to see them thus spoiled. We are acquainted with several Japanese married ladies who have been educated in Mission Schools and we have had the history of many others related to us. It appears that, as a rule, they find the habits they have contracted at the school too expensive, or in other ways unsuitable to the married life they are called upon to lead. Things must move together. It is of no use trying to introduce even those foreign customs which are actually essential to the general progress of the nation till the surroundings make it possible for them to be observed with comfort and convenience. One thing introduced often makes another necessary and that other a third; and when almost everything in the house has been exchanged for something else, it is found that the construction of the building itself is unsuitable to the furniture it contains. All this requires money, and money takes time to make. The moral is that reform, even where absolutely necessary, is complicated and expensive, and must therefore be effected gradually and cautiously, lest those who are the subjects of it should experience rather the pain it causes than the comfort it confers.

If asked what the Japanese lady needs, we reply—a sound school education, good food, plenty of exercise on horseback as well as on foot, greater freedom in social intercourse with her friends, both male and female, rights of property and of living independently of the assistance of rela-

tives; slight modifications in her dress and domestic arrangements. Give her these and she will be in a position to take her place in mixed Society with dignity and self-respect, but as a Japanese and not as a foreign lady. Thus equipped, the fact that she has preserved those graces of behaviour and mien which are her national characteristics will constitute a far higher title to foreign esteem, than if she had spent her youth in trying to mimic a set of manners and a mode of behaviour, which, though in their general aspects distinctive marks of a person who has come from a civilized country, are not on this account for a moment to be identified with civilization itself, but are, on the contrary, frequently most antagonistic to the spirit, and most obstructive to the progress, of civilization—manners and behaviour whose origin is to be traced to individual whim and caprice, or to the example of unreflecting coteries, not to the mature deliberations of the wise and good; manners and behaviour whose prevalence is accounted for by men's apish tendency to do as their predecessors did, or as their neighbours do.

We venture, therefore, to think, after a very careful perusal of Professor TOYAMA'S essay, that, as a measure of proposed reform, it is far too sweeping and would involve a large amount of denationalization, which the most thoughtful Japanese should be sorry to see taking place. Further, it is certainly impracticable, so long as missionaries are situated as at present.

#### GERMAN & BRITISH MERCHANTS.

“FOR many years past, during my residences on the River Plate, in Brazil and the United States, I have been painfully impressed by the conviction that English merchants are indeed being driven out of the field by Germans, but that the latter attain this superiority, not by protection from their authorities, but by their own unaided and independent energy, by the greater economy of their establishments, and by downright hard work on the part of both chiefs and subalterns.” That is what Sir EDWARD THORNTON wrote to Lord ROSEBURY last May. His opinion, not at all novel to observers in this part of the world, is endorsed independently by Sir SPENSER ST. JOHN, who, writing from Mexico at about the same time, says:—“There can be no doubt that, up to the present time, the English commercial community have shown the utmost apathy and indifference to the trade of this country, and have left to the Germans, French and Spaniards the management of a commerce a fair share of which would fall to them if they would show the same qualities of thrift and industry which have distinguished their competitors. In the course of a very long experience I have noted that the average English commercial man of the

present day is unfit to compete with the thrifty and industrious German. The former is bent on the pursuit of pleasure, whilst the latter gives himself no leisure until his future is assured." Again, Consul-General MICHELL, in a Memorandum dated "Hull, April 30th, 1886," says:—"The luxurious standard of living in Great Britain, and the consequent high remuneration of all descriptions of work performed within exceptionally fewer statutory or customary hours of labour (frequently like wages regulated by strikes) combined with a decidedly defective education in regard to the practical acquisition of foreign languages, undoubtedly places the modern British merchant and manufacturer at a disadvantage in relation to his foreign, and principally his German, competitor." Then we have Consul JOEL, writing from Cadiz, under date April 29th:—"British merchants do not evince that amount of enterprise and self-reliance, nor do they appear to take that interest in the requirements of foreign markets which is shown by their French, German and Belgian competitors. Agents or travellers for French and German firms are continually visiting Cadiz, and they are enabled to give their employers valuable information, resulting from their knowledge and experience in their respective trades, while British merchants seek to extend their business through the medium of information derived from the Consul, who, however desirous he may be to facilitate British commerce generally, cannot go into every particular case as though he were an expert in every trade comprised in the commerce of the world." Finally, the evidence of Consul BRACKENBURY from Lisbon is:—"It is in respect of their commercial travellers, and not in the quality of their Consular Reports, or the aid given to commerce by their Consular officers, that the French and the Germans, but especially the latter, are so far in advance of us. Their commercial travellers are men of considerable education and linguistic acquirements; they are active, vigilant and enterprising, and they bring home to the foreign tradesman or shopkeeper, by the exhibition of patterns and of carefully drawn out price-lists, the advantages in point of design, fabric and cheapness possessed by their wares over those of their rivals."

All this is unpleasant reading for Englishmen, and would probably be contemptuously denied were the weight of testimony less formidable. But there is no gainsaying such an array of intelligent opinion and varied experience. Neither is the recent history of commerce in the Far East wanting in corroborative instances. A striking case is that of the coal-carrying trade between Nagasaki and China. In the field of maritime enterprise, if anywhere, the British merchant might be expected to hold his own. But he has been ousted by his German rival for reasons a clear statement of which

can be obtained by any enquirer. The German works harder, is content with smaller profits and behaves with much greater amenity than the Englishman. The latter will not have his routine deranged or his leisure disturbed. He resents everything that interferes with his independence or curtails his own estimate of the consideration due to him and the comforts he merits. The former, figuratively speaking, is always cap in hand. Deference to the convenience of employers is a principal item in his programme for winning custom. We are not expressing an opinion of our own but merely repeating the verdict of those with whom lay the choice of marine carriers in this particular instance. Besides, reasoning by analogy, something of the sort might have been predicted. For a considerable time—exactly how long we cannot say, since the beginnings of such things are seldom perceptible—we have been watching the progress of a gradual rapprochement between Japanese and Germans. The latter have appreciated the prudence of coming out of their shells and cultivating more intimate contact with the former. Consul-General Bernal, in his Commercial Report for 1885, says:—"One thing is certain, that in these days of fierce and energetic foreign competition, backed up by protection, it is quite useless to sit quietly in a counting house, and expect customers to drop in of their own accord." It would seem as though this principle, enunciated by a British official, had been instinctively translated into practice by the Germans. To them it appears worth while to cultivate the ability of making themselves intelligible to the Japanese, and to be at the pains of seeking access to the social circles of their native clients. Repeatedly during the past six years we have urged the necessity of such a course, but our recommendations have invariably been met by the rejoinder, dictated partly by sentiment, partly by indolence and chiefly by prejudice—three moods which ought not to have much influence with practical men of business—that the Japanese trader is not a fitting associate for his British colleague; that foreign merchants can get on very well without knowing anything of the language of the country in which they live and trade, and that outside the counting house there cannot be anything in common between them and the Japanese. The Germans think differently, it would seem, and the results are making themselves too plain to be misinterpreted. In our opinion there cannot be the least doubt as to the place which foreign men of business will eventually occupy in this country. They will be the associates of the Japanese. Not here alone, but in every region where commerce has felt the subtleties of civilization, conclusive indications are discernible that the days of the costly middleman are past. He is becoming incompatible with modern conditions. Already there is some-

thing startlingly incongruous about his lingering survival, a relic of the soon-to-be-forgotten era when imperfect and untrustworthy communications necessitated an almost equal distribution of judgment, enterprise and irresponsibility at every point in the field of a commercial undertaking. This thought, doubtless, was present with Sir FRANCIS PLUNKETT when, in his despatch of last May, he predicted that "the days of 'foreign settlements' and 'enforced tariffs' are rapidly passing away," and that unless home manufacturers look to native agents to promote the sale of their goods, "they will find themselves beaten out of the field by the Germans and other foreigners." The truth, if seldom pleasant, is always wholesome. The prospect of the demise of our own particular settlement, or rather of its translation into a new existence, has not an exhilarating influence upon conservative instincts. But unless we are to disappear with the catastrophe, we must prepare ourselves to be among the survivors by selection. The method seems plain enough. Call it by any name you please, even that of making to ourselves friends of the mammon of unrighteousness that when our old functions fail they may receive us into their companies. It is not perhaps, an altogether congenial prospect, but we must accept it or its alternative. The feature of the future is a commercial association of foreigners and Japanese, in which the former will discharge the rôle of direction and the latter that of subordinate management. When the restrictions which at present forbid such associations shall have disappeared, the first to profit by the more liberal conditions will not be those who have previously held farthest aloof from their future partners. It is much to be wished that British merchants would take these things seriously to heart. Even the evidence accumulated at the beginning of this article fails to convince us of their comparative incapacity so long as they decline to give themselves equal chances with their rivals. When it has been shown that they lack ability as well as disposition to adapt themselves to the altered circumstances of the era, it will be time enough to admit that the day of their supremacy is past. For our own part, we fully believe in their ability and would fain arouse the disposition to utilize it. But as years go by we grow less and less able to combat the apprehension that, after all, the epitaph of this stubborn procrastination may be "too late."

## FRENCH BIMETALLISM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It appears to me that the two articles on silver published in your weekly edition of 4th instant completely dispose of all that your recent correspondents advanced on the other side, and I write now mainly to compliment you on their soundness and clearness. I notice but one flaw in them, and that is a needless concession to our opponents.

One of them stated that France demonetized silver in 1850, and you have incautiously adopted that error.

The fact is that France has *never* demonetized silver, which remains to this day as full legal tender for all French debts as it ever was; a circumstance, by the by, which should lead people disposed to denounce Americans proposing to pay their debts in silver (such debts being on precisely the same original footing as French debts are), to ask themselves why that should be disgraceful in America which is never spoken of as dishonourable in France.

No Frenchman of any eminence as an economist, except Chevalier, has ever, so far as I know, proposed the demonetization of silver in France, and certainly no such proposition has been entertained in that country. Chevalier, in 1857, when his authority was very great, urged France to demonetize *gold*, and he was powerfully supported, both in France and abroad (notably by Mr. Cobden, who translated his elaborate treatise on the subject). But his arguments wholly failed in France though they seem to have induced Germany about that time to revert to the single standard of silver. Later the same Chevalier, thinking only of the interests of the creditor class, advocated with equal eloquence gold monometallism. But France herself kept the double standard which she had established in 1803, and she still retains it.

All that she ever did against silver was to suspend its unlimited coinage in her mints after 1874, and her object in that measure was mainly to prevent her German enemies from drawing away her gold and substituting for it their discarded silver at a full gold price. It is very questionable if even this action, founded, as it was, on a bitter sentiment, was not a grave mistake; for by it France ranged herself among the nations destined to suffer from scarcity of gold instead of remaining among those destined to prosper from the abundance of silver.

The monetary change which occurred in France after 1850, and which is probably what your correspondent mistook for demonetization, was this: Before that date gold, which had for many years been the relatively dearer metal, was but little used in France, and her currency consisted chiefly of silver. But soon after that date, owing to the increased supplies of gold, silver became the dearer metal, and commanded such a premium for export to the East, that the shrewd French people rapidly sold out their stock of silver and used the cheaper gold money in its stead, making a very handsome profit by the operation. France did not adopt gold, as England and Germany have done, for the shallow reason that golden money, like silken cloths, comports best with the grandeur of rich and powerful nations, nor for the still shallower reason that gold is prettier and more portable than silver; for her people are a very sensible people, in money matters, and experience had assured them that one metal was quite as good as the other for monetary purposes. But she adopted it because her alternative standard allowed her to do so without any inconvenience, or any disturbance of contracts, and because the change gave

her a good and solid profit. That she was able thus easily and advantageously to adjust her affairs to the new circumstances of that time is, of itself, an excellent illustration of the benefit which the alternative standard confers on those who maintain it.

Chevalier and his comrades did their utmost to raise an alarm over this operation, crying out in horror about the deluge of gold which was pouring into France, and about the grievous loss of her precious silver, which they then thought, (and, be it remembered, this was only 30 years ago) would never come back again; and would leave the country without the only standard of value of any proper steadiness. But the wiser French people (for the Government had nothing to do in the matter) calmly disregarded all this theoretical clamour, sold away their silver, pocketed their profits, and used the cheaper gold instead, so that by 1860 gold was almost the only money in France.

If it had not been for the war with Germany and its rankling results, which made the French people eager to defeat any German project at whatever sacrifice on their own part, it is probable that these same shrewd Frenchmen, after 1874, would have simply reversed their former operation, selling off gold and getting back silver with another handsome profit, and would now be exempt (as all silver using countries practically are) from the depression and distress which are everywhere driving the gold standard countries into distraction and disorder.

In my view it is very unfortunate for France and for all who followed her example, that this natural feeling of spite against Germany so misled her people in their last monetary action, and I look forward confidently to the day when they will awake to their mistake, recover their ancient common sense, and let those who want to buy their gold at a high price take it to their heart's content. It seems to me unlikely that so analytical a people can long continue under the delusion that it makes any serious difference to them whether their money, their measure of value, be made of yellow metal or of white, it being easily demonstrable that the latter is as useful as the former for monetary purposes, and, in the long run, far steadier as a standard of value.

Meantime it is to be observed that France holds firmly on to her stock of silver, uses it as money, pays her debts with it whenever it suits her to do so, and stands ready to assist general remonetization whenever her neighbours emerge out of the gold mania which is now racking their strength. This "expectant attitude" is perhaps all that can be looked for on her part while such mad confusion on monetary matters rages all around her.

But I shall be disappointed if she does not some day break boldly away from it all, and firmly resume that practical and profitable course which, until recent times, made French finance the admiration of the world, and insured the prosperity of the French people in spite of the most erratic politics on the part of their rulers. French industry and frugality have never failed of success except under the regimes of paper and of gold; and as they long ago emancipated themselves from the one, so, I believe, they will finally emancipate themselves from the other, and prove to the world that the alternative standard is as efficient for good now as it was during the first 70 years of this century, and has advantages over monometallism, in ensuring steadiness of prices and justice between debtors and creditors that no other system can pretend to.

I have cherished a similar hope with regard to America, which has at least equally good reason to return to the alternative standard, from which she ought never to have departed. But, as in England, the creditor classes are there exceedingly powerful, and the sweets of holding obligations which have appreciated in value some 30 per cent. since they were acquired, (and which are still rising), and of drawing incomes in a metal whose purchasing power daily increases, are too much to their taste to be easily resigned; while the injustice done to those who have to pay this crushing excess in all debts, seems not to move them.

But how honest men can defend such injustice, or rail at those who denounce it, is more than I can understand.

I am, Sir, Your obedient servant, T. W.  
September 17th, 1886.

[We had not intended to speak of the demonetization of silver by France, but only of its displacement by gold.—Ed. J. M.]

## LOOK AT HOME.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—You formerly commented with severity on the plagiarism of an Anglo-Japanese journal which had embodied in one of its own leading articles, without acknowledgment, a considerable portion of the text of a Shanghai newspaper's

remarks. The following extracts will show you that the Anglo-Japanese journal, were it now in existence, might plead at least equality of wrongdoing with an English contemporary:—

EDITORIAL NOTE, PUBLISHED AS ORIGINAL MATTER, IN THE LEADING COLUMNS OF THE "JAPAN GAZETTE" OF SEPTEMBER 23RD:—

Her Majesty's ship *Dragon*, Commander Anson, which arrived at Plymouth last month, has had a long and eventful commission. She was originally commissioned at Devonport in February, 1879, and has ever since been employed on the East Indies station. She was at first actively employed on the East African division of the station in keeping up communications between Zanzibar, Tamatave, and Mauritius when Tamatave was being blockaded by the French. She was subsequently ordered to the Persian Gulf where a large number of slaves were surrendered to her by the Arab chiefs on the pirate coast, and these slaves were taken to Muscat and condemned in the prize court there. The *Dragon* afterwards traversed 700 miles of the Arabian coast, calling at many ports hitherto unvisited by ships of war, and was stationed at Trincomalee during the Russian scare last year. While here more than a hundred cases of fever broke out in the ship, and she was ordered to Colombo. Arriving on the coast of Africa in June of last year, Commander Anson took up the slave trade so actively that in less than three months the *Dragon*, together with the *Kingfisher*, captured no less than four slave dhows, containing a large number of slaves. During her commission she has covered a distance of over 60,000 miles under steam and sail, and has visited over a hundred different ports and anchorages. Five officers and thirty-nine men have been severely ill, and there have been three deaths. The officers and crews have become entitled to a large amount of prize-money.

Lord Randolph Churchill will be the youngest leader that the House of Commons has had since the days of Pitt, who first accepted the post at the age of twenty-three. Peel was called to the same responsibility at forty, Russell at forty-two, Disraeli at forty-seven, Palmerston at seventy. Happily the nation is unfettered by any hard-and-fast rule of age in respect of such appointments. Had Lord Randolph been a citizen of Republican Rome he must have waited another six years to be legally eligible for the consulship. Under the French constitution of 1875 he could not be chosen a senator for three years to come. On the other hand he has added two years to the thirty-five which an American must have lived before he can hold the Presidency of the United States. No doubt a majority of the men who have made history had shown the measure of their capacity at thirty-seven. Bismarck was just thirty-six when he became Minister at Frankfurt and his aggressive personality began to assert itself. Gambetta entered on his thirty-third year the acknowledged dictator of France outside Paris. Gordon had just completed the third decade of his life when he assumed the command of the "ever-victorious" army.

Those who have followed the obstreperous career of Sir John Pope Hennessy in the government of British Colonies will be amused, though hardly surprised, at the telegram announcing that he has quarrelled with Mr. Clifford Lloyd, his deputy. As it was on the Gold Coast, at Labuan, at Barbados, at Hongkong, so it is at Mauritius. There never was a secretary, or a treasurer, or a deputy yet with whom Sir John Pope Hennessy was able to agree. Discord attends his steps wherever he goes. Three-quarters of the world have already been witness to the talent of this astonishing Irish consul for disturbing the peace. We may track him through every colony he has governed by the heap of smouldering, unsmothered, but smouldering embers of civil dissension, social tumult, and intestinal wrangling he has left behind. With Mr. Clifford Lloyd a fight, sooner or later, was certain to come only and it will be interesting to watch the issue of a struggle in which is reflected so much of the character of the Irish political situation.

I am Sir, your obedient servant,

September 25th, 1886.

FAIR PLAY.

## ARTLESS GABBLE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I remember that you once compared the writing of one of your local contemporaries to Mrs. Flora Finch's artless gabble, "which never came to a full stop." Nothing, surely, could better illustrate the aptness of that comparison than the following extraordinary sentence of 284 words, which was presented to the public of this Settlement on Thursday last, and which deserves reproduction in your widely read columns as a unique specimen of "English as she is wrote."

Nor is it that newspaper men alone who suffer from the famine of topics that mostly prevails here; distressed Ministers, more amply furnished it may be, with paper on which to state their views, than with facts or ideas to put upon record, when the obligation is felt to be pressing to manufacture a despatch to forward by the next outgoing mail to head-quarters, and the *Herald* fails to furnish them with material for the purpose,—which we regret to say is often the case,—then, in such dire emergency, they may almost claim to be forgiven, if they indulge either in some questionable notions of their own, or what is much better, refrain, if they are wise enough to put a rational constraint upon themselves, from not writing at all, to the relief, and we might almost add the joy of the usual recipients of their communications, because unfortunately, they have the responsibility of glancing through them to see if there be anything at all in them requiring attention or reply, before relegating them to that vast limbo, to which fate has preordained that they shall most of them be committed, there perhaps to lay faded, musty, and as forgotten as most of their authors will then be, until some curious antiquary shall obtain permission, a dozen generations or so hence, to search the archives to make excerpts for the "Dryadist Publication Society" of the period; or some historian of that day, may perhaps assist in the resurrection, with the object of proving how completely the course of events in Japan falsified the hopeful predictions of the men who made them, and who half believed in them as likely to come true.

Yours faithfully,

ANGLICANUS.

Yokohama, 25th September.

## EPISCOPAL JURISDICTION IN JAPAN.

We have been requested to publish the following correspondence:—

[Copy.]

British Consulate, Kanagawa (Yokohama),  
September 28th, 1886.

REVEREND AND DEAR SIR,—I beg to enclose for your information and guidance copy of a despatch from Her Majesty's Minister to my address, advising me of the receipt of telegraphic instructions from Her Majesty's Principal Secretary of State for Foreign Affairs on the subject of the spiritual superintendence over clergymen and congregations of the Church of England in Japan.

The superintendence hitherto exercised by the Bishop of Hongkong is now vested in the Bishop of the Church of England in Japan, and in effect, the spiritual jurisdiction exercisable by the Bishop of Hongkong may be said to have ceased on the appointment of the late Dr. Poole as Bishop of the Church of England in this country.

I am, &amp;c.,

(Signed) RUSSELL ROBERTSON,  
Consul.The Reverend, E. C. IRWINE, M.A.,  
&c., &c., &c.

[Copy.]

Christ Church Parsonage, Yokohama,  
September 28th, 1886.

DEAR SIR,—I beg to acknowledge the receipt of your letter of this day's date with its enclosure from H.M.'s Minister to your address, notifying that a previous circular from the Foreign Office on the subject of the spiritual superintendence of Church of England clergymen in Japan was annulled, and that such spiritual superintendence now vests in the Bishop of the Church of England in Japan.

In reply I beg to state that I will now cheerfully submit to Bishop Bickersteth in all matters of spiritual jurisdiction.

I am, &amp;c.,

(Signed) E. CHAMPNEYS IRWINE,  
Chaplain.

RUSSELL ROBERTSON, Esq., H.B.M.'s Consul,  
&c., &c., &c.  
Yokohama.

## THE REGISTRATION REGULATIONS.

## REGISTRATION LAW.

We hereby give Our Sanction to the annexed Law relating to Regulations of Registration, and order it to be promulgated.

[His Imperial Majesty's Sign Manual]  
[Privy Seal.]

Dated the 11th day of the 8th month of the 19th year of Meiji.

(Countersigned) Count ITO HIROBUMI,  
Minister President of State;  
Count YAMAGATA ARITOMO,  
Minister of State for Home Affairs;  
Count MATSUGATA MAMAYOSHI,  
Minister of State for Finance;  
Count YAMADA AKIYOSHI,  
Minister of State for Justice.

## LAW.—NO. I., RELATING TO REGULATIONS OF REGISTRATION.

## SECTION I.—GENERAL RULES.

Art. I.—Any person desiring registration of the sale, purchase, transfer by gift, mortgage, or hypothecation of lands, buildings, or shipping, should, in conformity with the provisions set forth in the present Regulations, apply, in the case of land or buildings, to the Registering Office of the locality where the objects in question are situated, and in the case of shipping, to the Registering Office of the locality where the object lies at anchor.

Art. II.—Registration of the sale, purchase, transfer by gift, mortgage, or hypothecation of lands, buildings, or shipping will be under the control of the Chief Judge of a Court of First Instance.

Art. III.—The business of registration will be conducted at a Peace Court; and in localities far removed from any such court, it will be conducted at the Town or District Office, or at any other place to be fixed by the Minister of State for Justice.

Art. IV.—The location and territorial limitation of each Registering Office, will be determined by the Minister of State for Justice.

Art. V.—Registration officials will, in the discharge of their duties of registration, be subject to the control of the Chief Judge of a Court of First Instance.

Art. VI.—Any sale, purchase, transfer by gift, mortgage, or hypothecation of lands, buildings, or shipping which has not been recorded in the registry-book, will be devoid of all legal value to the third party.

Art. VII.—The particulars to be registered in connection with the sale, purchase, transfer by gift, mortgage, or hypothecation of lands, buildings or shipping, are as follows:—

1. In the case of land: the name of the rural or urban division, and of the *machi* and *mura*, the local name (*asana*), the number and special name of the lot, its area in *tan* or *tsubo*, and its value as expressed on the title-deed.
2. In the case of buildings: the name of the rural or urban division, and of the *machi* or *mura*, the local name (*asana*), the number and special name of the lot, the style of construction, the area occupied by the building in *tsubo*, and whether or not the building is provided with *zōsaku* (such accessories as doors, final plastering, etc.).
3. In the case of a ship built on a foreign model: whether a steamship or sailing vessel, the name and number of the ship, registered tonnage, nominal horse-power, variety of engine and boiler, and number of boats and other accessories.
4. In the case of a ship built on the Japanese model: the name and number of the ship, the capacity in *koku*, dimensions in *ken*, and number of boats and other necessary accessories.
5. Reasons for registration.
6. The amount of money.
7. In the case of mortgage or hypothecation: the period and rate of interest.
8. The names and addresses of the owner and the person for whom the registration is made.
9. In the case of sale, purchase, transfer by gift, mortgage, or hypothecation is confined to a portion of land or of a building, the circumstances must be stated.
10. In the case of hypothecation for a second time or thereafter, or mortgage of a hypothecated object, or hypothecation of a mortgaged object, the circumstances must be stated.
11. The era, year, month, and day of registration.

Art. VIII.—When any person applies for registration, a registration official should instantly

look through the particulars described in the preceding article, and insert them in the registry-book. After showing or reading the record to the applicant, the latter should be made to sign his name and put his seal on it; after which the registration official should also sign his name and affix his seal.

Art. IX.—The retention, provisional retention, keeping in lien, provisional keeping in lien of, or provisional action in reference to, lands, buildings, shipping, or the retention of the profits of lands or buildings, should be recorded in the registry-book, according to the instructions of the Law Courts.

Registration of the foregoing particulars can not be annulled, without the instructions of the Law Courts.

Art. X.—Excepting in the cases provided Art. XV. (2nd clause), Art. XVI., Art. XVII., and Art. XVIII., no process of registration or alteration, or of annulment should be made without either the request of both parties to the contract or the instructions of a law court.

Art. XI.—Any person desiring to see a copy, extract, or a summary of registration, may apply in person at a Registering Office.

Art. XII.—Any person having any complaint respecting the conduct of business by registration officials may appeal to the Court of First Instance of the district.

Art. XIII.—The process of registration and the forms of the registry-book shall be determined by the Minister of State for Japanese.

## SECTION II.—SALE, PURCHASE, AND TRANSFER BY GIFT.

Art. XIV.—In applying for registration of the sale, purchase, or transfer by gift of lands, buildings, or shipping, both parties to the contract must present themselves at the office and produce the documents necessary to complete the transfer.

When, in the foregoing case, the object in question is in mortgage or hypothecation, the purchaser or person to whom it is given should acknowledge the circumstances, and request that the act be registered.

Art. XV.—In applying for registration of lands, buildings, or shipping in connection with a bequest of estate, both parties should present themselves at the office and produce all documents relating to the transfer.

In case the applicant for registration should inherit land, buildings, or shipping left by a deceased person, an outlaw, or a person who has been divorced, a document signed either by his relatives, or, if he has no relatives, by more than two heads of families in his neighbourhood, should be presented, and if there be any documents of testamentary value, they should also be produced.

Art. XVI.—In case the applicant for registration has obtained his right of ownership in land, buildings, or shipping by public sale (*Kōbai-shobun*) at an executive office, a note of acception of the offer and a receipt for the price in full should be produced.

Art. XVII.—In case the applicant for registration has either purchased, or received a free gift of land, buildings, or shipping in possession of the Government, either the original copy of the Government's sanction, or the note of transmission should be produced.

Art. XVIII.—In case land, buildings, or shipping in the possession of a private individual or individuals is transferred to Government, the office receiving the new property should request its registration, by exhibiting the particulars mentioned in Art. VII.

Art. XIX.—When the right of ownership in lands, buildings, or shipping has been obtained, by purchase at an auction, or through a tender in accordance with judicial action, the registration shall be made by order of the law court.

Art. XX.—Any person desiring to apply for, or to request modification of, a title-deed of land, or a certificate, after registration, of lands, buildings, or shipping, should receive from the Registering Office a note testifying the registration.

## SECTION III.—MORTGAGE AND HYPOTHECATION.

Art. XXI.—In applying for registration of a mortgage or hypothecation of land, buildings, or shipping, both parties to the contract should attend in person and produce the documents completing the transaction.

[The foregoing provision applies to the case of mortgage or hypothecation of lands, buildings, or shipping, contracted not for the purpose of procuring money, but as security for the fulfilment of certain obligations.]

Art. XXII.—In applying for registration of the hypothecation of lands, buildings, or shipping, already in hypothecation, the second creditor should testify his knowledge of the circumstances. The same rule applies to the mortgage of land which has been in hypothecation and to the hypothecation of land which has been in mortgage.

Original from

Art. XXIII.—In applying for registration of the cancelling, in whole or in part, of, or modifications in, a contract of mortgage or hypothecation, both parties to such contract should attend in person and produce the documents completing the transaction.

Art. XXIV.—When several registrations have to be made as to the same lands, buildings, or shipping, their order shall be fixed according to the dates of the applications.

### SECTION III.—FEES OF REGISTRATION AND COMMISSION.

Art. XXV.—For registration of the sale or purchase of lands, buildings, or shipping, the purchaser should pay fees for each registration at the following rates, calculated on the price of the sale or purchase:—

PRICE OF SALE OR PURCHASE.	FREE OF REGISTRATION.	PRICE OF SALE OR PURCHASE.	FREE OF REGISTRATION.
YEN.	YEN.	YEN.	YEN.
under 5	0.05	400 to 500	5.00
5 to 10	.10	500 to 750	6.00
10 to 25	.25	750 to 1,000	7.00
25 to 50	.50	1,000 to 1,500	8.00
50 to 100	1.00	1,500 to 2,000	9.00
100 to 200	2.00	2,000 to 3,000	10.00
200 to 300	3.00	3,000 to 10,000	12.00
300 to 400	4.00		

Beyond the last mentioned sum the amount of the fee increases by *yen* 2 for every additional *yen* 5,000 or under.

Art. XXVI.—For registration of the transfer by gift of lands, buildings, or shipping, the donee should pay the fee of registration for each object registered at the rates mentioned in the foregoing Article, according to the price estimated by both the donor and the donee in view of the then general rate of prices.

Art. XXVII.—For registration of the mortgage or hypothecation of land, buildings, or shipping, the mortgagor or hypothecator should pay for each object registered, one-half the amount of the fee of registration as mentioned in Art. XXV; but the amount of the fee for each object registered should not be less than *sen* 5.

Art. XXVIII.—For registration as mentioned in the second clause of Art. XXI, the fee of registration should be paid at the rate provided in the foregoing Article according to the estimated price.

For registration, mentioned in the first clause of Art. IX, the fee of registration should be paid at the rate fixed by the preceding Article, according to the price in the case of an object the price of which is fixed; and in the case of an object the price of which is not fixed; according to the price estimated in view of the then general rate of prices.

Art. XXIX.—For registration as mentioned in Art. XV, the fee of registration should be paid for each object registered at the rate of one-fifth of the amount mentioned in Art. XXV, according to the price estimated in view of the then general rate of prices. But the amount of fee for one object should not be less than *sen* 5.

Art. XXX.—In the following cases, *sen* 5 shall be charged as commission:—

1. Per object, in the case of the annulling of registration or the registration of modifications.
2. Per leaf, in the case of application for a copy or for extracts of registration.
3. In the case of application to see a registration.

Art. XXXI.—In the following cases, neither the fee of registration nor commission is required:—

1. Registration at the request of a Government office.
2. Registration connected with public schools and hospitals, parks and asylums.
3. Registration connected with shrines, temples, and grave-yards.
4. Registration connected with grounds occupied by sewage, ponds, embankments, wells, or ditches, in the common possession of the public, and public roads.

Art. XXXII.—When a Registering Office deems improper the price estimated according to Art. XXV, Art. XXVI, Art. XXVIII. (second clause), and Art. XXIX, three disinterested persons shall be appointed as Assessors to fix the price.

Art. XXXIII.—When the price fixed by the Assessors exceeds the price originally stated, the expenses connected with the assessment shall be charged to the payer of the fee of registration. When the price fixed by the Assessors coincides with, or falls below the price originally stated, the expenses of assessment shall be borne by the Registering Office.

Art. XXXIV.—Any person appointed as Assessor should not refuse such appointment without due cause.

Art. XXXV.—Assessors shall be paid each from *sen* 20 to *sen* 50, according to the discretion of each particular Registering Office.

### SECTION V. PUNITIVE RULES.

Art. XXXVI.—Any person who evades by deception the payment, or pays less than the proper amount, of the registration fee, or who has connived with such an offender, is liable to be fined in a sum of not more than 100 *yen* and not less than 2 *yen*.

Art. XXXVII.—Any persons who may be convicted according to the present law shall not be allowed the benefit of those precedents of criminal laws relating to doubtful cases, mitigation, second offence, or the discovery of several offences at the same time.

### SUPPLEMENTARY RULES.

Art. XXXVIII.—The Rules of Procedure for the Sale, Purchase, Hypothecation or Mortgage of Ships, proclaimed by Imperial Proclamation No. XXVIII of the 10th year of Meiji; the Rules for the Sale, Purchase, or Transfer by Gift of Lands, proclaimed by Imperial Proclamation No. 111 of the 13th year of Meiji; the Rules as to the Stamp Tax on Title Deeds of Land, proclaimed by Proclamation No. XXX of the 14th year of Meiji, and all other statutes and regulations contradicting the provisions of the present law, shall be cancelled from the date at which the present law comes into force.

Art. XXXIX.—The Minister of State for Finance shall determine the mode of procedure in all matters relating to the granting or modification of title-deeds of land, such as the sale, purchase, or transfer by gift of land, the reclamation of waste lands, the period of cultivation of reclaimed lands, etc. He shall also fix the amount of commission for any such granting or modification of title deeds of land.

Art. XL.—In applying for registration of lands, buildings, or shipping which have never been entered in the registry-book of a Registering Office, the certificate of the headman of the place where, in the case of land or buildings, the subject is situated, and, in the case of shipping, it lies at anchor, should be produced to show that the applicant is the real owner of the subject and that it is free from disabling conditions.

Art. XLI.—The present law shall come into force on and after the 1st day of the 2nd month of the 20th year of Meiji.

### YOKOHAMA CHORAL SOCIETY.

The annual general meeting of the Yokohama Choral Society took place on Monday evening, in the Public Hall. Mr. J. T. Griffin, president of the Society, was in the chair, and there was a large attendance of the members chiefly ladies.

The CHAIRMAN, having explained the object of the meeting, asked whether the minutes of last meeting should be held as read.

This was agreed to, but a suggestion by Mr. Crane that the report of the Committee and the statement of accounts should also be held as read was not so favoured, and Mr. Griffin therefore read the report and afterwards intimated his readiness to answer any questions that might be put to him for fuller information.

Mr. CRANE asked how it was proposed to carry on the dual arrangement referred to in the report. Would there be two meetings a week, or would both be on the same day?

The CHAIRMAN said it was not intended to have both on the same day. He thought it would be quite possible to have two meetings a week, as was the case last season when the "Pirates of Penzance" was in full rehearsal. The Monday meetings were taken up by Mr. Keil for the "May Queen," and the "Pirates of Penzance" went on as it suited the convenience of those taking part in it.

Mr. CRANE presumed certain set days would be fixed.

The CHAIRMAN said certainly.

Mr. CRANE then moved the adoption of the report which was as follows:—

LADIES AND GENTLEMEN.—Pursuant to Article II. of the Constitution, we have called this meeting, and now proceed to lay before you a report of the Society's operations, during the short experimental season which expired on the 30th June.

Following the General Meeting of 20th March, we began work at once; and the first weekly practice was held on the 5th April. On that occasion, Professor Sauvet (who had been engaged as Conductor for the three months, April to June) selected the "Pirates of Penzance" for rehearsal; and performances of that opera were eventually given on 14th and 18th June. These performances, while fairly successful from a musical point of view, did not rouse much enthusiasm with the public; and the financial result was not encouraging. While there was actually no loss upon these ventures, the heavy expenses incurred in their production re-

duced the profit to so small a sum, that we had to call up the subscriptions for May and June to enable us to provide new music for the coming season.

A list of music suggested by the Committee was circulated among the members during July; those works which met with general approval were at once ordered from abroad, and should be here during next month or by the beginning of November.

The Treasurer's report shows Disbursements \$735.82 against Receipts \$871.35, leaving a balance in hand, towards paying for the music just referred to, of \$135.53.

The list of members now stands at 84, and we hope for some new recruits when the rehearsals recommence. We found that during the past season a large and influential section of the Society preferred more serious work than Comic Opera affords. To meet the views of this section we arranged (with the kind assistance of Mr. Keil as conductor) practices of Sterndale Bennett's "May Queen." These practices were held regularly from the 17th May; and, had it not been for the great delay in producing the "Pirates of Penzance," a performance of this Cantata could have been brought off before the end of June.

We recognise the fact that in so large a body of members there are diversities of taste, and suggest that in future two works, of different *genre*, be placed in rehearsal simultaneously—so that all the members may find congenial employment during the whole season. By this dual method of procedure we think there should be no difficulty in giving frequent concerts and performances: thus keeping alive the interest of the community in the work of the Society.

It is necessary to take into consideration the fact that the pianoforte used by the Society last season is no longer available; and that some fresh arrangement must be made in this respect. A fine new concert-grand pianoforte has recently arrived in the settlement; and we recommend that the members go to work with renewed vigour, so that we may acquire, by purchase, this valuable instrument for the Society's own special use and benefit.

With a view to meeting the financial question, we propose that, for the ensuing season, no paid Conductor be engaged; but that the post of Musical Director be filled by one of the members, as in former years. By following this course we believe that the work of the Society may be carried on successfully and profitably; that we shall be able to pay our way without continual calls for subscriptions (beyond the \$2 per annum provided for in Article IV. of the Constitution); and that we can earn sufficient funds for the purchase of a pianoforte besides furnishing all necessary books, music, and properties for current use.

For the Committee,

JOHN GRIFFIN, President.

Gilbert and Sullivan's latest Opera.  
Barnett's—"Ancient Mariner."  
Mendelssohn's—"Elijah."  
Two Cantatas for ladies' voices.  
Two Cantatas for men's voices.  
Two Cantatas for mixed voices.  
Sacred Cantata—"Ruth and Naomi."  
Part Songs, Glee, &c.

C. MARSHALL MARTIN,  
Yokohama, 17th September, 1886. Hon. Sec.

Mrs. HANNEN seconded the motion, which was agreed to.

The next business was the election of office bearers, and in making this intimation,

Original from

UNIVERSITY OF ILLINOIS AT  
URBANA-CHAMPAIGN

The CHAIRMAN mentioned that all the office-bearers of the past year were willing to return to office; but it would be necessary to elect a lady in place of Mrs. Irwine, who had gone home.

While the scrutineers (Messrs. Cameron and Andson) were busy, the Chairman remarked that he would be glad to hear observations as to the pianoforte, on which it would be necessary to take some action at once. The one the Society had last year was no longer available, having been sent home for repairs, and so they must look out at once for another instrument. The one now in the settlement was a fine large concert grand pianoforte, specially built—he was going to say for this climate—but specially built for this settlement by Hopkinson, the noted pianoforte builders in London. Mr. Keil, who was ever generous and open hearted in his operations, brought it out at his own expense. There was some talk of the Bluff Recreation Club taking it, but it seemed that the Recreation Club were not now in a position to take anything. Mr. Keil therefore placed the piano at the disposal of the Society; he did not want the money at once but would wait till the Society could earn it.

In reply to one of the ladies, the CHAIRMAN said the price would be somewhat over \$1,000 at the present price of silver. Mr. Keil observed that the total amount would be \$1,020 to \$1,025.

The CHAIRMAN said he thought they should pledge themselves to take this piano and pay for it; it could easily be done in one season, he believed.

The result of the ballot for office-bearers was here announced, last year's members (Mr. Griffin, president, Mr. Keil, vice-president, Mr. Townley, treasurer, Mr. Martin, Secretary, Mrs. Wheeler, Mrs. Hannen, and Mrs. Lowder) Mrs. J. C. Hall being selected to take the place of Mrs. Irwine.

The CHAIRMAN thanked the members for the honour they did him in re-electing him and would do his best to properly discharge the duties of the office. He would now like to hear the views of the members as to the pianoforte.

Mr. TOWNLEY suggested that it should be put in the form of a resolution.

Mr. GILLET remarked that at present there was nothing before the meeting at all.

The CHAIRMAN pointed out that the report of the Committee had been passed recommending that the piano should be purchased. In further reply to Mr. Gillett the Chairman said unless some instructions were given by the members at this meeting the Committee as directors of the society would certainly pledge themselves to purchase the instrument. He had been all the time asking some one to make a motion on the subject.

Mr. TOWNLEY proposed that the Committee be authorised to purchase the piano owned by Mr. Keil.

Mr. KEIL remarked that Mr. Griffin had gone just a little too far. He should certainly want to have a definite arrangement of some kind instead of an understanding that he should wait for the money. He pointed to the fact that in one season they had earned \$800, of which over \$500 were spent on this building; and remarked that so far as that went there was no reason why they could not earn the money even in the present season, if matters were properly arranged.

The CHAIRMAN said there was this further to take into consideration that some money would be made by lending the piano to people giving concerts. Of course they had always the power to refuse to lend it to people who they thought might damage it. That, however, was a question for after consideration. He thought, in spite of Mr. Keil's protest, that gentleman's bark was worse than his bite, and that though Mr. Keil was right to make a guarded speech, he (the Chairman) had correctly described the state of matters.

Mr. CAMERON here seconded Mr. Townley's motion, and a ballot was about to be taken, when,

Mr. GILLET remarked that it would be unfair to Mr. Keil to leave this matter in any doubt, and such an arrangement as that they should pay for the piano when they could earn the money was unsatisfactory and unbusiness like. If the society assumed the responsibility of paying for the instrument they must pay for it. He thought and probably some others there were of the same opinion, that the Society was not at present in a position to take any such responsibility. They had just started the Society and finished one season fairly successfully, and paid their way but as they knew by experience here it was usual for a society after getting on its feet to rush into all sorts of expenses and then to come to grief. They had seen nearly the same thing in this very building. Where would the instrument be kept?

The CHAIRMAN said in the Public Hall or wherever the Society should practise.

Mr. GILLET—Keep it here during the whole year?

The CHAIRMAN—Yes.

Mr. GILLET said he did not know very much

about pianos but he should think this was no place for a piano. He protested against the Society taking upon its shoulders this incubus, when they could have no difficulty in hiring a suitable instrument. He moved as an amendment that the Society should hire a piano when one was required.

Mr. WIRGMAN seconded.

The CHAIRMAN remarked that in some of their past performances, notably in "Pinafore," they had netted as much as \$750 by one performance, and there was no reason why they should not do so again. There was difficulty in hiring a good instrument, and there was always the chance, if they did get one that was suitable, of some body coming along and buying it.

On a ballot being taken 15 voted for the motion to purchase and 14 for the amendment.

Mr. GILLET thought in the circumstances the matter should be left in the hands of the committee. They wished to begin work as soon as possible, and if they rejected this offer they might have to wait for a month to hire a suitable piano.

Mr. GILLET again protested against such an instrument as this being kept in such a dismal hole as the Public Hall. He asked would any one owning a piano care to keep it there. At of no great expense they could hire a piano for ordinary practice, and hitherto there had never been any difficulty in hiring instruments for the performances. The very narrowness of the voting showed that there was much feeling about the matter, and it would be very questionable policy to order the piano against the wishes of the 14 who had voted against it.

The CHAIRMAN said he had hoped to begin next Monday but if matters were left in that unsatisfactory state there was no telling when they could begin. In answer to Mr. Gillett, Mr. Griffin said the Committee were unanimous as to the purchase of the piano.

Mrs. HANNEN said the ladies were not unanimous.

The CHAIRMAN said copies of the report were given to all, and there were no dissentients. Mr. Griffin then referred to the minutes of the Committee meeting, which stated that "a proposal was submitted as to purchasing a new piano, which was put to the meeting and all present assented to this course." He remarked that they should be very much indebted to Mr. Keil for offering them such terms. If the Society wished, then, it should not go to work and should die out again, but if they wanted to work and make success then let them go in and work.

Mr. GILLET asked was it necessary to buy a grand piano.

The Chairman said that was as Mr. Gillett liked but if he imported the tin kettle he had before spoken of, some of the members would not attend practice. To do good work they required good tools. The piano would stand in the green room, where there was a fire place, and the temperature would be carefully regulated. Besides that Mr. Keil allowed his own piano to remain here for six months at a time, and as vice-president of the Society they might be certain he would look after the Society's piano.

Mr. GILLET asked if it was understood that they could not hire a piano for ordinary practice.

Mr. GILLET thought they could not.

Mr. GILLET then moved that the meeting be adjourned to give the Committee an opportunity of ascertaining whether pianos suitable for ordinary practice could not be obtained on the hire system.

Mrs. JAMES seconded.

The CHAIRMAN, in reply to a lady, said he thought the society should practise on the same instrument that they had for their performance. Mr. Griffin put the motion to the meeting and declared the meeting adjourned for a week, remarking that if a piano for hire were found the members need not be surprised if one at least of the Committee tendered his resignation at the same time.

#### MEETING OF TEA BUYERS.

A meeting was held on Wednesday, called by the following circular:—"Members of the undermentioned firms, interested in the tea trade at Yokohama, are invited to meet at 3 o'clock on Wednesday, the 29th September, at the Chamber of Commerce Rooms, to discuss the question of 'rejections,' and steps that it may be advisable to take to facilitate the settlement of disputes between buyers and sellers." This circular was addressed to twenty firms. Among those present were Messrs. A. H. Groom, Harris, Dross, Barnard, Hunt, Mollison, H. Baggallay, Hellyer, Varnum, Wylie, Low, Bazing, Melhuish, and Gordon.

Mr. J. P. MOLLISON was called to the chair.

On the motion of Mr. BARNARD, seconded by Mr. VARNUM, it was decided that the meeting should be open to reporters.

The CHAIRMAN, after reading the circular calling the meeting, stated that the occasion in reference to which the meeting had taken place was a dispute that had arisen between Messrs. Mourilyan, Heiman & Co. and the Mitsui Bussan Kaisha—a dispute similar, he thought, in nature to that which all present had had to undergo from time to time with Japanese. He considered the subject to be a most important one, thoroughly deserving the notice of such a meeting. The Chairman then asked Mr. Groom to explain more fully the nature of the dispute.

Mr. GROOM remarked that he did not propose to say much about the dispute with Mitsui. He hoped that some good would come out of the matter. He believed it would be necessary to work in connection with the Japanese association, which it was to be hoped, would fall in with their views, as their aim, of course, was to facilitate the buying and selling of tea here. At present there were endless cases of dispute, and great necessity was felt for an arbitrating committee; and he thought it would be a good plan to ask the Tea Association to assist them with their views. He suggested that a sub-committee should be appointed at this meeting to draw up a letter to be sent to the Tea Association, inviting them to give their views and to coöperate. Mr. Groom then read a resolution that he had drawn up providing for the appointment of a committee of reference, and remarked that, though this committee would have no legal status, both sides would transact business on the understanding that any disputes would have to be referred to the committee, by whose decision they would agree.

The CHAIRMAN suggested that the resolution should be divided.

Mr. HUNT observed that except in cases like the present, occurring in the off season and exciting some special interest, people would in most instances prefer to send the tea back rather than have the trouble of referring to the committee. He believed it desirable that something in the shape of a foreign tea guild should be organised in order that buyers could on occasion unite in their attitude towards the Japanese. He thought the views of buyers should be obtained as to the formation of such a body, with perhaps a consultative committee such as Mr. Groom proposed, to take special cases into consideration.

The CHAIRMAN thought Mr. Groom's proposal practically embodied this idea, as each tea firm would have a vote in the election of the committee.

Mr. GROOM expressed the opinion that in a case of emergency, such as an attempt to boycott any foreign firm, buyers would stand by that firm. But he pointed out that, all being commission houses as one might say, it would sometimes be impossible for firms to enter at the time into a combination, as they had other interests besides their own to consider. He thought, if this committee were appointed, and the Japanese met them in a similar spirit, that they might work harmoniously together.

Mr. GROOM then, after some discussion, altered his proposal, and put the first part of it in the following motion:—"That a committee of three be appointed now to invite the cooperation of the Japanese tea brokers with a view to forming a joint committee, to which disputes between buyers and sellers could be referred. The result to be communicated to a subsequent meeting."

Mr. VARNUM seconded and the motion was agreed to unanimously.

Mr. C. P. LOW suggested that some indication should be given to the committee as to the policy they were to pursue.

Mr. GROOM then read the second part of his original proposal as a motion embodying instructions to the committee.

On this some discussion took place.

Mr. HELLYER suggested that no number should be specified for the committee.

Mr. GROOM then put his motion as follows:—"That the proposition to the Japanese tea brokers be that a committee of reference be appointed, to be composed of equal numbers of Japanese and foreign experts, to be elected by ballot amongst those brokers and firms engaged in the trade, and that this committee be elected annually in April."

Mr. LOW seconded, and the motion was adopted unanimously.

In the course of further discussion which took place,

Mr. GROOM pointed out that it would be highly advisable that all should sign the letter that would be drawn out by the committee. He could speak on behalf of one or two other firms, Messrs. Paul Heinemann & Co., Jardine, Matheson & Co., and Smith, Baker & Co., which fully sympathised with the motion, and would be prepared to go with them to a certain extent.

The ballot then took place for the election of the

committee, resulting in the appointment of Messrs. Mollison, Groom, and Wylie.

This was all the business.

The following is the correspondence that took place between Messrs. Mourilyan, Heimann & Co. and the Yokohama Tea Association:—

(A.)

Yokohama, 24th Sept., 1886.

To the firm No. 33.

GENTLEMEN,—In reference to the failure of the negotiations between the parties concerned, with respect to the dispute arising between the two firms in regard to the difference between musters and cargo of tea brought in to your office by the Mitsui Bussan Kwaisha on the 7th inst., the committee of Tea brokers at this port, Messrs. Otani, Okano, Hori, and Chiujo offered themselves to mediate between the disputants, but your reply to the committee was that if you would accept their suggestion it would give rise to an endless practice on the part of the Japanese teamen of withdrawing their goods whenever there has been any difference discovered between muster and cargo, and that as this would entail endless trouble, you could not undertake to return the goods.

You state also that we must be aware that when similar troubles occurred between foreign residents and Japanese import traders, they did not carry on transactions as before, and that your request is not unreasonable; and you further reply was that unless we provided proper rules which may prevent such abuses in future, you would not return the cargo in question, and that you should require us to reply to you on the subject after the Yokohama tea guild has been duly consulted.

The above, having been communicated, was reported to us by the committee. We have duly discussed the matter, and have decided that as, during many years past, we never met with such a dispute as the present one, and as we have had indeed trouble for the first time with no other firm but yours, we feel very certain, if we meet such trouble in the prosecution of every contract with your firm tea-brokers should no longer bring samples to your office, so that if you want to buy you will have to come down to their offices and inspect both musters and cargo at the same time, which latter will be delivered to you, if you like, in exchange for cash. This we believe will be equitable, as by so doing our transactions with your firm may be conducted in the same manner as between foreign merchants and Japanese import traders. If you agree to this, we will at once report it to our brokers, and the affair will be at an end. We should like to be informed as to what you are going to do with regard to the dispute arising between you and the Mitsui Bussan Kwaisha.

Respectfully awaiting your reply,

We are, Dear Sir, yours faithfully,  
(Signed) YOKOHAMA TEA ASSOCIATION [Seal].

(B.)

Yokohama, 25th Sept., 1886.

THE JAPANESE TEA BROKERS' ASSOCIATION.

SIRS,—We are in receipt of your reply to our request that you would give us your ideas on the subject of the question of "rejections," upon which we wished to arrange a dispute between the firm of Mitsui and ourselves, and we would point out that you have put an entirely different interpretation on the whole matter. The dispute between Mitsui and ourselves, as you must be aware, was the principal question under discussion. We informed you that it was not a matter of returning, or keeping 40 piculs of tea, but that as you threatened to dictate terms, we would refer the question to all the tea buyers at the port, so that the question of "rejections" might be once and for all determined fairly.

You must bear in mind that so little stress was laid upon the Mitsui bargain, that we offered to abide by Chiujo's decision.

Our reason for not giving up the tea upon Chiujo's non-acceptance of the position of arbitrator, was simply to bring about this discussion.

A meeting of Tea buyers will take place early next week, and the result will, in due course, be communicated to you. It will be our endeavour to suggest such an arrangement as will meet with the support of both buyers and sellers.

As it is not our wish or intention to let the present contract for a small lot of tea lead to farther trouble, and our object of raising the question of "rejections" has been gained, we shall return the tea to Mitsui on application, it being understood that this action on our part is not to form a precedent.

We are, Sirs, yours faithfully,

MOURILYAN, HEIMANN & CO.

(C.)

27th September, 1886.

GENTLEMEN, No. 33.

SIRS,—We beg to acknowledge receipt of your

letter. We note that you say the import of our letter under date of 25th instant is entirely at variance with your proposal. To ascertain further on the subject, we have again inquired of the committee as to what was discussed with you, and we have been told by them that your letter (of this date) is contrary and different in character from your original statement which items we shall state hereunder, viz, the committee's calling at your office was not to demand your decision upon the dispute about Mitsui's cargo.

It would be, of course, though their action was to endeavour to mediate in the dispute for the advantage of both you and Mitsui, as it is not desirable to have such an endless, profitless dispute between the two; and also your letters declare Chiujo refusing to interfere, &c., &c. But they never said so, because they were to have voluntarily tried to negotiate this matter with you. At the end of yours, you say that your keeping the cargo was in order to bring up the question of breaking contracts or rejection. It seems very strange and doubtful because, if so, we cannot avoid deeming that your action was simply to bring up the new question of breaking contracts, and not for the difference of muster and cargo.

As said in above, the committee's calling at your office was not to demand your decision on the cargo, and therefore we presume you will arrange the present dispute in your own proper way.

Simply stating our views on your letter, we remain.

Dear Sirs, yours faithfully,

(Signed) YOKOHAMA TEA BROKERS' ASSOCIATION.

(D.)

Yokohama, 28th September, 1886.

TO THE YOKOHAMA TEA BROKERS' ASSOCIATION.

SIRS,—In reply to your letter of the 27th inst. we beg to say that although the Committee from the Tea Brokers' Association professed to interview us, as mediators between the firm of Mitsui and ourselves, they took up quite a different position, and informed us that they, being friends of Mitsui, would advise us to give up the cargo if we wished to avoid trouble with the Japanese Tea Association.

The Committee, if mediators, should we think have looked at the tea in dispute, and not have silently acquiesced in Mitsui's refusal to compare our sample with the cargo, on the plea that because the sample held by them was the same as the cargo delivered, they could not admit a comparison between our sample and the bulk. It was after this veiled threat that we informed the committee that it would be better for buyers to discuss such an important question, so that similar unpleasantness, and, possibly, lengthy litigation might be avoided in future, and that we would let them know, as soon as possible, what proposition Tea buyers could suggest to facilitate transactions between buyer and seller that would be acceptable to both.

We also invited the committee to give us their views after full discussion, which they promised to do when taking leave, and which we shall still be pleased to receive.

We are, Sirs, yours faithfully,

MOURILYAN, HEIMANN & Co.

## FINANCIAL ADMINISTRATION.

### A HISTORY OF THE CURRENCY.

(Continued from 11th September.)

Owing to the above causes, namely, that on the one hand, the Shōtoku and Kōhō currencies were, owing to the scarcity of bullion, insufficient to meet the wants of the nation, while, on the other hand, there was no proper standard of comparative value between the different coins, the inferior money drove out the better coinage altogether from the market. The first year of Genbun, 150 years ago, corresponds to the year A.D. 1736. Previous to this, in the various foreign countries the relative values of gold and silver were, subsequent to the year 1640, on an average 13.51 of silver to 1 of gold; and subsequent to 1700 the relative values were 14.01 of silver to 1 of gold. At that time the trade between our country and foreign nations was confined to the single port of Nagasaki to which place a limited number of Chinese and Dutch merchant vessels came every year. Even supposing that on account of the excessive strictness of the laws regulating this trade the outflow of gold coins did not take place to any very large amount, still our consumption of foreign goods increased every year, and as a natural result, the mercantile firms in our large towns came to understand the enormous difference

there was in the relative values of gold and silver in Japan and abroad, and consequently carefully stored up their *kobans*. The chief cause, however, of the disappearance of the Kōhō gold *kobans* and 1 *bu* pieces from the market is to be found in the increasing quantity of Clan paper.

Although, as we have mentioned previously, the Shogunate, in the 4th year of the period of Hōei (1707), prohibited for a time the circulation of the Clan paper which was issued, in their territories, by the Daimios of Echizen and Kii, and afterwards by the Daimios in the South-west, yet, after all, this prohibition did not continue in force for long. When, in the 4th year of the period of Kiōhō (1719) the Shogunate held private deliberations upon the question of attempting an issue of Government silver notes in the single province of Yamashiro, the Governor of Kyōto had actually to make enquiries of all the money changers in the city as to the advantages to be derived from such an issue. From this fact we may infer how hard it was to stop the issue of the paper notes current among the various Clans. Accordingly in the 5th month of the 15th year of the period of Kiōhō (June, 1730) the Shogunate issued a fresh edict to all the Clans, stating that, although the circulation of gold, silver and *sen* notes had been previously (in 1707) prohibited, their use would be henceforth permitted in the case of all those places where they had formerly circulated. In places where such paper money already existed and where the rice assessment of the Clan was 200,000 *koku* or more, a limit of 25 years would be placed on the period of circulation; and where the rice assessment was less than 200,000 *koku* a limit of 15 years would be imposed. If, at the end of these periods, it was still desired to keep these paper notes in circulation, notice was to be given to the Chief Financial Officer of the Government. On this account the area in which the money coined in the periods of Shōtoku and Kiōhō circulated was very limited in extent, and it was extremely rare for them to be used in the Provinces west of Osaka or in districts where means of transport were difficult (such as the provinces of Echizen, Kaga, Noto, Echū and Kishū). In these provinces Clan paper formed the great bulk of the currency, and, therefore, whenever gold *kobans* reached those localities they were either at once put away in the godowns of the *daimios* to serve as a fund for military purposes, or they were hoarded in the godowns of wealthy merchants, and thus disappeared from circulation. Such being the state of affairs, it was impossible for the gold and silver coinage of Kiōhō, such as the *kobans* and *ichibu* pieces, to fulfil, for any length of time, the purpose for which they were minted, and a recoinage became absolutely unavoidable in the 1st year of the period of Genbun (1730).

To sum up briefly what we have said before we find that, although the financial system of the Shogunate was thrown into great confusion by the changes that took place in the periods of Genroku and Hōei (1688-1710), yet that this disorder was remedied for a time by the good reforms carried out in the periods of Shōtoku and Kiōhō (1711-1735). However, this remedy ceased to be effective after a little over 20 years, and with the change that took place in the 1st year of Genbun (1730) our financial administration was again thrown into disorder. After this, in the periods of Bunsei, Tempō, Ansei and up to Man'yō<sup>22</sup> there were frequent re-issues of coinage, but each only increased more and more the confusion existing in our monetary system.

These frequent re-mintages were nothing more than an attempt on the part of the Tokugawa Government to meet its financial difficulties by debasing the currency.

Below we give the amounts of gold and silver money recoinced on each occasion during, and subsequent to, the period of Genbun (1730-1740).

In the period of 83 years from the 1st year of Genbun (1730) to the 1st year of Bunsei (1818), the amount of Genbun gold coined was about 17,435,711 *ryo*; while the Man'yō silver (coined during the same period amounted to about 525,465,900 *kwanme* (=5,254,659 lbs. Troy).

In the 2nd year of Meiwa (1765), when the 10th Shogun, Iyellaru, was in power, the silver called *Go-momme gin* was coined for the first time, and the amount coined up to the 1st year of Anyei (1772) was about 1,800,400 *kwanme* (=18,064 lbs. Troy).

In the 1st year of Anyei (1772) two *shu* silver pieces were first coined, and these were known as *ko-ni-shu gin*. From the 1st year of the period of Anyei (1772) to the 7th year of Bunsei (1825) the amount of this *ko-ni-shu gin* coined was 5,933,000 *ryo*. (See "Table of Old Coins.")

At the beginning of Bunsei, when the 11th Shogun, Iyenari, was in power, there was a

<sup>22</sup> Bunsei (A.D. 1818-1829); Tempō A.D. 1830-1843; Ansei A.D. 1854-1859; Man'yō (A.D. 1860-1910).

recoinage of gold *kobans*, one *bu* pieces, and of *chōgin* (silver bars) and *mameitagin* (slugs), while two *bu* gold pieces, known as *shimmon*, were coined for the first time, but the standard of fineness was gradually lowered. From the 1st to the 11th year of the period of Bunsei (1818-1829), the amount of gold *kobans*, 1 *bu* gold pieces, and of the new coinage of two *bu* gold pieces recoined, was 14,029,382 *ryo*; and the amount of silver bars (*chōgin*) and silver slugs (*mameitagin*) recoined between the 1st year of Bunsei and the 8th year of Tempō (1818-1838) into the new *Monji* silver, mentioned previously, was about 224,981,000 *kwamme* (= 2,249,819 lbs. Troy). (See "Table of Old Coins.")

In the 7th year of the same period (1825) one *shu* gold pieces (*issshukin*) were for the first time coined, and the two *shu* silver pieces (*nishugin*) were recoined. The amount of this *Bunsei nishugin* coined between the 7th year of Bunsei and the 1st year of Tempō (1825-1837) was 7,587,000 *ryo*. (See "Table of Old Coins.")

In the 11th year of the same period (1829) two *bu* gold pieces, known as *sōmon*, were for the first time coined, and in the 12th year (1830) *issshu* silver coins were likewise coined for the first time. In the space of 5 years between the 11th year of Bunsei (1829) and the 3rd year of Tempō (1833) the amount of *sōmon* two *bu* gold pieces coined was 2,033,061 *ryo*; and from the 12th year of Bunsei to the 5th year of Tempō (1830-1838), a space of 9 years, the amount of *issshu* silver coined was 8,744,500 *ryo*. (See "Table of Old Coins.")

If we compare this gold and silver recoinage of the period of Bunsei with the gold and silver of the period of Gemmei (1776-1790), we find that the standard of fineness of the former was even inferior to that of the latter. This Bunsei coinage is the so-called *Bunsei* gold and new *Monji* silver.

This was the 7th change in our monetary system instituted by the Shōgunate.

In the 3rd year of Tempō (1832), while Ieyoshi the 12th Shōgun was in power, two *shu* gold pieces were coined. The amount of this *kōni-shu kin*, as it was called, coined between the 3rd year of the period of Tempō and the 5th year of Ansei (1832-1858), a period of 27 years, was 12,883,700 *ryo*.

Afterwards, in the 8th year of Tempō (1837), 5 *ryo* gold pieces and 1 *bu* silver pieces were for the first time coined. The amount of these *koichibu* silver pieces, as they were called, coined between the 8th year of Tempō and the 1st year of Ansei (1837-1854), a space of 18 years, was 19,729,100 *ryo*. Comparing the standard of fineness of the Tempō gold and silver (recoined from *kobans* and one *bu* gold pieces, and from the *chōgin* and *mameitagin*) with that of the gold of Bunsei, we find that this new coinage was inferior even to that which preceded it. This new coinage is the so-called "Tempō gold and silver."

This was the 8th change in our monetary system instituted by the Shōgunate.

(The amount of Tempō gold *kobans* and 1 *bu* gold pieces coined between the 8th year of Tempō (1837) and the 5th year of Ansei (1858) was 8,120,450 *ryo*; the number of *ban* was 1,887 coins; while, in this period of 22 years, the amount of *chōgin* and *mameitagin*; that is to say *Hōji* silver, recoined was about 182,008 *kwamme*, equivalent to 1,820,080 lbs. Troy.)

A reference to old records<sup>22</sup> shows that on the 11th of September, 1843, an investigation was made by the Government, from which it was found that on that day the total amount of the six denominations, viz., 5 *ryo* pieces, *Tempō kobans*, 1 *bu* gold pieces, 1 *shu* gold pieces, *Tempō shūan* and 1 *bu* silver pieces in circulation with the people was about 15,153,802 *ryo*. Besides these there were old gold and silver coins (the circulation of which was then prohibited by law) still in circulation, the value of which was as follows:—gold, about 9,538,085 *ryo*; silver, about 2,518,597 *ryo*, while the old *chōgin* and *mameitagin* amounted to about 230,795 *kwamme* and 400 *me* (= 2,307,954 lbs. Troy).

In the *Kahē Hiroku* the book from which the above facts are obtained, the evil effects of the disorder which existed in our financial system at that period are thus recorded:—

"In the recoinage of gold and silver, the *deme-osame* (by which was meant the profits accruing to the Government from recoinage), was from the commencement of the period of Bunsei denominated *On-yekiosame*, or Government Profit. This was a base deception, by narrow minded persons, of all classes of the nation; for few could the debasing of the standard, the lightening of the weight, and the lowering of the denominations be called 'profit'? It is just as if we were to divide one *koku* of rice into ten portions of one to each and add nine to of rice-bran to each of these heaps, and then, when each portion became just one *koku*

(or ten *koku* in all) to say that the nine *koku* were 'profit made.' On every occasion that coins are re-minted a certain loss in weight, what is known as *fuki-kake*, takes place; in point of fact, therefore, there is loss and not gain in such operations. For this reason the term 'profit made' (*yeki-osame*) was not heard of prior to the period of Gemmei (A.D. 1736-1740).

"Below we give the proceeds realized by the Government, and termed *deme-osame* or *yeki-osame*, in each of the eleven years between 1832 and 1842 inclusive:—

1832—more than	819,000	1835—more than	1,075,350
1833—more than	540,000	1836—more than	697,745
1834—more than	470,150	1837—more than	694,600
1835—more than	600,000	1838—more than	1,155,000
1836—more than	409,744	1839—more than	591,445
1837—more than	629,393		

"Total for 11 years, over 7,558,043 *ryo*; average 'profit' during 11 years, over 687,094 *ryo*."

This statement shows that the profits made out of the recoinage of the currency at that time were very large, but that these profits were not legitimate. As above stated, the standard of the currency was debased by trickery, and, although nominally the amount of currency was increased, in reality this increase was just as if we were to add nine *koku* of rice-bran to 1 *koku* of rice and were then to speak of the result as ten *koku* of pure rice, and as therefore so much profit. There is nothing, therefore, surprising in the fact that the confusion in our monetary system grew gradually worse.

Prior to this, in the middle of the period of Kōhō, the Shōgunate had introduced reforms into the administration, but afterwards, on a change in the Shōguns taking place, decay again set in. In the 5th year of the period of Miwa (1768) the two *daimios* of Mito and Sendai were permitted to coin and issue cash for the space of five years in their own territories, and again, the periods of Arcei (A.D. 1772-1781) and Tenmei (1781-1789), the *daimios* of Mito and Sendai were permitted for several years to issue as before in their own territories the cash they had coined.

Although in the year 1730 the issue by all the clans of gold, silver, and cash notes had been sanctioned, subsequently, in May 1755 an edict was promulgated prohibiting the issue of any new gold notes of this kind by the clans, and later on, in 1759, by another edict, this prohibition was extended to silver notes, while the circulation of all gold and *sen* notes, which had previously been issued, was stopped. In the 7th year of the period of Tempō (1836) the clans were forbidden to issue even silver notes, not to mention gold and *sen* notes, in their territories without the permission of the Government. There prohibitions, however, existed only in name, and, in reality, in all of the large clans and also in all clans which occupied a middle position between large and small (with the exception of those in the north-east) the notes (gold, silver and *sen*), which were issued subsequent to the period of Kōhō (1716-1735), instead of diminishing continued to increase every year until, ultimately, throughout the whole of Shikoku, Kishū, Chikoku, and the provinces of Kaga, Noto, Echizen, and Etchū (in the Hokuriku circuit) clan paper, the circulation of which was limited to the territory of each clan, became the regular currency. The people in these localities with the exception of a very few, certain mercantile firms for instance, only knew of the existence of clan paper notes, and not only were they ignorant of what sort of thing a *koban* was, but they had never in the whole course of their lives even used any gold or silver coins at all.

Thus, as stated above, while on the one hand, owing to the disorder which existed in the quality of gold and silver coins and to the difference in the weights of coins of various issues, the good money was driven out of the market by the inferior coinage, on the other hand there was a confused mixture of clan paper of various kinds, each of which was only current in the territory of the particular clan which had issued it. And so it was that the seeds of confusion already sown in the middle period of the Shōgunate began to take root, and with such rapidity did this confusion increase during and after the period of Tempō (1830-1843) that when the last days of the Shōgunate arrived our currency was, as we mentioned in the first paragraph, in an indescribable state of confusion and disorder.

The monetary system of the period of Tempō (1830-1843) lasted for about twenty years, and then, in the 1st year of Ansei (1854) there was a further change. This was the ninth change in our monetary system instituted by the Shōgunate. The system of Ansei (1854-1859) lasted for only a few years, and in 1859 another important change took place. This was the tenth change in our monetary system made by the Shōgunate.

As these ninth and tenth changes have a direct and special bearing on our present coinage we will describe briefly the causes which led up to them.

The financial embarrassment of the Shōgunate and its anxiety to meet the deficiencies in the public exchequer were of course the reasons which led to the recoinage of 1854; but this financial embarrassment again was aggravated by the entry into the Bay of Yedo in 1853 of the men-of-war which carried the American Envoy. Prior to this, and subsequent to the issue of the prohibitive edicts in the 18th year of the period of Kanyei (1641), with the exception of a limited number of Chinese and Dutch merchant ships which plied to and from Nagasaki, foreigners of all nations were prohibited, for over two hundred years, from visiting and trading in Japan. During this long period our country had been entirely free from trouble, all classes of the people had become accustomed to habits of luxury and ease, and all military preparations, from fortresses and war vessels down to all the hundred other appliances of war, had been neglected. Such was the condition of affairs during the period between 1818 and 1853. But when once the men-of-war of the American Envoy had entered the Bay of Yedo all classes became alarmed, and feeling that it behooved them to lose no time in making good the deficiencies in their military preparations they set to work at once. Owing, however, to the long peace and abundant ease which the country had enjoyed, the national coffers were empty, and a recoinage of the currency was the only plan which presented itself for dealing with the emergency. It was probably due to this that from the first year of Ansei (1854) new 1 *shu* silver pieces, made from the old silver coins, were first coined and issued. In 1855 an edict was issued ordering the exchange of old gold and silver coins for the new coins, and, by offering a premium on the exchange, the Government sought to buy up the old gold and silver coins; but, as the premium they offered was insufficient, the number of those who obeyed this decree was very small. The reason of this was that the amount offered at that time for 100 *ryo* of the *Keichō* and *Kichō Kobans* and 1 *bu* pieces was only 107 *ryo* of the currency of the day (i.e. the *Ansei* currency); while, if we compare the true value of the old gold money with that of the currency of Ansei, we find that the former was at the very least at 180 per cent. premium.

Again, another reason for the urgency of this recoinage lay in the fact that, when the American Envoy arrived with his men-of-war and expressed his wish to conclude a treaty of friendship and commerce, the Shōgunate named the 5th year of Ansei (1858), and promised the Envoy that they would then be prepared to sign the treaty; and as the time for the opening of the ports and the establishment of trade came to be very close at hand, the impending change had an effect on the relative market prices of gold and silver. Prior to this, from A.D. 1837 to A.D. 1848, the relative value of gold to silver was about 1 to 5, but by the year 1854 market prices underwent a change, and to 14 of silver became equivalent to 1 of gold. The cause of such an extensive change in the relative prices of gold and silver in our markets was simply this, that in foreign markets already, for two hundred and eighty years, gold and silver had had relative exchange values of about 1 of gold to 14 of silver, and that subsequently from the commencement of the 19th century, the ordinary exchange value of gold as compared with silver was 1 to over 15. It was easy to see, therefore, that when the day came for the opening of our ports and for the mutual exchange of commerce, the relative values of our gold and silver would at once undergo a great change, and would be governed by the natural tendencies of the commercial world. This was the reason why, as the time for the opening up of the ports, etc., came nearer, fluctuations occurred in the comparative values of gold and silver and the necessity for a recoinage was hastened on. But the quality of the gold *kobans* and 2 *bu* pieces and of the new 1 *shu* silver pieces recoined between A.D. 1854 and A.D. 1858 was inferior to that of the gold and silver of the period A.D. 1830 to 1843, and the relative values, as legally fixed, of these gold coins as compared with the silver, and of the silver again as compared with the copper coins of the same currency, were disproportionate, the price of silver as compared with that of copper being extremely high, while that of gold as compared with the price of silver was absurdly low. This was the principal cause which led up to the really great loss our country suffered after the opening of the Ports, and it was also this cause which necessitated the further great change in our monetary regulations of 1859 (the 6th year of Ansei).

By Articles II. and VII. of the Treaty of Friendship concluded at the port of Kanagawa on the 31st of March 1854, between the Shōgunate and Perry, the United States Plenipotentiary, Americans were allowed to pay for Japanese goods purchased by them in American gold or silver.

<sup>22</sup> The *Kahē Hiroku*, in possession of the Treasury.

Afterwards, by Article III. of the Treaty of the 17th of June 1857, it was distinctly stipulated that, in the settlement of accounts between Americans and Japanese, the coinage of one country should be exchangeable for an equal weight of the coinage of the other country, gold for gold and silver for silver.

(The stipulations relating to coinage in the Treaties of Friendship concluded in 1854 and 1857 between the Shogunate and Russia are to the same effect as those of the Treaties concluded with America).

In the new Treaties of Friendship and Commerce concluded in 1858 between the Shogunate and the five countries, America, England, France, Russia, and Holland, it was stipulated that the coinage of each of those countries should pass for its corresponding weight in Japanese coin of the same description; that, as the Japanese people were not yet accustomed to foreign money, for the period of one year after the opening of each port the Japanese Government were to give Japanese coin in exchange for foreign coin, whenever application to this effect was made by a foreigner, and without making any charge for mintage; and that all kinds of Japanese coins, except copper, might be exported.

As we have already frequently stated, the relative values of our gold and silver, as fixed for purposes of exchange, were extremely disproportionate, and these Treaties were concluded at a time when the price of our gold coins was excessively low. Consequently the astute foreigners saw what an excellent thing for them this treaty was and what a capital opportunity was afforded to them by the disorder in our monetary system, and accordingly by exchanging one dollar for three silver 1 *bu* pieces, and again exchanging three silver 1 *bu* pieces for one *koban*, or for two gold 2 *bu* pieces, or again for eight half *bu* gold pieces, they bought up and exported our gold coins in large quantities. Moreover, at Hongkong and other convenient places they melted down dollars and from them coined counterfeit 1 *bu* silver pieces, which they brought over and exchanged for our gold coins. These operations were carried on to such an extent that our gold continued to flow out from the country without ceasing. If this state of things had not been stopped by a change in our monetary system, in a very few years the limited quantity of gold coin in our country would have been exhausted.

The Government, being at that time unacquainted with the history of the currency of modern times in all countries of the world, were unable, before the opening of the ports, to carry out a prompt and energetic reform, and even after the opening of the ports they still hesitated and could not decide upon a plan of action. But Mr. Harris, the American Minister at that time resident in Japan, seeing that, from the confusion that existed in our monetary system, and more especially from the disproportion in the relative values of gold and silver as legally fixed, we had continued to suffer heavy loss ever since the opening of the ports to commerce, and that, in consequence, a tremendous national disaster was imminent, found himself unable to pass the matter by in silence.

(To be continued.)

## KOREA.

(FROM OUR CORRESPONDENT.)

Sŏul, August 21st.

The first sign of trouble in connection with recent event was given by the call of the Tai-wŏn-kun on the Chinese Minister here and then his audience with the King. The King soon after received a telegram from China. This was on July 14th and 15th, I think. On the 16th, four officials of rank who were connected more or less with foreigners—one having been in the United States Legation as interpreter for more than a year—were seized and thrown into prison. They were condemned to death, but the sentence was commuted and they were sent into banishment. During the whole of the 16th the city was intensely excited and fears of another riot were entertained by many. Rumour had it that China's war-ships were ordered to Chemulpo and that her soldiers would soon enter the capital.

On the 17th instant, the city was still full of war rumours, and the excitement ran high. The news developed that Russia intended to insist on the independence of Korea, a small point China is likely to dispute, but which the other nations would like to see decided definitely and permanently. On the 19th, word was passed around, "everything is settled," and immediately the excitement began to grow less.

The affair is "settled" by Min Yong-ik going

to China on the 25th as a special ambassador to implore forgiveness "this once." What for? No one seems to know. But the hot haste with which he is despatched is indicative of "pressure" brought to bear upon Korea by China. This special mission is looked upon with much disgust by the foreigners here. It shows that Korea is afraid to think and act for herself.

August 25th.

The late rumours afloat in this city, which resulted from the banishment of four young Korean officials, are not entirely assuring. The affair is by no means ended. Japan will not allow China to dictate to Korea as to who is dangerous in Sŏul and who is not. Russia resents with indignation the allegations made that she intends to shield Korea in case China should prove false in the hour of need.

Yesterday five Chinese men-of-war arrived at Chemulpo. The United States steamship *Ossipee* also arrived a day or so ago. Several of the high officials among the foreigners did not attend the dinner last night at the Foreign Office given in honour of His Majesty's birthday.

The telegraph wires between Sŏul and the outside world were "broken" for several days for despatches from Sŏul, but all right for despatches from China. The Japanese authorities here and at the port outwitted the Chinese. The Koreans, or rather a few merchants, have been buying a small steamer to be used on the Han river. They had difficulty in raising the money, so the steamer was lying at Chemulpo, flying the Japanese flag of course. The Japanese officials pressed this boat into their service and sent her to sea with sealed orders.

Judge Denny leaves Sŏul this afternoon for Cheloo. Whether he will return or not is unknown.

Sŏul, September 17th, 1886.

The smoke from the "latest Korean" brawl has cleared away. The foreigners here generally believe the thing was cut from whole cloth. As stated in my two previous letters, the disturbance was caused by Chinese interference. There was much excitement, and for several days an outbreak was feared. The men banished were not the Mianshis of the Right and Left, but Chusabis, intimately connected and identified with foreigners. Against these the plot, from whatever motive, was directed, and it resulted in their removal; but the reaction speedily followed and they were recalled. As suddenly as the excitement arose it subsided by the mission of Prince Min Yong-ik to China to eat a piece of humble pie.

At present there is considerable talk of his long absence, and some even go so far as to say that the Prince will stay away from Korea—thinking no doubt his life is worth more in some foreign country than at home.

Judge Denny, who is putting forth honest and earnest efforts for Korea's independence, went to Tientsin to enquire whether Mr. Yuen had instructions from head-quarters in his late course, or whether he acted upon his personal authority. The great question: What is China's policy in Korea? must soon be decided. A few more high-handed moves like the last will help materially in the solution of this vexed problem. Even at this late day, foreigners are at a loss to account for the bold action of Mr. Yuen.

There is much talk among the Koreans about Russia and China, and about the probable fate of Korea in case of a war between those two. The difficulty is not settled, though the excitement may be allayed for a while.

## LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, August 31st.

The *City of Sydney*, of the Pacific Mail line, sails to-day for Yokohama with the American mails. It was announced from Washington that the new contract between the Post Office Department and the Pacific Mail Company would not go into effect till to-morrow, but neither Government nor Company could afford to stand upon a day, and you should receive this letter in due course on or about 16th September. Eighteen months hence, if reports come true, you will have much more frequent communication with this coast. Sir John A. McDonald, the Canadian Prime Minister, gave in a recent speech a full account of his negotiations for a new British line to the Pacific. Sometime last winter, when Lord Salisbury was in power, Sir John visited him and pointed out the advantage which England would derive from the establishment of a line of swift and powerful steamers plying between Asia and British Columbia. He reminded the Premier that England's enemy, by sinking a vessel at a particular spot in the Suez Canal, might

close that avenue of transportation between England and India. His views commended themselves to Lord Salisbury's approval, and his Lordship promised to lay them before the Cabinet, which was done at the next meeting, with the result that Sir John was assured that the Government would forthwith ask Parliament for "a large and satisfactory subsidy" for the line in question. Before the application could be made, the Conservatives went out. Lord Salisbury left a memorandum for Mr. Gladstone recommending the project to him; but the Liberals have never been partial to subsidies, and the matter went over. Now Salisbury is again in power, and Sir John McDonald says that since the Tory leader took office, he has renewed his assurance that he will bring the subject before Parliament. This is confirmed in private letters which I have received from Liverpool—where it seems, the amount of the subsidy, and the plans of the ships are already subjects of general discussion. Sir John says that the line should be at first fortnightly, then weekly; that the first vessels should sail about 1st January, 1887; that the ships are to be "of the first speed known to modern navigation, and of the last magnitude," capable of being converted into men-of-war if necessary. These prospects are contemplated by the owners of the Pacific Mail and the Occidental and Oriental lines with an uneasiness which is undisguised. At some day, in the distant future, the maritime intercourse between the western shore of North America and the eastern shore of the continent of Asia will probably not be less active than the intercourse between our eastern shore and Europe; but what with our restriction acts, our tariffs, and our torpor, it looks as though our English neighbours to the north of us would enjoy a much larger proportion of the coming commerce than their fellow countrymen, to the east of them, enjoy of the commerce now existing.

We are in the midst of the opening of the fall campaign. Political conventions are meeting in every State, and ground is being occupied for the November battle. In this State the Republicans met at Los Angeles last week, and nominated for Governor, John F. Swift, who was one of the Commissioners to China in 1880. The only striking feature of their platform was a resolution calling upon Congress to abrogate the Burlingame treaty with China. At the time that treaty was made, nearly twenty years ago, California wanted population, and people thought Burlingame did a particularly bright thing in getting from the Chinese Government permission for a few score thousand labourers to come to this country. Now, California wants population worse than ever, but the labouring class already here know when they have got a good thing and don't propose to divide with anybody. If they dared they would ask Congress to prohibit immigration from Germany and Ireland. The Democratic convention will meet as the *City of Sydney*, with this letter on board, casts off her hawsers. It will endeavour to out-do the republicans in abuse of the Chinese; but it won't matter.

In the East regattas and yachts divide public attention with politics. After a series of races the new sloop yacht *Mayflower*, built at Boston, has been selected to race the *Galatea*. New York is in despair, and Boston is in the seventh heaven. The following description of one of the preliminary races—the one for the Goelet Cup—from the pen of a young lady friend, appears to me so vivid, that it may interest your readers:—

On the *Luckenbach* the judges were ready for action. No peril, charm she never so wisely, is let aboard the *Luckenbach*. All is stern reality there. Most of the judges stood on the upper deck, leaning against the bottom of the life-boat making entries in their note-books. Under a gauzy awning in the stern a curly-headed waiter, palpably French, even at a distance, was setting a table. He had spread the cloth and was bringing on the glass—such lots of it as there was—long-stemmed glasses for sherry, flat-bodied glasses for champagne, green ones for sauterne, little, fat, white ones for claret, round ones for burgundy, and tiny, crystal thimbles for a chateaufort. But all the wines in France and Italy—the blushing Hippocrene itself—could not charm the judges at that point, for with the firing of a gun from the *Luckenbach* and a tolling of bells from the lightship, the pride of the fleet swept into view from Newport. The *Puritan* and *Mayflower* took the lead, the *Atlantic* and *Priscilla* followed. They were a noble sight as they came bowling up toward the lightship, the waves crisply sizzling under their bows, not a crease in their smooth expanse of canvas, not a loose end of rope on their decks, not a flick on their hulls. Stately and swift they showed among their comrade yachts, careering, plunging, burying their noses in the foam, like young thoroughbreds in a paddock full of hacks. As they passed the judges' boat there was no sound, interest was for the moment too intense for words. One old sea-dog, rough and weatherstained, the hero of a hundred cruises, watching them keenly as they swept by, heaving to the stronger wind, shaking the spray off their bows and coming about with a sudden flash of sun on flapping sails, voiced the thoughts of the other passengers when he said: "I'll be hanged if I can see how the *Galatea* can stand a show with them." The rest of the fleet streamed by hurrying in their wake.

Close under the steamer's rail the *Miranda*, a crack English cutter, and the *Ruth*, the newest sloop in the Eastern Squadron, bowed merrily along in the freshening breeze. The *Miranda's* deck, every inch of which was visible as she heeled to the breeze, was about bare. Her racing-sails, like balls of cotton, lay piled up near the bow; and crouched in the lee of the cabin roof, rolled in plaids and ulsters and shawls, lay two women, with the wet salt breeze tearing at their wrappings and whisking the loosened ends of their hair across their faces.

The course was the well-known triangular one from Brenton's Reef Light-ship to the Sow and Pigs' Rocks, then across to the Hen and Chickens, and from that home again to Brenton's Reef. At the rounding of the Sow and Pigs' light-ship, the excitement, which had given place to hunger or seasickness, roused an hundred-fold. The cry went over the boat: "The *Mayflower* ahead." The steamer hove to near the squat, yellow hulk of the light-ship, the crowd surged to one side, climbed on the railing, stood on the camp-stools, swarmed up the hurricane-deck, and gazed with hungry eyes as the four single-stickers drew toward the Sow and Pigs. Boston was to the fore. The white sloops were far ahead, the *Mayflower* leading by a good half-mile, heeling to the wind till the end of her boom touched the wave crests, and we could see the pot-leads on her hull. Then the peerless *Puritan* fled by like a phantom, her crew huddled together on the cabin roof, her great spinnaker and balloon jib lying in huge snowy piles on the deck. Away they bounded like coursing greyhounds, for the Hen and Chickens, every sheet straining, every stitch of canvas drawing. The Commodore's yacht, the *Electra*, came plunging along just behind them. It was when the Hen and Chickens light-ship was passed, and the yachts entered on the home-stretch, whizzing along straight before the wind, that excitement really grew fierce. New Yorkers turned away as they watched the black sloops beating up toward the light-ship, with the *Sarkis* and the *Grayling* ahead of them, and the Boston beauties booming along before the wind. It is astonishingly waked as hilarious as is admissible with perfect good breeding, and leaped against the rail eyeing with stolid triumph the stately march of the *Mayflower* goalward, and the sudden flash of billowing canvas as the *Puritan* swooped round the Hen and Chickens. She had hardly set her head for home, when suddenly, soft and snowy, like the bursting of a cloud across her bow, out swelled her spinnaker. Then came the balloon jib. There was no flapping, no one moment when it hung limp and wrinkled; as it gradually unfurled, it slowly filled and belled out round, till it covered the whole bow with one sheet of curving whiteness. The *Mayflower* broke out her spinnaker and balloon jib at almost the same time, but not so skilfully. Her huge jib hung limp for a moment before it caught the leakage of wind which poured out between her staysail, jib, and topsails. Her spinnaker did not loom out from space with the sudden, cloud-like puff of the *Puritan's*, but as the wind filled them, every wrinkle was gradually smoothed, and, with no hull visible, presenting to the spectators nothing but great white bosses and cool blue shadows, she bore down on Brenton's Reef, amid shouts of frenzied enthusiasm. As she swept between the *Lutetian* and the light-ship she was a goodly thing to see. Behind her, in Indian file, stretched the fleet, the *Puritan* bending under a slanting tower of canvas, the *Grayling* with every sail drawing, the *Priscilla* with her spinnaker and balloon jib billowing out on either side like giant wings, the *Atlanta*, two great white dashes against a hovering sky, far back as the eye could reach they stretched, till they dwindled to tiny white flecks where the gray sky and the gray sea met.

The impression is general that the *Galatea* is going to be beaten—which some people are sorry for, as Lieutenant Henn has made hosts of friends. He has challenged the fleet to sail a race round Bermuda, which will test the sea going qualities of the single stickers, and will settle the limit of the area of canvas that a racing sloop may venture to carry.

Our relations with Great Britain are again going to be strained. By orders of the Treasury Department the revenue cutter *Corwin* has seized three British fishing schooners for the offence of catching seals in Behring's Sea, or Kamtskatka Sea, as it is called on some of the maps. To understand the seizure it is necessary to go back sixty years. In 1825, Russia made a treaty with Great Britain defining the boundary between the British possessions and the Russian possessions in North America. In that treaty Russia claimed that the sea which lies between East Siberia on one side and Alaska on the other, was a closed sea—wholly Russian—and that no one could fish therein without permission from St. Petersburg. England did not acquiesce in the claim, but neither did she positively reject it. So matters rested for over 40 years, until Russia sold Alaska to the United States. The treaty of cession defined the Western boundary of Alaska as running from the most westerly island of the Aleutian group to a point midway between that island and Copper Island, and thence running north-eastwardly to a point in the centre of Behring's Straits, and so on into the Arctic Ocean. The Russian contention was that all the waters lying between this line and the coast of Alaska were a closed sea; and the United States, as the grantees of Russia, inherited this contention, and so far reasserted it that they ceded to the Alaska Commercial Company a monopoly of the right of fishery in that sea.

The English schooners which have been seized, together with an American vessel which has also been seized for catching seal in that sea without leave from the Alaska Commercial Company, now raise the point that Behring's Sea or the Kamtskatka Sea—by whatever name it may be called—is not a closed sea, but is a high sea, an open sea,

free to all the world for purposes of fishery; and certainly every one who is familiar with the doctrines which this country maintained in the controversies over the Sound Dues and the claim of Nova Scotia to the ownership of the Bay of Fundy, must agree with them. We shall see, when the controversy gets into the newspapers, whether Mr. Bayard had his usual bad luck in grappling with it. The American people are not prepared, at this time of day, to reverse their traditional policy on the subject of high seas and closed seas, merely for the benefit of an American trading company.

#### THE COLONIAL AND INDIAN EXHIBITION.

The following telegram was received yesterday (21st September) by the Government from H.R.H. the Prince of Wales.

London, September 20th.

Referring to suggestion already communicated as to permanency of present Exhibition, I now propose that memorial of Queen's jubilee should take the form of a permanent Imperial Institution of Colonies and India, comprising display of Colonial and Indian resources. Contributions in aid of institution to be solicited from Governments and public here and all parts of the empire, to be vested in board trustees appointed by the Sovereign under permanent presidency of the Heir Apparent to the Throne.

Shall be glad to be favoured with your views by cable and to hear whether your Government are prepared to recommend annual grant for certain number years, or if preferred sum down.

PRINCE OF WALES.

For Shanghai, Kobe, and Nagasaki, per N. Y. K. Tuesday, October 5th.  
For Europe, via Hongkong, per M. M. Co. Saturday, Oct. 9th.  
For America, per O. & O. Co. Wednesday, Oct. 13th.

### TIME TABLES AND STEAMERS.

#### YOKOHAMA-TOKYŌ RAILWAY.

TRAINS LEAVE YOKOHAMA Station at 6.35, 8.00, 8.50, 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50, 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

TRAINS LEAVE TOKYŌ (Shimbashi) at 6.35, 8.00, 9.15, 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50, 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

FARES—First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90.

Those marked with (\*) run through without stopping at Teurumi, Kawasaki and Omori Stations. Those marked (†) are the same as above with the exception of stopping at Kawasaki Station.

#### TOKYŌ-MAYEBASHI RAILWAY.

TRAINS LEAVE TOKYŌ (Uyeno) at 5.25 and 9.25 a.m., and 12.25 and 4.50 p.m.; and MAYEBASHI at 5.25 a.m., and 12.25 and 4.50 p.m.

FARES—First-class (Separate Compartment), yen 3.80; Second-class, yen 2.25; Third-class, yen 1.14.

#### TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI at 6.50 and 9.55 a.m., and 1.00 and 4.10 p.m.; and YOKOKAWA at 8.25 and 11.30 a.m., and 2.40 and 5.45 p.m.

#### TOKYŌ-UTSUNOMIYA RAILWAY.

TRAINS LEAVE TOKYŌ (Uyeno) at 12.25 and 4.50 p.m.; and UTSUNOMIYA at 12.25 and 4.55 p.m.

FARES—First-class, yen 3.50; Second-class, yen 2.10; Third-class, yen 1.05.

#### UTSUNOMIYA-NASU RAILWAY.

TRAINS LEAVE UTSUNOMIYA at 9.55 a.m. and 4.40 p.m.; and NASU at 7.35 a.m. and 2.40 p.m.

FARES—First-class, yen 1.10; Second-class, yen 74; Third-class, yen 37.

#### SHIMBASHI, SHINAGAWA, AND AKABANE JUNCTION.

TRAINS LEAVE SHINAGAWA at 8.49 and 11.49 a.m., and 2.44 and 6.29 p.m.; and AKABANE at 9.55 a.m., and 12.50, 4.05, and 8.35 p.m.

FARES—First-class, yen 70; Second-class, yen 46; Third-class, yen 23.

#### KOBE-OTSU RAILWAY.

TRAINS LEAVE KOBE (up) at 5.55, 7.55, 9.55, and 11.55 a.m.; and 1.55, 3.55, 5.55, 7.55, and 9.55 p.m.

TRAINS LEAVE OSAKA (up) at 4.45, 7.5, 9.6, and 11.6 a.m.; and 1.5, 3.6, 5.6, 7.6, and 9.6 p.m.

TRAINS LEAVE KYOTO (up) at 6.46, 8.46, and 10.46 a.m.; and 12.46, 2.46, 4.46, 6.46, and 8.46 p.m.

TRAINS LEAVE OTSU (down) at 5.45, 7.45, 9.45, and 11.45 a.m.; and 1.45, 3.45, 5.45, and 7.45 p.m.

TRAINS LEAVE KYOTO (down) at 6.45, 8.45, and 10.45 a.m.; and 12.45, 2.45, 4.45, 6.45, and 8.45 p.m.

TRAINS LEAVE OSAKA (down) at 6.25, 8.25, and 10.25 a.m.; and 12.25, 2.25, 4.25, 6.25, 8.25, and 10.25 p.m.

FARES—Kobe to Osaka: First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90. Kobe to Kyoto: First Single, yen 2.25; Second do., yen 1.40; First Return, yen 3.55; Second do., yen 2.10. Kobe to Otsu: First Single, yen 2.85; Second do., yen 1.70; First Return, yen 4.30; Second do., yen 2.55.

#### OCEAN AND COASTING STEAMERS.

Steamships are regularly despatched from the Port of Yokohama for the following destinations:—

FOR EUROPE—The P. & O. Company's steamer sails fortnightly on Tuesday, via Inland Sea Ports, making connection with the English mail at Hongkong, for Marseilles and Plymouth. The Messageries Maritimes Co.'s steamer sails fortnightly on Saturday, carries the French mail, and makes connection at Hongkong with the mail-boat for Marseilles.

FOR SAN FRANCISCO—The steamers of the O. & O. Co. and the P. M. Co. sail hence, approximately, every 10 days.

#### YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatoba daily at 8.30 a.m., and 12.00 m., and 4.15 p.m.; and leave Yokosuka at 6.30 and 11.00 a.m., and 4.00 p.m.—Fare, 20 sen.

## REPORTS.

The German steamer *Massalia*, Captain Pearlsen, reports:—Left Hongkong the 18th September, at 11 a.m. and experienced light easterly winds and calms with a heavy N.E. swell until the 21st; thence experienced a strong northerly breeze and heavy N.E. swell; at midnight wind veered round S.S.E. and a heavy sea came up from S.S.W.; blew a fresh gale until the 23rd; at 4 a.m. weather moderated and wind shifted to N.N.E.; at 8 a.m. wind increased to a heavy gale with heavy cross sea, ship shipping large seas fore and aft, until 24th; at 4 a.m. gale and weather moderating; at 3 p.m. wind increased to a strong gale and overcast sky varied from N.N.E. to W. with a heavy cross sea, ship rolling heavily and shipping heavy water over all. Had to throw over board deck cargo for safety of ship, at 11 a.m. on the 25th moderate weather and wind shifted to S.W. blew a fresh breeze to Rock Island; and thence to port fresh northerly wind and thick weather with light rain. Arrived at Yokohama, the 26th, at 8 a.m.

The British steamer *Cambodia*, Captain Wildgoose, reports:—Left Hongkong the 22nd September and experienced strong north to easterly winds and overcast sky during the first part, and during the latter part strong N.E. winds, heavy rain, and heavy easterly swell to Cape Sagami; and thence to port, calm and overcast. Arrived at Yokohama, the 30th September, at 7 30 a.m.

The American steamer *City of Peking*, Captain H. C. Dearborn, reports:—Left Hongkong the 23rd September, at 3 p.m. and experienced strong N.E. winds and sea, and fine weather throughout the passage.

The Japanese steamer *Satsuma Maru*, Captain G. W. Conner, reports:—Left Shanghai the 25th September, at 8 35 a.m. and experienced calm weather. Arrived at Nagasaki the 27th, at 2 a.m. and left the same day at 4 p.m. with light northerly winds and fine weather. Arrived at Shimonoseki the 28th, at 5 57 a.m. and left the same day at 7 55 a.m. and experienced light N.E. breeze and fine weather. Arrived at Kobe the 29th, at 5 40 a.m. and left at midnight; had fresh N.W. breeze to Omi-saki; thence to Sagami light N.E. airs and fine weather; and thence to port fresh northerly breeze and clear weather. Arrived at Yokohama the 1st October, at 8 a.m.

The Japanese steamer *Takasago Maru*, Captain Brown, from Kobe, reports light N.W. breeze and fine weather throughout the passage.

## LATEST COMMERCIAL.

## IMPORTS.

The general condition of the Market could hardly be worse, as business has almost come to a standstill; quotations are unaltered but quite nominal in most instances, dealers showing not the least inclination to operate at present beyond trifling orders, and holders appearing satisfied to wait in turn in the tide.

**YARNS.**—Sales for the week do not reach 50 bales of all kinds; dealers are said to have been accepting lower prices from the country buyers.

**COTTON PIECE GOODS.**—Sales have been limited to 1,000 pieces Indigo Shirtings, 1,500 pieces Twills, 350 pieces Cotton Italians, 1,200 dozen Handkerchiefs, and a few cases Velvets.

**WOOLLENS.**—1,500 pieces Mousseline de Laine, 1,000 pieces Italians, and 1,800 pairs Blankets comprise all the sales reported.

Turkey Reds—12 to 24 lb, 24 yards, 30 inches	1.20 to 1.30
Turkey Reds—24 to 36 lb, 24 yards, 30 inches	1.40 to 1.60
Turkey Reds—36 to 48 lb, 24 yards, 30 inches	1.28 to 1.20
Velvets—Black, 35 yards, 22 inches	6.25 to 7.00
Victoria Lawns, 12 yards, 42-3 inches	0.65 to 0.72 1/2
Taffetales, 12 yards, 43 inches	1.35 to 2.05

## WOOLLENS.

	PER POUND.
Plain Orleans, 40-42 yards, 32 inches	\$4.00 to 5.50
Figured Orleans, 29-31 yards, 31 inches	3.25 to 4.00
Italian Cloth, 30 yards, 32 inches	0.21 to 0.31
Mousseline de Laine—Crape, 24 yards, 31 inches	0.14 1/2 to 0.16 1/2
Mousseline de Laine—Itajime, 24 yards, 31 inches	0.20 to 0.24
Mousseline de Laine—Yuzen, 24 yards, 31 inches	0.30 to 0.40
Cloths—Pilots, 54 @ 56 inches	0.35 to 0.45
Cloths—Presidents, 54 @ 56 inches	0.50 to 0.60
Cloths—Union, 54 @ 56 inches	0.40 to 0.60
Blankets—Scarlet and Green, 6 to 4 lb, per lb	0.37 1/2 to 0.45

## METALS.

The better feeling continues without leading to much actual trade. Dealers however seem more inclined for business and are on the look-out for their favorite brands.

**IRON.**—Considerable arrivals by each Canal steamer. Prices are not strong and holders must make some reduction to effect sales of any magnitude.

**WIRE NAILS.**—Quotations unchanged, but weak for anything but special lines.

All other kinds without variation from last week, although buyers look to reap some advantage all round from the steady rise in foreign exchange.

	PER POUND.
Flat Bars, 4 inch	\$2.60 to 2.65
Flat Bars, 1 inch	2.70 to 2.75
Round and square up to 1 inch	2.60 to 2.75
Nailrod, assorted	2.40 to 2.50
Nailrod, small size	2.60 to 2.70
Wire Nails, assorted	4.50 to 5.50
Tin Plates, per box	5.60 to 5.80
Pig Iron, No. 3	1.20 to 1.25

## KEROSENE.

The regular autumn demand continues; and purchases for the week are about 25,000 cases at last quotations. The sales at auction of damaged cargo have continued and good prices have been realised for some "part empty" and *fale quails*. Deliveries are fair and present Stock in harbour and godown is 540,000 cases. The *Utrecht* sails for Hakodate in a few days and will take up 5,000 cases to the northern port.

	PER CASE.
Devos	\$1.77 to 1.80
Comet	1.72 to 1.75
Stella	None

## SUGAR.

There was no business done during six days of the past week, but on the seventh a large demand set in and 5,000 piculs changed hands, which

stimulated prices all round for Formosa sorts. White descriptions are not much in demand, and consequently they continue to rule weak.

White, No. 1	7.25 to 7.50
White, No. 2	6.50 to 7.00
White, No. 3	5.50 to 5.70
White, No. 4	4.95 to 5.40
White, No. 5	4.60 to 4.75
Brown Formosa	4.05 to 4.10

#### EXPORTS. RAW SILK.

Since our last issue of the 24th September there has been much more business doing in this Market. Settlements for the week are quite 1,000 piculs, divided thus:—*Hanks* 200 piculs, *Filatures* and *Re-reels* 710 piculs, *Kakeda* 40 piculs, *Sendai* 20 piculs, *Sundries* 30 piculs. No "Direct" Export at present although the *City of Peking*, now loading, is expected to take something for New York on Japanese account.

The demand for Europe has increased and full rates have been paid for suitable parcels. Buyers for America have also been active and the outgoing steamer should have a considerable quantity for that quarter. It would seem that foreign markets are slowly coming up to our level; and, in spite of the continued rise in exchange, the natives are quitting their stocks freely at a small reduction on the highest prices paid a month ago. As a matter of fact *Hanks* are even dearer than they were at the beginning of September and there are willing buyers at current rates.

Arrivals continue upon a free scale: and the total of the Stock-list has increased to 8,750 piculs notwithstanding the large transactions of the week. Quotations from last week cannot be altered, and for some grades are distinctly strong.

There has only been one shipping opportunity during the week, namely the *P. & O.* steamship *Thibet* on the 28th instant. This vessel carried 104 bales for Lyons; and the total Export is now 3,719 piculs, against 3,501 piculs last year and 6,245 piculs at same date in 1884.

*Hanks*.—A current business for Europe at prices which not only are well maintained, but even show a hardening tendency. Holders have all through been very strong and now appear likely to reap the reward of their persistency. Among the transactions we notice *Toniyoka* \$650, *Annaka* \$617½, *Hachioji* \$580.

*Filatures*.—A large trade both in *Shinshu* and *Koshi* Silks; buyers for Europe and America being actively engaged. A small parcel *Utsunomiya* has again notched \$800. *Rokkusha* has fetched \$770, *Hakunuru* \$740, *Nansinsu* \$740, *Kameisha* \$735, *Tueisha* \$725, *Tokusha* \$710, while many large parcels of good *Koshi* *Filatures* have been done at or under \$700. *Mino*, *Bishu* and *Hikone* noted at \$680.

*Re-reels*.—Considerable demand but most buyers cannot afford the prices asked by dealers. Some parcels of *Tortoise* and *Five Girl* reported at \$690 with *Shinshu* (Helmet chap) at \$710. Some inferior qualities of *Yoshu* and *Bushu* have been taken to account at about \$660 but these Silks seem dear at the price when compared with the better grades.

*Kakeda*.—The Settlements consist of one parcel Old staple at \$640. New produce from this district is very strongly held at quotations, which buyers appear quite unable to pay.

*Oshu*.—At last some little demand and a few piculs *Sendai* have been taken into godown at prices ranging from \$540 to \$595.

*Sundries*.—In *Taysam* kinds two or three lots *Yechisen* and *Nagahama* at \$485 to \$530.

#### QUOTATIONS.—(NEW SILK.)

America	2,393	2,666	3,739
Total	3,801	3,631	6,664
Settlements and Direct	5,050	4,050	7,700
Export from 1st July	8,750	7,500	5,600
Stock, 1st October	13,800	11,550	13,300

#### WASTE SILK.

Another heavy week, foreign buyers purchasing 990 piculs (*Cocoons* 200 piculs, *Noshi* 500 piculs, *Kibiso* 240 piculs, *Neri* 50 piculs) and direct Export shipping 168 piculs besides. Indeed the native Export-Kwaisha is reported to have bought about 1,000 piculs altogether, and this large quantity will probably be shipped during the present month.

*Cocoons*, *Noshi*, and *Kibiso* have again been eagerly bought for European Markets. Prices are strong in spite of the continued rise in foreign exchange. Supplies have not equalled sales and the Stock is reduced to 8,000 piculs not deducting the purchases on Japanese account remaining unshipped.

The English mail steamer *Thibet* of 28th instant carried 285 bales various *Wastes* and *Waste Cocoons* for Europe. Total Export present season to date is now 4,304 piculs against 1,123 piculs last year and 4,314 piculs at same date in 1884. The *Harter* has also 100 bales of *Cocoons* for New York which are not included in these figures.

*Cocoons*.—Business continues at late rates and the stock of *Pierced* is now getting small. A considerable quantity of *Waste* and *Tama Cocoons* yet remain to be disposed of.

*Noshi*.—Large transactions in *Yoshu* assorted at from \$120 to \$125, *Oshu* \$190, *Mino* \$157½, and *Shinshu* at \$150. Holders firm and apparently plenty of buyers at full rates.

*Kibiso*.—Considerable business at prices which show no decline on recent quotations. In *Filature* kinds *Koshi* district has been done at \$140 to \$150 and best *Shinshu* is held for \$160. Ordinary *Yoshu Kibiso* has brought \$70 and common *Mino* \$75.

*Neri*.—Several parcels sold up to \$28 for rough uncleaned stock.

#### QUOTATIONS.—(NEW WASTE)

Pierced Cocoons—Good to Best	\$130 to 150

*Exchange*.—Foreign has further advanced in sympathy with better prices ruling for silver on the London Market. Present quotations are firm as follows:—LONDON, 4 m/s. Credits, 3/3½; Documents, 3/1½; 6 m/s. Credits, 3/3½; Documents, 3/1½; NEW YORK, 30 d/s. G. 879; 4 m/s. G. 880½; PARIS, 4 m/s. fcs. 4.14; 6 m/s. fcs. 4.17. Domestic unchanged, Kinsatsu being nominally at par with silver yen.

#### Estimated Silk Stock, 1st October, 1886:—

	RAW.	PICULS.	WASTE.	PICULS.
Hanks	1,680	1,680	Pierced Cocoons	600
Filature & Re-reels	5,140	5,140	Noshi-to	3,400
Kakeda	985	985	Kibiso	3,700
Sendai & Hamatsuki	670	670	Mawata	180
Taysam Kinds	275	275	Sundries	120
Total piculs	8,750	8,750	Total piculs	8,000

#### TEA.

Business in this department has somewhat abated

ed during the past seven days, the volume of purchases only aggregating 1,595 piculs, against 3,200 piculs for the corresponding period in 1885. Prices continue to rule firm all round, and as Finest is in limited supply, quotations for that description are withdrawn from this date for the season 1886-87. It is estimated that there are about 33,500 piculs more Tea to arrive from the producing districts as follows:—Ise and Mino 9,000 piculs, Suruga and Inshu 11,000 piculs, Hachioji 3,500 piculs, Shimosa 3,500 piculs, Kiushu 2,500 piculs, Echigo 2,500 piculs, and various, 1,500 piculs. The above is divided thus under various grades:—Fine and upwards, 7,000 piculs; Medium and Good Medium, 10,000 piculs; Common to Good Common, 13,000 piculs; and Bancha 3,500 piculs. Total Settlements for Yokohama 186,845 piculs and Kobe 119,500 piculs, making 306,345 piculs, against 251,625 piculs, last year. The *O. & O.* steamship *Belgie*, which sailed from this port on the 23rd instant, took 495,679 lbs. from Yokohama as follows:—139,762 lbs. for New York, 156,544 lbs. for Chicago, 193,913 lbs. for San Francisco, and 5,460 lbs. for Canada. The Suez Canal steamship *Port Adelaide* which left on the 27th instant, took 269,734 lbs. for New York and 46,936 lbs. for Canada. Aggregating 316,670 lbs. from this port.

Common	\$13 & under
Good Common	14 to 15
Medium	16½ to 17½
Good Medium	18½ to 20½
Fine	24 & up'ds

THE GREATEST WONDER OF MODERN TIMES.

**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

**HOLLOWAY'S OINTMENT**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

"FAISCE QUE DOIS: ADVIENNE QUE POURRA!"

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 9TH, 1886.

### BIRTH.

At No. 21-3 A, Pluff, on the 4th instant, the wife of H. Moss of a Daughter.

### MARRIAGE.

October 5th, at the residence of Dr. J. C. Hapburn, by the Rev. Wm. Ingle, D.D., the Rev. R. B. GREENAN, of Virginia, U.S.A., to Miss LUISA ARLINA LEETE, only daughter of the late Charles E. Leete, Esq., of Fayetteville, North Carolina.

### SUMMARY OF NEWS.

THE Naval College was opened the 4th instant.

A scheme for forming large sugar plantations in the Riukiu Islands is mooted.

THE Yokohama Specie Bank proposes to establish a branch office at Shanghai.

VICE-ADMIRAL ITO left for Shiohara, Yashu, the 1st instant, to recruit his health.

MESSRS. FUJITA & Co. of Osaka have decided to work the silver mines at Omeri, Sekishu.

MR. SHIBUYA RICHIE, Vice-President of the Aichi Local Assembly, sent in his resignation the 30th ultimo.

THE remains of H.I.H. Princess Isako were interred at the Toshimaoka the 4th instant at 3 p.m.

THE Extradition Treaty between Japan and the United States of America has been ratified and published.

MR. SHIBAYAMA, Governor of Yamagata Prefecture, arrived in the capital the 30th ultimo on official business.

IN consequence of the decrease in the number of cholera cases in Osaka the authorities have

removed the restrictions on the trade in rags, second-hand clothing, and waste paper.

GOVERNOR TAKASAKI, of the Tôkyô City Government, removed to his new official residence at Shiba Park the 3rd instant.

THE number of banks in Kiushu is estimated at 22, with a total capital of yen 3,315,000 and yen 2,268,000 of notes issued.

THE Conference on treaty revision, which was to have been resumed early this month, has been postponed till the 20th instant.

MR. SOMESAKI NOHUFUSA, editor of the Tôkyô *Hiri Shimbun* or *Illustrated News*, died the 27th ultimo at the age of 69 years.

THE telegraph authorities are said to be enquiring with a view to the construction of a line from Hakodate to Soya in Kitami.

THE total number of Japanese residents at Sôlu is 131, of whom 94 are males, and 37 females, the total number of houses being 26.

THE total number of Japanese residents at Fusan is 1,807, of whom 918 are males, and 889 females, the total number of houses being 431.

ENGINEERS have reported that the supply of water to be obtained from the Mino Falls will not be sufficient for the city of Osaka.

MESSRS. MASUJIMA, OKAYAMA, SHIBUYA, and ENRI have assumed charge of the Yokohama Law School, which was opened the 1st instant.

H.E. COUNT SAIGO, who is at present staying in London, will return to Japan, after visiting various foreign countries, in April next year.

THE Tôkyô City Government contemplate the construction of a bridge near Komakatacho for the convenience of residents in Asakusa and Honjo.

At a large meeting of officials and leading residents at Fukuoka, it was decided to begin at once the formation of the Kiushiu Railway Company.

THE total number of notes burned in the Printing Bureau from the 28th ultimo to the 1st instant was 3,837,401. The total value represented was yen 3,036,883.

IN August last the total number of Japanese residents at Gensan was 281, of whom 186 were males and 95 females, the total number of their houses being 76.

MR. ISHII, Director of Imperial Telegraphs, left the capital the 4th instant to visit the localities in Kiushu where it is proposed to establish branch telegraph offices.

It is stated that the residents of Fukuoka, Kumamoto and Saga Prefectures have decided to apply to Government on the subject of the construction of a Kiushu Railway.

AN adjourned meeting of the Yokohama Choral Society was held on Monday, at which it was

decided by a majority to hire a piano for the practice of the society and to ask M. Sauvlet to again take the office of conductor.

THE total number of passports issued to Japanese who applied to the Foreign Office for leave to travel in foreign countries during September last was 41.

THE plans of seven fish-shaped torpedo-boats, which were recently completed in the Naval Department, were submitted to the Marine Bureau the 2nd instant.

THE autumn races of the Kyôdô Keiba Kaisha, which were fixed to take place at Ueno the 23rd instant and two following days, have been postponed till the 3rd proximo.

MIURA BUNJI, KOBARI SHIGEO, and KOTOBA IWAMATSU, who were arrested in connection with the Kabasan riot, were hanged at the Ichigaya Branch Prison the 2nd instant.

SINCE the opening of the market at Shanghai, 35,000 bales of raw silk have been imported from Japan, 21,000 bales changed hands, and 20,330 bales were exported from Shanghai.

IN future the results of floods, &c., will be reported to the Central Government by the governors of prefectures or their secretaries who will come to Tôkyô for that purpose.

COLONEL ABU has been appointed to the office of President of the *Kyôdoden* School, in place of Colonel Watanabe, who has been gazetted acting commandant of the 4th Army Corps.

H.E. COUNT INOUE KAORU, Minister of State for Foreign Affairs, received permission the 30th ultimo to accept and wear a first class decoration conferred on him by the Prince of Montenegro.

MR. NAGAOKA YOSHIYUKI, Commissioner of the Board of Auditors, who was promoted the 4th instant to the rank of 5th class of first grade, by special orders, died the same day after a long illness.

MR. TÔJÔ ICHIRO, secretary of the Japanese Legation at Vienna, received permission the 30th ultimo to accept and wear a third class decoration conferred on him by H.I.M. the Emperor of Austria.

SINCE the return of their Excellencies Counts Inoue and Yamagata from Hokkaido, the vernacular press speaks of great reforms as likely to be made in connection with the administration of the place.

MR. KIMURA SOHEI, who resides at Mita, has applied to the Tôkyô City Government for permission to purchase the cattle-rearing establishment of the Agricultural and Commercial Department at Mita, for yen 50,500.

THE total traffic receipts on the Ueno-Mayeabashi and Shinagawa-Akabane line during August last were yen 59,215, of which yen 36,819 were for passengers, and yen 22,395 for parcels, &c. The total receipts on the Taketoyo-Kisogawaline

during the same period were *yen* 1,976, of which *yen* 1,850 were for passengers, and *yen* 126 for parcels, &c.

An experiment with torpedo apparatus took place at the Naval Arms factory the forenoon of the 5th instant. Rear-Admiral Ito, Superintendent, and M. Bertin, adviser, of the Naval Construction Bureau, were present.

MR. YOSHIDA, Vice-Minister of State for the Agricultural and Commercial Department, who had been for some time confined to his residence by illness, left for Isobe the afternoon of the 30th ultimo to recruit his health.

It is stated that the site of H.I.H. Prince Arisugawa's former residence will be added to the Nagata Park at Nagata-machi, Kojimachi, the present park being very small as compared with other places of public recreation in the capital.

THE CHINESE MINISTER, accompanied by Mr. Loo Yung Ming, Japanese interpreter of the Chinese Legation, visited the Foreign Office the afternoon of the 2nd instant, and had a conference with Count Inouye and Mr. Aoki in connection with the Nagasaki affair.

THE total number of visitors to the museum at Ueno during last month was 3,939, of whom 3,754 were adults and 185 children. The total number of visitors to the Zoological Gardens during the same period was 6,669, of whom 5,935 were adults and 734 children.

THE Tōkyō City Government Office is said to contemplate the purchase of the site of the residence of Marquis Hosokawa, at Hamacho, Tōkyō, with the object of forming a Park. The ground is highly suitable for that purpose, and the total extent is over 36,520 *tsubo*.

MADAME SUGI, wife of Mr. Sugi, High Chamberlain of the Empress Dowager, who since her accident had been staying at the residence of Mr. Takashima Kaemon, at Kanagawa, under medical treatment, returned to Tōkyō in a *kago* the evening of the 4th instant. Madame Sugi's health is greatly improved.

THE quantity of rawsilk exported from Yokohama during September last was 1,438 bales; 4,991 bales were sent to foreign firms; 1,058½ bales rejected, and 9,178 bales came in from the country. Of waste, 6,793 bales were sold to foreign firms, 7,524 bales arrived from the country, and 99 bales were sent back.

THE opening of the new line of the Nippon Railway Company between Utsunomiya and Nasu took place the 1st instant. H.E. Count Matsukata, Messrs. Inouye, Director of the Government Railways, Narahara and Kitagawa, President and Vice-President of the Nippon Railway Company, and other gentlemen were present.

THE total amount of the Hokkaido products sent to Shanghai during September last was 3,439,418 catties of *kombu*, showing an increase of 1,390,723 catties against the previous month; 71,569 catties of *bêche de mer*, or an increase of 17,273 catties; 106,239 catties of *surume* (a species of dried cuttle-fish), or an increase of 43,847 catties; and 23,770 catties of dried sea-eel, or an increase of 11,268 catties.

OPERATIONS in Imports have scarcely been equal to expectations, transactions all round having been on a smaller scale than is usual at

the time of year. But little inquiry has been made for Yarns, though during the past two days certain spinnings were in good request at an advance on recent rates, whilst other kinds were only saleable at easier prices. Cotton Piece-goods and Woollens moved off to a small extent only, and without improvement in values. No change can be reported in Metals, and Kerosene is quiet. A small demand only has to be noted for Formosa and Manila Sugars, and White kinds are scarcely looked at. A large business has been done in Silk, principally for Europe, and prices are higher with the prospect of a further advance. Holders are very firm, and, if a demand should come from America, will be able to dictate any terms they please. Waste Silk has also been largely dealt in, and transactions would have been still more extensive if sellers and buyers were not so far apart in their ideas of values. The Tea trade continues active, all grades participating in the demand; and though no change has occurred in prices, the market closes slightly weaker for common and medium sorts. Foreign exchange is steady.

#### NOTES.

THE recent Korean complications have not ceased to cause concern to Japanese journalists. A telegram, dated at London, the 23rd ultimo, and published by the *Nichi Nichi Shimbun* a few days ago, has renewed the feeling of uneasiness. Its import is that "Russian reinforcements have left Odessa for Vladivostok." Nothing is said as to the nature of the reinforcements, and our Tōkyō contemporary is disposed to conclude that a strengthening of the Russian fleet in these waters is alone contemplated. It must be remembered, however, that of late China has been slowly but steadily augmenting her frontier garrisons until her strength *vis-à-vis* Russia amounts almost to a menace, and there is quite as much reason to attribute these reinforcements to that circumstance as to connect their despatch with Korean affairs. Yet the *Nichi Nichi Shimbun* writes uneasily. It sees in Kim Kak-u's attempt to escape to Vladivostok evidence of an intrigue the existence of which may be confirmed rather than denied by Kim's strenuous disavowal of anything like a secret treaty with Russia. If Kim's asseverations be trustworthy, it would follow that the Russian scare was a mere pretext, devised by Min Yon-ik and too easily credited—if indeed it was really credited—by the Chinese Representative, Yuen. Some confirmation of this view is furnished by the fact that Min, instead of proceeding at once to Tientsin to offer explanations to Viceroy Li, as was supposed to be his intention, stopped at Chefoo *en route*, and thence journeyed to Shanghai. Rumour says that the Viceroy Li, having vainly waited for Min's arrival, telegraphed to Sōul reprimanding Yuen's tardiness in sending the Korean politician to Tientsin. In our opinion, already more than once expressed, Min's proceedings appear to indicate that he is responsible for the whole intrigue, and that, to achieve the downfall of his rivals, the Kims, he made a mere cat's-paw of the Chinese Representative. But in truth it is scarcely possible to find one's way through the labyrinth of political plotting and international vacillation which make up the sum of Korea's present history. Two things only are certain; namely, that there is a strongly

developed disposition on the part of some Koreans to throw their lot in with Russia, and that the fitful, suspicious policy of China is gradually creating an intolerable situation.

Suppose, for a moment, that Russia is innocent of all designs upon the Korean peninsula and that she has taken no part in the intrigues attributed to her, what, under those circumstances, must be her feelings towards China? Even a humble individual does not find it pleasant to be unjustly suspected, and the Government of a great empire may well be indignant at such evidences of distrust as China has of late shown in her attitude towards Russia. We do not pretend to say whether or no the statesmen of the Middle Kingdom have reason on their side, but we do say that even if they were absolutely certain of their facts, their conduct has exhibited very little sagacity. They have proclaimed to the world that they regard Russia as an unscrupulous Power, always on the watch to extend the sphere of her aggressions. Russia, indeed, seems to take it all very quietly. But that her resentment is aroused there need not be much question. Korea has proved a most unfortunate field for Chinese statesmanship. Seldom has there been anywhere displayed a policy of such conflicting elements—timidity and boldness, vacillation and firmness, repudiation and presumption.

DURING the absence of their Excellencies Counts Inouye and Yamagata in Hokkaido, a rumour was published by one or two Japanese newspapers to the effect that the steamer by which the Ministers travelled had violated the quarantine regulations at Hakodate, and entered that port without undergoing the prescribed processes of disinfection. This story was taken up by an English local contemporary, and converted into a circumstantial statement, supported by the reputed evidence of "numerous correspondents," and embellished by an assertion that the Governor of Hakodate had expressed great indignation at the contumelious behaviour of the two high officials. We ventured to point out that the whole tale was a fable; that the *Satsuma Maru* had been duly disinfected at Ogi-no-hama, *en route* for Hakodate, and that a repetition of the process at the latter place would have been quite superfluous. Our contemporary, so far from accepting this correction, which we made "by authority," re-iterated its previous romance with renewed assertions of indisputable testimony and with all the mien of indignant veracity. We are now in possession of the detailed facts as related by the "high officials" themselves. The *Satsuma Maru* and all her equipage were duly disinfected at Ogi-no-hama, Counts Inouye and Matsugata and their party proceeding, after the process, overland to Onna-hama. When the *Satsuma* reached Hakodate she was kept waiting some time at the Inspection Station owing to the somnolent habits of the sanitary officer on duty. When that gentleman came on board, he seemed doubtful how to proceed inasmuch as the disinfection of a ship from Yokohama at Ogi-no-hama was a novelty to him. Presently the Governor of Hakodate visited the *Satsuma*. He too acknowledged some uncertainty in view of such a departure from the ordinary routine. On the other hand, the notion that a ship coming directly from a non-infected port where it had undergone disinfection and been furnished

with all the necessary certificates, should be again disinfected at Hakodate merely because the officials at the latter place were not familiar with such a case, must have appeared a little ludicrous to the passengers in the *Satsuma*. Count Yamagata, however—who as Minister of State for the Interior might be supposed to know the rules enacted by himself—did not insist, but merely referred the Governor to the naval physician who had accompanied the *Satsuma Maru* from Yokohama, promising that, if after consultation with that officer the Governor still felt uncertain as to his duty, the *Satsuma* should remain at the Inspection Station until telegraphic instructions had been received from the Sanitary Bureau in Tōkyō. A few words from the naval surgeon sufficed, however, to enlighten the Governor. He expressed himself perfectly satisfied, and the ship proceeded to her moorings. It will be seen that these incidents were just sufficiently unusual to furnish materials to ignorant outsiders. The *Tōkyō Independent* will now, perhaps, see the expediency of repudiating its too easily credited story.

CHIARINI'S circus is drawing better than ever. Since the cholera ceased to deter visitors and the hot weather disappeared, the accommodation afforded by the big tent is taxed nightly to the very utmost. The clown, Mr. Godfrey, has become a great favourite with the people. His merry antics elicit shouts of laughter, though, of course, the dialogue that sometimes accompanies them is unintelligible to ninety-nine in every hundred among the audience. A trait very characteristic of the artistic instincts of the Japanese must have impressed foreign visitors. Among the performances is one in which a boy-dressed as a girl with long flowing locks, stands upon two bare-backed ponies and drives two others before him. As the four animals career round the arena, the rider turns his body parallel to the course and, shading his eyes with his hand, strikes an attitude of great picturesqueness. As an equestrian feat the thing is nothing, but as an artistic *coup* it appeals at once to the Japanese, who immediately burst into vehement applause.

The lion show, which is certainly the least pleasing item in the programme, has not yet been attended by any accident. But it is plain to every one who has visited the circus at intervals of any length, that the largest lion of the three grows nightly less docile and more disposed to resent the indignities to which he is subjected. The tamer, Mr. Frame, however, expresses entire confidence in his ability to manage the tawny beasts. Kindness, he says, succeeds better with them than cruelty, and though he seems to use the whip freely, he denies that he does so wantonly, or that the lions ever fail to connect their punishment with some conscious fault. Certainly his theory is borne out by results, for there is at least one of the lions so much attached to him that it receives his caresses with all the mien of a pet kitten. The case of the tigers is different. Their temper is pronounced to be treacherous and untrustworthy in the extreme. At present they do not perform, as the largest of the three is indisposed, and, under the influence of fever, has scratched a deep gash in his own face. Over this animal Mr. Frame acknowledges that his control is imperfect. Twice during his seven months' association with the circus, he has been struck down by

the brute's paw, and received wounds which would quickly have been multiplied to deadliness but for the interference of the other two tigers. These, fortunately, being on bad terms with their big comrade, are generally ready to interrupt his proceedings, especially when he betrays any symptoms of ill temper. But it is a precarious business. The tamer's only resource—a slender one at best—lies in a heavily loaded stick which an attendant holds ready to hand him, at any moment, through the bars of the cage. With this he avows ability to fell any of the tigers, but the blow would have to be delivered with unimpaired force and the precision of unshaken nerves. If the tiger should happen to strike home first with its claws, however lightly in respect of its full capabilities, would the felling process be likely to come off successfully? We doubt it, and, having observed the decidedly repellant lions' show, we have not the smallest desire to witness the still more perilous performance with the tigers.

A VERY significant feature of Mr. Mori's administration at the Educational Department, is the disposition to utilize foreign ability in fields which seem naturally adapted to native research. The appointment of Mr. Basil Hall Chamberlain to be Professor of Japanese is one case in point. Mr. Chamberlain, whose remarkable proficiency as a sinologue needs no comment, is now engaged in investigating and comparing the dialogues of Japan with a view to the philological and etymological deductions which their collation may be expected to suggest. For such work as this a Japanese scholar would certainly have been appointed by a Minister who did not possess Mr. Mori's great breadth of view and freedom from prejudice. Another scarcely less remarkable instance is the appointment of Mr. E. F. Fenollosa to what must be termed, we suppose, a chair of Japanese Art. Mr. Fenollosa's mission to Europe for the purpose of compiling a report on Western art schools in relation to Japanese art, is a public acknowledgment that Japan is prepared to submit her canons and traditions to the light of foreign research, and to benefit by intelligent foreign judgment in matters which her virtuosi, not without apparent reason, have hitherto claimed the exclusive right to regulate. Such facts as these do not accord with the inference so often deduced of late years, that Japan's leading purpose is to dispense with foreign aid altogether. Independent ability she certainly aims at acquiring, but that she does not underrate the value of talented foreign coöperation and is not unprepared to avail herself of it, seems pretty evident.

THERE is nothing novel in the advice which, according to the *Mainichi Shimbun*, M. Bertin is credited with having given to the naval authorities in regard to the necessity of aiming at greater uniformity in the armament of the Japanese navy. More than fourteen years ago the same recommendation was made with, we venture to say, at least equal earnestness, and though the authority of the officer making it was far inferior to that of M. Bertin, the reasons which he advanced in support of his counsel were doubtless identical with those which actuate the distinguished Frenchman. Then, too, it would have been comparatively easy to take the necessary steps, whereas now the problem is much more difficult to solve. It need not be

supposed, indeed, that the armament of the Japanese navy is of an exceptionally varied description. Perhaps Japanese ships are even better off in this respect than the British. But, in the first place, there is no valid reason why a country which does not make its own guns but simply takes its choice of those manufactured elsewhere, should furnish itself with a miscellany of weapons. The present condition of the Japanese naval armament represents, not the changes which the manufacture of ordnance undergoes as science progresses, but the uncertainty of the Japanese authorities as to the most serviceable weapon; and, in our opinion, no such uncertainty need have existed. If Japan were self-supplying in the matter of ammunition, there would be less cause for uneasiness; but so long as she depends on England, Germany and France simultaneously for her projectiles, her ability to fight cannot be regarded with much confidence. M. Bertin will have rendered this country a great service if he assists the naval authorities to adopt a system pointing to complete uniformity of armament, and to the development of thorough ability to be self-supplying in the matter of ammunition.

HER MAJESTY'S Speech at the opening of Parliament was singularly laconic:—

MY LORDS AND GENTLEMEN.—I have summoned you to meet at this unusual season of the year for the transaction of indispensable business. The Session of the last Parliament was interrupted before the ordinary work of the year had been completed, in order that the sense of my people might be taken on certain proposals with regard to the government of Ireland. The result of that appeal has been to confirm the conclusion to which the late Parliament had come. The provisional nature of the arrangement which was made by the last Parliament for the public charge of the year renders it inexpedient to postpone any further the consideration of the necessary financial legislation.

GENTLEMEN OF THE HOUSE OF COMMONS.—The Estimates which were submitted to the last Parliament, and were only partially voted, will be laid before you.

MY LORDS AND GENTLEMEN.—At a period of the year usually assigned for the recess, and after the prolonged and exceptional labours to which many of you have been subjected, I abstain from recommending now, for your consideration, any measures except those which are essential to the conduct of the public service during the remaining portion of the financial year. I am confident that they will receive your prompt and careful attention.

Perhaps the truest moral to be drawn from this brevity is that a session has been wasted. The last Parliament encountered the Irish barrier at the very outset of its legislative path, and fell in the attempt to surmount it. The new Parliament meets at a time when all possibility of legislative achievements is at an end. Her Majesty has, therefore, nothing to recommend for the future, and nothing to applaud in the past.

MR. JUSTICE FIELD'S artistic instincts seem to have been shocked by the curiosities which came under his notice in the case of Ahrens v. White. Messrs. Ahrens & Co. had been acting as agents in Japan for Messrs. White & Co. the bulk of the business transacted by the former being the purchase of various articles of Japanese art industry and their transmission to London. Cheapness appears to have been the great desideratum in selecting these goods, for we find that 5,000 porcelain figures at 1d. each were among the consignments, and that cloisonné vases at from \$4 to \$6 each were much affected by Messrs. White & Co. Perhaps it is not wonderful that, in giving judgment for Messrs. Ahrens & Co., Justice Field was betrayed into saying:—"I think they ought to get their money in their pockets to go on dealing with, and to buy more of these horrid monsters. I hope they will not send them to England."

A curious point was raised in connection with this trial, namely, whether the description

"gold lacquer" should be interpreted to mean that the surface of the lacquered object is all gold, or whether spots of gold only are necessary. We should have imagined that the matter did not admit of much doubt. The technical term for lacquer spotted with gold is, not "gold lacquer" but *avanturine lacquer*. By the former we should certainly understand lacquer having a ground entirely of gold.

JAPANESE papers publish the following telegrams:—

(*Nichi Nichi Shinbun*).

Nagasaki, October 1st, 6.25 p.m.

The enquiry by the Japanese and Chinese representatives has been held daily. The Chinese Consul has commenced the preliminary examination of persons concerned in the late disturbance, and officers and men from the ships at present in harbour being called.

(*Mainichi Shinbun*).

Nagasaki, October 1st, 1 p.m.

The Japanese representatives received a telegram from Mr. Kirkwood to-day containing suggestions as to the future conduct of the enquiry.

Nagasaki, October 1st, 3.15 p.m.

The Japanese representatives have requested the government to despatch Mr. Motoyama Masahisa to assist them in connection with the enquiry, but no decision has yet been come to by the Tōkyō authorities.

Nagasaki, October 2nd, 11 a.m.

Governor Kusaka was asked by Count Inouye as to the question of whether he had suspended the movement of small junks during the disturbance of the 15th. It is stated that this message is required for the conference with the Chinese Minister in Tōkyō.

Nagasaki, October 2nd, 7 p.m.

A long telegram from the Chinese Minister addressed to the Chinese Consul and Mr. Drummond arrived to-day. Presumably it is a message containing the minutes taken at the conference which was held in Tōkyō with Count Inouye on that date.

Nagasaki, October 3rd, (Noon).

With regard to the alleged suspension of the movement of small boats, Governor Kusaka has replied to Count Inouye that these steps were taken because of the conduct of the Chinese sailors. In the event of boats being required by foreigners, or Chinese not concerned in the disturbance, he gave the necessary permission to use the boats on being satisfied that such was advisable. Further, it was in accordance with custom to stop the movement of small boats in order to the arrest of offenders.

The Chinese representatives asked the Japanese representatives as to the rules governing the landing of men from ships. The latter replied that it was the custom to receive permission from the Governor on landing men from men-of-war for the purpose of marching or drilling in the settlement or in Japanese town, but on other occasions such permission was not necessary.

Nagasaki, October 2nd, 2 p.m.

Since the Chinese Consul added a postscript to the minutes contradicting their tenor, the representatives on both sides have had some ill-feeling. The Japanese representatives asked the Chinese representatives to alter and sign the minutes to suit themselves, intimating that if this were not done the Japanese version must stand as the record.

Nagasaki, October 5th, 1 p.m.

It has been decided by the authorities to report minutely in future to the Tōkyō Government the arrivals and departures of passengers in the mail steamers plying between Nagasaki and Korea.

Nagasaki, October 5th, 4 p.m.

Admiral Ting, who started for Korea yesterday morning in the *Nansen*, returned to Nagasaki to-day.

It is gratifying to learn that the efforts made to secure a regular pastor for the Union Church are likely to prove successful. At a meeting of the congregation held a few days since, the officers of the church announced that a letter had been received from Mr. Monroe of New York, acknowledging receipt of the Church's communication and expressing his willingness to see what could be done in the way of interesting the Christian Associations of London and New York in the movement. This gentle-

man, who was here not many months since, was in London at the time of writing, but he expects to arrive in New York before the year closes. It was stated at the meeting that there is some prospect of procuring the services of Dr. Draper, of the Methodist Episcopal Church; and after some interchange of opinion on the part of several present, Dr. Hepburn moved that measures should be at once taken to secure Dr. Draper's services if possible; which motion was seconded and unanimously adopted. We hope that the measures taken will have the desired result, for in Dr. Draper the church and the community generally will, we believe, gain an efficient help. If we are rightly informed, Dr. Draper commenced life as a lawyer, but relinquished a legal career to be ordained; and was not long in rising to a position of considerable eminence amongst the clergymen of America. His health failing, he proceeded to Europe, and accepted the pastorate of the American Church in Geneva. Returning to America, he resumed ministerial work in New York; but, his health again shewing signs of failing, he returned to Europe and became pastor of a church in St. Petersburg, succeeding by his labours in greatly reviving the church and largely increasing its membership. Dr. Draper is at the present time in London, acting as pastor of a large non-conformist church there. We trust the Union Church will be fortunate enough to succeed in securing the reverend gentleman's services.

On Thursday morning Tōkyō witnessed another of those imposing pageants which mark the sepulture of Japanese notables. The deceased, on this occasion, was the mother of Marquis Yamanouchi, formerly Daimio of Tosa. She died at noon of the 30th, at the residence of the Marquis in Hakozakicho, Nihonbashi, and the interment took place in the family cemetery at Oimura, Minami-Shinagawa. The ceremonial was according to the Shinto ritual, and as its nature has been described more than once in these columns, we need not speak of it again further than to say that the procession was nearly a mile in length, and that some of the bouquets carried before the catafalque were about 15 feet high and as many in circumference. The road taken by the cortège had been traversed a few days previously by the funeral procession of the grandmother of Count Okudaira, formerly Daimio of Nakatsu, in Buzen. This lady died on the 24th ultimo, and was buried on the 2nd instant in the cemetery of Tokaiji at Shinagawa. Among the numerous friends and former vassals of the Nakatsu clan who followed her remains to the grave, Messrs. Fukuzawa and Obata were conspicuous.

\* \* \*

The closing days of September were fatal to several persons of rank in the capital. The family of the Marquis Hachisuka was particularly unfortunate. That nobleman's mother, as well as his elder sister, were both taken ill on the 26th, and expired on the 28th. These ladies had come from Awa to welcome the Marquis on his return from Europe, and there is only too much reason to conjecture that their illness was contracted on the journey and was of a choleraic nature.

We believe it has now been definitely decided to form a Yacht and Boat Sailing Association for Yokohama, the first step having been taken in the calling of a meeting for that purpose. So

far as appears from the circular which has been issued to those interested, it strikes us as a somewhat bold measure to include among the proposals suggested for consideration a provision confining the objects of the association strictly and severely to sailing. "There must be nothing of the nature of a club," say the projectors; "no question as to the social position of members can be permitted to enter to disturb the harmony and menace the success of the association." It is certainly reasonable to hope, in view of the enthusiasm manifested in connection with this sport during the summer, that the proposed association can be carried on successfully. No money is to be expended on club or other premises—at any rate that is the suggestion made. Except for special and important purposes, the members will not be called together, and when afloat all class or other distinctions will be ignored. Any person may become an ordinary member, but we suppose the right of voting and taking part in the conduct of the association will be dependent upon some such condition as ownership of a boat, or willingness to present a prize for competition. The following are the general principles that are suggested as those which should be observed in the formation of the Association:—

1. The object of the Association should be to promote Sailing and Sailing Races, and not to facilitate social intercourse, or for any other purpose.
2. Social position, nationality, or class prejudices of any kind have nothing to do with the object of the Association.
3. Qualification for membership should not depend on the ballot, but everyone who has the necessary enthusiasm to become the owner of a sailing boat, or to show in some other practical way that his object in joining the Association is to advance the purpose for which it is formed, should have a title to the privilege of becoming a member, with a right to vote.
4. The value of a member to the Association depends entirely upon the amount of enthusiasm he displays in the object of that association, and upon nothing else.
5. The members of the Committee hold that honourable position by virtue only of their representing the opinion of the majority of the members—that being the true object for which they are appointed. For instance: any proposed alteration of rules, or other measure of any importance, should be submitted to the members by the Committee, and if such proposed important measures be rejected by a majority of the members, such action should be considered as a vote of want of confidence, and the Committee should resign, and a new Committee be appointed which might more nearly represent the opinion of the Association.
6. The expenditure of money on such things as Club Premises, or other property incurring material responsibility to the members, is unnecessary.

In addition to these the following suggestions are made:—

1. That it is unnecessary to extract heavy subscriptions from members; an annual subscription of \$2 for active and \$1 for honorary members would probably be enough to cover all expenses for stationery, Club colours, and incidental expenses.
2. That entrance fees for races should be as light as possible; they should rarely exceed one dollar at the most. Entrance fees should be devoted to the purchase of prizes, but, on the other hand, the object of the Association being to promote races for the sake of racing only, pot-hunting in any form should be particularly discouraged.
3. That any Sailing Rules or such details should be carefully collated by the Committee from the best sources obtainable, and adapted to local requirements, and then submitted to the members for final approval.
4. That as much as possible the calling of meetings of members should be avoided, but that members should be invited to express their opinions by some such means as "return post-cards," thus avoiding the danger of measures being adopted by a meeting which may perhaps not be representative, owing to the unavoidable absence of many of the members.

Doubtless the democratic spirit displayed by the framers of these proposals is very admirable under certain aspects. But we have some apprehensions as to the success of an association so ostentatiously designed to bring together persons of all classes in the pursuit of a common pastime. Why not expunge all this talk about social distinctions and so forth? The enforced levelling down process may be as distasteful to some as the levelling up will prove irksome to others, and under any circumstances it appears to us that intentions of this sort are better understood than expressed.

Original from

UNIVERSITY OF ILLINOIS AT  
URBANA-CHAMPAIGN

THERE is a very matter-of-fact Japanese gentleman living in Hamburg. The *St. James's Budget* gives the following account of his doings:—A Japanese gentleman in Hamburg went to see the "The Mikado" there, under the impression that it pretended to be a native production imported from Japan. Full of his discovery that it is no such thing, he has written a long "exposure" of it to a Hamburg newspaper. The names Nanki-poo, Ko-ko, Pooh-bah are not Japanese. "They have more resemblance with the Chinese." The embroidery of the dresses is what in Japan they embroider bed-clothes with. The girls open their mouths too widely; but one is so exquisitely beautiful that "if she were only to procure a somewhat more exact belt, she would look quite like a real Japanese." For the son of the Mikado, Nanki-poo "kisses the young girls too much." Very suspicious is the embracing, as "that fashion is not known with us in Japan." Most damning proof of all, "The Mikado" is fanciful; and in Japan all plays are prohibited that do not stick to facts. Mr. Gilbert has been found out. His play is original.

ACCORDING to a St. Petersburg newspaper, the Marquis Tseng has been using "very energetic language when speaking about Korean affairs. He declares that Korea ought to be considered an inseparable part of the Chinese Empire. Any attempt upon it would, therefore, he says, meet with the most determined resistance from the Chinese. He further expresses his conviction that China would be supported by the other Powers should such an attempt be made. The Marquis Tseng has two great advantages over the majority of Chinese statesmen—he understands what he is talking about, and knows his own mind. We have not the smallest doubt of the truth of his prediction as to the "determined resistance" which any foreign attempt upon Korea would encounter at China's hands. But while China is playing fast and loose with the status of the peninsula, she may wake up one fine morning to find that the Koreans have made themselves over to some other protector, and that her own disavowals of responsibility in the past preclude her from making any justifiable opposition in the present. There are no black flags in Korea to act as a Chinese vanguard, and we venture to entertain some uncertainty as to the figure which even the Viceroy Li's troops would cut in the rôle of invaders.

AMONG the prefectures that have recently suffered from storms, Hiroshima and Kôchi present the worst records. In the former prefecture, the results of the storm of the 10th and 11th September are stated as follows:—Human lives lost, 75; persons injured, 43; cattle killed, 4 head; houses demolished, 1,720; houses injured, 1,370; walls and fences damaged, in 110 places; shrines demolished, 18; temples injured, 2; public primary schools injured, 5; work-rooms attached to penitentiaries demolished, 4; police stations injured, 3; competitive exhibition buildings damaged, 3; stores injured, 5; granaries demolished, 96; granaries injured, 163; barns damaged, 77; epidemic hospitals injured, 3; abattoirs damaged, 3; roads damaged in 155 places; bridges swept away, 8; bridges injured, 20; embankments injured in 217 places; cultivated land injured, 479 *cho 6 tan*; landslip, one; sea embankment damaged in 13 places; steamship lost, 1; Japanese junks lost, 199; wharfs injured in 2 places. In the latter prefec-

ture, the damage done by the storms of the 20th and 21st September was as follows:—Loss of life, 2; persons injured, 3; horse drowned, 1; dwellings and accessory buildings demolished, 2,523; dwellings and accessory buildings swept away, 396; embankments destroyed in 1,788 places (total extent, *ken 32.474*); roads damaged, 1,235 places (total extent, *ken 18,666*); land devastated, 433 *cho 2 se 30 bu*; bridges destroyed, 398; junks lost and injured, 171; trees blown down, 9,804; grain destroyed by flooding, 1,035 *koku*; sake and other liquors lost, 66 *hoku*; *shoyu* lost, 125 *koku*; mills damaged, 35; landslips in 144 places; and walls and fences damaged in 66 places.—*Official Gazette*.

ACCORDING to the *Nichi Nichi Shinbun*, the representatives of one rural and the four urban divisions of Osaka met, the 3rd ultimo, at the Municipal Government offices to discuss the scheme, proposed by the local authorities for removing the poorer classes from the city, about which so much has lately been said. The number of families to be removed is 2,700, or an aggregate population of 8,100. The localities over which they are now distributed are as follows:—In Minami-ku, Nippon-bashi-suji (from 3rd to 5th street), Okura-ato-machi, and Takatsu-machi (from 3rd to 9th street); in Nishi-ku, Honda-samban-cho, and Honda-machi; in Kita-ku, Kihata-machi, and Iwai-machi Nichome; and in Nishinari Gun, Kamikushima-mura, Shinofukushima-mura, and Namba-mura. These poor people are to be removed to Mamba-mura, where new and good houses are to be constructed to accommodate them at the common expense of the four urban divisions and the one rural division. The rent of these buildings will range from 5 *rin* to 8 *rin* per day according to the depth of frontage. The explanation given by the authorities in submitting this scheme to the consideration of the assembled representatives shows that the energetic efforts of the city Government to protect the inhabitants from the visitation of various dreadful epidemic diseases, particularly cholera, have failed, principally on account of the presence of the small, filthy, and crowded houses of the poorest classes of the population side by side with those of the rich and well-to-do classes, and the consequent impossibility of keeping the city in a healthy condition. Perceiving the defective mode of house construction adopted in the case of *nagaya* (houses for the poor), the city authorities some time ago promulgated sound regulations applicable to the erection of that class of buildings, and, shortly after, they also published rules for the regulation of wells. But, considering that the improvement of the *nagaya* buildings cannot, for more than one obvious reason, be speedily accomplished, they have decided to remove the poor from the quarters in which their presence is so dangerous to the health and happiness of the rest of the population. The municipal authorities hope that, by this means and by the vigorous enforcement of regulations as to the construction of *nagaya* and for the management of wells, already alluded to, it will be possible to make the city of Osaka a very clean and healthy place. The expense of carrying out this project is to be borne in equal proportions by the one rural and the four urban divisions, which are to be benefited by the measure.

The *Nichi Nichi Shinbun* comments upon

the above project as follows:—We congratulate the people of Osaka on the energetic and highly desirable measure of sanitation which their representatives have been called upon to discuss. Should this scheme be approved of by the delegates, the city of Osaka will be happily freed from the presence of the squalid dens, which have become so dangerous to the welfare of the place since the appearance of cholera in this country; and with the improvement of the water-works which is already being considered by the citizens, the great emporium of the west will take first rank among the cities of the Empire on considerations of health. Turning to the city of Tôkyô, we grieve to say that, while its sanitary condition is far worse than that of Osaka both in point of house construction and also on account of the presence of the poorest and most destitute classes in the very heart of the city, its inhabitants generally manifest a feeling of indifference to measures of sanitation. Nowhere in the whole world is there, we fancy, such an unhealthy capital as Tôkyô. Its sewerage arrangements are bad, and in many places it is scarcely drained at all, while in the construction of houses a more deplorable system could not be conceived, and the general sanitary conditions of the place are injuriously influenced by the fact that the rich and the poor live close by each other. We cannot afford to wait the execution of the great work of city improvement; we must in the meantime carry out those measures of sanitation which are absolutely necessary for the maintenance of the health of the inhabitants, but particularly the enactment of rules as to the construction of *nagaya* buildings. We hope that those connected with municipal administration will not suffer the Osaka people to monopolize the honour of instituting improvements in sanitation.

ONE would suppose, from reading the correspondence recently carried on between the Foreign Office in London and British firms and Chambers of Commerce, that the only information supplied to Her Majesty's Government by its Representatives and Consuls abroad, in regard to commercial affairs, is confined to Consular Trade Reports or despatches published in blue books. But a moment's reflection will show that the communications which, from motives of prudence, cannot be laid before the public, far out-number those actually submitted for general inspection. It may be confidently asserted that whenever diplomatic pressure has been brought to bear upon an Eastern Government by foreign officials in respect of trade, all the facts of the case have been carefully forwarded by British officials for the instruction of the Foreign Office in London. Despatches of this character must of course be treated as confidential, but to conclude that they are not received simply because the public does not see them, would be a silly inference. Mr. Gladstone, when he had been only a very few months in opposition, was ridiculed by ignorant people because he avowed his inability to express a definite opinion with regard to a burning question of foreign policy until he had renewed access to the archives of Downing Street. But Mr. Gladstone knew thoroughly what he was talking about. He knew that what the public sees is only a small fraction of the information really collected for the benefit of the various State Departments. British merchants and Chambers of Commerce might have recollected this, one would fancy,

before they desired that Her Majesty's Diplomats and Consuls should be urged to obtain and transmit intelligence already in the possession of the Foreign Office.

STATISTICS recently published in the United States convey a startling idea of the rapid growth of the Great Republic's wealth. The following table speaks for itself:—

YEAR.	TOTAL VALUE OF NATIONAL PROPERTY.
1790 .....	750 millions of dollars.
1800 .....	1,072 millions of dollars.
1810 .....	1,500 millions of dollars.
1820 .....	1,882 millions of dollars.
1830 .....	2,653 millions of dollars.
1840 .....	3,764 millions of dollars.
1850 .....	7,131 millions of dollars.
1860 .....	16,160 millions of dollars.
1870 .....	30,069 millions of dollars.
1880 .....	43,642 millions of dollars.

Distributed throughout the population, the last sum gives \$870 as the average property of each unit of the nation. The items which make up the grand total of forty-three hundred millions are as follow:—

	MILLIONS OF DOLLARS.
Farms .....	10,197
Houses and fixtures .....	9,881
Railways and their material .....	5,536
Telegraphs and ships .....	419
Animals and tools .....	2,406
Movables, pictures, books, clothes, jewels, provisions and fuel .....	5,000
Mines, petroleum wells, quarries .....	781
Annual products of agriculture and industry and imported merchandise .....	6,160
Fixtures not taxed .....	2,000
Coin .....	612

It is worth noting that whereas the real property of the nation was valued at over forty-three hundred millions of dollars in 1880, the taxed property only amounted to \$16,903; or 38.73 per cent. of the real property. This is a striking example of the difficulty of levying direct taxes.

WHEN Dickens reduced Krook to the cinder of a small charred and broken log of wood sprinkled with white ashes, he was obliged by hostile criticism to parade his authorities for the incredible theory of spontaneous combustion, and after all very few people believed him. But we read in the *Standard* that Sir W. Gull recently testified before a Committee of the House of Lords to a case of intemperance which goes far to show that Dickens had reason on his side. "A large, bloated man, who was suffering from difficulty of breathing and great distention of the venous system, died at Guy's Hospital. At the post-mortem of the following day there was no sign of decomposition and the body was believed to be distended with gas. 'When punctures were made into the skin,' said Sir William, 'and a lighted match applied, the gas which escaped burned with the ordinary flame of carburetted hydrogen. As many as a dozen of these small flames were burning at the same time.'"

"THE imperial drum-beat follows the sun from the United Kingdom to Bermuda, Halifax, Esquimalt, Port Hamilton, Hongkong and the Straits Settlements." So says the *St. James's Budget* in an article entitled "Vladivostok and Esquimalt." The latter used to be Great Britain's only naval station in the North Pacific. It is now supplemented by Port Hamilton, Esquimalt, which lies at the southern extremity of Vancouver's Island, is about to be fortified. The Ottawa Parliament has voted £20,000 for the construction of earthworks, and the Imperial Government contributes £30,000 for armaments. As for Port Hamilton, we do not know when its defences are to be undertaken. The Rus-

sian Minister of Marine, Admiral Chestakoff, visited the islands a short time ago. It is related that when he found himself in their neighbourhood he was seized with insomnia, which could only be cured by going ashore. Of course he was courteously received by Admiral Hamilton, who showed him everything "except the forts, to which," explained the gallant Irishman, "I am not permitted to introduce visitors." Admiral Chestakoff probably understood the joke and fully relished the invisibility of the forts. But neither he nor any one else can mistake the fact that the inevitable duel between England and Russia is to be fought in the North Pacific. Russia's Amoor provinces would speedily become sources of immense wealth in English hands. Their acquisition would be easy after the reduction of Vladivostok and a few other positions on the Pacific seaboard. China, also, wants those provinces, or a part of them, very badly. If their partition with her were to be the object of war, she would readily become England's ally against Russia. A provident belligerent does not wait until bullets are flying to choose his campaigning ground. The annexation of Port Hamilton and the fortification of Esquimalt indicate as plainly as possible where England means to strike some of the blows she would aim at Russia in the event of war. The present Japanese Minister of State for Foreign Affairs is reported to have said, two years ago, that when England and Russia fought, the sound of their cannon would be audible in Japan. The tendency of events is to verify his prediction.

A GREAT, perhaps a morbid, interest attaches to those relics of grey antiquity which are occasionally unearthed from Egyptian tombs. Two of these were examined recently, in the presence of a distinguished company, and their condition faithfully recorded by Professor Maspero. They were the mummies of Sekeven-ra Ta-âken, who headed the great national rising celebrated in Egyptian history as the War of Independence (circ. B.C. 1850), and of Seti I., father of Rameses II., who flourished thirty-two centuries ago. Until Ta-âken's mummy was examined, it had not been known that he died on the field of battle. Not only this fact, but also the manner of his death, were clearly shown by the condition of the mummy. "A large wound running across the right temple, a little above the frontal ridge, was partly concealed by long and scanty locks of hair. The lips were wide open, and contracted into a circle, from which the front teeth, gums, and tongue protruded, the latter being held between the teeth and partly bitten through. The features, forcibly distorted, wore a very evident expression of acute suffering. A more minute examination revealed the position of two more wounds. One, apparently inflicted by a mace or a hatchet, had cloven the left cheek and broken the lower jaw, the side teeth being laid bare. The other, hidden by the hair, had laid open the top of the head a little above the wound over the left brow. A downward hatchet-stroke had here split off an enormous splinter of skull, leaving a long cleft, through which some portion of the brain must have escaped. The position and appearance of the wounds make it possible to realize with considerable certainty all the circumstances of this last scene of the King's life. Struck first upon the jaw, Ta-âken fell to the ground. His foes then precipitated themselves upon him,

and by the infliction of two more wounds, despatched him then where he lay, one being a hatchet-stroke on the top of the head and the other a lance or dagger wound just above the eyes." Professor Maspero adds that, "to judge by what remains of the muscles of the shoulder and thorax, Ta-âken must have been a singularly powerful man." He says of the second mummy, that of Seti I., that the removal of a mask of fine linen blackened with bitumen, showed "the most beautiful mummy head ever seen within the walls of the museum. The sculptors of Thebes and Abydos did not flatter the Pharaoh when they gave him that delicate, sweet, and smiling profile which is the admiration of travellers. After a lapse of 32 centuries, the mummy retains the same expression which characterized the features of the living man. Most striking of all, when compared with the mummy of Rameses II., is the astonishing resemblance between the father and son. The nose, mouth, chin, in short, all the features, are the same; but in the father they are more refined, more intelligent, more spiritual than when reproduced in the son. Seti I. is, as it were, the idealized type of Rameses II."

THE *London Spectator* has an excellent article on the question of German *versus* English trade as illustrated by the contents of a lately published volume of the Royal Commission on the Depression of Trade. The Commissioners, as we know, addressed a number of queries to British officials abroad. The answers received from Japan are not quoted in detail by the *Spectator*, but their gist may be gathered from the following passage:—"While in China there has rather been a standstill than a retrogression in British trade, in Japan there has been a marked falling-off. The total European import trade has dropped in value from £6,800,000 in 1880, to £5,400,000 in 1884; and British imports, from three millions to under two and a half millions. Here, again, it is the inevitable German, and, to a lesser extent, the Belgian, who has beaten us. It appears there is now a "ring" in the iron trade by which orders are divided in the proportion of five-tenths to England, three-tenths to Germany, and two-tenths to Belgium. England still retains the lion's share; but the lion's share a few years ago would have been more like nine-tenths than five-tenths, and the lion would have regarded a proposal for such an arrangement as equal division between himself and the rest of the world as an insult. Nor is it only in iron, but in woollens and cottons, and in shipbuilding, that the competition not only exists, but is driving the British productions from the field. Again, the chief reason assigned is the lack of energy and adaptiveness of the British manufacturer and merchant, his ignorance of Japanese tastes, and his contempt of them and of small business, notwithstanding that small business leads to large business. We cross the sea, and alike in the Western Pacific and in the South American Republic of Ecuador, the ubiquitous, irrepressible German is there, driving out by his energy, his knowledge, and his adaptiveness, the slow, old, high and mighty British trader."

THE fertility of invention displayed by old Mr. Chuzzlewit in applying terms of opprobrium to the fallen Pecksniff, is almost equalled by the *St. James's Budget* in its abuse of Mr. Gladstone. Each week that respectable journal

regales its readers with some ingeniously new assault upon the Grand Old Man's morality and statesmanship. Its latest utterance on the subject is this:—"The resignation of the last Gladstone Government makes no stir; partly, no doubt, because it occurs in the midst of a 'sensation' as noisome as its own existence has been. And this is the very last of the Gladstone Governments, as well as the worst. Of unworthy origin, it was contemptible in its composition, crazy in its purposes, disorderly in its conduct. Whether there was more arrogance than servility, more madness than mediocrity in it, the future historian will have some difficulty in deciding; but he will have no hesitation in saying that the sum total was greater than any on record. However, it is gone. The brief frenzy of its existence is over; and while file away all its members into the shadow of a deep disgrace and some into limbo beyond, it becomes the business of more sober and unselfish men to remedy the enormous mischief it has done, if that be possible."

MR. PHILIPPE DARYL'S views of Ireland, which we find republished by a local contemporary, show him to be a critic of extraordinarily keen vision. We only regret that he is not more explicit, for it can scarcely be supposed that the characteristics which struck him so forcibly will be made evident to others by his mere *ipse dixit*. How is one to know, for example, that because a lady has "a pale face and black hair," there is "not a drop of Anglo-Saxon blood in her veins," or that a gentleman in a grey ulster whose tailor is evidently English has "flesh and bone of different origin." The nationality of a man's blood and the parentage of his flesh and bones are not in general analysable at a glance. But Mr. Philippe Daryl's glance is of no ordinary power. Arrived in Dublin he found "the statues all of Irish patriots, the signboards of the shops Irish, and the goods all labelled Irish." The most conspicuous statue in Dublin is Nelson's, and as for the signboards being Irish and the goods labelled Irish, it is pure fiction and very foolish fiction at that. The labels and boards may be Irish in the sense that they were made in Ireland, but if they were carried to London and used there, we venture to say that Mr. Daryl would find them distinctly English. How long will it be, we wonder, before the public discovers that a traveller paying a flying visit to a country has to draw on his own imagination if he seeks to describe the national characteristics.

"THE Dicky Bird Society" has come to be an organization of considerable size and importance in England. It was started nearly ten years ago by the *Newcastle Weekly Chronicle*, the idea being to enrol children who were willing to pledge themselves that they would be kind to all living things, protect them to the utmost of their power, feed the birds in winter and never take or destroy a nest. This programme soon attracted numbers not only from the United Kingdom but from all parts of the British dominions and even from America. The names of the little associates were entered in a "Big Book" and printed, as they came in, in the columns of the *Weekly Chronicle*. They now number one hundred thousand, and some four thousand more are waiting to be enrolled. The editor of the *Chronicle*, who for the purposes of the Society is known as "Uncle Toby,"

receives and prints, in the "Children's Corner" of his journal, letters from the members, some of whom are granted the titles of Captain and Companion according to the zeal and interest they show in the purposes of the association. It is a very pretty and practical idea, and might be acted upon advantageously in other countries besides England.

*Vanity Fair* has the following with reference to recently conferred orders of knighthood:—

The public is not at all adequately aware of the great distinction of the public servants it possesses in its Foreign Office. Three or four years ago we possessed exactly the same men, three or four of them writing C.B. after their names; but it never occurred to us to look on them as distinguished at all. Now, however, in the Foreign Office alone we have Sir Julian Pauncefote, G.C.M.G., C.B., Sir T. V. Lister, K.C.M.G., Sir Philip Currie, K.C.B., and, lastly, Sir Francis B. Alston, K.C.M.G., not to speak of such minor lights as Mr. Kennedy, C.B. (perhaps in reality the most distinguished man in the Office), Sir Percy Anderson, K.C.M.G., Mr. Sanderson, C.B., Sir Edward Hertlet, Knight, C.B., Mr. Cartwright, C.M.G., and Mr. Beigne, C.M.G. This is pretty well for an Office which includes in all less than seventy individuals, even if we take into account all the subordinates of the Librarians, the Chief Clerks, the Commercial, and the Treaty Departments, numbering twenty-six persons, who do not belong to the political establishment, but which (excluding these) is composed of only forty individuals, counting the Secretary of State.

It is as if in one regiment the Colonel, the Lieutenant-Colonel, both the Majors, the Surgeon, and one-half of the Captains were all decorated. In the midst of such a galaxy Sir James Fergusson will feel himself quite small. We remember in the pages of *Amids* reading an anecdote of the late Sultan Abdul Aziz, who had bestowed somewhat promiscuously the decoration of the Osmanieh upon his Ministers. During that they were too much inflated thereby, he one day thought it would do them good to let down their pride a little. Telling an attendant to fetch him a "master" from the harem, he formally invested the bird with the ribbon and collar of the Order in the face of his assembled Cabinet. In like manner it would not surprise us if some day Lord Didsdaleigh, finding his titled clerks somewhat above their business, were to administer a gentle rebuke to them by sending, say, for the hall porter or the chief attendant, and duly investing him with the K.C.M.G. It is coming to this.

Seriously speaking, Lord Rosebery has been a great deal too free in the bestowal of the above four letters. The power to bestow them is a public trust which ought not lightly to be played with. As we understand it, the decoration of this Order was extended to the Diplomatic Service to be granted for political services. Lord Rosebery is a young man whose judgment may not have attained its maturity. Has he ever asked himself what political services have been rendered by Sir F. Alston, who for the last twenty years has had nothing to do with anything but accounts? As well might the decoration be bestowed on any West-End banker or army agent. Sir F. Alston would have been a very proper recipient for a simple Knight Bachelorship, such as has been bestowed on Mr. Kortright formerly Her Majesty's Consul at Philadelphia. In explanation of this nomination it is stated that Sir C. Kortright performed considerable services while at Philadelphia. No doubt he did. Being a very wealthy man, he freely entertained visitors to the Philadelphia Exhibition in 1876. If this be his reward, seeing that he retired from the service in 1878, we can only say that his admirable dinners have taken somewhat long in digesting.

Turning to the Diplomatic Service, has Lord Rosebery ever reflected that, in conferring lightly a decoration for mere nominal service, he detracts considerably from the value of the same decoration when bestowed for very real service? For instance, our Ministers in Persia and Japan were recently made K.C.M.G. respectively for service involving long exile and very skilled diplomacy. How will these gentlemen look on their valued decoration on reading that the same had been bestowed on Her Majesty's Ministers at the Hague, Brussels, and Copenhagen respectively for absolutely no service beyond the act of living? Not counting Ambassadors, of our seventeen Envoys Extraordinary, no fewer than eleven are now Knights of St. Michael and St. George.

THE *Nichi Nichi Shimbun* of the 2nd instant discusses the policy of the Japanese Government in regard to Yezo on the one hand and the southernmost islands of the Riukiu Group on the other. The visit of Counts Inouye and Yamagata this summer to Yezo at once attracted public attention to questions connected with the former island, but a similar visit paid by the latter minister to the Riukiu islands earlier in the year was allowed to pass almost unnoticed. Yet the relative importance to Japan of Yezo and the Riukiu islands is not such as would appear from the measure of public interest accorded in each case. If Yezo is the northern key of the Empire, the southernmost Riukiu islands are equally the southern key, and strategically the latter are even more important than the former. For just as Tsushima has a value of its own as the point from which the movements of

China, Russia, and Korea can be controlled, so the geographical position of the Yayeyama, Ishigaki, and Miyako groups of islands, forming as they do a continuous chain midway between Formosa and Riukiu, is one of the utmost importance; and this importance has now been much increased by the colonizing activity displayed by Western nations, whose recent acquisitions in the South Pacific are gradually bringing them nearer to Japan. If these outlying islands are held to lie beyond the sphere of Japan's active interests there is no more to be said. But if, on the contrary, it is recognized that, on grounds of military and financial policy, these islands cannot be relinquished by Japan, then they must be garrisoned with troops, and they must be connected with the rest of the Empire by a telegraph cable and a regular steamship service.

It is commonly said that Yezo has great sources of wealth, and this is not impossible, but certainly in this respect the Riukiu islands are far superior to Yezo, although in point of size there is no comparison between the two. Nevertheless, during the last ten years or so, more than 20 million yen have been spent in developing the resources of the former, and an annual sum of 2,000,000 yen is devoted to the same purpose, while on the other hand not a 10th part of this sum has been spent during the same period upon the latter. It is probably inability to understand the motive for this marked difference of treatment which leads people, when speaking of the Yayeyama and Miyako groups of islands, to say that, as the Government formerly, in accordance with General Grant's advice, entertained the idea of ceding these islands to China in order to obtain a definite settlement of the Riukiu question, they may very likely do so now, and to the same reason we may ascribe the suggestion that the Government have taken no active steps to develop the resources of the Riukiu islands because they were afraid of exciting local ill-will. Such erroneous notions require to be corrected. The idea of ceding these groups of islands to China did certainly at one time form part of the Government's policy—and the circumstances under which this idea was entertained were as follows. The basis on which negotiations were conducted with China was that Japan should cede these islands to China, and by thus relinquishing the sole control of this passage to Eastern waters should give proof of her friendly feeling towards that country, and that as a counter-concession China should revise her Treaty with Japan before the date fixed for such revision and should place the latter country on the footing of the most favoured nation. Negotiations were concluded on this basis, and the agreement was on the point of being signed when a difference of opinion occurred in the councils of the Peking Government. China abruptly broke off the negotiations, and the agreement became waste paper. Now, the date for revising the Treaty between the two countries has already arrived, and there is therefore no reason for making any concessions on this point to China. Therefore, whether there was or was not any proposal at that time to cede these islands to China, the position at present is this—that the negotiations in question fell through and that consequently there is an end of the matter. Under no circumstances whatever can we now surrender these islands to another Power; their importance to Japan is too great. The article

concludes by rejecting as absurd and far-fetched the notion that great precaution must be exercised in carrying out any progressive measures in the Riukiu islands lest the people's feelings should be alienated and they should be induced to look to China for sympathy. The duty of a Government is certainly to conform as far as possible to popular sentiment, but not to subordinate its action to that feeling so far as to abandon all its other duties. If the Government has not exerted itself in the welfare of the Riukiu islands because its hands are too full of other and more pressing business, let the fact be acknowledged, but the more probable reason for its inaction is that public opinion has not forced the matter upon its attention; and if this be the true explanation, the press should remedy the omission without delay.

AN extraordinary story comes from Newark, U.S.A. It recalls some phases of the *Pall Mall Gazette's* exposures. A real estate agent, by name M. L. Darby, who to all appearances lived a staid sober life and was the repository of every trust, is charged with having played, for years, the role of a wholesale seducer. Darby is described as a "middle aged man of fine appearance, above the medium height, his hair tinged with grey and his grey mustache partly concealing a row of even white teeth." He appears to have been an universal favourite with young girls of the lower classes, who addressed him familiarly as "Matt," and were fond of accompanying him to skating rinks. The evidence thus far collected indicates that Darby had a regular organization for procuring victims. Girls from 13 to 18 either came to his office or were brought there, their ruin following in every case easily and surely. Darby's foreman, indeed, speaks of "frightful and heartrending screams" issuing from his master's private room immediately after the arrival of young girls, but as this worthy citizen and his companions confined themselves to throwing iron against the floor of the room from below, or to yelling and pounding the partition, the horrors they describe are a little out of proportion to their demonstrations of indignation. Moreover, from the evidence of the girls who have already spoken, it seems that they went to the office again and again of their own free will, and gladly received the fifty cents with which Darby was wont to reward their visits. The whole thing may, and probably will, turn out to be a gross exaggeration. At present the inference it suggests is that in Newark young girls have no very deeply rooted prejudice against immorality.

STRONG hopes of an approaching revival of trade in this country are expressed by the *Nichi Nichi Shimbun*. That journal thinks that, but for the prevalence of cholera, considerable improvement would already have been witnessed. Reports from all parts of the country announce an exceptionally abundant rice harvest, not excepting the districts visited by the recent storms, since the crop there was too far advanced to be seriously injured. In former years a plentiful harvest meant such a fall in the price of grain that the farmer often suffered severely. Now-a-days, however, improved transport facilities at home and access to new markets abroad obviate any such danger. Sericulture, also, has given excellent results this year. The quantity of silk produced has increased largely, and as yet there have been no indications of a fall in its price

abroad. Moreover, owing to the constant appreciation of gold, the silver price of silk shows, this season, a rise of from 20 to 30 per cent. The consequence is that the people of the silk-producing districts, Kōzuke, Iwashiro, and so forth, have remained virtually beyond the range of the depression caused elsewhere by cholera. Arguing from all this, the *Nichi Nichi* infers that the coming winter will witness a marked revival of trade. It is true that the increasing difference between gold and silver enhances the price of imported goods and thus checks demand. But against this has to be set the increased purchasing power of the farmer, which is in itself sufficient, our contemporary thinks, to compensate for an appreciation of 20 or 30 per cent. in the price of foreign goods. Further, the rapid development of a taste for Western dress and modes of life will operate in favour of the import trade.

QUITE a flutter has been caused among the old ladies of London by the behaviour of the police. In June last the Chief Commissioner gave notice that constables should "deal according to law" with any "mad dog or dog suspected of being mad" which might be found in the streets of the metropolis. This left the police a good deal of discretion. They were to be guided by their own suspicions, and they were to interpret what was meant by "dealing according to law." It is not asserted that extravagant exercise was given to their suspicions, but only that their definition of lawful dealing is to beat a dog to death. A case in point was the spaniel of a lady living in Baker Street. At half-past eight one morning the little animal paid its matutinal visit to its mistress, ate its breakfast, and having been muzzled, was turned into the streets to take the air. Some boys came along, bullied it a little and displaced its muzzle. A lady, seeing this, came and re-fastened the muzzle, and the dog lay down on the steps of an adjoining house in the sun. The police now arrived upon the scene and proceeded to lasso the spaniel. The lady of the house, recognising the dog, was coming out to rescue it, when "she heard the first thud of a truncheon on the poor creature's spine and a piteous cry." She remonstrated, received an insolent answer and the spaniel's spine was again pounded for her edification. Then followed more remonstrances, more pounding, and we next find the lady sitting crying on the stairs. Still the sound of the "thuds" and the moaning of the spaniel reached her. She once more remonstrated vehemently; was once more insolently repulsed; ran upstairs; poured out her indignation on the policeman in the shape of a pitcher full of water; was summoned before the Magistrates and fined £8.8s. Meanwhile the little spaniel, "still breathing and covered with wounds, was strapped on a water cart and removed to be finished at the station." Need we say that a faithful record of this horror has been drawn up, signed by five ladies and forwarded to Her Majesty the Queen.

It is pleasant to hear that General Grant's family will derive a larger income from the General's publications than had at first been anticipated by the most sanguine. The General himself, with his characteristic modesty, had estimated the probable proceeds from his work at \$30,000, and when he was told, twenty-one days before his death, that orders had already

been received securing him a profit of \$280,000, he could scarcely believe the statement. Since his death the rapidly with which the book is being sold has still increased. No less than \$200,000 have been paid over to Mrs. Grant; \$200,000 more are due, and the entire proceeds from the work, so far as they will go to the General's widow, are more than half a million of dollars, and may probably reach the sum of \$600,000.

As an example of the vicissitudes of official life in China the following account furnished by a correspondent of the *North China Daily News* is interesting:—

Last evening between 7.30 and 8 p.m. a fire broke out somewhere in the southern suburbs of the City of Rams. During the fire it appears that General Hsü Chên-piao, lately Commander of the Chinese gunboat *Hai Tung Tsing*, barricaded his house to prevent thieves from getting into it. The Chiefs of the local Fire Brigade, however, called on General Hsü, in the name of the Companies, to open his door and allow the engines to draw supplies from his wells, as is customary in all parts of the city, I believe. The General however refused to listen to them, although the local gentry offered to form a guard for the especial purpose of guarding the General's family and property from violation by the mob. The General, however, still refused to be persuaded that he and his household would not be molested, and as the fire was increasing and argument unsuccessful as well as difficult, some of the firemen attempted to effect an entrance into the house, despite the General's determination that they should not, and his threats to shoot any one who attempted it. The threat of shooting put the Cantonese firemen on their metal—the General is a native of Szechuan—and they then tried hard to break into the house. General Hsü, who was on the roof of his house, or on the wall, I do not know exactly which, opened fire on the storming party of his besiegers; a fireman dropped, and revenge for his life was demanded by his fellow firemen. Meanwhile the fire was fortunately being subdued without the aid of General Hsü's water, or of the firemen who were trying to get into his house; so the number of besiegers increased and the violence of the firemen was being worked up to the highest pitch. Ladders and other appliances of the hook and ladder companies were brought to bear on the General's house, all sorts of missiles were brought into play, and firearms were not wanting, whilst pikes and halberds were as common as usual at any Chinese fire here. All this only determined the General to hold out firmly against his assailants, and when he saw that they were about to take the place by storm he re-opened fire on the storming party, and revolvered quite a number of them. Two were killed on the spot, others are dying of their wounds, whilst the remainder are being cared for and attended to by local medics. The capture of General Hsü, and the taking of his house by storm, were eventually given up as impracticable, so a regular siege has been laid by barricading all approaches to the house—at a respectable distance however, that is, out of range of the General's revolving abilities; and the siege has now lasted over twenty-four hours. The General's family is exposed to a considerable amount of danger, there is no doubt, but his wives and daughters are said to have assisted at the defence in a vigorous manner, and to have done a great deal in persuading the General to refuse admittance to the firemen, when they asked for it.

JOURNALISTIC criticisms, it is said, are written by friends, enemies or rivals. Such work seldom if ever falls to a neutral pen. Last April, when reviewing Mr. B. H. Chamberlain's "Simplified Grammar of the Japanese Language," we excused our own ability to be critical by asserting that, in our opinion, a competent critic of Mr. Chamberlain's work was not to be found in Japan. Shortly afterwards a very hostile review appeared in a local contemporary, and rumour freely ascribed its motive to our remark. Somebody, it was whispered, had taken up the gauntlet on behalf of the Sinologues and had attacked the grammar merely for the purpose of proving that there *was* in Japan a critic capable of such an enterprise. The public, unless we are much mistaken, concluded at the time that this critic had established his temerity rather than his ability. It would seem that the same writer, conscious perhaps of ill success, has returned to the charge in the *Saturday Review*. There is a striking family likeness about the phrases in both cases, but whereas

originally Mr. Chamberlain was blamed for departing too boldly from the canons of Japanese Grammarians, he is now censured for adhering to them too closely. He can scarcely have committed both errors, but that, probably, matters little to his critic. Public fault-finding, even when it directly contradicts itself, is still public fault-finding, and as such has a measure of power to discredit the best scholarship. It is so easy, too, to bring charges of prolixity and ambiguity against a grammar. The writer in the *Saturday Review* exhibits a very creditable faculty for framing indictments. By an adroit juxtaposition of "forty pages of paradigms," of "multiplied moods and tenses," of "conclusive and attributive forms" and so forth, he raises quite a thick dust of perplexity and bewilderment. But unfortunately the contrast between the methods he advocates and those he condemns is inartistically startling. The unhappy student of Japanese is asked to content himself with the knowledge that "the Japanese verb is rather impersonal than active;" that "it denotes merely a coming to pass;" that "the past and future tenses are marked by the addition of suffixes," and that "the value of the verb is to be determined by the context." With what delight a learner, condemned to draw mental sustenance from this desert of vast vagueness, would fly to Mr. Chamberlain's oasis of explanations. But, perhaps, the critic is most admirable in his comments on the adjective. He thinks that the analogies between the Japanese adjective and the adjective of "European and other languages" should have induced Mr. Chamberlain to dispense with detailed explanations. This is truly a delightful idea. Imagine the compiler of a Spanish grammar telling his readers that further explanations about this or that part of speech are superfluous because its behaviour, under given circumstances, is analogous to that of its Italian or French equivalent. Perhaps Mr. Chamberlain's simplifications may be a trifle too corpulent, but the wretched relics of rules which his critic apparently affects would not even amount to an articulated skeleton.

An exhibition was given on Wednesday afternoon of the fire resisting properties of cyanite or fire-proof paint, by Messrs. Findlay Richardson & Co., agents for the sale of this preparation. Very few foreigners were present, but a good many Japanese merchants watched the proceedings with much interest. The exhibition took place on unoccupied ground at Uchidacho, some distance beyond the Railway Station. Three large packing boxes, similar in size and construction had been prepared; one of these received two coats of colourless cyanite (which resembled ordinary varnish very much in appearance) and another two coats of the coloured composition, the application of which latter imparted a white-washed appearance to the packing case. The third box was not treated with the preparation at all. The three boxes were laid on their sides with their openings turned in the direction towards which the wind was blowing, and a quantity of shavings, with which all three were well filled, was set on fire. At first it was not possible to detect any difference in the manner in which the cases stood the flames, but as the heat increased, the box that had not been coated gradually gave way and at length the flames burst through the seams, after which the complete destruction of the fabric speedily followed. The others,

however, showed but little indication of suffering from the fire, that treated with the coloured cyanite in particular, being, though of course charred on the inside, perfectly untouched on the outside, while the box coated with the colourless composition did not till after the lapse of twenty-five minutes show signs of fire externally. The result of the trial proved not only the high properties of the composition, but also to a certain extent the superiority of the coloured cyanite.

THE Public Orator of Cambridge must be puzzled occasionally for panegyrics suitable to the gentlemen upon whom the University confers its honorary degrees. His Highness the Rajah of Narsinhgarh was among the recipients of this distinction at a recent Congregation. The Public Orator complimented him as a king "who had left his royal city and the quiet lake that reflected the towers of his palace" to come and improve his acquaintance with England. It was no doubt very creditable on the part of the Orator to know that the palace of Narsinhgarh is reflected in a lake, but if temporary absence from this reflected image constitutes a part of the Rajah's claim to a Cambridge degree, such honours are easily won. The Orator was happiest in the case of Sir George Bowen, for with a delicately veiled but unspoken allusion to that gentleman's classical proclivities, he applied to him alone a Greek as well as a Latin quotation:—

Sir George F. Bowen, G.C.M.G., D.C.L. Oxon., was described as one who, after taking a first class in the Final Classical School at Oxford, had spent more than 30 years in public positions of the highest importance, and had not only given signal proof of his literary and administrative ability in the Ionian Islands, but had also shown the greatest sagacity, courtesy, and dignity as Governor of no less than five of our colonies (Queensland, New Zealand, Victoria, Mauritius, and Hongkong). He might almost ask in the words of Virgil, "Quæ regio in terris nostri non plena laboris:—nisi forte, Ithacæ suæ memor, versu Homericæ mavult laudari: πολλῶν ἀνθρώπων ἵεν ἄστεα καὶ ἰὼν ἐγὼ."

The following record, which we presume is trustworthy, ought to afford some satisfaction to Englishmen:—"The Italian Statistical Society has recently published the following interesting figures concerning the number of criminals in every 100,000 inhabitants of the different European countries. Of criminals condemned for all kinds of homicide the proportions are:—In Italy, 8.12; Spain, 7.83; Hungary, 6.09; Austria, 2.24; Belgium, 1.78; France, 1.56; Germany, 1.11; British Isles, 0.60. Under the heading of "Blows and wounds" we find the following number of persons condemned out of 100,000 inhabitants. Austria, 248; Belgium, 177; Italy, 162; Germany, 129; France, 65; Hungary, 46; British Isles, 7.19. The statistics with regard to "crimes against morals" run thus:—Belgium, 15.11; Germany, 14.03; France, 9.77; Austria, 9.18; Hungary, 6.25; Italy, 3.77; British Isles, 1.70. Thieving of all kinds is carried on most frequently in Germany, which heads the list with 222 arrests. Italy follows immediately after with 154; then follow the British Isles, with the remark that to the average of 147 Scotland contributes 222 thieves in every 100,000 inhabitants. Next comes Belgium with 128, France with 112, Hungary with 77, Austria with 60, and Spain with 56."

MR. SUEMATSU, a councillor of the Department of State for Home Affairs, and one of the most active members of the Stage Reform Association, delivered a speech on Sunday last, on the

subject of the reform, in the Hall of the First Higher Middle School, Kanda, at the request of the Literary Club. Mr. Suematsu spoke for two hours, and his speech was in the main similar to the recently published pamphlet of Professor Toyama on the same topic, though more detailed. Among the audience was the famous actor, Mr. Ichikawa Danjūro. The *Nichi Nichi Shimbun* declares that the speech was one of the best delivered in recent years.

Is this wonderful tale from Canton conceivable or credible:—"A few miserable beings were beheaded the day before yesterday. Chang Chi, the surrendered of Hongkong, was not among them, being doubtless reserved for the refined barbarities in vogue in Fokien Province, where the victims are cut up, according to custom in other parts of China. But immediately after the executioner's work is finished, many half starved wretches run up, rip open the bodies of the scarcely dead victims, scoop up their heart, liver and lungs and gnaw the bleeding, reeking ghastly mass, like so many dogs devouring carrion."

THE *Mainichi Shimbun* assures us that an apparatus of glass has been invented by which one may look through the shell of an egg and see whether it is rotten or fresh. The inventor is Mr. Sakakibara Kenkichi, a well-known fencing master of Tōkyō. Unpopular public orators, and others who have a good deal to do with eggs of one sort or another, will doubtless welcome the invention, which we are glad to observe has been duly patented. Genius sometimes takes curious twists. The art of peering through an egg-shell is not the field which suggests itself as most suitable for the exercise of a fencing master's inventive powers.

THE cholera returns for Yokohama during the past week were:—Saturday, 2nd instant, new cases, 3; deaths, 5. Sunday, new cases, 4; deaths, 2. Monday, 0; death, 1. Tuesday, new cases, 4; deaths, 2. Wednesday, new cases, 2; death, 5. Thursday, new cases, 5; deaths, 1. Friday, new cases, 2; deaths, 1. Total cases, 20; deaths, 17.

THE cholera returns for Tōkyō during last week were:—Friday, 1st instant, new cases, 65; deaths, 55. Saturday, new cases, 71; deaths, 45. Sunday, new cases, 58; deaths, 53. Monday, new cases, 66; deaths, 40. Tuesday, new cases, 47; deaths, 51. Wednesday, new cases, 36; deaths, 40. Thursday, new cases, 44; deaths, 36. Total new cases, 387; deaths, 320.

MRS. HANSEN and John Fay, who were taken prisoners in a raid of Acheen natives on the Dutch steamer *Hok Cantou*, have been delivered up to the Netherlands authorities, for, it is stated, a ransom of \$25,000.

AN additional train has been placed upon the Tōkyō-Utsunomiya Railway, and the hour its departure will be found in the time-table in the usual place.

WE understand that M. Sauvlet proposes to give the first of a series of winter concerts about the beginning of next month.

THE British ship *Honauwar*, Captain Smith, sailed from Kobe, the 4th instant, for New York.

THE REV. WILLIAM IMBRIE, D.D., will preach in the Union Church to-morrow at 11 a.m.

"A YOKOHAMA CONSERVATIVE."

THERE is a pleasant air of "give and take" about the letter which we publish to-day from "A Yokohama Conservative." Without some risk of betraying the writer's identity, we are unable to speak of his representative character, but we do feel at liberty to say that in one respect he cannot properly answer for the bulk of those to whom we addressed ourselves in the article which he criticises. Of their condition a prominent feature is such indifference to the intimacy of their relations with the people of this country that they have never made the smallest effort to acquire the Japanese language. That, at least, cannot be said of "A Yokohama Conservative." Were scholarship like his commoner among the English merchants in this community, there would be much less reason to feel uneasy about the competition which they have now to encounter. And here we take occasion to disavow an idea apparently attributed to us by our correspondent. We have never meant to imply, nor will anything we have written bear the construction, that Germans are superior to Englishmen in acquiring the Japanese language. If accomplished facts are consulted, the opposite inference must be drawn. But any comparison of the sort is unnecessary and would be presumptuous on our part.

Speaking briefly, the grounds taken by our correspondent are two. He disputes the idea that British merchants are falling behind their German competitors, and he claims for the conduct of foreign trade in Yokohama a comparatively independent character. With regard to the former point, we imagine that the testimony of competent observers is too strong to be disregarded. In a recent article we quoted the opinion of HER MAJESTY'S Consular Officials in various parts of the world. To these may be added similar verdicts recorded, explicitly in language and implicitly in figures, in the last Consular Trade Reports for Japan. When Englishmen lose that trait ridiculed by their enemies, incapacity to recognise defeat, the sun will be setting on their greatness. Our correspondent has not lost it. He is determined not to confess himself beaten. He has a sturdy conviction that British pluck and British enterprise will hold their own against all competition, and with magnanimity that well becomes this faith he is ready to applaud every triumph fairly wrested from him by his rivals. We share his conviction and admire his mood. But history tells of many cases in which vulnerability has been the direct outcome of over-cherished trust in one's own prowess. It seems to us that the position of the British merchant towards Oriental trade may be compared to that of a husband, while the position of his rivals is that of a lover. The husband, relying on marital rights

consecrated at the altar of supremacy and strength, had become just a little overweening in his ways, just a trifle careless of the fancies of his spouse, when the lover with blandishments and attentions appeared upon the scene. The natural consequence is a disturbance of the old relations. Trade is not sufficiently constant to be insensible to the addresses of ardent wooers. The husband sees his position threatened. It is hard for him to admit that anything of the sort has happened; still harder to adapt himself to the altered circumstances of his formerly serene household. But the fact that the change has been so quickly recognised is a healthy sign for the future. The one thing to be strongly deprecated is the resentment betrayed by the average English merchant whenever the soundness of his methods or the exclusiveness of his disposition is criticised. Every attempt to indicate mistakes which threaten the prosperity of British trade is by him too readily referred to the mere love of fault-finding, and sometimes to an even more discreditable motive. It seems to be forgotten that the sole purpose of HER MAJESTY'S Diplomats and Consuls is to promote the interests of their country's commerce, and that the impulse which directs them to record truths unpleasant to themselves not less than to others, deserves not the censure but the gratitude of their countrymen.

Turning to the second point emphasised by our correspondent, we observe that he speaks of "the days of consignments being over," and says that "the bulk of the business done in Yokohama is at the risk" of the foreign resident merchants. We do not question the accuracy of his facts, being content to note that they corroborate the position taken by ourselves. If the era of consignments is over, it is because the middlemen engaged in their distribution have become incongruous with the conditions of commerce. Our correspondent wants to know what we mean by "a middleman," and places in that category "the labourer who harvests the produce" and "the retail country dealer." His criticism can scarcely be serious, and is certainly irrelevant. There is no question here of either labourers or retail dealers. It might, indeed, be pointed out that the constant tendency of modern invention is to dispense with the former, and that the redundant number of the latter is held to be a principal reason why the consumer does not reap due benefit by the reduced cost of production. But we have to do only with middlemen who owe their *raison d'être* to the peculiar circumstances of foreign trade in Japan. There is no occasion to demonstrate what must be perfectly plain to our correspondent, as well as to all intelligent men. He and they know that the farther Japan progresses towards the position she has set her heart on winning, the more intolerable will she find the subordinate rôle played by her merchants.

It will not do to dismiss this as mere sentiment. It has become a practical factor in the situation, and although we believe with "A Yokohama Conservative" that many years must elapse before the Japanese develop competence to conduct their foreign commerce after the manner of Western nations, we are equally persuaded that they are morally capable of developing such competence; that they will never rest till they have developed it, and that the foreign merchant, be he British or German, who takes no count of their resolution, will certainly drop out of the race.

Those contingencies, however, are still in a distant future. The intermediate period concerns us more intimately. To it we referred when we said in a recent article that associations of foreigners and Japanese are the feature of the horizon now rising into view. It should not humiliate a Japanese to be told that for long years to come foreign enterprise and foreign experience must remain essential to the development of his national resources. We do not pause to explain our reasons for this assertion, since they are evident to ordinary intelligence. When the qualities of the Western expert and the capacities of the Japanese are brought into direct coöperation, we firmly believe that a wholesome and prosperous era will be inaugurated for both. And it is to that conjunction we refer when we endorse the prediction that the days of foreign settlements are drawing to a close. Foreign settlements and the restrictions implied by their existence have hitherto been the means of keeping foreigners and Japanese apart. It is inconceivable that the abolition of such barriers to free intercourse should be resented by thinking men. None have raised their voices more loudly than the foreign merchants themselves against the inelastic and crippling conditions that paralyse their capacities in Japan, and place them at the mercy of combinations and monopolies fatal to sound commerce. Is it then a crime to desire the removal of those obstacles and restraints? "Your wish is father to your thought," says our correspondent, "so you must not be surprised if we look on your opinions as biased." There spoke the true Conservative. On his own side, of course, there can be no bias, neither does it matter at all that his own interests counsel him to share the wish which he condemns. What motive can possibly induce us to advocate the granting of larger facilities of trade and residence to our countrymen, unless it be the motive which, in 1882, induced the foreign merchants of Yokohama—our correspondent among the number—to sign a memorial asking for greater freedom of intercourse and commerce with the people of this country? We make no secret of our strong sympathy with the patriotic aspirations of the Japanese, but it would be ridiculous to suppose that such sympathy could be felt

by any Englishman unless the objects of Japanese aspiration were consistent with what he believes to be the true interests of England. Our correspondent seems to labour under the strange impression that in speaking of "the abolition of foreign settlements," we imply changes disastrous to the interests of house-owners and property-holders in Yokohama. This misapprehension is a remarkable perversion of the views we have always expressed. What we contemplate is simply the abolition of the semi-barbarous limits which at present confine foreign enterprise and residence to a painfully narrow field; and what we believe is that the consequence of such abolition will be a large appreciation of the value of property in the settlements, and a considerable development of their size and prosperity. That, too, was the obvious meaning of the writer of "the historical extract" from the Blue Book of last May. Our correspondent has evidently misread the Blue Book as much as he has misunderstood us. He asserts in one breath that the "bulk of the business done in Yokohama is at the risk of the resident merchants," and in the next, that the idea of "merchants and correspondents at home closing up their hongs here and operating direct with Japanese is chimerical, and shows crass ignorance of the conditions of commerce in Japan." We thus have it on his own evidence that correspondents and merchants at home *have* withdrawn, for the most part, from their former positions of vicarious responsibility, and that direct dealing with the Japanese at undivided risk *has* become the rule of business. Yet, at the same time, we are informed that to assume the possibility of this state of affairs shows "crass ignorance." According to our rendering "the historical extract" conveys nothing more than an intimation to British merchants at home that if they desire to extend their business in Japan, they must look beyond the restricted field of foreign settlements, and endeavour to obtain access to the incomparably larger circle of opportunities lying beyond. The day when they will be able to do that is, we trust, within sight. Its advent, so far from discounting the merchants now residing in the settlements, will import enhanced value to their local experience. None the less ought it to be the signal for a largely increased effort on the part of British enterprise, and it is the duty of everyone concerned in the growth of England's trade, and in the permanence of her commercial supremacy, to encourage that effort, even at the risk of exposing local interests to somewhat inconvenient competition. There are aspects of Yokohama Conservatism with which we can sympathise, though unable to admit their justice or soundness. But for that peculiar instinct which would keep things as they are, simply because time has consecrated them; which attributes every advocacy of change to mere

bias, if not to selfishly interested motives; and which refuses to admit that the Japanese can ever be worthy of confidence or equal intercourse—for that instinct we are free to confess, even at the risk of incurring our correspondent's censure, that we do entertain "ill concealed contempt."

#### THE LATEST MOVEMENT OF REFORM IN JAPAN.

##### I.

IF the contents of the vernacular press may be taken as an indication of the state of public opinion in this country, there is quite a strong agitation abroad on the subject of woman's rights. Of course it has long been evident that the position occupied by females in Japan demands reform. At the same time that they are required to practise moral qualities which demand the highest degree of devotion and self-abnegation, they are treated as though their conduct and endowments disqualified them to receive any consideration or respect. All this is very unjust, and, from a manly point of view, very revolting. But, on the other hand, there is no question that the Japanese system has produced a woman as nearly as possible perfect in regard of every trait usually comprehended in the term feminine. Fidelity, docility, gentleness, grace, artlessness and unselfishness are to be found in the women of Japan if anywhere among the human race. The best friends of this country scarcely like to contemplate the change involved in any sweeping reform of Japanese womanhood on Western models. It is unfortunate but undeniable that humanity affects extremes. In this particular case we have to choose essentially between extremes. The woman of the West stands on a pinnacle of unjustifiable dominance. She lives in such a highly rarified atmosphere of sexual worship that social intercourse with her has become to the last extent artificial and fantastic. Had she been placed upon this pedestal of adoration for the sake of her moral endowments or intellectual attainments, the male sex might have some excuse for prostrating itself before her. But it were purely idle to pretend that she possesses in herself any real claim to such elevation. After we have accorded the fullest mead of applause to the romantic ideal of duty, deference, and protection which the civilized strong are supposed to set before them in dealing with the weak, we arrive finally at the hard fact that, not from the dictates of that pretty creed, but from attractions of form and face does the woman of the West derive her firmest title to be worshipped. It would be an error, perhaps, to dwell upon this. "As long as the heart has passions" men and women will be to each other what the Devil made them at the Fall rather than what philosophy would make them in their heirship of the ages. None

the less must we insist upon the truth that the position accorded to woman in the West is far more illogical and unnatural than the position she occupies in Japan. From the moment that an European lady enters society, she is surrounded by frivolous artificialities and conventional adulation. There are few greater marvels than her ability to preserve and display noble and virtuous traits amid so much that is unreal and demoralizing. Consider the social intercourse of the sexes in England or France. Is the woman in any reasonable sense a companion to the man? Is even common conversation between them possible unless the latter has educated himself to deal with sufficient ease and adroitness in the art of blowing those conversational bubbles which form the staple of drawing-room chatter and which derive their faint iridescence solely from their passage between the sexes? Of ninety-nine in every hundred men in Europe or America it may be truly said that their dominant feeling in the presence of ladies is one of embarrassment, and that the necessary effort to evolve some manageable topic of talk is extremely painful to them. Certainly this is not the case in Japan. In society here ladies do not expect to be spoken to unless the subject of discussion is one in which they can take a becoming interest and bear a rational part. Their presence is no restraint upon conversation, and being perfectly natural and unaffected in everything they say and do, they contribute an element of ease, not of embarrassment, to social intercourse. Their character is not free, perhaps, from frivolous traits. But even in this respect they do not lose comparison. Find, if you can, in Japan a lady who ruins her husband by toilette excesses; who covers her arms, fingers and neck with a barbaric mass of gold and jewels; who pinches her waist to deformity and tortures her feet to Chinese-like proportions; who carries a fortune on her back in laces and silks. And find, if you can, a lady who dresses in a fashion unbecoming her years; who dies her whitening hair, paints out her wrinkles, and at thirty or forty flaunts the finery of a girl in her teens. Such things are not to be found, and full account must be taken of their absence in appraising the merits and defects of Japanese womanhood.

We shall of course be charged with all sorts of enormities for writing in this strain. It will be said that we exalt the ladies of Japan at the expense of our own countrywomen, and so forth, and so forth. Let us then at once frankly plead guilty to the accusation within certain limits. So far as excessive dominance, frivolous extravagance and artificiality are concerned, the contrast seems to us to be in favour of the Japanese lady. In some other, and very important, respects the verdict may have to be reversed. Our present concern, however, is not to prepare a comparative catalogue of Japanese and

Western female qualities, but only to warn serious Japanese reformers against the dangers of sacrificing much that is uniquely admirable at the shrine of a civilization which they do not fully understand. Faticism is always hazardous, and there are many indications that the enthusiasm of giddy essayists and the effervescence of superficial journalists may push this otherwise praiseworthy impulse into extremes of loss rather than of profit. The iconoclasm which has too often marred missionary effort is not less capable of discrediting social reformation. They are imprudent propagandists who begin by destroying the faiths of those they would win over to their side. In making this choice the Japanese cannot consider too carefully the types offered for selection. On the one side is a perfectly feminine woman, unaffected, docile, full of grace and artlessness and not incapable of the highest efforts of self-sacrifice and devotion. On the other is a woman who has been taught to expect and exact a grotesque amount of reverence and consideration and to exercise a most unbecoming dominance; who too often makes a parade of frivolity, a glory of extravagance and a charm of caprice, and whose companionship in society can seldom be enjoyed without a special apprenticeship. This, of course, is only a part of the story. Despite the artificial system under which they live, multitudes of Western woman approach if they do not actually reach, the highest standard of everything that is refined, noble, virtuous and amiable. Yet the tendency of Western civilization is to educate a type such as we have depicted, and it is for the Japanese to say whether they will deliberately set about emulating that type. While fully admitting the need of large reform in the position of Japanese women, we should like to be sure that Japanese reformers perceive exactly how far the impulse they are beginning to obey has led their fellow-zealots in the West.

## II.

It follows from what we have written—and we count on the endorsement of every intelligent observer—that the contemplated reform need not concern itself about the manners or disposition of the ladies of Japan. Their modest, graceful and artless bearing, their lives of patient duty-doing, and their devoted self-abnegation leave nothing to be desired, and are better fitted to serve as a model to their Western sisters than to be readjusted according to foreign canons. But of this Japanese reformers do not appear to be cognisant. All their utterances on the subject are tainted by the fatal error that they attack the sound part and leave the decayed untouched. They speak as though women were themselves to blame for the unhappy position they occupy. We ought not to wonder, perhaps, that such a perverted

sentiment prevails. Were it otherwise—were the men of Japan honestly conscious of the true facts of the case, the reform they profess to desire would already be far on its way to completion. To look for so much as that at the outset would be over-sanguine. Yet it is hard to restrain a feeling of disappointment when we peruse the articles which have recently appeared in several of the leading vernacular journals. A regular crusade is inaugurated, for example, against the *geisha*, or singing-girl class. One writer declares that the social tone of the men of Japan is largely influenced by the sentiments and fashions of these little *dansesuses*, and then proceeds to propound the monstrous proposition that the character of the male sex in a country must largely depend on the conduct of the female. This is the logic of the drayman who drove his horse until it foundered, and then thrashed it for falling. If the *geisha* are no better than they ought to be, they owe their degradation entirely to the tyrannous licence of the strong sex. Of course we offer no plea for the maintenance of these *artistes*. It is well to be explicit upon that point, in view of certain silly critics who make it their business to pervert and misrepresent our meaning. But if we are fully alive to the evil influence of all such females, we cannot pretend to have any patience with the pedantic hypocrisy which professes to be shocked by the presence of a *geisha* at a public entertainment, and seeks to saddle its own sins upon her reluctant incontinence. The leaders of this crusade should remember that only the eye of an old expert can distinguish between a *geisha* and a virtuous lady in a mixed assembly, and that if the former has abandoned the comparative chastity of her ancient habits, she has merely yielded to a pressure which she could not resist. Unquestionably the presence of *geisha* at entertainments in private houses is to be strongly condemned. Not, however, because they imperil the moral tone of the men who have demoralized them, but because to invite them to such places is to show open disregard for the feelings of the ladies of the family. We recommend the reformers to leave the *geisha* alone. They are at present the soundest and least contaminating part of a social sore which has exhibited, ever since men developed gregarious habits, an ineradicable tendency to become irritated by every attempt to cure it. Moreover, when Satan is himself righteous, it will be time enough for him to reprove sin.

We dwell upon this question of the *geisha* because the manner of its treatment by the vernacular press is typical of the distorted views which unfortunately appear to prevail with regard to the relations between the sexes in Japan. Every argument, every recommendation, smacks of the glaring heresy that women are less sinned against than sinning.

One class of writers urges that they should be better educated, with the view of fitting them for more prominent positions in society, and qualifying them to be intelligent companions of the male sex. That seems sound enough so far as it goes; but it stops a long way short of the truth. Japanese ladies are already excellently fitted to fill their proper sphere in society, and if they seldom show competence to enter into the aims and interests of the stern sex, their persistent exclusion by the latter from such converse is chiefly responsible. Moreover, in this respect they do not differ appreciably from their sisters in the West, who, like them, complain with reason that their incapacity would soon be remedied did not men insist upon assuming its existence. If the graces of mind and mien and the excellencies of disposition possessed by the Japanese lady have not hitherto won for her a becoming position, scholastic attainments will not help her much. By all means let her bear her part in the progressive movement of the times, but let there be no pretence that her title to consideration is not already established. It is established. That she does not enjoy it is simply owing to the masterful selfishness of the other sex.

From a similar source of error is derived the suggestion that the chief object of reform should be to provide independent means of support for women. At present, we are told, their sole aim in life is marriage. Hence undue subservience to the stern sex, and an unhealthy tendency to direct their thoughts into one groove. Familiar echo, this, of a complaint that has been formulated over and over again in every civilized society since the world began. How many women are there in the West who place any object above match-making or match-seeking? If the women of Japan are more engrossed by this purpose than their Western sisters—a hypothesis which we see no reason to admit—it certainly cannot be said that their status as wives offers greater temptations. Undeserved humiliation, unrequited self-sacrifice and a wholly uncertain position—these are the prominent features of a married woman's life in Japan. The alternative, however, is still more deterrent. To save her from that alternative by providing for her independent and virtuous employment, is a worthy object of philanthropy. But to expect that she will ever prefer a stool in a telegraph office or a seat in a factory to the society of a husband and the joys of a mother, is the idlest chimera. Japanese reformers need not think that they have any mission to tamper with the "desire to a husband" which the legend of the Fall truly places in every female breast. That is a genuinely feminine trait which humanity will not survive. Neither need they imagine that the blemishes of their present social system are in any degree traceable to the moral condition of their women. The woman is as the man makes her. The

pitiable subservient rôle which she is condemned to play in this country; the utter absence of consideration she has to expect as a wife; the sacrifices demanded of her as a maiden—all this is the work of the men, and with the men its reform must commence. The law can do one thing only. It can secure her position to a married woman; rescue her from the now constant danger of being sacrificed to the mere caprices of her husband; confer on her the right to require on his side decorum corresponding with the chastity he looks for on hers. All the rest must be the voluntary work of the men. Education may help women to win respect; independent employment may save some of them from the worst alternative of marriage. But these devices must remain mere palliatives, so long as the man refuses to acknowledge in practice that the only virtues he has any title to expect in a woman are those which his own conduct exemplifies; that he owes to the feelings of his wife as much consideration as he requires her to show for his good name, and that no degree of poverty or physical suffering can condone the crime of parents who support themselves on the wages of their daughters' shame. We should like to see Japanese journalists approach this vital subject from the true direction, instead of hugging themselves in the comfortable belief that women should be the object of a reform which in reality must begin and end with men.

#### PROFESSIONS AND PRACTICE ABOUT SILVER.

THE ingenious "Autocrat of the Breakfast Table" might find a new subject for psychological study in the amazing difference often visible between what people in general think they believe, and what they really do believe. As an example, nothing could be better than the antagonism between the alleged opinion of a large class in America upon one of the most important of current topics, and the simple and unadorned conviction of that identical class upon precisely the same subject. Any stranger, accustomed to gather his impressions from the newspapers of the United States, might be led to the supposition that the one thing detested and feared above all others is the silver coinage,—or, more particularly, the silver dollar. Not a day passes without an outburst of denunciation against that unconscious piece of stamped metal, together with fierce outcries against the Government which persists in attaching to it a positive and fixed value. There has, perhaps, never been a more remarkable instance of the influence of long continued reiteration. The writers who repeat themselves without cessation in their declarations of the worthlessness of silver money, seem really to have persuaded one another, by dint of

this very repetition, that their words have a definite and logical meaning. Almost without exception, the press of the United States avers, each morning, that the value of the silver dollar is reduced to seventy-six cents, or seventy-five cents, as the case may be. It is not stated that this estimate is relative, or that it bears any reference to coin or bullion of another metal, but the blank announcement is sent forth that the silver dollar is worth only seventy-five cents, or less. Without regard to political divisions, American journalists devote their energies to convincing the populace, and especially the working men, that the coin in question is not to be accepted or recognized under any conditions. They sound their chorus of warning more urgently, apparently, than if they were discussing a down-right counterfeit. To show the wholesale nature of their accusations, a few phrases from a leading article in the *New York Herald* of August 19th will be sufficient. This essay takes the form of a solemn admonition to the labouring masses, and adjures them to utterly repudiate the coin as if it were a deadly abomination. "The wage-earners of this country," it affirms, "deserve to be paid in that kind of money which has the largest possible purchasing power. When they work hard to get a dollar, they ought to have that kind of dollar which will purchase one hundred cents' worth of anything they want for themselves or their families." The "sham dollar," it argues, "cheats them out of an hour's work every day in the year, and the government has no right to do that." "The gold dollar" it concludes, "is the only thing worth having." Another article in the same paper declares unhesitatingly that if the people wish for one hundred cents worth of commodities, they must not offer the silver dollar in exchange, the gold alone having the power to secure the desired amount. It hardly needs to be demonstrated that all this is absolutely false. It has not even the semblance of a foundation to rest upon. Yet the same sort of allegation is daily flung into the face of the American community, by journals of good repute, the writers for which are presumably honest men. The result is that immense numbers of working men have got it impressed upon their minds,—or imagine they have, at least,—that they actually are defrauded in some mysterious way by the admission to circulation of silver money. It does not occur to them that if they go into a shop with a silver dollar in the right hand and a gold dollar in the left, they can get exactly the same quantity of goods for the one as for the other. They never reflect upon that, but, obedient to the teachings they find in their newspapers, echo the silly clamor against the white metal as if it were an instrument of official iniquity, constructed for no other purpose than to rob humanity of its inherent rights. What can be more

laughable than the picture of a mob of recently landed immigrants, chiefly illiterate Irish, parading the New York streets in procession, with banners bearing such inscriptions as—"Give us Gold for the Sweat of our Brow," and "An Honest Wage for an Honest Day's Toil?" Precisely what the newspapers and their allies in the background expect to accomplish by this species of strategy it is not very easy to understand. Although the able editors may have deadened their own perceptions, temporarily, by the tumult they have raised, they must, when they give a moment's candid thought to the matter, realize that no satisfactory result can follow such flat defiance of truth and common sense. That men of integrity may hold divergent views upon the subtler or more complicated questions of national currency, is a reasonable proposition; but how they can with decency combine to beat into the brains of their less intelligent fellow-citizens a conviction that the silver coinage is fraudulent, when confronted by the plain and unimpeachable fact that the purchasing power of silver, all over America, is absolutely identical with that of gold,—this is a problem which the average outside observer finds it impossible to solve. If accountable at all, it is only upon a theory similar to that of certain autocratic *Daimios* in ancient days. Aiming at the uttermost degradation of a detested foe, they would decree not only the execution of the individual, but also the immolation of his entire family, including new-born infants and other innocent and unconscious representatives of the original object of hatred. Thus, in the intensity of their desire to cast universal obloquy upon the very name of the obnoxious metal, the writers in question continue to practise the device of falsifying its value, when coined, in the estimation of the community at large. Much inconvenience these misleading guides have undoubtedly caused, and worse than inconvenience they might create, but for the counter-acting influence which asserts itself intuitively, without process of reflection or reasoning, in the popular mind. Here presents itself the illustration, above referred to, of the difference between the real and the imaginary beliefs of the multitude. While the public voice is shrill in defamation of the silver dollar, and an affected reluctance to receive it is displayed on all sides, there lives not the man with soul so financially dead as to carry out the theory of inferior value to its legitimate conclusion. SNUG the joiner may bully his wife for bringing home from market a bright shining, clean coin instead of a filthy malodorous rag, and berate her for depriving the family hoard of twenty-five cents, or—as the *New York Herald* would say,—cheating her husband out of an hour's work; but if SNUG is lucky enough to have a hundred of those same dollars laid aside, he knows better than to accept

for them one penny less than one hundred dollars in gold. The artisan, or small tradesman who exhausts himself in labouring to prove that the white coin is worth only seventy-five cents as compared with the yellow, would stare open-mouthed if he were offered the opportunity to exchange, in hundreds or in thousands, not at the rate of seventy-five, but at eighty-five, or ninety-five or even ninety-nine. He would stare, and possibly drop the subject for a brief space; but in the next hour his tongue would vibrate with fresh volubility, and the crime of foisting a debased and degraded token upon the community would be proclaimed anew. Nothing is more certain than that persons of this stamp,—and it really seems as if they were largely in the majority,—do not really think what they say and suppose they think. Up to this point, they are held in restraint by an instinct of sagacity which they never dream of analyzing, and their vagaries are productive of comparatively slight harm; but in coming elections, their vote may perhaps be made potent in the determination of grave questions, concerning which their minds are equally, or still more, unbalanced. It is not altogether reassuring to think that the regulation of a great nation's currency system may depend upon something a little worse than the caprices of mere chance.

#### AS YOU WERE.

THE interesting correspondence between the Foreign Office and various representatives of British mercantile interests on the subject of the assistance lent to British trade by HER MAJESTY'S Consuls and Ministers abroad, has been published in two blue books. On the whole the contents of these books read badly for the merchants. There appears to exist in English commercial circles not only a singular degree of ignorance with regard to the functions discharged by British officials in foreign countries, but also a disposition to conclude that no device or manoeuvre is beyond the sphere of those functions provided its immediate aim be to promote trade convenience. One is sufficiently surprised to find the London Chamber of Commerce gravely asserting that "it has long been the rule of HER MAJESTY'S Foreign Office to decline to sanction any support being given by British Ministers at foreign Courts, or by British Consuls, to the merchants and traders of Great Britain in respect of matters of trade between them and the Governments or subjects of those countries in which they are resident;" or to find a firm of merchants formally addressing Lord ROSEBURY for permission "to apply to the British Consul in a foreign port with a view to ascertaining, if possible, the channels most advantageous for advancing the interests in that neighbourhood of our trade as marine

engineers." These examples of simplicity are as nothing, however, when compared with the suggestions formulated in other quarters. Thus, the Messrs. BLANK, "in common with other firms, experience considerable difficulty in securing suitable representation abroad, and suggest that at each Consulate a Registry should be opened, and invitation given to the local trade to enrol themselves as being open to take up agencies for English houses. All members of such Consular Commercial Registers to have the moral guarantee of the British Consul as to their *bonâ fides* and sound commercial position." It would be at once a pleasant and exciting pastime for HER MAJESTY'S Consuls to keep these eclectic records and to act as sponsors for the integrity and solvency of the traders in their districts. The line of conduct advocated by the Glasgow Chamber of Commerce is scarcely less remarkable. "The Directors think that where any doubt arises as to the nature and extent of the support which should be given by HER MAJESTY'S Diplomatic Representatives to British traders in any particular country, it might in many cases be settled by reference to the nature and extent of the support which our foreign competitors receive from the Representatives of their Governments." There is a note somewhat out of harmony with British traditions in the programme that the QUEEN'S Representatives should model themselves on the pattern of their foreign colleagues. Yet the course suggested by the Glasgow Chamber of Commerce might effect an interesting economical revolution. For its evident result must be that Diplomats would themselves become the agents and representatives of the firms whose interests they competed to promote, and that the present local merchants—of Yokohama, let us say—would be relegated to the rank of mere clerks and correspondents. We need not quote any more instances of the crude and, let us add, un-English, nature of the suggestions advanced by certain British firms and Chambers of Commerce. The widely endorsed principle, amounting almost to an instinct, of English merchants and manufacturers has hitherto been that commerce should be guarded as much as possible against official interference. It is a matter of much concern that this principle should be so easily shaken. The correspondence now before us, even if it served no other useful purpose, would still have accomplished a sufficient result in re-establishing the fact that every official attempt to force the trade of this nation or that upon a foreign country must lead finally to discredit and humiliation. Mr. BRYCE, in his remarkably able Memorandum, places this point in the most unequivocal light. "Pressure," he writes, "upon a foreign Government usually means pressure upon some particular official who has the contract to give away. It is apt to be accompanied and softened by

corruption, in the form either of a bribe or of some service to be rendered or commission paid to this official, inconsistent with the duty which he owes to his own Government. A Diplomatic Representative joining in, or even conniving at, such inducements, runs a double risk, that of lowering the dignity and character of his own country, and that of soiling his own personal reputation. People begin to hint that he is himself to share the expected gains, and as he cannot tell the whole truth, he is obliged to remain under imputations which go far to destroy his influence and usefulness. \* \* \* Moreover, he who forces a contract upon a foreign state makes his own Government to some extent responsible for the honesty and business capacity of the contractor—things which he may not be able to guarantee. In getting the better of competitors from other countries, he rouses jealousies and creates grounds of quarrel between his own and other European Governments; and in identifying himself with the contractor, he disposes the latter to believe that he may rely on the power of his Government to compel the payment of such debts as the foreign State may incur under the contract." If Mr. BRYCE had himself served in a diplomatic capacity abroad and taken a direct part in courses such as he deprecates, he could not have described them with greater fidelity. It would be plainly inexpedient to detail special cases; but we may go so far as to assert that the national discredit and loss of personal reputation predicted in the above Memorandum have unmistakably followed diplomatic patronage of commerce in this very country. We could easily adduce more than one instance in which the protégé of a foreign Representative proved himself unworthy of the commonest confidence, and involved the fair fame of his protector in the scandal of his own unscrupulousness. There is also another consideration which does not receive prominence from Mr. BRYCE, but which is, nevertheless, of great importance. We allude to the feelings of Governments which are subjected to foreign diplomatic pressure in commercial matters. There may be circumstances—as indeed there have been in Japan—which dictate temporary tolerance of such interference. But its certain consequence is umbrage and dissatisfaction. We can conceive no policy more short-sighted than that which, for the sake of securing some petty commissions in the present, would incur the risk of permanently placing a nation's commercial methods in an equivocal and arbitrary light. Can there be any doubt about the mood educated in Japan, for example, by foreign diplomatic excursions into the domain of trade? The Japanese know perfectly well that diplomacy could never be used for these ends in a Western State, and the inference they inevitably draw is that its prostitution to

such purposes in the East is conclusive evidence of the inferior position assigned to Oriental Powers in the comity of nations. If they yield ostensibly, we may be sure that, when circumstances liberate their choice, they will voluntarily turn to the nation whose Government, neither taking advantage of their embarrassments nor presuming upon their position, maintained towards them a respectful and self-respecting demeanour. It is, therefore, in the highest degree satisfactory to find that the outcome of all this correspondence between the Foreign Office and the British mercantile Community is practically to endorse the conduct hitherto pursued by HER MAJESTY'S Diplomatic and Consular Representatives in the East. Things are to go on as they are: if there has been any error, it has been on the right side. Such, in brief, is the verdict. The Foreign Office has shown itself fully abreast of the circumstances with which it has to deal, and, what is even more important, has proved its resolve to preserve the sound traditions of British Diplomacy even in the face of events well calculated to suggest and justify a different course.

#### CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

#### GERMAN AND BRITISH MERCHANTS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read with interest your article of this morning on German and British merchants, and though in the abstract a great deal of what you say is correct, I think you exaggerate the dangers to the success of the latter.

I acknowledge the superiority in linguistic accomplishments of our German friends; but our insular position has militated against our acquiring them. Furthermore the want of them has not been felt by us so far, whereas it is well known that no German clerk would be received out here did he not know English. As to their superiority in the acquirement of the Japanese language, that I question; at least such is my opinion from an observation of nearly two decades.

We neither fear nor resent German or any other competition, nor are we at the same time supine or indifferent; and I must confess I have been for a long time back unable to see the reasons for your "pegging away" on this subject. We have been accustomed to look on Germans as our chief competitors in some branches of commerce, and they will, I feel no doubt, continue to be so; but that there is any cause for such despair as must have inspired the writer of the Blue Book extract—now become historical—of last May, neither I nor any colleague I have spoken to can see. The said extract has caused some anger and much amusement. The writer seems to imagine that the indolent British merchant is in the comfortable enjoyment of continued consignments at sole risk of the manufacturer or shipper, whereas we others know very well that the days of consignments are over. No, the bulk of the business done here is at our risk, and the results depend largely on our own ability, which with you I fully believe in. As to our merchants and correspondents at home closing up their hongs here and operating direct with Japanese the idea is chimerical, and shews crass ignorance of the conditions of commerce in Japan. Such

operations have been tried but do not work well. I know of several instances where the "indolent" ones have been wired to 'interfere for honour' of the drawers, the native drawee being unable to take up the drafts. I have had to do so more than once myself.

In all this threatened ousting of the British merchant there is nothing new. The same awful prophecies have been made in China, and are still unfulfilled; direct trade has been inaugurated both there and here and gives unsatisfactory results; we have been written at, called "hucksters" (Heaven knows why) and so forth, but still we somehow manage to "bob up serenely" as the song has it.

Looking round in a calm dispassionate manner upon our various interests—Exchange Banking, Shipping, Insurance, Brokering, Exports and Imports, I fail to see where we are making permanent lee-way. Locally the Ginkō is giving trouble, but it is not an Exchange Bank—simply a remitter of Government monies—and in case of any emergency, and even the luckiest people meet with emergencies, its opposition would be disarmed. As for the German opposition in shipping—it is welcome to the shipper, and our steamship owners will prove equal to the occasion.

What, I would now ask, do you mean by the word "middlemen?" Why their name is legion; from the labourer who harvests the produce to the retail country dealer. Would not your ideal native agent be equally a middleman with us "indolent" ones? Your readers would be very glad to know what a middleman is, and having found him, to know why he is obnoxious or unnecessary.

As to the abolition of Foreign Settlements. I beg to differ from you, for good sound reasons deduced by property holders and other practical men who know what they are about. It is very evident to most of your readers that the wish is father to the thought, so you must not be surprised if we look on your opinions as biased.

Biased also you certainly are against anything Conservative, using the word with ill concealed contempt. Why, sir, we always shall have Conservatives as long as the world lasts. I am one myself both politically and in the matters under discussion; but I am sufficiently liberal to allow the necessity of an opposing party.

I am Sir, Yours faithfully,

A YOKOHAMA CONSERVATIVE.  
Yokohama, 2nd October, 1886.

#### THE CHORAL SOCIETY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have a suggestion to make anent the present singular differences of opinion among the members of the Yokohama Choral Society. I think that at Thursday's meeting some gifted orator (perhaps he of the "dismal hole" and "tin-kettle" variety of eloquence, who might by special grace be allowed to write his speech) should move a vote of severe censure on those members of the old Society, who have been graciously permitted during the last ten or a dozen years to take all the trouble off the shoulders of the members; have enjoyed the privilege of lending us instruments and music, and now with the most brazen effrontery, and the blackest and most undesirable kind of ingratitude decline to serve the Society longer.

Upon my word, Sir, things are coming to a fine pass!

Indignantly yours,

A MEMBER.

Yokohama, October 5th, 1886.

#### YOKOHAMA CHORAL SOCIETY.

An adjourned meeting of the Yokohama Choral Society was held on Monday evening in the Public Hall—Mr. J. T. Griffin, president, in the chair.

The CHAIRMAN after explaining the circumstances under which the Society had adjourned, said he had called upon Mr. Doering, who was the only person that kept pianos for sale or hire, but he considered none of Mr. Doering's suitable. He had received a letter from Mr. Doering, in which the latter wrote as follows:—

"In reply to your request about particulars as to the letting of a piano to the 'Yokohama Choral Society,' I beg to inform you that I have at present two grand pianos on hand, one of which, an almost new semi-grand, powerful Broadwood, London, I should be pleased to hire to you, at the rate of Mexican \$16 a month, including tuning, fire insurance and carriage up to the Public Hall, but for a duration not less than six months. Any personal damage that might occur, during the time of renting same by shifting the piano, etc., etc. I would have to hold the Society responsible for of course. Furthermore I must be at liberty to rent the piano to any professionals in the Public Hall or elsewhere, or to other performers, any time, provided it is not required by the Society for public practice at such times. The other is a grand piano by Steinweg Braunschweig, which is on sale at Mexicans \$450.00 nett cash. I also have a concert upright piano, which would probably suit, to be let on the same terms as the first one and equally powerfully toned. Regarding the supply of another grand piano for performances, I cannot bind myself, as the demand for these is too limited here and I could hardly be expected to keep one for the sake of letting it for perhaps 5 or 6 performances yearly."

Mr. TOWNLEY said:—I have a motion that I wish to lay before this meeting, on which I wish to make a few remarks before I put it. I think it is clear to us all that as a Choral Society we must have a piano, whether by hire or purchase, and I would like to offer my ideas as to which of the two plans is the most feasible. So far as I can ascertain we cannot at any time hire an instrument suitable for concert purposes; there is not one piano of sufficient power for hire in Yokohama, and if there were such an instrument, the cost of hiring it would be high in proportion to its value. Hiring an indifferent instrument for practice is to my mind a mistake. I think we ought to practice to the instrument we sing to at the performances. It is a certainty that we never could depend on having a suitable piano for any one given performance or concert. Mr. Doering is the only person in Yokohama who has pianos for hire and we cannot expect him to keep a full-grand for hire, unless we could induce him to do so by offering him a very high price for the loan of it. I am, therefore, in favour of purchasing the instrument imported by Mr. Keil, on the terms of my proposition, which I will presently read, and which I hope will be carried without dissent from any one. I am sure Mr. Keil will agree to the terms, which would have the effect of making all of us set to work with a good will to make our Society worthy of its name, a "Choral Society." My proposition is as follows:—"That the Choral Society purchase the piano from Mr. Keil and guarantee that he shall be paid in full on or before the expiration of one year from date of purchase; that it be paid for out of the profits of entertainments given by the Choral Society during the year, and if any balance is found to be due to Mr. Keil at the end of the year it shall be subscribed for by the members." This resolution, if carried, would, I hope, incite all our members to exertion, so that they should not be called on to subscribe anything. I feel assured that if we resolve to work hard and with unanimity we shall find ourselves at the expiration of one year in the possession of a valuable piano, and have also a balance of cash in hand at no cost to the members beyond their labour. The liability of individual members would not in any case be very serious, even were it resolved to pay for the piano at once, and certainly will be a most trifling matter at the end of the term of 12 months, provided always that we work together cheerfully and without division.

Mr. CAMERON begged to second Mr. Townley's motion.

Mr. KEIL suggested that it should be amended to the effect that the terms should not be for one year but up to the end of the next year.

Mr. TOWNLEY agreed to this.

Mr. GILLETT asked permission to explain the reasons that had actuated him in taking up his present position, and justified him in asking the members, as he did with confidence, to record such a vote as would show the committee that they disapproved of any action that would pledge their credit individually and collectively or lay them under a heavy debt. In the rules of the Society, which, he thought, were utterly inadequate to the guidance either of the members or the committee, there was no provision to meet such a case as the present, and he thought it would be well for the members to amend the rules so that the credit of the Society could not be pledged in any way except by the authorization of a large majority at a full general meeting. He urged the members to bear in mind that there was no personal feeling in the matter and said they were glad to have this opportunity of acknowledging the ever ready assistance given by Mr. Keil to the Society in time, labour and materials. The present was simply a business matter, however, and he strongly urged those present to disabuse their minds of any personal feeling in the matter. They had before them an offer of a grand piano at a cost of over \$1,000; they had no funds in hand for the purpose; on the contrary, he believed, the small balance shown in the accounts would be insufficient to meet the expense of the music lately ordered. They were told by their ever sanguine president that they could earn enough by one or two performances, and they had been further told that they should not let the opportunity slip (no doubt there were many buyers eager to take the piano at the same figure); and they had further been told (and this was a high tribute to their powers) that it was absolutely necessary that they should have a first-class instrument not merely for performances but also for practice and rehearsals, the president, replying to a lady at last meeting, having expressed the opinion that it was desirable that the same piano should be used at practice and performances. Now first, and most important of all, the society had no money to buy the piano, and they should consider very seriously before incurring a debt on any such pretext. In the second place, if they had the funds and could enter the market, it would be for them to consider whether they could not buy cheaper a better or at any rate as fine an instrument as they could possibly require. He had the authority of Professor Sauvlet for saying that a new first class concert grand, suitable in every way for their requirements could be laid down at a cost of from \$400 to \$500—nearer \$400. Professor Sauvlet said further that in his opinion such an instrument, if kept in the Public Hall, would be virtually spoiled in a year. As to the necessity of the Society being the owners of any such instrument they had here an opportunity of hiring a suitable instrument for rehearsals on favourable terms, and if they should find that a better one was required for public performances they could at present and would probably at all times be able to hire from the same owner. He could speak only for "Patience" but he knew that the rehearsals of that piece at the Gaiety Theatre were accompanied on an instrument more honoured for its age than for its quality. It would doubtless be very gratifying to skilful accompanists to have a splendid instrument to dispose upon at practice, but the poor outsiders who had not the same high appreciative powers would be content with something at any rate not absolutely first class. As to the president's view of the ease with which the money could be earned, he pointed out that the performances of "Patience" and "Pinafore" were in the Gaiety Theatre, and ventured to say that no such profits could be made in the Public Hall, where the hire of the building, scenery, dressing and general expenses would always be much heavier—as witness the "Pirates of Penzance." There was a full house the first night; the piece was dressed very inexpensively and yet the performance simply covered expenses. The second performance was unsuccessful for more reasons than one. He begged the members once more to think seriously of what they committed themselves to before they gave any authority to purchase or promise to purchase a piano. Speaking more particularly to the 15 who voted at last meeting, he reminded them that they would be pledging not only their own credit but also that of their fellow members. He further pointed out—though not in the way of a threat such as the president treated them to at the close of last meeting—that their authorization to purchase would in all probability be followed by the resignation of a considerable portion of their fellow members, who would decline to be a party to the debt, and they would thus be left a much smaller number to meet an expense

for which they would one and all be individually liable. He proposed, therefore:—"That the purchase of, or any promise to purchase, the grand piano offered to the Choral Society would in the present state of the Society's finances be inexpedient, and is not authorized by the members."

In the course of some discussion, which followed, The CHAIRMAN pointed out that the committee had not pledged the members; they had put the question before the members at last meeting, and could not be charged with wishing to implicate them in any such scheme.

The vote resulted thus:—in favour of the amendment 16, against, 9.

The CHAIRMAN now asked what the members proposed to do as to the procuring of a piano.

Mr. GILLETT proposed that the committee be empowered to make arrangements with Mr. Doering as to the hire of the semi-grand at a cost not exceeding \$15.

The CHAIRMAN remarked that if they simply empowered the committee it might not be done.

Mr. GILLETT then said he would put it that the committee be directed to make such arrangements.

Mr. VIVANTI seconded, and the motion was agreed to.

During other discussion,

The CHAIRMAN stated that a letter had been received from Mr. Sauvlet resigning, on September 24th, his position as conductor of the Society, but as a matter of fact he was not at that time conductor, his engagement having expired on 30th June.

Mr. GILLETT said Professor Sauvlet had expressed himself very strongly as to the treatment that he had received. He had never been summoned to any committee meeting.

The CHAIRMAN read minutes of a committee meeting in May at which Mr. Sauvlet was present.

Mr. GILLETT said he might possibly have misunderstood the professor. He expressed also the opinion that Professor Sauvlet's services should be re-engaged.

The CHAIRMAN said Mr. Sauvlet had no cause of complaint. He was paid liberally and he did not always come up to his engagement. He was punctual enough to appear for his salary, however, and even tried to claim for July and August.

Mr. COPE thought the chairman should take the post of conductor himself.

The CHAIRMAN asked to be excused, as it would take up too much of his time.

Mr. KEIL suggested that Mr. Gillett should himself undertake the duty.

Mr. GILLETT declined.

The CHAIRMAN said Mr. Keil and he must simply be regarded as ordinary members, after the direct negative the members had given their proposal. For himself he should resign his position as Chairman and committee man.

Mr. GILLETT proposed that one of the members should be asked to wait on Professor Sauvlet with power to treat with him as to terms.

The CHAIRMAN suggested that the meeting should be adjourned in order to see how many of the committee meant to resign, and Mr. Gillett could then see Mr. Sauvlet.

The meeting was adjourned till Thursday evening.

The twice adjourned annual general meeting of the Yokohama Choral Society was held on Thursday evening at 5.30 p.m. in the Public Hall. There was a fair attendance of ladies, and about half a dozen gentlemen were present.

The CHAIRMAN explained the object of the adjournment as being in order to ascertain how many of the members of the committee intended to resign so that the members might elect others in their places. Before they proceeded to the election of the committee he would state that, following the instructions of the meeting, he went to Mr. Doering and hired the semi-grand Broadwood for a term of six months at \$15 per month, Mr. Doering to pay carriage, insurance, and tuning during that period. He had further to inform them that one of the sets of music ordered in July had arrived, "Ruth and Naomi." The treasurer now reported that after paying for the music there was a balance in hand of \$81.33, the cost of the music having been \$53. As to the resignation of the committee, all the office-bearers had resigned—the President, Vice-President, Secretary and Treasurer, with Mrs. Lowder, leaving three ladies on the Committee, Mrs. Wheeler, Mrs. Hannen, and Mrs. J. C. Hall. It would now be in order for the meeting to elect five members to take their places. The meeting would quite understand that those members of committee who had thus resigned would not stand for re-election.

Mr. GILLETT said he had been told by the secretary (Mr. C. M. Martin) at mid-day yesterday that he would take office if re-elected.

The CHAIRMAN said Mr. Martin made a different statement to him. But the members were of course at liberty to reelect him as secretary, and find out whether he would take office or not.

A ballot was then taken, Messrs. O'Neil and A. C. Read acting as scrutineers.

The CHAIRMAN stated that Mr. Martin had been reelected as secretary, but the names for the other offices were so much divided that nobody had been elected. It would be well if the meeting could have some idea of their ticket—who they were going to elect—and vote accordingly. There were 27 people present, and by one of the rules no election could be valid unless a candidate received a majority of the total votes given. They must combine sufficiently to elect some one or another. It might assist them if he stated that the highest number of votes given were—President, Dr. Van der Heyden 8; vice-president, Messrs. Gillett and Read, 7 each; treasurer, Mr. Gillett, 11; and lady member, Mrs. F. S. James, 9.

The result of the second ballot was as follows:—President, Dr. Van der Heyden; lady member, Mrs. James; treasurer, Mr. Gillett. There was no election for vice-president, Mr. Read being highest with 12 votes.

Mr. GILLETT said he must decline to take the office of treasurer, as he could not spare time for the duties.

The CHAIRMAN said he was sure the whole society was sorry to hear that; could not Mr. Gillett reconsider the matter?

Mr. GILLETT said he really could not; he could not spare the time.

The CHAIRMAN said then he was afraid they must vote again for the office of treasurer. He regretted that Mr. Gillett had not mentioned his objection at the first ballot. The next in order to Mr. Gillett was Mr. Flint Kilby.

Another ballot was now taken, which was announced by the Chairman to have resulted in the election of Mr. Read, as vice-president, and Mr. Flint Kilby as treasurer, the Committee being—President, Dr. van der Heyden; vice president A. C. Read; treasurer, E. Flint Kilby; secretary, C. M. Martin; lady members, Mrs. James, Mrs. Hannen, Mrs. Wheeler, and Mrs. Hall.

Mr. GILLETT said he had much pleasure in resigning the chair to the new president, and as he was not present it became the duty of the vice-president to take the chair.

Mr. READ took the chair amid applause.

On the motion of Mrs. HANNEN, seconded by Mr. DE RUSSETT, a vote of thanks was accorded to Mr. Griffin for his services as president and to Mr. Keil in recognition of his having lent his piano to the Society.

The CHAIRMAN then invited remarks from the members to the arrangements for the coming season.

Mr. GILLETT said he believed the question of a conductor was the chief question that had to be dealt with at the present time. As he understood it, they had to do without the valuable assistance of the two gentlemen who had so greatly aided them, Messrs. Griffin and Keil. It therefore behoved them to look about for the services of an efficient conductor. At present he knew of no one but Professor Sauvlet. He might say that after the last meeting, in accordance with the direction that he should call on Professor Sauvlet, he called and saw the Professor. M. Sauvlet told him that he would be very willing to do all in his power for the interests of the society. On behalf of the society, Mr. Gillett thought it better that M. Sauvlet should be paid a monthly salary instead of as formerly, because the society must remember that they were paying an artist who had to make a living, and that it was due to M. Sauvlet that there should be no uncertainty about the matter. M. Sauvlet would give the society two afternoons a week, or, if the members preferred it, one afternoon and one evening a week. The idea would be to have two pieces as suggested by the old committee—one choral and the other dramatic. M. Sauvlet thought, and Mr. Gillett thought so too, that it would be better to have the choral piece in the afternoon. M. Sauvlet could give the Society any afternoon except Tuesday and Thursday from 5 to 6.30 p.m. For the dramatic piece he suggested one evening a week from 8 to 11 p.m. These dramatic pieces needed to be put though quickly or they would hang fire; there was very little in them as a rule, and the sooner they were put on the stage the better. He thought the idea of having the dramatic rehearsals in the evening was worthy of consideration. When practice was sufficiently advanced he would give three rehearsals a week, as was the case with the "Pirates of Penzance." M. Sauvlet would give his services for practices, rehearsals, and performances and would leave to the Society the question of remuneration. He (Mr. Gillett) did not think that \$25 a month would be out of the way as payment for

such work as M. Sauvet proposed to give. He thought the Society could afford to give \$25 per month, and it would be well within their power if they had successful performances to give M. Sauvet a honorarium. Mr. Gillett then proposed that M. Sauvet should be engaged on these terms for the season of the Choral Society, with one month's notice on either side.

Mr. WIRGMAN seconded the proposal.

In answer to Mr. DE RUSSETT, Mr. GILLETT said he thought the agreement should be in writing.

Mr. GRIFFIN, as a person of some experience in these matters, thought M. Sauvet's terms very reasonable indeed, terms for which he doubted very much whether any professional gentleman could give the time and attention that M. Sauvet promised. He strongly recommended that the offer should be accepted, and, as Mr. Gillett said, put in writing.

The motion was then agreed to unanimously in these terms:—That the services of Professor Sauvet be engaged at a salary of \$25 per month for the season of the Choral Society, subject to the terms agreed upon by the meeting.

In reply to Mr. GRIFFIN,

Mr. GILLETT said he understood that Mr. Sauvet would act as accompanist. He thought the choral practice should be arranged for as soon as possible with M. Sauvet in order to give him time to make his arrangements. Several ladies proposed that Monday afternoon should be fixed. He might mention that he had looked through the American mail dates up till February and found that, so far as published, there were five mails on Mondays. M. Sauvet could not attend on Tuesdays or Thursdays, and on Fridays there were three mails.

It was decided to adopt Monday.

Mr. GRIFFIN suggested that it would be well to arrange with the directors of the Public Hall if the Society wished to use the hall for practice.

This was all the business, and the meeting broke up.

### CRICKET.

Saturday's match between elevens over and under thirty was an exciting game. The juniors won, thanks to the assistance of a visitor—Mr. Leaf, whose batting was well worth observing.

Messrs. Mollison and Playfair captained the teams; Playfair won the toss, but was obliged to forego the advantage of sending his men to the wicket first, as several of the other side were late in arriving. Mr. Groom and Rev. Mr. Irwine were the first to bat,—Edwards and Griffiths bowling. In the latter's first over, Groom fell—having made only 2. Trevelick joined Irwine, and commenced by driving Griffiths's last ball for a "three." His next play—a cut—lost Irwine his wicket,—run out. Sutter following in, a stand was made and runs were put on fast, Edwards being driven for a "three" and Griffiths for two "twos" and a "four,"—the last a splendid hit from Trevelick's bat. Baggallay here relieved Griffiths at the Settlement end. After himself contributing 7 Sutter retired before a ball from Edwards, and made way for Mollison, who, after sending first Edwards and then Baggallay for a "three" and helping Trevelick run up the score, played a ball off Edwards into Wileman's hands—4 for 48. Easton then went in, Griffiths in the meantime resuming bowling. With the score at 50 Trevelick was sent back by a pretty ball from Edwards; Trevelick's 27 were carefully put together, but it is quite probable that he would have done less had he not been allowed a substitute to do the running during a considerable portion of his innings. Kilby was the next to bat, and the next to retire, though not without contributing four "singles," and a "two" before giving Playfair an easy catch off Griffiths—7 wickets for 72. Hearne took Kilby's place, and added one before being bowled by Edwards. Litchfield then went in, and commenced well—hitting Edwards to "long on" for 3, and Griffiths for another 3. With the score at 85 Edwards bowled Easton. Oram joined Litchfield and hit Griffiths for a "3" and a "two," but was soon afterwards bowled by Edwards. Hellyer, the last to bat, had not an opportunity to do anything, Litchfield being shortly after bowled by Melhuish, who in the meanwhile had taken Griffiths's place at the pavilion end. The whole innings closed for 93.

Messrs. Leaf and Melhuish opened the innings for "under 30," against Sutter's and Hearne's bowling; and remained in some time, 27 having been made (several of the hits being for threes, mostly off Hearne by Leaf) before Melhuish was bowled by Hearne. Griffiths, the third to bat, kept his wicket about as long, hitting three "twos" and a "single," whilst his partner got

Sutter to leg for two "threes" and Hearne for a "three," before Griffiths fell, bailed by Sutter—2 for 50. Edwards joined Leaf, and more runs were made, the former getting Hearne away for a "three"; immediately after this, Hearne yielded the ball to Mollison, at the Settlement end. Leaf made another "two" off Sutter, but in the same over retired, Sutter taking his middle stump. Wileman thereupon went out, and Edwards shortly afterwards played Mollison on. Wilson took Edwards' place, and another stand was made, Wilson batting well for a useful 14, before he was badly run out, though not being properly backed up by his partner. Hooper, who next appeared contributed a "single," whilst Wileman also put on a few "singles," and gave a hard chance in the slips to Mollison, which, however, was not secured. In the next over Sutter bowled Hooper—6 for 90. Playfair joined Wileman, but fell in the same over before his first ball from Sutter. The game at this point was very exciting. Baggallay was the next to bat. In Hearne's next over, he caught and bowled Wileman; a good catch from a hard return, one hand, high up. Cain joined Baggallay, and with the second ball he received drove Hearne for three, so making the match a "tie." In Sutter's next over Baggallay made a grand drive for four, which with some singles brought the score up to 99, before Cain retired, bowled through attempting to drive Hearne. Arnold then went in, and with a few "singles" the score rose to 104 before Hearne was successful in taking Baggallay's wicket through his being rather too anxious to hit out. The innings closed for 104. We give the full score and bowling analysis.

### THE SITUATION IN THE EAST.

(Translated from the *Hochi Shimbin*.)

#### I.—DANGERS TO JAPAN AND CHINA WILL NOT COME FROM THE DIRECTION OF KOREA.

Rumours of the occupation of Port Lazareff by Russia have more than once attracted the attention of diplomats in Europe since the latter part of last year. The port of Vladivostok, which is at present the only naval depot of Russia in the East, is ice-bound all the winter through, and unfit to serve as a basis of naval operations. It is, therefore, naturally thought by politicians in the East that the occupation of the fine harbour of Lazareff by Russia will seriously affect the safety of the three countries, Japan, China, and Korea. But it is a mistake to suppose that the greatest danger to Japan and China lies in that quarter or that the destiny of the East is bound up with that of Korea.

On the contrary, the danger to the East comes not from the north, but from the west of China, through the central regions of Asia.

The possession of Port Lazareff will give Russia a harbour, where she can shelter her ships of war both in summer and winter; where she can store up coal, ammunition, and provisions; and where she can station a strong garrison; and just to that extent does its occupation affect the interests of both Japan and China. But it is not probable that the danger will be as great as is commonly imagined. Transportation through Siberia is at present barely effected by carriages, so that in the event of war it will be hardly possible to send out troops to the East by that route. Nothing therefore is farther from the truth than to suppose that Russia will land Siberian troops in Japan or China from Port Lazareff. As to the navy, there being few available vessels in the Black Sea fleet, Russia will be obliged to select from the Baltic fleet. In order to serve in the East, Russian men-of-war will thus be compelled to accomplish a long voyage of nearly 10,000 miles. Besides it will be impossible to move all her war

vessels, for that would most dangerously interfere with her safety among other European Powers. Thus, from the limit to the number of her war vessels, from the exceedingly long journey they will have to make, and from the excessive costliness of the process, Russia is not likely to undertake any very active operations with her fleet. With a slight improvement of their navies, neither Japan nor China need be afraid of Russian war vessels in the East. The Russian occupation of Port Lazareff, though injurious no doubt to the interests of the East, is not likely to prove as dangerous as is generally apprehended.

Danger to the East lies in the west of China. Nothing is more full of menace to Japan and China than a line of railway constructed by Russia from the Caucasus to Central Asia. When the line is so far extended as to touch Samarkand, and thence to reach Kokand and Taskend, it will be possible to send out hundreds of thousands of troops from Russia to the western frontier of China in less than 15 days. The fact that Russia could not support strong claims as to Kuldja some years ago, was due to the difficulty of despatching a sufficient force of troops to that region. But with the completion of the above mentioned railway, there will no longer be the old obstacles to the eastward policy of Russia.

Crossing the Altai mountains from Ili and Kuldja, and proceeding eastward towards the interior of China, an invading Russian army would have little difficulty in making itself master of the situation, for all the river courses flow from those regions toward the east, and there are also good facilities of transportation. Who can be sure, when Russia once crosses the Altai, that the present territories of China will not pass into her possession? Who can say that the danger will not extend to Japan? It is at best extremely uncertain that China in her present condition can successfully resist the invasion of the well-disciplined and well-equipped troops of Russia.

While the Asiatic railway of Russia is of such a dangerous character, it is reported that the line will reach to Samarkand during the present year, and that in the course of another year both Kokand and Taskend, the capital of Turkestan, will be connected, when the Czar of Russia will be crowned at the latter place as the Grand Emperor of Asia,—at least it is so rumoured. From these circumstances something of the intention of Russia may be guessed at.

Hitherto the Russians have been unable to extend their Asiatic railway, on account of the difficulty of obtaining fuel for working the engines. But lately a method has been invented for using petroleum oil in place of coals, and the present writer saw in England last year a model locomotive adapted to the new invention, ordered by Russia. Now vast quantities of petroleum are yearly produced in the Caucasus, and there is also no want of oil wells along the route of the railway. A great impetus has thus been given to the prosecution of the work of constructing the Asiatic line. While the distance between Taskend and Kuldja is not more than 650 miles, the capital of China is removed from the latter region by a distance of nearly 2,400 miles. Even such flourishing centres as 關中 are more than 2,500 miles distant from Kuldja. What hope is there for China, with such a long distance to traverse without any modern facility of transportation, to intercept the onward march of the Russians? It is clear that, within two or three years, the great range of the Altai mountains will bear the advancing steps of Russian troops, who can easily descend thence into the interior of China. In point of dangerous capabilities, no sort of comparison can be established between this line of railway and the port of Lazareff.

#### II.—WHICH IS THE MORE DANGEROUS TO JAPAN, RUSSIA OR CHINA?

In order to bring more vividly before the reader's eye what we have thus far been describing, we have decided upon issuing a map, from which it will be observed that Askabad is now in direct communication with the capital of Russia, while the line from the former place to Samarkand is at present under construction. It is reported that further lines to Kokand and Taskend will be speedily laid out. Originally this Asiatic line was intended to convey troops to India, Afghanistan, or Persia. But England has not been slow to take the necessary precautions against Russian designs, and measures are being vigorously taken to extend railway communication far into the interior of Afghanistan. The Russians, therefore, have at present no advantage over the English in Central Asia so far as facility of transportation is concerned, and have to turn their attention either to Persia or the western borders of China. It will be fortunate for the Far East if they fix their attention on the former country; but if they extend their railway to the Chinese frontier, the

fate of most of the western provinces of China is already sealed.

At the outset, it was designed to turn this line northward and extend it through Siberia as far as Vladivostock. The time required was said to be a little over 20 years, for in a nation's life a space of 20 years is nothing, for we ourselves have already seen 19 summers since the Restoration. But the danger of the East will not be 20 years in coming. Its advent will be first heralded by the extension of the Russian line to Ili and Kuldja, which will be within two or three years, and the magnitude of the danger will grow greater as the rails approach nearer and nearer to the Pacific coast.

In making calculations as to future events, we must guard ourselves against the influence of mere sentiment. Everybody wishes to live hundreds of years, but nothing is more certain than that we must all die in less than one hundred years. One would be inclined to believe that China will be able to remain in her present condition to the end of all time, so vast is the extent of her dominions and so numerous her population. But this is a mere sentiment. Upon calm reflection, it appears tolerably certain that the north-western portions of her territory will be ere long invaded and occupied by the Russians. A country's boundaries are like embankments; when once the frontier is broken through, there is little hope of resisting the invading flood before it reaches the very centre of the country. It is small comfort to think that the western frontiers of China are far distant from her capital. While Port Lazareff and Vladivostock are incapable of serving as the basis of any naval operations on a large scale, the extension of the Russian railway line into the interior of China must certainly prove a most momentous danger to the East. The question demanding immediate solution is: which is more dangerous to Japan, the existence of China in her present state or her assimilation into Russian territory? Both are menacing to Japan, but between the two there must be a vast difference in the degree of danger.

### III.—THE DANGER TO JAPAN OF A RUSSIAN OCCUPATION OF CHINA.

In point of territorial extent, population, and wealth, China is a sufficiently strong antagonist to Japan. At present the Middle Kingdom does not seem powerful enough, but with the improvement of her naval and land forces, she will soon become a dangerous neighbour. However, if she increases in her fighting capacity, we will not remain far behind her, and, judging from the energetic efforts with which Japan is endeavouring to play a part on the world's stage, it does not appear that China will be so strong as to overshadow us. We, therefore, ought not to fear much from the preservation of China in her present condition. On the other hand, Russia takes a leading position among the great Powers of the world, and if once she gets a hold on the north-western parts of China, and proceeds toward Japan, we must be utterly powerless to oppose the irresistible force of the invasion, whatever progress we may have made in the meantime. Moreover, the people of the north-western provinces of China are most remarkable for their bravery and daring, so that their assimilation by Russia deprives China of her backbone, while the gain to Russia will be immeasurable. It will thus be seen that to allow Russia to gain a firm footing on the soil of China is to prepare a step toward the ruin of our own country. It will, therefore, be admitted by every one at all acquainted with the affairs of the world that it is far more unwise for us to suffer Russia to annex to her dominions the north-western provinces of China, than to allow the latter country to maintain her present territorial integrity.

Some people may say that it would be wise to pursue an aggressive policy towards China and share the spoils together with Russia, and thereby maintain the former relative positions of the two countries undisturbed. This scheme is daring enough, but it is impracticable for there is a fatal obstacle in the way. We allude to the friendly relations which have been existing for more than ten years between England and China. Russia is the great rival of England in the East, and it is accordingly the latter's policy to give assistance to China in order to check the progress of Russia's eastward policy. For these twenty years, since the North China War, England has witnessed many changes of Government, but the policy of using China as a barrier to the Russian advance has remained unaltered, and each new year sees the bonds of friendship between the two countries drawn closer and firmer than ever. At present, in higher circles in England, it is tacitly admitted that China is an ally, and the Chinese are regarded with love and respect. Whether or not it is because Englishmen have an affinity to the Chinaman's quality of perseverance, the former have a high opinion of their

Oriental friends' ability in business. These are trifling facts, but there is no doubt as to the intimate relationship between the two countries. China evidently relies on the advice and the friendly assurances of England, in showing a bold front to Russia in the Korean peninsula and elsewhere. England's relations to China may fittingly be compared with her relations to Turkey. As everybody well knows, England is a great Power in the East, possessing as she does, a strong basis in the form of Australia. Nobody, therefore, who understands international affairs, will fail to see the disastrous consequences of pursuing an aggressive policy towards China, which may really be considered as an ally of England. If England gives aid to China in the form of arms and money, what hope is there for us, brave though we may be, to gain any victory over our neighbour? Shall we, then, ally ourselves to Russia? What we fear most and need most are men-of-war, and in point of navies what comparison can be made between England and Russia? Were our country contiguous to Russia, and were there nothing to fear in naval warfare, it might be a fairly wise stroke of policy to form an alliance with Russia. But nothing could be more hazardous than to attempt an invasion of China, against such a powerful naval State as England.

Even granting that we should be free from England's interference, and that we should be able to acquire territory in China, will it make our country's position any the less exposed to danger? Assuming that we were to obtain exactly the same extent of land in China as the Russians, we should stand toward them just in the same position in point of relative strength as before, so far as territorial extension is concerned, but we should have brought ourselves into direct contact with the dreaded enemy, while, moreover, the assumption of equal success in territorial acquisition is far from being admissible. Thus from every point of view, it is far more advantageous to suffer China to maintain her present status, than to allow Russia to conquer her.

### IV.—ALLIANCE BETWEEN JAPAN, CHINA, AND ENGLAND.

If it is true, as we think it is, that the existence of the Chinese Empire in its present form is highly conducive to our welfare, we must shape our policy in the East so as to secure the end that we desire. An old saying tells us that "oneness of purpose produces harmony of conduct." As it is in private conduct, so it is also in the management of state affairs. Unless a nation has a definite purpose, its policy will be only vacillating and there will be no harmony in its conduct. If, glancing over the situation in the East, we are impressed with the urgent necessity of pursuing a certain particular line of policy, we ought to fix our eyes on that policy and shape our conduct accordingly. So long as we remain without any fixed purpose, ready to be startled by every trifling occurrence, there is very small hope of the maintenance of our independence among the nations of the world.

As is well said in an ancient treatise on military tactics, it is very dangerous to arouse suspicion in other people's minds, when in reality there is nothing in our own purpose calling for such distrust. We do not know whether or not it is the purpose of our Government to attempt to conquer China, but, judging from all we know of our national affairs, it does not appear that that is exactly our object. We grieve, however, to say that our foreign policy has tended to excite in the minds of the Chinese nation a strong suspicion as to the nature of our intentions towards their country, leading them to regard us as their unalterable enemies.

Whatever is harboured in one's mind is sooner or later manifested outwardly; and, however long it may take, no good intention can fail to excite a corresponding friendly feeling in other people's breasts. If we make up our mind to cultivate the friendship of China, our western neighbour will not fail in the end to regard us with correspondingly good will, though at first she may view us with suspicion. And if the Government of Peking were once to put confidence in us, everything in the East would go on very smoothly, and there would no longer be any danger of creating mutual ill-feeling and friction on account of trifling accidents, leading to loss of time and temporary disturbance of peace.

Certain judicious precautions must, of course, be used in carrying on intercourse with other countries, so as to avoid the danger of being deceived or overpowered. But the primary purpose must be definitely kept in view. We must take a large-minded view of the situation, and, cementing the bonds of union between Japan and China, we must use all our efforts to check the eastward progress of Russia on one hand, and secure the safety of Korea on the other. In doing so, we shall be

all the time working for the ultimate benefit of our own country. It may be somewhat late, but the opportunity has not yet entirely passed away.

In England the Government changes in obedience to public opinion, and it is accordingly impossible for the rulers of that country to wage an invading war on a large scale without regard to its justice or injustice. But so far as small, weak States are concerned, England has very often shown no scruple in conquering them, so that we cannot entirely trust her. But considering the nature of her position towards Russia, and considering also her intimate relations with China, it appears certain that she would be more or less affected by the invasion of this country by Russia. It, therefore, seems the wisest and the most practicable policy for the maintenance of peace in the East, to unite with China and act with the co-operation of England, that is to say, to form a triple alliance between the three countries.

China indeed is not indifferent to her danger, for she is busily engaged in making defensive preparations for her north-western frontiers. But she is unable to employ all her efforts in that direction, partly because of her fear of invasion by some of the Western Powers from the sea, but principally because she suspects Japan of unfriendly intentions towards her. If we let her know now that we harbour no aggressive designs, and that, on the contrary, our primary purpose is to maintain the peace of the East, the Middle Kingdom will be more unrestrained in the prosecution of such urgent works as the defence of the north-western provinces. It will be far more economical to assist China in resisting the aggressive movements of Russia, than to await the ruin of our neighbour and then try to cope single-handed with the victorious armies of the great Northern Power.

What China now needs most urgently are railways and telegraph lines. England and Germany have advised her to undertake these necessary works, but she appears to be undecided. As our own interest is indirectly concerned, we ought, when once we make up our mind on the question we have been treating thus far, to use all our efforts to induce the Chinese Government to speedily take up those undertakings. When once China's confidence is obtained, it will be an easy affair to settle the position of Korea. If our assistance can enable China to secure the safety of Korea, we may give her our hearty aid. But these considerations are of secondary importance; what concern us most are the eastward movements of Russia, involving the fate of both Japan and China.

Diplomacy is a delicate thing, and must be handled with a keen insight into the conditions of each particular case. But the general turn of events in the East does not differ much from what has been thus far described. Nothing is more fraught with danger to a State than the fact that it has no definite purpose in its foreign policy; for when it has no settled object, its conduct, though innocent in reality, is liable to awake suspicion in the minds of other nations. And, in order to fix our purpose, we must take a broad view of the whole situation, instead of paying attention to minor circumstances.

### OBSERVATIONS ON HOKKAIDO.

BY SEKI NAOHIKO, A GRADUATE OF THE LAW DEPARTMENT IN THE IMPERIAL UNIVERSITY.

On August 5th, when the heat of summer was at its highest point, Counts Inoue and Yamagata started for the north on a tour of inspection. For forty days their Excellencies diligently examined Hokkaido and enquired into the state of the local administration and the means of livelihood of the people there; shrinking neither from discomfort nor danger, neither on sea nor on land, in the pursuit of their object, exploring dense forests, defying darkening fogs, and lodging in the huts of poor fishermen on lonely shores. Words are incapable of doing justice to the earnestness of their Excellencies to promote the prosperity of Hokkaido, and thereby to advance the interests of the country at large. I, therefore, doubt not that the future of the island will receive intelligent and liberal consideration at the hands of a Government which numbers such officials.

It will, no doubt, appear superfluous therefore for me to write my humble opinions about the island, but in offering my observations to your readers, I have, I think, some claims of my own. I was admitted into the retinue of their Excellencies, and, under their special favour, was enabled to follow them wherever they went, where, indeed, other members of their suite were not allowed to go. Thus I have something to impart to your readers, and certain considerations to submit for their criticism,

Original from  
UNIVERSITY OF ILLINOIS AT  
URBANA-CHAMPAIGN

as to the island of Hokkaido. Should my views coincide with those of the Government and express the wishes of the inhabitants of that region, I can have nothing more to desire.

Before I started on the journey, I had been accustomed to hear that the land was fertile and that products were abundant both on land and sea in Hokkaido, and my own personal observation has on the whole confirmed this. But the question arises, how is it that the rich capacity of the island remains almost entirely unutilized, after the spending of tens of millions of yen since the establishment of the Kaitakushi in 1869? This question has not suggested itself to me alone, but it must also have pressed itself upon the attention of many who have recently visited that island. There may be several causes to account for the anomaly, but, speaking roughly, the difficulty is that no enterprise is remunerative there. Without alluring prospects of profit, who will migrate to such a distant place? What is most urgently needed is, then, to remove all the obstacles that now lie before the prosperous conduct of agriculture, industrial, and fishing enterprises, and to take measures to secure the success of such undertakings. I shall proceed to consider more at length, one by one, each of the above mentioned three classes of undertakings.

I shall first speak of the fisheries. As is well known, the most important marine products in Hokkaido are salmon, herrings, fish manure and *Kombu*. Immense wealth is, as it were, hoarded in them, but at present no profit is obtained by the fishermen there. In order to substantiate my remarks, I refer below to the statistics prepared by the principal fishermen of Nemuro:—

HERRING, &c.	YEN.
Quantity caught by a <i>tatami</i> in a season	300.00
Tax in kind, 15 per cent., and payment to liquidate the debt to the Government, 5 per cent.,	45.00
Quantity remaining	155.00
Value of the above 155 koku (at yen 3.30 per koku)	511.50
Expenses:—	
Wages of 16 labourers (at yen 15 each)	240.00
Price of rice to feed the above (June 18th—Novem- ber 15th), koku 0.75 at yen 7.50 per koku	56.25
Man, shoyu, and sake	30.00
Fuel laid aside to liquidate boats and nets	100.00
Purchase of 150 mats, <i>mashiro</i>	67.50
Improved mats for packing guano	35.00
Miscellaneous expenses during the season	30.00
Interest on capital (3-6 per cent. monthly)	30.50
Total expenses	643.75

Comparing the income, yen 521.40, and expenses, yen 643.75, the latter shows an excess of yen 122.35. These figures are said to be the average for three ordinary years, and the price is that at the place of production.

KOMBU.	YEN.
Quantity collected by one boat (July-November)	70.00
Taxes, 14 koku, and liquidation of Government debts 14.2 koku,	18.20
Quantity remaining	51.80
Value of the above 51 koku of which 35 koku at yen 4.00 per koku, and 16 koku at yen 2.80 per koku,	187.04
Expenses:—	
Wages of 8 labourers, at yen 18 each	144.00
Price of rice to feed the above (June 18th—Novem- ber 15th), koku 0.75 at yen 7.50 per koku	56.25
Miscellaneous expenses of labourers	5.00
Man, shoyu, sake, etc.	15.00
Purchase of mats, <i>mashiro</i>	4.00
Liquidation of buildings, boats, etc.	10.00
Miscellaneous expenses	20.00
Labels for 300 bags of kombu	3.50
Interest on capital	13.50
Total expenses	216.21
Loss	20.17

These figures refer to the most hopeful year, and the prices quoted are the highest at the place of production.

SALMON.—(IN THE VICINITY OF NISHIBETSU).	YEN.
Quantity caught in a season by one <i>tatami</i>	170.00
Tax, 15 per cent., liquidation of Government debt 5 per cent., and the shore-rate <i>hamagaki</i> , 1.5 per cent.,	38.25
Remaining quantity	131.75
Value of the above 131.75 koku, at yen 6.00 per koku	790.50
Expenses:—	
Rice to feed 15 labourers (Aug. 15th—Nov. 15th).	81.00
Salt for curing, 272 bags	103.30
Wages of 15 labourers, at yen 15 each	225.00
Liquidation of nets, boats, etc.	750.00
Sake, shoyu, and man	30.00
Miscellaneous expenses	10.00
Interest on capital	55.30
Total expenses	724.50
Profit	66.00

These statistics refer to the average for three ordinary years, and the price quoted is the ordinary rate at the place of production.

From the figures thus far given, it will be seen that, while the herring and *Kombu* fisheries are unprofitable, the salmon fishing at Nishibetsu alone yields a slight remuneration. But it must be remembered that Nishibetsu is specially noted for its salmon, and that its figures cannot be taken to

represent the condition of the salmon fishing in general. I shall, therefore, give the statistics for Shibetsu and Menashi.

SALMON.	YEN.
Quantity caught by one <i>tatami</i>	200.00
Tax, 15 per cent., liquidation of Government debt 5 per cent., and the shore-rate <i>hamagaki</i> , 1.5 per cent.,	45.00
Remaining quantity	155.00
Value of the above 155 koku, at yen 4.60 per koku	713.00
Expenses:—	
Rice to feed labourers (August 15th—November 15th), at yen 7.50 per koku	81.00
Wages of labourers, at yen 15 per head	225.00
Salt (320 bags), at yen .65 a bag	208.00
Liquidation of nets, ship, etc.	150.00
Sake, shoyu, and man, etc.	30.00
Miscellaneous expenses	30.00
Interest on capital	40.00
Total expenses	763.00

These figures are the average for three ordinary years, and the price is the average at the place of production.

SALMON.	YEN.
Quantity caught by a <i>tatami</i>	400.00
Tax, 15 per cent., liquidation of Government debt 5 per cent., and shore-rate (15 per cent.)	90.00
Remaining quantity	310.00
Value of the above 310 koku, at yen 4.40 per koku	1,364.00
Expenses:—	
Wages of 26 labourers, at yen 15 each	390.00
Rice fed labourers, 28 koku	210.00
Liquidation of nets, boats, etc.	200.00
Salt, 640 bags, at yen .65 per bag	416.00
Man, shoyu, etc., and miscellaneous expenses	65.00
Interest on capital	90.00
Total expenses	1,356.00

These figures are the average for three years (slightly better than usual), and the price is that usually prevailing at the place of production.

In certain places, fishermen are enabled to fish herrings and salmon and collect *Kombu* in the same year. In such places, the expense of hiring labourers is largely economized. But statistics from those places show that even there the profit does not much exceed yen 100:—

GROSS EARNINGS.	YEN.
1. Herrings.	
Quantity caught with a <i>tatami</i> by 16 labourers	300.00
Tax, 15 per cent., liquidation of Government debt 5 per cent., and shore-rate ( <i>hamagaki</i> ), 1.5 per cent.,	45.00
Quantity remaining	155.00
Value of the above 155 koku, at yen 3.30 per koku	511.50
2. <i>Kombu</i> .	
Quantity caught with 3 canoes by 16 men	150.00
Tax and other payments to the Government	33.75
Quantity remaining	116.25
Value of the above 116.25 koku, at yen 3.60 per koku	418.50
3. Salmon.—	
Quantity caught with a <i>tatami</i> by 16 men	200.00
Taxes and other public payments	45.00
Quantity remaining	155.00
Value of the above 155 koku, at yen 5.40 per koku	837.00
Total for the three	1,767.00
Expenses:—	
Wages of 16 men including allowances for travel- ling expenses from the South	560.00
Mats, 200 packs	90.00
Rice to feed 16 men during 9 months, allowing 2.5 cups per day, and at the rate of yen 7.50 per koku	243.00
Liquidation of boats and nets	300.00
Salt for curing salmon (250 bags)	162.00
Sake, shoyu, and misc. etc.	60.00
Miscellaneous expenses	60.00
Paper or labeling sacks of <i>kombu</i>	7.50
Improved mats for packing guano	35.00
Interest on capital	100.00
Total expenses	1,653.50
Profit	Yen 113.50

Excluding all unprofitable fisheries, and confining our attention to those alone which are profitable, it is observed that the most remunerative hardly yield 9 per cent. annual interest, while the common profit ranges between 5 and 7 per cent. per annum. Thus, speaking in general, the fishery industries in Hokkaido yield barely 5 per cent. interest. In Tokyo, one can get 7 per cent. interest by holding Public Bonds, or at the least 5 per cent. by holding Navy Bonds. Who, then, will undergo the hardships and inconvenience of life in Hokkaido to obtain such a low and precarious rate of profit? That the people in the island are still pursuing their enterprises even at such a disadvantage is to be attributed partly to their inability to seek new fields of action and partly to their hopes of a revival of trade activity.

I shall now proceed to mention the more important of the causes that have conspired to bring about this condition. They are as follows:—(1) the heavy tax upon marine products, and the imposition of an export-tax; (2) the lowering of the price of marine products by the appreciation of paper money; (3) inconvenience of transportation, especially since the cessation of the competition between the rival shipping companies (the Kyodo and Mitsu Bishi); (4) indiscriminate borrowing of money from the Government since the establishment of the Kaitakushi; (5) the standard of living has become more luxurious, under the in-

fluence of the rise of prices some years ago, and of the borrowing of Government money; (6) the improvement of *Kombu* and the mode of packing it has been initiated but lately, and the carrying out of these measures do not yet work smoothly; and (7) the high price of rice, salt, and other articles of daily consumption.

Besides these, there are other causes, to which, however, allusion cannot be made. But the above mentioned seven circumstances are the principal causes, and it may yet be possible to promote the prosperity of the fishing industries, by removing these impediments as far as possible. And whether any of them can be removed or not, I shall consider in my next article.

In enumerating the causes of the present difficulties of the fishermen in Hokkaido, I placed at the head the heavy taxation of marine products and the export-taxes on the same. On reaching Hokkaido, complaints about this matter came to my notice before anything else, and, whatever might be the difference in the customs and manners of the people and in the climate of the different localities in the island, whether on its eastern coasts or in the western regions, whether in the north or in the south, everywhere throughout the island all were unanimous in complaining of the severity of the taxation on marine products.

The so-called marine tax in kind is peculiar to Hokkaido, and its rate varies according to the conditions of each fishing place, but ranges between 20 and 10 per cent. Thus for every 100 koku of fish or *kombu* obtained, the fisherman has to pay 20 koku, which is afterwards sold by the Government, the proceeds of the sale going to the Treasury. Merely from the point of view of quantity, a rate of 10-20 per cent. is no light taxation, but to make it still more unbearable, the products to be paid in the form of tax have to be brought to a finished state before being delivered to the Government. Thus in the case of salmon, the fish must be cured with salt, while in the case of guano, the manure has to be neatly packed in improved bags. Taking into account the cost of the salt, the bags, and the labour, the fishermen are loaded with an excessively heavy burden.

Besides the weight of the tax, they have to undergo various inconveniences. Before sending their products to the market, tax-collectors have to inspect them, which causes considerable delay and consequent disadvantage in disposing of them. It not infrequently happens that, while the tedious process of official inspection is thus going on, the approach of the forbidden season of navigation in Hokkaido obliges the ships, specially hired from Hakodate and other places for the purpose, to leave without a cargo. And, even in such cases, the fishermen have to pay the owners of the ships what is popularly known as "the empty vessel rate."

Besides the above direct tax, there is an indirect tax called the export-tax, levied since 1875. The export-tax is not levied on agricultural products, being limited to marine products. Nominally, ship-owners are taxed with a duty of 4 per cent. *ad valorem*, but really the money is paid by the fishermen themselves.

If this be the inconvenience and severity of the system of marine taxation from the fisherman's point of view, is the Treasury profited by a corresponding income? On the contrary, I am disposed to think that the Government reaps after all no profit and that the system uselessly gives rise to dissatisfaction and discontent among the people. For, in the first place, a vast amount of money has to be expended in sending out a large number of officials to collect the tax and also to examine the actual quantity of the products so as to prevent evasion of payment. In the next place, the products that have been received in the shape of tax have to be disposed of, and in selling them the Government is compelled to incur great loss, because, as it would be injudicious to compete in the market with the products of the people, the officials must wait until the latter have been all disposed of, when the price goes down by one half of its original rate. Now, the total amount of the marine tax in kind is about yen 600,000, and the cost of collecting it is computed at about yen 200,000, that is, one-third of the whole amount collected. I cannot say that I approve of such a system of taxation.

Why does this system of taxation then hold in a country so recently opened as Hokkaido? Its origin dates back to the reign of the house of Matsumae, when, however, the mode of levying the tax was very liberal, and the fishermen had little to complain of; for, although the rate was the same as at present, they paid in reality only a fraction of the legal amount. I do not think it wise to follow any such loose method of taxation, nor do I approve of the tacit permission thus given to the people to publicly defraud the Government. But I earnestly hope that either the rate will be

\* Most fishermen are in debt to the Government.

lowered or that some other method will be adopted to save both the payers and collectors of the tax the present trouble, cost, and inconvenience. Some persons advocate the abolition of payment in kind, and the fixing of the rate at the present amount, i.e., 10-20 per cent., by calculating the average quantity of products and their prices during several successive years, and also the establishment of guilds in each locality, to be held responsible for the payment of the tax. This plan is worth attention. At all events, unless some modifications are introduced into the present system, it will be difficult to insure the prosperity of the fisheries in Hokkaido.

I now proceed to consider the second cause of the present difficulties of the fishermen in Hokkaido, which is the fall in the value of marine products caused by the general depreciation of prices. The effects of the appreciation of paper have been felt by every class of people in every part of the Empire, but its direct consequences have been most severely felt by the fishermen in Hokkaido. While, on the one hand, owing to want of facilities in transportation, the cost of production—including the value of articles consumed, and the wages of labourers—has been very slow to follow the downward course of prices in the south, on the other hand marine products could barely fetch half their former prices, and thus immense losses have been incurred by those engaged in the fishing industry in the island. Moreover, in 1878 and 1879, when the products of the sea commanded extraordinarily high prices, the people gradually raised their standard of living, thinking that money could be at any time obtained, and very few ever thought of putting past a portion of their earnings for future contingencies. As already stated, however, their income, which was at one time enormous as expressed in paper, has gradually decreased in amount, until at present they scarcely obtain enough to carry on their employment. While their income has thus steadily decreased, it has been a matter of great difficulty for them to lower their standard of living in like proportion, and having neither reserve funds nor credit on which to borrow capital, many of the best established fishermen have been reduced to bankruptcy, while those apparently less unfortunate are in a hardly less deplorable condition when their financial affairs are revealed. No doubt the fishermen are not solely to blame, for they have been but victims of the general disturbance of the national economy; and though to a certain extent such disturbances can be controlled by the exertions of the Government, nothing human can be free from unexpected changes, and it is surely every man's concern to make necessary provision to meet such unlooked-for events. If the people are averse to the taking of such necessary precautions, it will be useless for the Government to endeavour singlehanded to protect their interests. I, therefore, suggest that the fishermen themselves should reflect on their conduct in the past, and take care not to be guilty of the same folly in the future.

The next circumstance demanding our attention is the inconvenience of transportation. Hokkaido is naturally ill-provided with fine harbours, while the seas that surround it are noted for their violence and for the prevalence of dense fogs, which greatly impede navigation. On land, also, various obstacles present themselves to check the extension of means of communication, even the river courses being rendered unfit for navigation by the presence of trees and other obstacles in their beds. Except between Hakodate, and Oshima and Nemuro, there is no regular line of steamship communication in Hokkaido, and as a consequence the price of articles of daily consumption, such as *sake*, *miso*, *rice*, *shoyu*, etc., is fully twice as high as in the south. The carriage of a bag of salt from Hakodate to Nemuro costs as much as 16 *sen*, so that the salt, which sells elsewhere at 25 *sen* a bag, commands at Nemuro 63 or 64 *sen*. The transportation thence to different fishing localities still more enhances the value. This is true of every other article imported from the south. The same circumstance, which enhances the prices of articles of consumption, operates to lower the prices of products. For instance, a commodity worth *yen* 4.00 per *koku* at Hakodate cannot be sold at the place of production at much beyond *yen* 3.00. These evil results of inconvenience in transportation are by no means limited to the case of fishermen, but apply equally to all other classes of the inhabitants. In order to develop the resources of Hokkaido, it must, therefore, be our first object to remove, as far as can be done by artificial means, the natural obstacles now impeding navigation and land transport. Although the island is poor in natural harbours, there are not wanting arms of the sea which can be rendered good places of shelter by the application of a greater or less amount of human skill. Such ports are, on the west coast, Oshima and Vohchi; and on the east coast, Urakawa, Horizumi,

Kushiro, Akeshi, Hannasaki, etc.; and I have no doubt that the list could be considerably extended. The coasts of Hokkaido are notorious for the abundance of dangerous rocks, and in view of the injuries these inflict on shipping and the extent to which they check navigation, it is of great importance to have the whole coast carefully sounded and surveyed. Most of the large navigable rivers, such as the Ishikari, Kushiro and others, are at present unfit for the passage of steam boats, their beds being full of obstructions. It will be a comparatively easy task to improve them, so as to fit them for navigation purposes. I am informed that the authorities have plans for cutting roads, and I hope that they will speedily carry out their scheme. As to the opening of mail lines to various ports in Hokkaido, I must look to the Nippon Yusen Kaisha. As it is impossible, however, to expect that a private company will undertake an enterprise which has little prospect of profit, it seems to me desirable to grant a certain amount of subsidy money to the company for its routes in Hokkaido. In a word, it is principally due to the inconvenience of transportation on land and sea that complete success is unattainable in the development of the land and sea resources of the island, and I earnestly hope that the authorities will speedily undertake the works above recommended—the construction of harbours, the sounding of the coast, the improvement of the river courses, and the opening of roads and mail lines.

(To be continued.)

#### DIARY OF A RESIDENT IN SŌUL.

The following extracts from the diary of Mr. Inoue Kakugoro, the editor of the Korean *Official Gazette*, are published in the *Fiji Shimpō*:—

September 13th.—Yesterday Mr. Chin Shun-tak, the Prime Minister, resigned, and Mr. Kim Hei-shi received the appointment of Minister of the Left. After repeatedly declining it, he has at length accepted the appointment to-day, and in an interview with His Majesty, presented a memorial. The ex-Prime Minister, Mr. Chin Shun-tak, has been appointed, together with Mr. Kim Kō-shu, the former Minister of the Right, to the office of *Han-fuji*, which means Retired Minister. *Han-fuji* are held in high reverence, and can at any time visit the King to advise His Majesty as to the political affairs of the day.

September 14th.—The memorials presented by high officials yesterday have surprised everybody. The newly appointed Minister of the Left, Mr. Kim Hei-shi, simply asked to be released from the responsibilities recently put on him; the officials of *gikundō* rank advised the King to devote himself to the acquisition of knowledge; while those of the rank of *Shōshu* entreated the King to recall the Retired Ministers. No official, therefore, made any reference to the real political affairs of the country. In this country, the Prime Minister, and the Ministers of the Left and Right are called the three Ministers of State, and occupy the highest places in the Government. Every measure of State had formerly to receive their sanction, and accordingly they wielded vast power. But during the last twenty or thirty years and until recently, the relations of the royal family exercised immense influence, and the three Ministers of State were relegated to a place of comparative insignificance. Still they had the power of giving their approval to administrative affairs, but of late the acquisition of power by a class of minor officials called *betsu-niiji* (special favourites of the King) has completely thrown the three Ministers into the shade. The latter accordingly have come to be regarded as merely titular dignitaries of State, and it is only once or twice in a month that they are admitted to the presence of the King. Every statesman, therefore, is now said to avoid nomination to these high positions.

The Minister of the Left, Mr. Kim Hei-shi, has again presented to His Majesty, a memorial, asking to be released from his new office. Mr. Kim says in the memorial that he has little capacity to manage successfully the internal and foreign affairs of his country, which are at present in a condition most difficult to handle. He complains that his advice to introduce reforms in the administration and to enforce neglected laws, had been unheeded by the King. He then proceeds to call the attention of His Majesty to what he calls "the eight grievances": (1) that the public money is squandered on useless works, leaving scarcely money enough to carry on the daily business of administration;—(2) that the people both in the capital and in the country are in a state of chronic pauperism on account of the abundance of robbers; (3) that, although the number of soldiers trained in foreign drill is in-

creasing, they are not kept under sufficient discipline, so that in ordinary times they are a nuisance to the citizens, and in times of war desert the ranks in large numbers; (4) that the circulation of the *tigosen* coins is disadvantageous to the people; (5) that the Government is incapable of obtaining the friendship and credit of the Treaty Powers, and constantly exposes itself to their derision and contempt; (6) that the King allows himself to be duped by his favourites, the *betsu-niiji*, and disregards the loyal counsels of the Ministers of State; (7) that the laws are not enforced; and (8) that the loyalty of the people is being alienated by the appointment of local officials from those alone who succeed in procuring the patronage of the favourites of the King. Even if Mr. Kim had the confidence of His Majesty, he avows himself incapable of grappling with these "grievances," and being without that confidence, he says he is compelled to ask to be released from the high responsibilities now put on his shoulders. The King has replied that His Majesty is very well aware of the loyalty of Mr. Kim; that what the new Minister of the Left says about the "grievances" is all true, and that His Majesty hopes that he, the King, may not be refused the opportunity of repenting his follies.

From the time of my first arrival here, in the close of 1882, until the *coup d'état* of 1884, the positions of the Prime Minister and the Ministers of the Left and the Right were filled respectively by Kō Jun-lok, Kim Hei-tok, and Chin Sun-tak. In December, 1884, the last-named gentleman became Prime Minister, and in January, 1885, Messrs. Kim Kō-shu and Kim Hei-shi were appointed respectively Ministers of the Left and Right. The Minister of the Left is officially above the Minister of the Right; but Mr. Kim Kō-shu is inferior in birth to, and younger in age than, Mr. Kim Hei-shi; and further they belong to different political factions, the former being identified with the Eastern, and the latter with the Western faction. On account of these circumstances Mr. Kim Hei-shi felt wronged, and the two Ministers were not on very good terms with each other, so that in April or May, 1885, they both resigned. At that time the Japanese press interpreted their hostility to mean that Mr. Kim Hei-shi was a number of the philo-Chinese party, while Mr. Kim Kō-shu leaned towards Japan. In truth, they neither of them lean to one country or to the other, but if such an inclination has to be ascribed to them, it would be nearer the truth to say that Mr. Kim Kō-shu is philo-Chinese and Mr. Kim Hei-shi philo-Japanese. After their retirement, Mr. Chin continued to be Prime Minister until the close of last year, when he resigned his office and Mr. Kim Hei-tok was called to become Minister of the Right. But the latter declined the nomination and Mr. Chin was again recalled to office. Recently he again resigned, and Mr. Kim Hei-shi has been appointed Minister of the Left. At present the political power of this country is in the hands of the Western faction, and accordingly the new Minister will be very popular. But his attempt to oust the *betsu-niiji* seems hardly politic, however sincere his motives may be. The King is fond of hearing about other civilized countries, and is ever ready to patronize any of his subjects who either understands a foreign language or has visited a foreign country. Therefore, to attempt to remove such persons at once from the court, would be an imprudent policy. Mr. Kim Kō-shu also still enjoys the confidence of the King; so that from every point of view, it is to be regretted that Mr. Kim Hei-shi has put himself in an antagonistic position to the *betsu-niiji*. But I firmly believe that, if he shows decision enough, he will effect great reforms in Korean politics. *En passant* Mr. Kim Hei-shi belongs to that section of the Kims which is called the Anō Kims. The Kims are bound by their family vow "not to sit with their faces towards China, nor to speak to or have intercourse with the Chinese." It is said that the new Minister is strictly faithful to his vow.

The custom of the country requires that a statesman who has been called to the office of either of the three Ministers of State, shall shut himself up in his house and refuse the visits of relatives and friends, thereby to show to the country that he thinks himself unworthy of the new honour. The King first calls him by letter, but he excuses himself. Officials of the *fuku shōshu* rank are next sent to his residence, and on his still remaining firm in declining the offer, those of the *shōshu* rank are dispatched, but he of course persists in excusing himself. At this point the King may give up his attempt, but if he really desires to effect the appointment, the statesman is brought to the palace by one of the high officials. He then presents his memorial to the King, and if his opinion is endorsed by His Majesty, he is appointed a Minister. But Mr. Kim Hei-shi wished to resign after his memorial was accepted, and, in

doing so, he is said to have had an object in view. As already said, the position of the three Ministers has become nominal, the real power having been usurped by the relations of the Royal family and the *betu-niigi*, and, therefore, Mr. Kim Hei-shi desires to remedy this evil and invest his position with more or less power, before proceeding to take political affairs into his hands. The people appear to be pleased with his memorial and to wish to see his recommendations carried out. The section of the document relating to the foreign relations of the country seems to have made a favourable impression upon the minds of the Foreign Representatives here, who desire his speedy assumption of office.

## TIME TABLES AND STEAMERS.

## YOKOHAMA-TOKYO RAILWAY.

TRAINS LEAVE YOKOHAMA Station at 6.35, 8.00, 8.50,\* 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50,\* 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

TRAINS LEAVE TOKYO (Shimbashi) at 6.35, 8.00, 9.15,\* 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50,\* 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

FARES—First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90.

Those marked with (\*) run through without stopping at Tsurumi, Kawasaki and Omori Stations. Those marked (†) are the same as above with the exception of stopping at Kawasaki Station.

## TOKYO-MAYEDASHI RAILWAY.

TRAINS LEAVE TOKYO (Uyeno) at 5.25 and 9.25 a.m. and 12.25 and 4.50 p.m.; and MAYEDASHI at 5.25 a.m. and 12.25 and 4.50 p.m.

FARES—First-class (Separate Compartment), yen 1.80; Second-class, yen 2.28; Third-class, yen 1.14.

## TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI at 6.50 and 9.55 a.m., and 1.00 and 4.10 p.m.; and YOKOKAWA at 8.25 and 11.30 a.m., and 2.40 and 5.45 p.m.

## TOKYO-UTSUNOMIYA RAILWAY.

TRAINS LEAVE TOKYO (Uyeno) at 5.25 a.m., and 12.25 and 4.50 p.m.; and UTSUNOMIYA at 9.35 a.m., and 12.25 and 5.00 p.m.

FARES—First-class, yen 3.50; Second-class, yen 2.10; Third-class, yen 1.05.

## UTSUNOMIYA-NASU RAILWAY.

TRAINS LEAVE UTSUNOMIYA at 9.55 a.m., and 4.40 p.m.; and NASU at 7.35 a.m. and 2.40 p.m.

FARES—First-class, yen 1.10; Second-class, yen 74; Third-class, yen 37.

## SHIMBASHI, SHINAGAWA, AND AKABANE JUNCTION.

TRAINS LEAVE SHINAGAWA at 8.49 and 11.49 a.m., and 2.44 and 6.29 p.m.; and AKABANE at 9.55 a.m., and 12.50, 4.05, and 8.35 p.m.

FARES—First-class, yen 70; Second-class, yen 46; Third-class, yen 23.

## KOBE-OTSU RAILWAY.

TRAINS LEAVE KOBE (up) at 5.55, 7.55, 9.55, and 11.55 a.m.; and 1.55, 3.55, 5.55, 7.55, and 9.55 p.m.

TRAINS LEAVE OSAKA (up) at 4.45, 7.6, 9.6, and 11.6 a.m.; and 1.6, 3.6, 5.6, 7.6, and 9.6 p.m.

TRAINS LEAVE KYOTO (up) at 6.45, 8.45, and 10.45 a.m.; and 12.45, 2.45, 4.45, 6.45, and 8.45 p.m.

TRAINS LEAVE OTSU (down) at 5.45, 7.45, 9.45, and 11.45 a.m.; and 1.45, 3.45, 5.45, and 7.45 p.m.

TRAINS LEAVE KYOTO (down) at 6.45, 8.45, and 10.45 a.m.; and 12.45, 2.45, 4.45, 6.45, and 8.45 p.m.

TRAINS LEAVE OSAKA (down) at 6.25, 8.25, and 10.25 a.m.; and 12.25, 2.25, 4.25, 6.25, 8.25, and 10.25 p.m.

FARES—Kobe to Osaka: First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90. Kobe to Kyoto: First Single, yen 2.25; Second do., yen 1.40; First Return, yen 3.55; Second do., yen 2.10. Kobe to Otsu: First Single, yen 2.85; Second do., yen 1.70; First Return, yen 4.30; Second do., yen 2.55.

## OCEAN AND COASTING STEAMERS.

Steamships are regularly despatched from the Port of Yokohama for the following destinations:—

For EUROPE—The P. & O. Company's steamer sails fortnightly on Tuesday, via Inland Sea Ports, making connection with the English mail at Hongkong, for Marseilles and Plymouth. The Messageries Maritimes Co.'s steamer sails fortnightly on Saturday, carries the French mail, and makes connection at Hongkong with the mail-boat for Marseilles.

## YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatoba daily at 8.30 a.m., and 12.00 m., and 4.15 p.m.; and leave Yokosuka at 6.30 and 11.00 a.m., and 4.00 p.m.—Fare, 20 sen.

## PASSENGERS.

## ARRIVED.

Per British steamer *Teheran*, from Hongkong:—Mr. and Mrs. Stainland, Mrs. and Miss Crawford, Messrs. Litten, Ritter, Dalmann, Desker, Lacaca, Tata, O. Rejee, and G. Caldwell in cabin.

Per American steamer *San Pablo*, from Hongkong:—Mr. T. Naudin in cabin.

Per Japanese steamer *Tokio Maru*, from Shanghai and ports:—Messrs. Bredon, J. Lang, A. J. Lines, Yoda, Oda, Hakayama, Akaboshi, and Nishikawa in cabin; Mr. and Mrs. Yamawaki, and Mr. Hakazawa in second class; and 2 Europeans, 4 Chinese, and 41 Japanese in steerage.

Per French steamer *Monsiehl*, from Hongkong via Kobe:—Messrs. Lebarbier, J. Sibiodan, Yoshijiro, and Wilinson in cabin.

Per Japanese steamer *Nagato Maru*, from Kobe:—2 Japanese in cabin; and 75 Japanese in steerage.

## DEPARTED.

Per American steamer *City of Peking*, for San Francisco:—T. I. H. Prince and Princess Komatsu and 2 servants, Mr. and Mrs. Y. Sannomiya, Count Date, Count Arima, and 2 servants, Professor and Mrs. Fenolosa, 2 children and 2 nurses, Dr. W. S. Bigelow, Messrs. N. Tatsumi, T. Bojiri, Arima, F. H. K. Dudacher, T. Morimura, P. L. Joney, Hoshi, H. Adams, J. La Farge, and K. Okakura in cabin.

Per Japanese steamer *Satsuma Maru*, for Shanghai and ports:—Mrs. J. Simpson and child, Rev. Mr. and Mrs. Oumans, Mr. and Mrs. Tibay and five children, Mrs. Yeend Duer and infant, Mrs. K. Oka, Messrs. N. Schlessler, Ofuji, T. Southey, C. H. Fearon, S. S. Benjamin, Ishii, Yoshida, E. Bouger, J. Riack, E. Bois, J. Valentine, A. Anatoly, and A. Kerr in cabin; Mrs. Kimura, Messrs. Kito, Nomura, and Okada in second class; and 70 Japanese in steerage.

Per French steamer *Tanais*, for Hongkong via Kobe:—Mrs. T. E. Candler, one infant and two servants, Messrs. Willers, Leaf, Bancal, Al. Harrison, S. Yoshida, D. Thompson, Ikejiri, and Henry Woods in cabin.

## CARGOES.

Per British steamer *Teheran*, from Hongkong:—2,360 packages merchandise, 3,719 bags sugar.

Per Japanese steamer *Satsuma Maru*, for Shanghai and ports:—Treasure, \$37,000.00.

Per French steamer *Tanais*, for Hongkong via Kobe:—Silk, for France 1,040 bales.

## REPORTS.

The British steamer *Teheran*, Captain Seymour, reports:—Left Hongkong the 25th September, at 2.50 p.m. and experienced strong N.E. and E.N.E. winds with considerable head sea, up as far as Turnabout; thence light N.E. wind and smooth sea. Arrived at Nagasaki the 29th, at midnight, and left at 5 p.m. the 30th, had variable winds and fine weather. Arrived at Kobe, at 5.50 a.m. the 2nd; and left at 10.15 p.m. on the same day; had moderate N.E. wind and considerably confused sea off Osima. Arrived at Yokohama, the 4th October, at 7 p.m.

The British steamer *Benlarig*, Captain J. M. Clark, reports:—Left Hongkong the 28th September, at 3.30 p.m. and experienced fresh to moderate E., N.E., and northerly winds, with fine and clear weather and a heavy S.E. swell throughout the passage. Arrived at Yokohama the 7th October, at 10.30 a.m.

The Japanese steamer *Tokio Maru*, Captain Wynn, reports:—Left Shanghai the 1st October, at 4.5 p.m. and experienced light to moderate breezes from N.E., and fine clear weather. Arrived at Nagasaki the 3rd, at 3.8 a.m. and left the same day, at 4.20 p.m.; had calm and fine weather. Arrived at Shimonsaki the same day, at 6 p.m.; and left at 8.30 p.m. had fine weather and light easterly winds. Arrived at Kobe the 6th, at 5.45 a.m., and left at 9 p.m. with light wind and fine weather throughout the passage. Arrived at Yokohama the 8th October, at 2 a.m.

The Japanese steamer *Nagato Maru*, Captain Young, reports:—Left Kobe the 6th October, at noon and experienced strong N.N.E. winds throughout the passage. Arrived at Yokohama the 8th October, at 6.30 p.m.

The British steamer *Auton*, Captain Wallace, reports:—Left Kobe the 7th October, at 7 p.m. and experienced strong N.N.E. winds and smooth sea to Reck Island; thence to port calm and fine weather. Arrived at Yokohama the 9th October, at 7.30 a.m.

## LATEST COMMERCIAL.

## IMPORTS.

Rather a sudden demand has sprung up for Yarns within the past few days; prices have advanced 25 to 75 cents per picul on certain spinings with a fair business doing, but with this exception very little change has taken place in the Market, and the aggregate of transactions is again on a small scale, with very little enquiry for Piece Goods generally.

YARNS.—Sales for the week amount to 700 bales of English spinings chiefly 28/32, which have shown the greatest improvement in prices; and 200 bales Bombays, for which easier rates have been accepted.

COTTON PIECE GOODS.—2,200 pieces 7 lbs. Shirts, 1,000 pieces 8½ lbs. and 2,500 pieces 9 lbs. are all the sales that have been reported. Quotations are unaltered, but nominal to a very great extent.

WOOLLENS.—1,000 pieces Mousseline de Laine, 250 pieces Italian Cloth, 1,000 pairs Blankets, and a few odd lots of Cloth have been disposed of. The Market has been very disappointing for this season of the year.

## COTTON YARNS.

	PER PICUL.
Nos. 16/24, Ordinary .....	\$26.00 to 27.50
Nos. 16/24, Medium .....	28.00 to 29.00
Nos. 16/24, Good to Best .....	29.25 to 30.00
Nos. 16/24, Reverse .....	30.00 to 31.00
Nos. 28/32, Ordinary .....	30.50 to 31.25
Nos. 28/32, Medium .....	31.50 to 32.50
Nos. 28/32, Good to Best .....	32.75 to 33.50
Nos. 38/42, Medium to Best .....	34.00 to 35.50
No. 32, Two-fold .....	32.50 to 34.00
No. 42, Two-fold .....	35.50 to 39.50
No. 208, Bombay .....	26.00 to 27.50
No. 168, Bombay .....	24.75 to 26.25
Nos. 10/14, Bombay .....	23.00 to 24.50

## COTTON PIECE GOODS.

	PER PICUL.
Grey Shirtings—8½ yds, 38 yds, 39 inches .....	\$1.70 to 2.10
Grey Shirtings—9½ yds, 40 yds, 45 inches .....	2.20 to 2.60
F. Cloth—7½ yds, 24 yds, 45 inches .....	1.45 to 1.57
Indigo Shirting—12 yds, 44 inches .....	1.60 to 1.75
Prints—Assorted, 24 yds, 30 inches .....	1.70 to 2.35
Cotton—Italians and Sateens Black, 32 inches .....	0.07 to 0.14
Turkey Reds—1½ to 2½ yds, 24 yds, 30 inches .....	1.20 to 1.30
Turkey Reds—2½ to 3½ yds, 24 yds, 30 inches .....	1.40 to 1.60
Turkey Reds—3½ to 4½ yds, 24 yds, 30 inches .....	1.28 to 2.20
Velvets—Black, 35 yds, 22 inches .....	6.25 to 7.60
Victoria Lawns, 12 yds, 42-43 inches .....	0.65 to 0.72
Taffetas—12 yds, 43 inches .....	1.35 to 2.05

## WOOLLENS.

	PER PICUL.
Plain Orleans, 40-42 yds, 32 inches .....	\$4.00 to 5.50
Figured Orleans, 29-31 yds, 31 inches .....	3.25 to 4.00
Italian Cloth, 30 yds, 32 inches .....	0.21 to 0.31
Mousseline de Laine—Crape, 24 yds, 31 inches .....	0.14 to 0.16
Mousseline de Laine—Italian, 24 yds, 31 inches .....	0.20 to 0.24
Mousseline de Laine—Varen, 24 yds, 31 inches .....	0.30 to 0.40
Cloths—Flats, 54 to 56 inches .....	0.35 to 0.45
Cloths—Presidents, 54 to 56 inches .....	0.50 to 0.60
Cloths—Union, 54 to 56 inches .....	0.40 to 0.60
Blankets—Scarlet and Green, 6 to 4½, per lb .....	0.37 to 0.45

## METALS.

No change to notice in this market. Buyers generally are wary, and will not operate freely in any department. Dealers profess themselves open for business; but do not complete their purchases, hoping by delay to secure some turn in price.

	PER PICUL.
Flat Bars, ½ inch .....	\$2.60 to 2.65
Flat Bars, 1 inch .....	2.70 to 2.75
Round and square up to 1 inch .....	2.50 to 2.75
Nailrod, assorted .....	2.40 to 2.50
Nailrod, small size .....	2.60 to 2.70
Wire Nails, assorted .....	4.50 to 5.50
Tin Plates, per box .....	5.60 to 5.80
Pig Iron, No. 3 .....	1.20 to 1.25

## KEROSENE.

Business continues on an even keel without much excitement on either side. Quotations may be left unchanged, although some buyers profess to be waiting for further auction-sales. Deliveries continue on a good scale; the *Faronius* took 5,000 cases to Hakodate (in addition to those mentioned last week as going per *Utrecht*), so our present stock is not much over 500,000 cases.

	PER CASE.
Devoe .....	\$1.77 to 1.80
Comet .....	1.72 to 1.75
Stella .....	None

## SUGAR.

There has been but little demand for Formosa and Manila descriptions, and Whitecane not in such request. Prices are unchanged.

	PER PICUL.
White, No. 1 .....	\$7.25 to 7.50
White, No. 2 .....	6.50 to 5.90
White, No. 3 .....	5.60 to 5.70
White, No. 4 .....	4.95 to 5.40
White, No. 5 .....	4.60 to 4.85
Brown Formosa .....	4.05 to 4.10

## EXPORTS.

## RAW SILK.

Our last issue was of the 1st instant, since which date we have had a large daily business resulting in the Settlement of 1,250 piculs, distributed thus:—*Hanks* 200 piculs, *Filatures* and *Reels* 950 piculs, *Oshu* 50 piculs, *Sundries* 50 piculs. In addition to these figures the native Export *Kaisa* have taken up 100 piculs for the United States Markets.

Again the bulk of the trade has been for Europe: and the outgoing French mail will have a large quantity for that destination. Some demand also is apparent for the American trade, but buyers for New York are at present distanced by their European confidres both as to quantity and price. Quotations for some kinds are about \$20 higher than a week ago, with exchange strong and tending upwards. Holders generally are very firm and ask a fresh advance on every new sale. Arrivals have been plentiful, and in spite of the large business passing, the Stock-list shows a slight increase on the week. At the same time we must soon expect the quality to fall off, especially in some districts where the approaching cold weather will interfere with reeling processes.

There has only been one departure during the interval, namely the *City of Peking* on the 2nd inst. She carried 481 bales for the United States, and the *Tanais*, leaving tomorrow, should take a large shipment for France. Total Export to date is now 4,230 piculs, against 4,165 piculs last year and 7,587 piculs to same date in 1884.

*Hanks*.—The buying has continued on a fair scale in spite of sundry rejections. Settlements are about 200 piculs, and include so-called *Nhimonita* at \$650, *Annaka-Takasaki* \$615, *Maibash* \$610, *Hachoji* \$570.

*Filatures*.—A very large business, buyers for Europe operating freely. Fine sizes are pushed up until a small parcel extra quality *Yonesawa* is entered at \$820, *Yechu* fil. *Fukumitsu* \$800, *Iwa* fil. *Taiyosha* \$780, *Uzen*, *Kosha*, and *Bushu* sorts at \$750. In full sizes a fair amount of trade, ranging from *Nansinsu* \$770, *Hakusuru* \$760, *Kameisha* \$750, *Miyataguni* \$750, *Tenrasha* \$750, with *Kosha* sorts at from \$730 to \$700 according to quality. For *Rokkusha*, *Gakusha*, and similar Silks, \$800 is now asked, and some holders of these crack chops refuse to sell at all. There has been some buying of these good *Shinsu* Silks on this market by Japanese clients but whether for shipping or speculation does not yet appear.

*Reels*.—Some business in these at higher prices both for Europe and America. There is now nothing to be had under \$650, and we cannot wonder at it when buyers willingly pay the same price for *Hanks* not *Re-reels*. Nothing done in the crack marks, the trade chiefly running on *Bushu* sorts costing from \$650 to \$700. We presume *Tortoise* chop would be held for \$720.

*Kakeda*.—No business, holders being far above the limits which exporters can pay at present.

*Oshu*.—Some little buying in both *Hamatsuki* and *Sendai* kinds, at about \$620. The *Hamatsuki* at this figure are understood to be something super-excellent.

*Sundries*.—Several purchases in *Nagahama* and *Yechusen* at from \$450 to \$480 per picul.

## QUOTATIONS.—(NEW SILK.)

<i>Hanks</i> —No. 14 .....	\$670 to 680
<i>Hanks</i> —No. 2 (Shinsu) .....	650 to 660

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

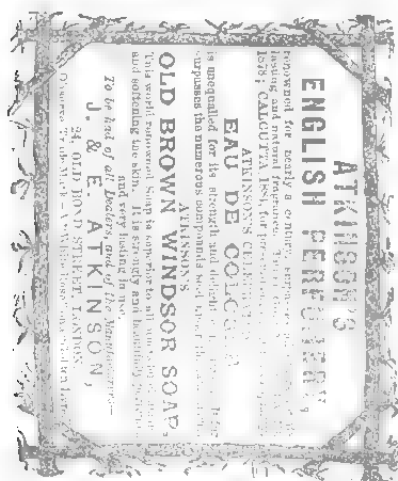

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 16TH, 1886.

### SUMMARY OF NEWS.

THE Mitsui Bank has given up the practice of closing on Sundays.

MR. TAKASAKI, Governor of Tōkyō, left the 10th instant for Seiohara.

H.I.H. PRINCE HARU visited the Military School the afternoon of the 8th instant.

H.I.H. PRINCE YAMASHIMA, who had been staying at Arima, left for the capital the 8th instant.

THE *Naniwa Kan*, which has been overhauled at Yokosuka, came out of dock the 7th instant.

THE survey for the new forts at Tsushima has been commenced. The number of forts will be three.

THEIR IMPERIAL HIGHNESSES PRINCE AND PRINCESS FUSHIMI left Tōkyō the 8th instant for Atami.

H.I.M. THE EMPRESS visited the Peers' Female School the 12th instant, and inspected the various departments.

EXPERIMENTS with Murata rifles lately manufactured at the Koishikawa Arsenal, commenced the 11th instant.

THE priests of various sects at Kobe are at present discussing regulations as to their respective official robes.

DR. KIKUCHI TSUNESABURO, first class army surgeon, and Dr. Takeshima Tsutomu, second class army surgeon, who have been ordered to

complete their studies in Germany, will leave Japan about the 18th instant.

ACCORDING to official returns of the Judicial Department, there are at present 1,052 lawyers practising in Japan.

THE festival of Atago Jinji, Shiba, which was postponed in September last, will take place the 23rd and 24th instant.

MR. YOSHIKAWA, Vice-Minister of State for Home Affairs, has been ordered to visit Mie and four other prefectures.

MR. KATSUMADA, Prefect, and Mr. Iwamoto, Chief Commissioner, of Aichi Prefecture, arrived in the capital the 8th instant.

THE officers of the Osaka Garrison have got up a rifle competition to take place at the Castle range. The meeting will last three days.

MR. OSHIMA SENZO, who has been staying for some time in the United States by order of the War Department, has been recalled.

MR. KATO HIDEKAZU, a clerk in the Foreign Office, has been appointed as student secretary in the Japanese Legation at Peking.

THE total quantity of rice that changed hands at the Shichijō Rice Exchange, Kyōto, during September last, was 136,590 *koku*.

THE military cholera hospital at Okubomura was closed the 10th instant, and the hospital at Komagome will be closed shortly.

THE first silkworm egg-cards of the season arrived at the warehouse of Mr. Kawagita, Yokohama, the 10th instant, from Iwashiro.

H.I.H. PRINCE FUSHIMI has been permitted to accept and wear a first-class decoration conferred on him by H.M. the King of Denmark.

MR. MATSUDA TAKASHI, of the Mitsui Bussan Kaisha, will start from Japan the beginning of December to visit branch offices in Europe.

MR. KOJIMA, President of the Osaka Court of Appeal, left for Kochi Prefecture the 7th instant, to visit the local courts under his jurisdiction.

CAPTAIN KIMOTSUKI, who had been surveying the coast of Chishima, in Hokkaido, returned to the capital the 9th instant in the *Takasago Maru*.

THE total number of old curios and swords purchased by Prince Napoleon while staying in Japan is said to have been 345, valued at *yen* 6,890.

PRINCE LOUIS NAPOLEON intimated to the Japanese Government by telegram, the 12th instant, news of his arrival at San Francisco the 11th instant.

THE total quantity of raw silk sold to foreign firms during September last was 5,092 bales; 9,172 bales arrived in Yokohama, 1,022 bales were returned; 507 bales were exported and

98 bales were sent back to the interior. On the 1st instant 15,818 bales remained in stock.

THE Sanitary Office in the Ogawamachi Police station was closed the 10th instant, and the sanitary offices in other stations will shortly be closed.

COUNT AND COUNTESS INOUE will give an entertainment at the Rokumeikan on the birthday of H.I.M. the Emperor, which falls the 3rd proximo.

VERNACULAR journals say that H.I.M. the Emperor will visit Kyōto in the spring, and that the month of March is fixed for the Imperial journey.

REPORTS from various parts of the country show the steady decline of cholera, and in several prefectures there have been no fresh cases for several days.

THE Italian rice which was sent by the Agricultural and Commercial Department to Fukuoka Prefecture to be planted there, is said to have produced a good crop.

THE Japanese Government has been asked to send some exhibits to the International Marine Produce Exhibition which will be held in May next year at Havre in France.

MR. EGUCHI TAKAYOSHI, late Chief Inspector of Police, who was promoted the 11th instant to the rank of fifth class of second grade, died the same day from lung disease.

THE total value of the articles sent to Gensan from Japan for the first half of this year was *yen* 301,516, and the total amount exported from Gensan to Japan was *yen* 277,760.

THE theatrical managers of Osaka have been summoned to the Police Office and instructed to take measures for the improvement, from a sanitary view, of their respective houses.

MR. ISHII, Prefect of Mie Prefecture, who has been staying in the capital for some time, is said to have all but completed his mission, and will leave for his post about the 20th instant.

IN connection with the proposed Osaka Waterworks, officials from the Engineering Bureau have been inspecting the sources of supply, measuring the flow of water, and making other surveys.

MESSERS. NAGANO YOSHIMASA and Hayashi Nagayoshi, of the Imperial Household, have been permitted to accept and wear fifth-class decorations conferred on them by H.M. the King of Hawaii.

COUNT YOSHII, Vice-Minister of State for the Imperial Household, and Mr. Kataoka Toshikazu, an Imperial Chamberlain, who had been ordered to proceed to Akita Prefecture, left the capital the 8th instant.

THE drawing for Industrial Bonds, which was fixed by the Finance Department to redeem *yen* 20,000, took place the 12th instant in the First

National Bank. The officers of the National Debt and Record Bureau and representatives of National Banks were present.

THE fine art society, which was projected by Mr. Okubo Koki, will now be established in the Asakusa Park. Mr. Okubo has applied to the Denbo-in to lease the *Nenbuisudo* at the back of the Temple of Kan-non.

THE festival of *Daijingu*, at Hibiya, which was postponed owing to the prevalence of cholera in the capital, will take place the 16th instant and two following days. The *No* performance and concert will be held the 17th instant.

OWING to the great abatement of cholera in the capital, the sanitary boats hitherto stationed at Nakazu, Funamatsuchō, Kanasugi (Shiba), the water-course of Kazusa, and the 2nd fort off Shinagawa, were withdrawn the 7th instant.

As an indication of a revival in trade in the neighbourhood of Osaka, it is stated that *saké* is in much better demand at higher prices, and that 50 per cent. more will be brewed in 1887 than was manufactured during the present year.

ACCORDING to official regulations, the Kanagawa Local Government contemplates the establishment of police stations at Kurakigori, Osumigori, Yurugigori, Kami-Tsukugori, South-western Tamagori, Aikōgōri, and Kamakuragori.

A TELEGRAM received by the Doshinsha, Yokohama, from New York, dated the 9th instant, states that the best *Zaguri* Silk is priced at \$4.75 (20 cents higher than the previous telegram), and as stocks are small, holders are strong.

THE export of Japanese fans has largely increased of late from Kyōto and Osaka, and from the latter place the value of these articles exported during the first half of the present year was *yen* 37,772, an increase of *yen* 16,111 over the export during the same period last year.

FROM the first appearance of cholera on the 2nd of last January up to the 8th instant, the number of cases, recoveries, and deaths in Kobe and Hyogo were respectively 1,885, 258 and 1,617. The figures for the remainder of the prefecture were 4,346, 804 and 3,112.

CHOLERA has so far abated generally that the restriction upon the sale of certain articles of food and upon opening places of amusement have been almost entirely removed. It has also been found unnecessary to continue the disinfection of passengers on steamers and railroads.

THE total number of visitors to Fuji-yama for sixty days from 3rd July to 2nd September last was 16,005, of whom 9,792 men and 376 women (Japanese), and 161 men and 59 women (foreigners) ascended from Yoshidamura, Yamanashi Prefecture; and 4,786 men and 540 women (Japanese), and 108 men and 73 women (foreigners), from Ichinomiya, Shizuoka Prefecture.

IMPORTS generally have not improved, though there has been a good demand for Yarns, and 1,200 bales of English spinings have been sold at full rates, in addition to some small lots of Bombays; the latter, however, were very dull at the close. Cotton Piece-goods and Woollens have been in such small request that the transactions of the week are not worth recording;

and prices are accordingly quite nominal. With heavy arrivals of Metals and dealers pretty well stocked, prices have slightly declined; a fair quantity of Bar, Sheet, and Pig Iron, however, has changed hands. Tin Plates hold their value, stocks being rather low; on the other hand, Wire Nails are a drug, the already accumulated stock being increased by large quantities recently landed. Kerosene has been worked off in fairly large lots, though top figures are hard to get; the enquiry, however, continues, and dealers would go on at a further small reduction. Retail dealings in Formosa sorts have been the sole business in the Sugar market, and for the present demand stocks are more than ample. Of Exports, Silk has been largely dealt in, at prices which indicate a strong and advancing market; and of the 1,500 bales settled during the week more than one-fifth has been by direct shipment. The French and American mail steamers each took over 1,000 bales, and though supplies come in freely they hardly keep pace with the good demand. In Waste Silk there has also been an extensive business, close upon 1,000, in addition to a direct shipment of 200, bales. Prices are fully maintained, and an advance for superior grades has been paid. The Tea trade is on an even keel, and prices are unchanged. All sorts have had a turn, and the total receipts to date are nearly 40,000 piculs more than at same time last season. Foreign Exchange has steadily risen, and closes firm.

#### NOTES.

It is said to be the intention of the authorities to construct a theatre in Tōkyō in foreign style as a preliminary step in the large programme of stage reform now upon the *tapis*. Certainly nothing could be more needed than a good building for theatrical representations. The best theatre in Tōkyō, the Shintomiza, scarcely deserves to be called anything but a shanty. It is constructed of the roughest timbers; the interior is absolutely without decoration of any sort, and to go behind the scenes is like visiting a dirty store-house in the slums of a backwoods city. How two thousand people—the regulation number—can be packed into such a place it is difficult to conceive, and how they could get out of it in the event of fire is still more perplexing. But it strikes us that if the Treasury is going to expend a large sum on the construction of a theatre in foreign style, some steps should be taken at the same time to familiarize Japanese actors with the ways and appliances of the foreign stage. In no direction have the theatres of Europe, above all of England, progressed so much of late years as in the matter of stage accessories. London has now grown to such enormous dimensions that it can furnish a practically unlimited number of audiences, and a good play may consequently run for months. Under such circumstances managers can afford to be lavish in the manner of mounting a piece. The utmost realism has been attained in every detail of scenery and appurtenance. No expense is thought too great by any of the three great managers if the result brings them nearer to their ideal. We hear of from thirty to forty thousand dollars being spent on getting up a single piece, which may or may not turn out a hit. London theatres are pre-eminent for their enterprise in this respect. Their reputation is so great that American managers never think of

supplying their wants at home, but procure all their scenery and stage accessories from London. Actual inspection of the English theatres and their advices by Japanese experts would do more for the improvement of the histrionic art in this country than several years of instruction at a distance. Why should not a commission consisting of two actors—say Ichikawa Danjuro and Sadanji—a decorator and a stage manager, be sent for a few months to London at the public expense? It strikes us that this would be the most practical and effectual of all possible measures of theatrical reform, and we strongly recommend it to the consideration of Messrs. Suematsu, Toyama and their fellow thinkers.

THE Directorate of the Shanghai Waterworks Company is to be moved from London to Shanghai. This step is the immediate result of a suggestion addressed to the Board by 56 shareholders, representing some 2,700 shares. The waterworks have not hitherto proved a success. At the outset a great future was predicted for them; their scrip sold at a premium of 100 per cent., and the company could with difficulty be induced to fix its maximum dividend at 8 per cent. The Chinese, however, once more proved that their conservatism is of the sturdiest type. They persisted in preferring dirty creek or river water at twenty cash a bucket to pure filtered water at six or eight cash. No doubt the guild of water-carrying coolies had a large share in keeping things in the old groove. The guild numbers several thousands, and its members naturally resented an innovation which would have deprived them of employment. But it would seem that this conservatism has at length given way. The superior quality and greater cheapness of the water supplied by the Waterworks Company have begun to be recognised in China-town, and the shareholders, who have hitherto been obliged to possess their souls in patience, are now looking forward to a fat reward. Mr. W. G. Howell, replying as Secretary to the suggestion that the Directorate should be moved to Shanghai, says:—

The Directors are of opinion that the time is at hand, if, indeed, it have not already arrived, when the disappearance of much of the prejudice of the native population will combine with a general and active sense of the advantages afforded to the entire community by the Company's operations, to produce a larger and more remunerative demand for its supplies of water. To this period the Board have always looked forward as the term at which it would be desirable that the Directorate of the Company should be removed to Shanghai, and I am pleased to be able to inform you that steps in this direction were taken very shortly after the annual general meeting of the present year.

We confess that we do not quite see the connection between the "disappearance of the prejudice of the native population" and the removal of the Directorate to Shanghai, but the shareholders will probably dispense with reasons so long as they get what they want.

A CRITIC must be of a sentimental turn when he indignantly wants to know what becomes of the Egyptian mummies after they are unwrapped and exposed to scientific scrutiny. Queen Nefertari was the ancestress of all the mighty Pharaohs of the Eighteenth Dynasty, "the greatest race of kings of one family which ever probably reigned on earth—a race which produced the three Amenhataps, and the three Thothnees, as well as Queen Hatasoo, and that extraordinary genius, Khoo-en-Aten." But when her mummy was unwrapped, it emitted "so foul an odour that it became necessary to get rid of it." How were the royal relics "got

rid of"? That is the question posed by the *Saturday Review* with much caloric. Were they buried with a monument to mark the spot, or were they burned and "the ashes reverently gathered up and placed in an urn in the museum"? Or where they simply dumped in the sea? The same awful uncertainty shrouds the ultimate disposal of many other kingly corpses, some of whose mummies were ancient before Alexander the Great began his career of conquest. The *Saturday Review* is much grieved about it all, and reflects sadly on the fact that "the two modern nations who have wrought between them the greatest destruction of old monuments should have been the two chiefly represented at the finding of the mummies' coffins; that Frenchmen and Turks should be the trustees of all the ages which have elapsed since the patriarch of the Egyptian Empire perished in driving out the Hyksos."

THERE is, perhaps, no foreigner who has done more to educate public intelligence in Japan than Mr. W. Denning. An exceptional command of the Japanese language, combined with untiring energy, enables him to accomplish, generally from purely philanthropic motives, feats of lecturing and teaching which, even to a man of leisure, might appear formidable. We have often thought that one of the principal factors of progress in Japan is the disposition—created since the Restoration—to impart instruction to the public by means of lectures and speeches. One hears constantly, now-a-days, of large audiences assembling to listen to discourses on subjects of which not even the student classes had any conception twenty years ago. There is no doubt that the Japanese have a great aptitude for public speaking. So much might be inferred from the performances of their remarkable *Kōshakushi* and *Hanashika*, without the additional evidence which nine out of every ten private individuals offer whenever they are required to go through the hitherto unconceived ordeal of making a speech. The probability is, therefore, that oral teaching from the platform or the rostrum will henceforth constitute an important element in the national education, and men like Mr. Denning deserve gratitude for the impulse which they have given to the development of this natural aptitude. We have before us a Japanese volume of 139 pages entitled *Den-nin Yensetsu-shu*, or a "Collection of Denning's Lectures." It appears to have been published at the risk of Mr. Nagao, and it comprises a selection from lectures delivered by Mr. Denning before various societies during the past two years. We learn from the preface that these lectures are printed as they were delivered in Japanese, most of them having been taken down by short-hand writers, and revised by their author, before appearing in the journals from which they are now extracted. It is worthy of note *en passant* that the apparently insuperable difficulties of adapting a stenographic system to the Japanese language have been overcome, and that short-hand reporting is now a largely practised art in the capital. The evidence of its success afforded by this volume of lectures is very satisfactory. The lectures are seven, their subjects being: "The Consummation of Education in the Development and Cultivation of each man's individual Nature;" "The Cultivation of Memory;" "Modern Psychology and Educational Science;" "Moral Education;" "The

Relation of Work to Play;" "Custom in the East, Reason in the West;" and "The Close Connection of Body and Mind." The lectures are full of sound and instructive thought and suggestions. Their appearance in pamphlet form will be of public service, and it is pleasant to reflect that if foreigners like Mr. Denning are willing to devote their abilities and research to such philanthropic purposes, Japanese like Mr. Nagao are ready to promote and assist the effort.

THE following *Imperial Decree*, translated by the *North China Herald* from the *Peking Gazette*, is one of the most interesting and characteristic documents published among recent Chinese archives:—

Inasmuch as the Emperor was of tender age upon his accession to the Throne, and the Princes and high Ministers could not be without an authority to appeal to and receive instructions from in all matters regarding the employment of individuals and the carrying on of Government, We yielded consent to the entreaty of the Court that We would "give an ear to affairs of Government from behind the curtain." We further ordained that when he should have fulfilled the period of his education the Emperor should forthwith assume the personal government of the Empire.

For the past ten years and more he has been assiduous in his studies, and has been daily renewing his virtue and fitting himself for his duties in life. Of late he has been opening and perusing reports to the Throne, arguing on the merits of bygone policy, and deciding questions of present moment, and has shown a capacity to determine between proper and improper courses of action and justly to weigh questions of pro. and con.

Upon giving audience this day to Yihuan, Prince Ch'un, Shih-to, Prince Li, and other members of the Grand Council, We announced to them that, commencing with the Great Sacrifices to Heaven at the Winter Solstice of the present year, the Emperor would proceed to the Temple of Heaven to conduct the observances in person, and we commanded that the Imperial Board of Astronomy should select an auspicious day next year for the performance of the ceremonial attendant upon the personal assumption of Government.

Upon hearing this announcement, the Emperor knelt long upon his knees entreating us to excuse him, while Prince Ch'un and the Members of the Grand Council urged that the difficulties of the time were many in number, that there were countless and complicated questions to be dealt with, and that the Emperor was still making daily progress and monthly advance in the pursuit of studies which he had not brought to completion. If, therefore, he might be allowed to postpone the personal direction of the various details of Government, he would certainly be still better able when the time did come to bring complete perception to bear upon his duties and perform them with even a larger measure of success, to the great good fortune of the officials and people of the Empire at large.

These entreaties were urged upon us again and once again in language which was the outcome of complete sincerity, but bearing in mind, as We do, that the establishment of a feminine Regency was only a matter of temporary expediency, We feel that as the Emperor has ascended the Throne as the successor to the great Dynastic Line, and has been charged with the burden of the great trust committed to his keeping by the Emperor Mu Tsung I (T'ung Chih), the time has arrived, now that he has fulfilled the period of his education, when he should rightly share in the efforts of Metropolitan and Provincial officials to govern the Empire aright, and do all that can be done to aid in alleviating the difficulties with which it is beset. It is, therefore, his manifest duty, in reverent obedience to the Decree of the Empresses Regent of the 14th January, 1875, to enter upon personal government forthwith, and thus satisfy the hopes and aspirations which are directed towards him from the *Penetralia* of the Palace. He should also attend in person all the ceremonial observances at the Great Altars (Heaven, Earth, Sun, Moon, etc.) and the Ancestral Temples, in order to manifest due sincerity and reverence, and he will commence by conducting in person the Great Sacrifice before the Altar of Heaven at the Winter Solstice of the present year.

We further command that the Imperial Board of Astronomy select an auspicious day during the first moon of next year for the performance of the ceremonial attendant upon the present assumption of Government.

The various Yamens concerned will reverently

search the records to ascertain the course of procedure to be pursued, and what old constitutional usages should be reverted to, submitting reports of the same to the Throne for action to be taken accordingly.

These commands will be circulated throughout the Capital and the Provinces.

THE President of the British Medical Association for this year has delivered an address against the over-education of women. The learned female, according to this authority, has neither health, beauty, nor capacity to enjoy life. She is simply a "pathological specimen," and her progeny will hand down her debility. "Only fools will have healthy children," as a caustic critic of the President pithily puts it, "and the human race will be composed of brainless animals, on the one hand, and anæmic bookworms on the other." We really cannot see why there should be much need for dissertations upon this subject. The rule of work applies with equal truth to everything—gain in one direction is loss in another. Mental cultivation cannot be carried beyond a certain point without corresponding injury to the physique. But neither is there any reason to be as angry with the President of the Medical Association as some of his critics are. One writer accuses the Senior Physician of not knowing what he wants to prove, because the address sets out by asserting that women should not be as well educated as men, and concludes by showing that both boys and girls suffer from too much work and too little play. Both of these propositions the same writer undertakes to demolish by pointing out that "among the thousands of healthy English girls who can play lawn tennis with ease and precision, there are very few who could construe a page of Goethe or even of Victor Hugo without a mistake, or work a sum in double rule of three." This is much as though the proposition that excessive indulgence in alcohol is injurious were to be met by the rejoinder that drunkards are rare. Here in Japan, certainly, we have ocular demonstration of the debilitating effects of over-education on the girls of the rising generation.

HAVING long expected to hear public attention drawn by the vernacular press to the sugar-growing capacities of the Riukiu Islands, we welcome the *Nichi Nichi Shimbun's* vigorous utterances on the subject. It is said that, despite the unfavourable results of the beet-sugar manufacturing enterprise at Mombetsu, the authorities contemplate establishing a sugar factory at Sapporo, where the soil has been pronounced suitable to the growth of the cane. Our Tōkyō contemporary alludes to this project with approval, but notes that there is no possibility of supplying the demand for sugar in Japan by means of a factory at Sapporo only. The yearly consumption of sugar throughout the country amounts at present to over 83 millions of lbs., and the cost of this quantity is nearly 4½ million yen. It is principally the produce of Formosa, and to this fact is to be attributed the circumstance that the balance of trade between China and Japan is in the former's favour. The *Nichi Nichi* thinks that every effort should be made to render Japan self-supplying in the matter of so important a staple as sugar. According to a gentleman who recently visited Riukiu, the area of land now available there for purposes of sugar plantations is very considerable. He estimates the total area at 121,028 acres; namely, 77,732 acres in
